Mr. Walter H. Page, who has been successively editor of the *Forum* and of the *Atlantic Monthly*, and now edits the *World's Work*, writes in some bitterness of spirit in reply to the question, Why are the magazines not better? "I should be the last man in the world to call even the best magazines good. I have had my hand in making—I should not undertake to say how many—but I have never made one and I have never seen one made that was more than a pile of débris. The reason that you have rubbish in the magazines is because the editors cannot get anything better." This, or something like this, has always been the editorial cry. Mediocrity in the contributor has always been the rule, talent the exception. And if the editor of the *World's Work* merely wished to show that no magazine is quite worth the pain of its parturition, we might immediately relegate his words to the category of indiscreet confessions. It is not because Mr. Page is convinced that something ails the modern magazine—that is a very general belief—but because he tells definitely what, in his opinion, ails it, that his article will command the attention of the thoughtful.

He regrets that "the intellectual class" to which magazine contributors belong, does not write in an interesting way. The contributors who have some superficial grace of style lack ideas; those who have ideas lack style. There is an almost universal inability to write for the reading public of the beginning of the twentieth century, which is apparently a far more difficult public than any of older times. The voice and the style that can arrest it have not yet been discovered. Says Mr. Page:

> "The truth is, our style must become better. We do most things better than we write. Effective style is changing. The somewhat leisurely style of a generation or two ago pleased the small circle of readers within its reach—a mere little company which by comparison might have been got into one room, a company who had leisure and who liked to read that kind of writing. Now the great world is forging forward in all its departments of thought as in all its industrial development, and style suited to our time is different. The man who would write convincingly or entertainingly of things of our day and our time must write with more directness, with more clearness, with greater nervous force; and the teaching of composition and the practice of style have not kept pace with the development of our intellectual life in the United States."

Here, then, is the case squarely put. We must achieve a style nervous, emphatic, and insistent enough to catch and hold the man of to-day. But before we commit ourselves to this theory that the magazine style must be violently popularized, it may be well to recall a few masters of that "leisurely style" which Mr. Page feels we have so completely outgrown.

At the opening of the last century and thereabouts the best of the "leisurely" journalists were Hazlitt and De Quincey; a little later Macaulay and Leigh Hunt

continued the tradition; then Thomas Carlyle and Thackeray made their way through the magazines; Walter Bagehot and Matthew Arnold and J. R. Green did their turn in journalism; and to-day John Morley and Leslie Stephen, though unpossessed of the new style, manage to get a hearing. Now the implication that there was or is anything esoteric about these men, that writing to-day their too leisurely style would be found lagging behind our recent intellectual development—requires no very serious discussion. The writer who wished to reach our public would do much better, we believe, to study the "leisurely style" than to strive for that "nervous" quality which the modern magazine reader is supposed to require.

As a matter of fact, the desiderated style for the times has had a pretty thorough trial. The late G. W. Steevens certainly wrote it; Mr. Kipling writes it and produces six distinct electrical discharges in the space in which the leisurely writer would grudge himself one; Mr. Maurice Hewlett, although he is still caviare to the general, has all the nervousness and picturesqueness that any editor could desire; and Mr. J. P. Mowbray fairly flings his bawble into the face of the expectant public. But these examples of the modern style hardly encourage us to believe that progress lies that way. It seems to us, in short, that Mr. Page's conception of a deliberate attack upon the larger reading public, of a general attempt to measure up, or down, to the standards of those who, at bottom, have learned to read only between pictures, is fundamentally erroneous. We do not believe that the style which the great untrained public wants is a good style. The fact is that, while the "intellectual contributor" is often a dull person, the writers of to-day are less at fault than the public. It is the public that needs to be converted to intellectual leisureliness; not the writer who needs to catch the fever of modern life.

It is a very natural and in an editor a very amiable illusion—that of imagining the scramble for money and place and distraction to be more intellectual than it is. It is easy to mistake a certain progress in accustomed ruts for that untrammelled flight of the mind which is the condition of literary production and appreciation. Mr. Page is too modest in feeling that the failure to interest people who have little capacity for the pleasures of the mind is criminal. The newspapers and magazines that cater to listless intelligences, languid tastes, and roving attentions—it is these that have already discovered the style for the times which Mr. Page ingenuously desires. Should they be praised for the discovery?

We have fallen upon dull times for editors. The "intellectual class" probably writes less interestingly than it did, say, from 1800 to 1870. If any one wishes to appreciate the full seriousness of the case against the "intellectual contributor," let him read thoughtfully 'Literary Boston of To-day'—a book which, by a sheer coincidence, but a felicitous one, appears within a week of Mr. Page's protest against the dull and the literary. Before, however, he despairs utterly of the intellectual class, and undertakes the desperate attempt to contrive a style for the times, we advise Mr. Page, and the more philosophical editors generally, to take counsel of this wise saying, which may be found in the current *World's Work:* "It is a delusion to conclude that, because an idle man reads a silly book, he would read a good book if he didn't have the silly one. That kind of man will never read a good book." With the single change of "article" for "book," this covers the case. One should not go too far with this kind of reader. We are bound to write for him who runs, but we are not bound to make his haste our own.

## *AUTHORITY IN LANGUAGE.*

In April last the French Academy admitted to its Dictionary the word *chic*, without hesitation for the meaning 'improvisation of the artist who works without a model,' but only after much discussion for the sense 'taste of the day,' 'caprice of fashion.' If some critics would have barred out the word altogether, others complained that recognition came tardily. *Chic* (to which Littré was hospitable long ago, and which Sanders embraced in his 'Verdeutschungswörterbuch' in 1884) was, said M. Émile Faguet, slang of the clerks of the Parlement of Paris in the seventeenth century, with a relation to *chicane*, but when it reappeared in the second third of the nineteenth century, it had in the ateliers a quite different signification, and gained general acceptance as 'stylish' still later, between 1850 and 1860. Now, it is almost quite superseded by stranger forms—*pschutt, v'lan, urf, bath, chouette, dans le train* (in the swim), *dernier bateau*, and our English *smart*. All admit, however, that the Academy is exercising its proper function in fixing the limits of the allowable in correct French.

This function was invaded, in a way, in 1890, by M. Georges Leygues, Minister of Public Instruction, who was not uninfluenced by the agitation carried on during the previous three years by the Society for Spelling Reform. In a decree issued on the proposal of the Superior Council of Public Instruction, and dated July 31, 1900, he prescribed a number of licenses, both in spelling and in syntax, which examiners should tolerate in rating for certificates—for example, in the pluralizing of certain adjectives and compound nouns, in hyphenation, in the regimen of the past participle, in the use of unsupported *ne* after certain comparative expressions, etc., in the placing of adjectives before or after the noun—matters in which there is considerable doubt and inconsistency in the prevailing usage. The storm of protest which this decree evoked led M. Leygues (who, the wits declared, should begin by simplifying his own name to Lègue) to take advice of the Academy, which reported, through M. Hanotaux, against all the substantial changes proposed. M. Leygues, in a new decree, dated February 26, 1901, repudiated any intention of attacking the purity of the language or the work of grammarians, and drew a line (surely futile in practice) between strictness of teaching and strictness of examination.

The subject has just been reviewed, in a *Beilage* to the *Programm* of the Mülhausen Gymnasium, by Joseph Lebierre, who is engaged upon an extensive work showing the transformation and deformation of the French language during the past century. He marshals, rather obscurely because of poor typography, the arguments of the reformers and of the purists, who are not unevenly matched in learning and reputation. When Arsène Darmesteter pronounces French orthography the most incoherent and complicated of modern spellings, except the English, Brunetière points to the unrivalled expansion of English throughout the globe notwithstanding, while Bréal, far from wishing to write *farmacie* for *pharmacie, fisique* for *physique*, or to translate (as the new Germans have done under imperial guidance) such terms as *telephone* ("far-speaker"), advocates the greatest possible similarity in scientific and technical terms, for the sake of European solidarity. Other writers answer the solicitude of the reformers in behalf of foreigners as well as of school-children, by denying that there would be any real increase in facility of acquisition, whereas foreigners already in possession of the tongue would be compelled to unlearn and study anew. Would an Englishman be helped to recognize *juger* as meaning "judge" if it were spelt *jujer*, as is proposed, or *pijon* for *pigeon?* It may be set down for certain that any general disfigurement of the present orthography would separate French from English, which has taken over so much from the French; and that such typical changes as *atension* for *attention* or *aprendre* for *apprendre*, would serve to make English more a Latin tongue in appearance than French itself.

The battle has raged hottest, perhaps, over the proposed uniformity in the past participle of active verbs, instead of the actual concordance with the preceding object. Because the regimen of *coûté* is quite without rule, and because the past participle generally is conventionally constant or changeable in form, there is a desire to cut the knot at once by making this participle invariable. When, however, it is used adjectivally, a difficulty immediately arises, for it is justly contended that gender neglected in the participle would tend to become neglected in the adjective, and the language would approach English in the absence of inflection. English influence, it may be, is already making the post-position of the adjective less rigorous than formerly, but the other revolution would be far more sweeping.

At this point the poets take a hand in the controversy, and make an anxious plea for the integrity of the mute *e* of the feminine termination. Without this letter, reported M. Hanotaux, harmony and rhythm would perish from French verse; and Larroumet declares that it is "a rare and precious resource of classical prosody, from which the sixteenth-century poets de-

rived incomparable effects of tenderness, elegance, and dreamy melancholy"—citing a famous couplet from "Phèdre," with a *blessée-laissée* rhyme. Lacking the prolongation of the *e* mute, the verse becomes, he says, "hard and dry"; and he is sustained in this by Legouvé. A writer in the *Temps* claims the mute *e* as a peculiar musical property of the French language, and adds (but this is extremely doubtful) that "foreign poets envy us on account of it." Nevertheless, the strength of the position lies in the fact that the abolition of the mute *e* along with other silent letters would be the annihilation of a *shading;* of which poetry must ever be jealous. The *Journal des Débats* rightly remarked that if the new decree were carried to the logical conclusion of the reformers, "every mode of speaking and writing responsive to a shade of thought—perhaps a very subtle shade—would be construed as indicating a reactionary state of mind." It is in this light that must be interpreted a comment of the *Temps*, apropos of the "historic" argument for spelling *frapper* "fraper," or *femme* "fame": "To put the history of the language against the rules of grammarians founded in reason is to put barbarism against culture."

The dispute is not without interest for the English-speaking world. Pure phonetic reform in spelling finds no adherents of any consequence in France. The *visuels*, who regard the physiognomy of words, greatly outnumber the *auditifs*, who rely upon the sound. All the leading reformers want is a gradual change, bit by bit; and in the land of centralization they naturally turn to the Academy or to the Government for the necessary authority—as in Germany reformers turn to the Government alone—as in the United States they turn to the Government after having failed to make any serious impression on authors or master printers. It is only a little while ago that it was sought in Congress to pass a bill imposing the American Philological Association's list of changes on the Government Printing-Office; and there is no telling when the measure may be brought up again. Only the other day we ourselves were offered a communication recommending that, having the opportunity to fashion the unfortunate Filipinos in our own image, we should teach their helpless children an English orthography which does not exist except in the above association's pious wish and the actual practice (more or less timid and partial) of its followers, largely librarians who shuffle off two letters from *catalogue*. All this is of paltry worth beside the freedom which is the real genius of the English language, which enriches it from all tongues, naturalizes at once what it borrows, asks no other authority for what is correct spelling or syntax than the best usage, makes the historical Dictionary like the Oxford the mirror and monument of a splendid linguistic development—the record of countless experiments, successes, failures,

> "Revivals, too, of unexpected change";

and has no fear that the purity of the English tongue or the peculiar quality of English verse can sustain any lasting injury from the spirit of innovation like that surveyed by M. Lebierre in France for the past thirty-five years, and ever at work among ourselves.

# Correspondence.

## REPRESENTATIVES OF THE SOUTH IN CONGRESS.

To the Editor of The Nation:

Sir: Such a criticism of the fisticuffs of Southern politicians as appeared in the current *Nation* is not only merited, but sadly true. Perhaps it is explainable by the fact that the leading men of the South take not the interest in politics that they formerly did. Such a corner-grocery element has entered Southern politics that not very many gentlemen enter it; hence the absence of Calhouns, Clays, Madisons, Stephenses, Benjamins, Hamptons, Ben Hills, and the like in Congress. Jeff. Davis of Arkansas surely is not a type of the gentleman of the South of to-day. He is merely a specimen of the low grade to which Southern politics has now fallen. There are very few of us down South who admire either "Red Shirt" Tillman or Imperialist McLaurin. Senator Bailey, also, has lost many friends by his pugilistic encounter with Beveridge.

Northerners may be assured that all Southerners hate to see such encounters as have taken place recently. Also, let them know that the South is trying to reform, and hopes, in the near future, to send more men like Congressman John S. Williams of Mississippi to represent her at Washington.—Sincerely,

William Kernan Dart.

Bay St. Louis, Miss., August 20, 1902.

## THE ART OF UNLOADING.

To the Editor of The Nation:

Sir: The article entitled as above, in the *Nation* of August 21, seems to me worth to any thinking man the cost of a year's subscription, and, perhaps, of a whole lifetime of such subscription to some. The article has an economic as well as intellectual value, because at no former time have such gigantic efforts been made to inject vast amounts of worthless "water" into the country's securities, in the hope of thereby transferring the public savings into the pockets of a few tricky schemers.

Of course, it is chiefly the credulous and inexperienced, who still believe that their own especial genius can get something for nothing, that fall into these traps. But the public press professes to lead and teach the people, and, though the nets are shamelessly spread in sight of the game, scarcely a journal in the country has hitherto dared to expose the frauds with which their advertising columns are more or less filled. And yet the safety and happiness of countless families are endangered by every considerable amount of incorporated "water" which the promoters succeed in unloading upon unsuspecting industry.

Your theme is so timely, so well treated, and likely to benefit so many that I hope you will give us more of it, even "line upon line, and precept upon precept."

Yours respectfully, W.

Philadelphia, August 27, 1902.

## THE ARRANGEMENT OF PHOTOGRAPHS.

To the Editor of The Nation:

Sir: I have recently been making an effort to arrange a collection of some thousands of photographs of historical works of art, so as to be able to refer to them easily. My experience may be of interest to some of your readers. The first decision I had to make was as to division into sizes. One buys photographs of all sizes, but cannot arrange all together. The bulk of the collection must be small. After many experiments I fixed on the maximum size for the mounts of small photographs as a shade under 14½ inches by 10¾ inches—a little larger than music. I then had a number of "pamphlet cases" made by an American firm in London, the Library Bureau. The internal measurements of these cases are 14½ by 10¾ by 3 inches. The cases externally are mere rectangular parallelopipeds, with no roundings or additions of any kind except the labels I stick on. They are made of strong mill-board and covered in cloth. They are quite cheap. All photographs too large for these boxes are of a size that should lie flat in some kind of portfolio. Most working photographs will enter the boxes, though sometimes with very little margin. Personally I don't trouble to mount my photographs as a rule, they pack so much closer unmounted. I keep them strictly for use, and I write on their backs all the notes I want; but if I had time, I should mount them all on very *thin* cards, and write on the margins and backs of those. I have a number of thin covers of stout paper cut to fit the boxes, and I group the photographs in these covers—one to an artist, or to a school, or to one period of a single artist, according to the number of photographs to be dealt with. I write on the outside of the cover any notes I want about the artist or school in question. The boxes stand on shelves on their longer edges, the shelves being 15½ inches deep and 11½ inches apart. Thousands of photographs can thus be stacked in a small space. I am sorry now that I ever bought any large photographs, and am half inclined to cut most of them in half and hinge the halves together. The arrangement of the groups of photographs within the boxes is, of course, strictly chronological; architecture, sculpture, and all the arts of one period being boxed together. Martin Conway.

London, August, 1902.

# Notes.

John Morley's Life of Gladstone easily leads in interest the autumn announcements of Macmillan Co., in which Lives of Miss Yonge, by Christabel R. Coleridge, and of Sir George Grove, by C. L. Graves, are also to be found, side by side with Edward Everett Hale's 'Memories of a Hundred Years.' Further items are 'Essays, Historical and Literary,' by the late John Fiske; 'The Loyalists in the American Revolution,' by Claude Halstead Van Tyne; the fourth and concluding volume of Edward McCrady's 'History of South Carolina,' with Marion and Greene for the chief figures; 'Historical Lectures,' by the late Lord Acton; 'History: Suggestions as to its Study and Teaching,' by Prof. Lucy Maynard Salmon; 'Cecilia, the Last of the Vestals,' by F. Marion Crawford; 'Kottō: Some Japanese Curios, with Sundry Cobwebs,' by Lafcadio Hearn; 'The Splendid Idle Forties: Stories

of Old California,' by Gertrude Atherton; 'A Joyous Journey round Rügen,' by the author of 'Elizabeth and her German Garden'; 'How to Sing,' by Lilli Lehman-Kalisch; 'Sun-Dials and Roses of Yesterday,' by Mrs. Alice Morse Earle; 'English Pleasure Gardens,' by Rose Standish Nichols; 'Quebec: The Place and the People,' by Sir Gilbert Parker; 'New England and its Neighbors,' photographically illustrated by Clifton Johnson; 'Ancient Athens,' by Prof. Ernest A. Gardner; 'The Holy Land,' by John Kelman, with illustrations by John Fulleylove; 'Egypt,' painted and described by R. Talbot Kelly; 'Italy,' by Prof. W. Deecke; 'Stories in Stone from the Roman Forum,' by Mrs. Isabel Dorsey; 'Greater Russia,' by Wirt Gerrare; 'China and the Chinese,' by Prof. Herbert A. Giles; 'Around the World through Japan,' by William Del Mar; 'The Island of Formosa,' by James W. Davidson, U. S. Consul; 'London in the 18th Century,' by the late Walter Besant; 'London Highways and Byways,' by Mrs. E. T. Cook; 'The Roll-Call of Westminster Abbey,' by Mrs. E. T. Murray-Smith; 'The Scott Country,' by Wm. S. Crockett; 'The Boys' Iliad,' by Walter C. Perry; 'Furniture of Olden Times,' by Frances C. Morse; 'The Art of Walter Crane,' by P. G. Konody; 'Sir Joshua Reynolds,' by Lord Ronald Sutherland Gower; 'Nineteenth-Century Art and Scottish Historical Antiquities,' in two volumes; 'Frans Hals,' by the Rev. G. S. Davies; 'French Engravers and Draughtsmen in the 13th Century,' by Lady Dilke; a new play by Stephen Phillips, 'David and Bathsheba'; a prose work by Alfred Austin, 'Haunts of Ancient Peace'; 'An Illustrated History of English Literature,' by Dr. Richard Garnett and Edmund Gosse; 'A Lexicon to the Poetical Works of John Milton,' by Laura A. Lockwood; 'Shakspere's Moral System,' by Prof. Richard G. Moulton; 'A Guide to Fiction,' by E. A. Baker; 'Plain Facts about the Trusts and the Tariff,' by George L. Bolen; 'Democracy and the Organization of Political Parties,' from the French of M. Ostrogorski; 'The Strength of the People: A Study in Social Economics,' by Mrs. Bernard Bosanquet; 'The New Empire,' by Brooks Adams; 'The Government of Ohio,' by Prof. W. H. Siebert—of New York, by Prof. Wm. C. Morey—of Maine, by Prof. Wm. MacDonald—of Michigan, by Webster Cook; 'Theory and Practice in Boys' Self-Governing Clubs,' by Winifred Buck; 'Essays in Heredity,' by Prof. Karl Pearson; 'Dante and the Animal Kingdom,' by Richard Thayer Holbrook; 'Development and Evolution,' by Prof. J. Mark Baldwin; and the 'Diamond Mines of South Africa,' by Gardner F. Williams.

From McClure, Phillips & Co. will proceed 'Dante and his Time,' by Karl Federn; 'The Letters of Daniel Webster,' edited by C. H. Van Tyne; 'Hogarth,' by Austin Dobson; 'Jeanne d'Arc,' by T. Douglas Murray; 'Maxim Gorky: His Life and Writings,' by Dr. E. J. Dillon; Tolstoy's 'Anna Karenin' and 'Ivan Ilyitch,' translated by Mrs. Garnett; 'Mutual Aid, a Factor in Evolution,' by Prince Kropotkin; and 'Astronomy for Everybody,' by Prof. Simon Newcomb.

Messrs. Scribner announce 'The Incarnation of the Lord,' by Dr. Charles A. Briggs; 'All the Russias,' by Henry Norman; 'King Mombo,' a book for young people, by Paul Du Chaillu; and a new edition of the late Clarence King's 'Mountaineering in the Sierra Nevada.'

Bishop Potter's 'The East of To-day and To-morrow' will be brought out by the Century Co., as will likewise a volume on 'Title-Pages,' by Theodore L. De Vinne, and 'Luncheons: A Cook's Picture-Book,' by Mary Ronald.

An English version of Bémont and Monod's 'Middle Ages in Europe, 395 to 1270,' under the editorship of Prof. George B. Adams, is in the press of Henry Holt & Co.

Doubleday, Page & Co. will issue 'Nature and the Camera,' by A. Radclyffe Dugmore, and Kipling's 'Just So Stories,' illustrated by himself.

From the list of Thomas Y. Crowell & Co. we take a 'Guide-Book to Hygienic Diet,' from the vegetarian point of view, by Sidney H. Beard; 'Economics of Forestry,' by Bernhard E. Fernow; 'Irrigation in the United States,' by Frederick Haynes Newell; 'Parables from Nature,' by Mrs. Alfred Gatty; 'Thoreau: His Home, Friends, and Books,' by Annie Russell Marble; 'Robert Browning,' by Stopford A. Brooke; and 'Rustic Life in France,' from the French of André Theuriet, by Helen B. Dole.

Lives of Mozart and of Brahms will be added by E. P. Dutton & Co. to their "Master Musicians" series.

Elder & Shepard, San Francisco, are to publish 'The Romance of the Commonplace,' by Gelett Burgess.

Newnes's thin-paper editions of English classics, shaped for the pocket and the not too muscular hand, and bound tastefully in limp covers (Scribners), are extended by a volume of Shelley's Poems and another of Bacon's Essays and 'Advancement of Learning,' etc., while Irving's 'Sketch-Book' is allotted two in the analogous "Caxton Series" from the same house; but here the paper is of ordinary thickness and can be much more rudely handled. All have portrait or other frontispieces of excellent quality.

Messrs. Scribner are also the American agents for the thirteenth revised edition of Baedeker's 'London and its Environs.' The mapping and planning is most abundant and convenient, and the volume, which opens with a railway map of England and Wales, closes with a select index of streets and plans of the metropolis.

There is one career open to talents in England which has no parallel in this country. We have produced more statutes than all other nations put together, but we have produced no professional draftsmen. Every legislator may draw his own bill, or present a draft furnished him by the attorney of some constituent. No doubt much labor is expended in committee by good lawyers, but it is generally unsystematic. Hence, a new edition of Lord Thring's 'Practical Legislation' (Boston: Little, Brown & Co.) will probably not have so many readers here as we could wish. It was originally written to instruct the assistant draftsmen in the office of the Parliamentary counsel in "the composition and language of acts of Parliament and business documents," and appears to have received no alteration in this edition. The subject is certainly the driest conceivable, but the author relieves it with some illustrations of what statutes may be when not properly constructed. Thus, a certain act provided that its penalties were to be given half to the informer and half to the poor of the parish; but the only penalty imposed was transportation for fourteen years. Another statute contained the definition, "The term *new building* means any building pulled or burnt down to or within ten feet of the surface of the adjoining ground." An amendment proposed by a Queen's counsel ran as follows: "Every dog found trespassing on inclosed land unaccompanied by the registered owner of such dog or other person who shall on being asked, give his true name and address, may be then and there destroyed by such occupier or by his orders." But the book consists, in the main, of graver matter than this. It is systematic and logical in the highest degree.

The appearance of a second edition of M. Auguste Arnauné's 'La Monnaie, le Crédit et le Change' (Paris: Félix Alcan) tempts one to dwell on the complete collapse of bimetallism within the last few years. The first edition of this book appeared in 1894, and it then seemed as if bimetallism would carry everything before it. We all know how it was in this country, and in England the situation was almost as bad. Nearly all the professors of economics taught the necessity of restoring silver; Mr. Balfour joined the Bimetallic League; the Manchester Chamber of Commerce was converted. Never did an agitation more quickly subside; never was a theory more completely exploded. All the predictions of the bimetallists have been falsified. Gold has become almost universally the standard, and prices have almost universally risen. This book suggests these reflections because of its clear statement of the arguments concerning the standards, and of the monetary situation throughout the world. Controversy has now stiffened into history, but M. Arnauné's work has lost none of its value. It contains as good a description of money, its varieties, and its uses, as is to be found. The processes of exchange, of circulation, of credit, are all admirably explained. Especially satisfactory are the detailed accounts of the monetary systems of France, of England, of Germany, of the United States, and of Indo-China. The "Latin Union," of course, receives due attention. Were it not for the great number of books on the subjects here treated, we should be inclined to ask that this one might be translated; but it is written so clearly as to be easily read in the original.

Some idea of the rapid advance of socialism in France may be obtained from M. A. Lavy's 'L'Oeuvre de Millerand, un Ministre Socialiste' (Paris: Georges Bellais). The chief aim of the book is to glorify M. Millerand's achievements, and his speeches are certainly very able; but to American readers the extent to which the French Government has undertaken to regulate industry is the feature of interest. Much of what is called "amelioration of the conditions of life" consists in raising the salaries and shortening the hours of Government employees—of course, at the expense of the subjects. But the policy of compulsory insurance, of invalid and old-age pensions, of fixing hours of labor for men as well as for women and children, and of fostering the trades-unions, is very fully illustrated. No new arguments for this policy are advanced, but it is impossible not to be impressed with the autocratic powers of a French Minister of Commerce. The prefects are his agents, and he can assert his

will effectively at the same instant in every Department in France.

'Uhde,' by Fritz von Ostini, is the latest addition to the convenient "Künstler-Monographien" (Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner). This painter has been so much abused and praised for his practice of rendering Biblical scenes in the form of lowly German life of to-day that his more genuinely artistic qualities have been generally ignored or misunderstood. Typical of Ostini's criticism is the passage in which, commenting upon Von Uhde's neglect of portraiture, he discusses the present condition of that art in Germany: "Germany is not yet ready for portraiture conceived in any painter-like fashion, and if to-day a Franz Hals should appear among us, he would probably be without commissions. Our Philistines wish to be taken impressively, nay, monumentally; they do not wish their living likeness, but a partial and idealized representation of their personality. For this reason the best portraits among us are generally those which our painters do of each other casually and as a free act of friendship."

The appropriate costume for contemporary portrait statues can hardly be said to be of theoretical interest only. If comparatively few are in a position to give directions to the sculptor for work to be executed, the number of those feeling the need of a correct standard of judgment in the matter is certainly great. We, therefore, call attention to Professor Hugo Blümner's article on "Tracht und Nacktheit in der Portraitbildnerei," in the current number of *Monatsberichte über Kunstwissenschaft*, as a helpful, clarifying discussion of this rather puzzling question. Bringing the experience derived from the history of classical, Renaissance, and modern art to bear on such important recent productions as Lederer's "Roland-Bismarck," Klinger's "Zeus-Beethoven," and Tuaillon's "Unser Fritz" in Roman armor, the writer arrives at the conclusion that truth to life and direct response to the popular conception of the character represented are the desiderata for a public monument.

Under the caption of "Architectural Refinements in Italian Churches," Mr. William H. Goodyear sums up, in the *American Journal of Archæology* (No. 2 of the sixth volume), the investigations pursued in the summer of 1901 on behalf of the Brooklyn Institute of Arts and Sciences. These investigations were in confirmation of a previous set made in 1895, and these, in turn, grew out of Mr. Goodyear's pioneer work in 1870. They have, as is well known to readers of our architectural reviews and to many lecture audiences, revealed an unsuspected extension of intentioned curves, obliquities, and asymmetrical dispositions first remarked in the classic temples of Greece, but which Mr. Goodyear has demonstrated all the way from Egypt to the Maison Carrée at Nismes, via the Italian peninsula in particular. He is able, in the present paper, to append the certificates of the engineering architects in charge of St. Mark's at Venice and the Cathedral at Pisa in justification of his measurements and deductions. Pen tracings from photographs show clearly the horizontal curves in plan in the twelfth-century cloister of the Celestines at Bologna and in the cloister of S. Zeno at Verona; the vertical curves in the pilasters of chapel walls of the Cathedral of Vicenza; the buttressed *outward*-leaning walls of S. Agostino at Orvieto, and aisle-walls of S. Ambrogio and S. Eustorgio at Milan, and façades of the Cathedral of Pisa, of S. Michele at Pavia, and of S. Ambrogio at Genoa. But we must refer our readers to the article for these and other interesting details.

Though the serial publication called *American Art in Bronze and Iron* (New York, 556 West 27th Street) is frankly an advertisement of the work of a particular foundry, still, as the patronage notably proceeds from architects, decorators, and sculptors, the comparative exhibit is of real interest and value. The first number is given up to Tablets, including seals. Gen. McClellan, Professor Sylvester, Grace A. Oliver, Abby Hopper Gibbons, William Hamilton Gibson are among the better known persons commemorated in this manner.

The *Geographical Journal* for August opens with a paper on snow-waves and snow-drifts in Canada, by Dr. Vaughan Cornish. The most curious formations described are the snow-mushrooms on the tree-stumps in the Selkirks. A photograph is given of one which was nine feet in diameter. Of greater popular interest is Mr. Ellsworth Huntington's account of his descent of the great cañon of the Euphrates in the Taurus Mountains, he being the first after the famous Von Moltke to accomplish the feat. The voyage was made on a kellek, a light frame of saplings fastened together with ropes, under which were tied some thirty sheepskins with the legs up—a frail craft, apparently, but the party, five in number, floated on it safely 190 miles over numerous rapids, the total descent being 1,250 feet. In the great cañon the river flows between walls of limestone rock 450 feet high, many of the characteristic features corresponding closely to those of the Grand Cañon of the Colorado, "showing that the two rivers are of nearly the same age." Mr. Huntington calls attention to the possibility of reclaiming Mesopotamia, formerly one of the most fertile tracts in the world, but now largely a desert, by means of irrigation reservoirs in the great depression of the upper Euphrates valley.

The Korea *Review* for June, besides papers on burial customs and Japanese banking (the latter article showing the risks of trade in a country that still holds to the silver standard), contains an account of the wreck of the *Kumagawa Maru* by collision with another Japanese steamer off the western coast of Korea, in which Dr. H. G. Appenzeller lost his life. For seventeen years in the once hermit kingdom, this American scholar and man of affairs was foremost in travel, literary, and educational enterprises. He had made pioneer journeys throughout most of the provinces of the little peninsular empire, edited the Korean *Repository*, built the first brick edifice in Seoul, was the first educator of Korean young men in English, secured the widening of the narrow streets of the capital city and the building of good roads, and took part in the ceremonies on the completion of Independence Arch, near the old Chinese Gate under which, as vassal of the Emperor of China, the King of Korea paid homage. At the time of his death this typical American teacher was librarian of the Korea Asiatic Society.

A valuable feature of the work of the Asiatic Society of Japan appears in part ii. of volume xxix. of the Transactions, just received. It is a catalogue of the Japanese books published in the year 1902, from January to June. The librarian, the Rev. A. Lloyd, 56 Tsukiji, Tokio, will be glad to assist in procuring these books, or to make arrangements to have translations made at moderate charges. The titles, with transliteration into the Roman form and Chinese ideographs, name of the author and publisher, price, place of publication, and explanation of the general purpose and contents of the books, are given. Under the categories of art, education, ethics, and religion, fiction, law, poetry and literature, and "miscellaneous questions of the day," about six-score are listed and described. Most of these are low-priced, many costing less than half a dollar, while showing a wonderful range of intellectual activity.

Miss Gould bought an almost unique collection of works on Mormonism, made by Mr. Berrien, as a present to the New York Public Library. With this purchase she gave other documents she had gathered on the specialty, and added a fund for supplementing it further. Accordingly our critic of Mr. Linn's 'Story of the Mormons' spoke of this special library as "accumulated" by her. The bulletin of the Public Library for December, 1899, with Miss Gould's letter of presentation, titles of the rarest specimens, and other details, is worth consultation, and will quicken interest in the volume by which Mr. Linn has been said to have done for Mormonism what Mrs. Stowe did for slavery.

—The September *Atlantic* assigns its leading position to a negro to discuss the problem of the "Training of Black Men." The ability of Dr. DuBois to write intelligently on matters concerning his race has often been demonstrated, and the article before us ought to prove to any thinking person that the aspirations of the colored people of America cannot be suppressed on the flimsy ground of race inferiority. It is merely a question of the right to full opportunity for race and individual improvement, and this cannot exist apart from absolute equality before the law, practical as well as theoretical. It demands, also, a willingness on the part of the masses to judge the negro simply on his merits as a man. The prejudices that prevent this, Dr. DuBois holds, are not to be encouraged by being let alone. "They must be recognized as facts, but unpleasant facts; things that stand in the way of civilization and religion and common decency." He will have none of the doctrine that the training of the colored youth should be simply for industrial pursuits. The counting of human beings merely as a part of the material resources of a country, to be regarded with a view to future dividends, was "born of slavery," he thinks, "and quickened into renewed life by the crazy imperialism of the day." It is a hopeful sign to find in an intelligent leader of the colored race so clear a knowledge of the real meaning of imperialism to the progress of that race. We are glad to see the *Atlantic* keeping up the discussion, in spite of the fate which overtook Professor Sledd. A solution of

the problem is a necessity to the continued moral and political progress of both races; and in order to a solution, prejudices must soften and discussion must be free. Eben Greenough Scott contributes a very helpful article on "Going into the Woods," but one feels that it would have been a little more timely in the spring, when plans for the summer were in preparation. As it is, it will only aid many readers to regret their mistakes. Herbert W. Horwill contends for a new University, in the form of an examining body empowered to confer degrees, for the purpose of establishing a national standard of education.

—It will be a surprise to many to learn from Walter A. Wyckoff, in the September *Scribner's*, that the poor of East London are not in the lowest depths of vice, squalor, and misery. Mr. Wyckoff spent many days in tramping East London streets, looking for what one would naturally expect to find there, and found it not. On the contrary, his final impression was that of a district comfortably clad, well fed, and unusually well behaved, considering its enormous population of the laboring poor. This he attributes in part to the present era of prosperity, though one hardly knows just what title London has to any share in the present era of American-made, tariff-protected, home-market prosperity. A trip through Abyssinia, the country of Menelik, "King of Kings and Conquering Lion of Judah," is described by William F. Whitehouse, and Mary H. Peixotto contributes a sketch of Mostar, the Herzegovinian capital. "A Fisherman of Costla," by James B. Connolly, is an unusually good short story. Mr. Russell Sturgis has secured for "The Field of Art" a brief sketch of the growth of the Louvre Museum, by Alexandre Sandier, with the special object of showing the recent changes by which, from the unorganized condition of former years, it has been made, in the words of Mr. Sturgis, "the most splendid and attractive museum in Europe."

—'Historical Essays by Members of the Owens College, Manchester' (Longmans) is a jubilee publication which helps to commemorate the founding of the institution in 1851. The editors, Prof. T. F. Tout and Mr. James Tait, recall the fact that "the studies which bulk largest in the newer universities and colleges of England are naturally those which are of a scientific, technical, or professional character. The Owens College is no exception to this rule, nor would it wish to be." Yet, none the less, "history has occupied a prominent place in the studies of the Owens College almost from its inception." This last statement is strongly supported by the twenty essays which have been collected for the present occasion, and are now published in a stout, well-printed volume as examples of independent research. If we examine its origin, the historical impulse of the Owens College seems to flow in a direct channel from Mark Pattison, of whom the first professor of history, the late R. C. Christie, was a disciple. Since then the activity of the department has been well maintained under Dr. A. W. Ward and Prof. Tout. It may suit the modesty of the editors to say, "The historical department of the Owens College is still only in the making," but most readers will infer from the quality of these essays that historical studies, save perhaps of the most technical kind, may well be carried on at Manchester. Regarding the articles which are here put forward to illustrate the vitality of a single department in a great college, one is at once impressed by the extent of their range. They open with "The Beginnings of Cæsar-Worship," by Mr. Edward Fiddes, and close with "Historical Teaching under the English System of Elementary Education," by Mr. Thomas Bateson. To be sure, the topics have been taken mainly from British history or from the border land of British and Continental history, but there is nothing to suggest narrowness of teaching or paucity of resources. Of the contributions, a few that will be most likely to interest professional workers in history may be named. Professor Tout writes on "Wales and the March during the Barons' War"; Dr. Ward, on "Elisabeth, Princess Palatine"; Mr. Spenser Wilkinson, on "Napoleon, the First Phase"; and Mr. J. H. Rose, on "The Detention of Napoleon at St. Helena." The presence of women at the Owens College is also revealed by interesting papers on "The Legend of St. Ursula," by Mrs. T. F. Tout; "The Rule of St. Augustine," by Miss Elizabeth Speakman; "The Sumptuary Laws of Venice," by Miss Mary Newett; and "Historical Teaching in Secondary Schools," by Mrs. Alfred Haworth. The editors are extremely moderate in stating the book's pretensions: "The essays are all based upon a study of first-hand authorities, and in several cases unpublished materials have been utilized. Some may claim to throw new light upon old problems; others restate succinctly, and with reference to the latest results of research, matters which must be studied in a wide variety of sources not always very accessible." All this is true, but for our own part we have been quite as much impressed by the excellence of the form as by the value of the investigation.

—'A Primer of Greek Constitutional History,' by A. H. Walker, M.A. (Oxford: B. H. Blackwell; London: Simpkin, Marshall, Hamilton, Kent & Co.), is based on Greenidge's 'Handbook of Greek Constitutional History,' and is largely indebted to that excellent manual, though the author has rearranged his material, and treated it in an independent manner, with direct references to original sources. The result is a small volume of about half the compass of Greenidge's, of sound and creditable scholarship, which sketches neatly the development of Athenian democracy and its political machinery from its beginning in monarchy and aristocracy; and which discusses clearly the processes of transition from the Homeric king to aristocracy, oligarchy, and tyranny. Two chapters on the "Mixed Constitutions" of Sparta and Crete complete the survey of those miniature experiments in government which are so interesting to the student of constitutional history. A brief chapter on federal governments would certainly have interested the American student. This primer was originally planned with the purpose of aiding "to prepare boys for classical scholarships," and this statement reveals its scope and limitations. It is not barred to the general reader who seeks accuracy, and it may be useful in some of our best preparatory schools and as a short cut for the college student. But our college student will be more apt to use Greenidge's manual, and to supplement his reading from Gilbert, Meier and Schoemann, and similar authorities. Some misplaced accents in the index and in the body of this work make a discord with its general tone of scholarship, and in the third paragraph of page 75, "Roman invasion" must be a slip for *Dorian*.

—Nature study, a comparatively new departure in school education in this country and in England, is nearly a century old in Germany, instruction of the children of rural districts in the culture of fruit and vegetables having been obligatory in some parts of the empire since 1814. The school garden has been from the first an essential part of the scheme, and the English Board of Education, on adopting the German idea, sent an inspector, Mr. T. G. Rooper, to visit some schools where gardening forms part of the ordinary work of the scholars. His report, just issued, is an admirable summary of the methods of instruction, both of children and of teachers, with many practical details. A most attractive picture is drawn of an elementary school, corresponding to our primary and grammar schools, where there was a four years' course, of which Mr. Rooper gives a syllabus. Here was apparent one of the great advantages of the scheme. Instruction in fruit culture has been for twelve years the principal aim of the master, with the result that "the villagers have now taken to fruit-growing as an important subsidiary industry. They spend much of their leisure time in their gardens, and they save much money." Another advantage is the wholesome moral effect which this making of the garden a "living primer to the great Book of Nature" has upon the town children especially, in counteracting false excitement and craving after unwholesome amusements. One of the best town schools visited is in a suburb of Frankfort-on-the-Main, and a proof of its influence is shown in a tract of some 200 acres, only a mile from the centre of the city, divided into small garden plots of about 200 square yards, each with a little summer-house. These plots are let for $4.50 a year, and the fruit and vegetables raised upon them more than pay the rent, while "the summer-house is the scene of an almost nightly tea picnic" for the man and his family. A playground is provided for the young children, and the very poor are supplied with land gratis, by means of an old charity devoted to the purpose. Several photographs accompany Mr. Rooper's report.

—The gradual accumulation, step by step and year by year, of materials for filling in the scanty outlines of early Egyptian history goes on apace, and it is satisfactory to reflect that a goodly share of these new and important materials is annually distributed among the rising museums on our side of the Atlantic. The exhibition of all that was found this year, chiefly at Abydos, by Professor Petrie and the Egypt Exploration Fund, closed with the month of July, after attracting general attention. The fruit of this year's work must in part be shown by what is to be gathered in next year, since about half the outlay for excavation has been made with a view to reaching deposits that have not yet been actually touched, although they have in some sort been seen to exist. Extensive tombs of the first Egyptian Dynasty formed part of Professor Petrie's find of this year,

and have been connected—thanks to his indefatigable scientific ingenuity—with remarkably classified remains of prehistoric times found below the historic levels. Relics from Twelfth Dynasty tombs were also very conspicuous in his exhibition of this year, as were various inscribed bits of friezes, a number of sculptured bas-reliefs, and two very fine heads modelled in the early Egyptian and realistic fashion. Dr. Grenfell's Greco-Roman exhibition likewise formed an important part of this year's exhibition in Gower Street. The miscellaneous articles abounding in the Egyptian tombs of Roman date, the striking portrait-heads found on the mummy-cases of that period, specimens of variously shaped glass bottles, more or less fragmentary bits of harnesses, baskets used for toilet articles—these are some of the curiously modern appurtenances of latter-day life in Hellenized Egypt which have rewarded the laborers of the Greco-Roman branch of the Egypt Exploration Fund under Dr. Grenfell's superintendence.

—While Professor Petrie's and Dr. Grenfell's exhibition was open in London, a smaller exhibit was also made in the lecture-room of the Ashmolean Museum at Oxford, likewise of Egyptian antiquities unearthed this last season. Here were objects found by Mr. John Garstang a little west of Girgeh, whose investigations were made under the auspices of Mr. Hilton-Price, Mr. Arthur Evans, and a few other gentlemen who had been particularly struck by the discoveries made recently at a necropolis close to the site chosen by Mr. Garstang. Tombs of the Third, Fourth, and Fifth Dynasties were unearthed and a new series of monuments, of a kind not hitherto connected with Third and Fifth Dynasty tombs, has come to light. Among dated objects may be mentioned a glazed seal of Khafra and a bowl with the name of Sneferu inscribed on it. Both of these are thus indisputably assigned to the Fourth Dynasty. The character and relative position of several other objects found makes it possible to date them also. Most interesting, again, was a mace-head in alabaster on which was carefully wrought a "rope pattern" in sectional lines. It was surmounted with a curious inlaid cap of ivory with a removable stopper—just such an one as might have served in the Herodotean tale for the secreting of poison. This mace and a number of very graceful vases of remarkable size, in alabaster and in marble, came from one and the same tomb, presumably a royal one. Mr. Garstang further found a very curious shell carved in diorite and in many ways suggesting the workmanship of a curious shell unearthed by Mr. Evans at Knossos. Besides all these treasures and several others belonging to the Third, Fourth, and Fifth Dynasties—not hitherto abundantly represented in any museums—Mr. Garstang discovered some very good jewelry of the Nineteenth Dynasty. Altogether he is to be congratulated on the results of his first independent campaign.

## PROGRESS OF LAW IN ENGLAND.

*A Century of Law Reform:* Twelve Lectures on the Changes in the Law of England during the Nineteenth Century. Delivered at the Request of the Council of Legal Education. The Macmillan Co. 1901.

*Legislative Methods and Forms.* By Sir Courtenay Ilbert. New York: Henry Frowde. 1901.

These two volumes deserve hearty praise. They do honor to their authors and to the profession which they represent. Considered as literature, they are far superior to much that passes for historical writing, and may be found, to a great extent, not unreadable by the laity. The admiration of the American lawyer will be tempered, it is true, with envy. No such progress in legal reform as is here recorded has taken place in this country. No doubt it can be said that such progress was impossible because there was no such need for reform. When our forefathers crossed the ocean, they left behind them most of the legal abuses the suppression of which is so exultantly described in one of these books. As Webster showed in his great oration at Plymouth, in 1820, there was no place under our governments for the principles of the feudal system. There were no lands yielding rent, no tenants rendering service; and property was held and transferred by rules as simple as the lives of its owners.

Nevertheless, we cannot be blind to tendencies in our laws which are not encouraging. Statutes are multiplied incredibly, but not many of them embody reforms. We might almost say that abuses in England kindled a zeal for reform that has steadily grown more enlightened, while in our own country the absence of evil conditions has fostered an easy optimism under which abuses are becoming established. We are not saying that we have done nothing in the way of reform. In correcting the unjust laws relating to women we have gone as far as our English brethren, and in many other departments of law we have made changes as sweeping. But with fifty different jurisdictions, and a Federal system independent of them all, nothing could have been accomplished comparable in symmetry with the results attained in England. There a single system of law, highly centralized, could be and has been scientifically modified. Here the multitude of our councils has made systematic and scientific progress impracticable.

We cannot attempt to describe or even to enumerate the changes in the law in England which these lectures explain. They amount to a revolution, but they have been effected so gradually and so carefully as to have caused no appreciable disturbance. Women have been emancipated, children have been protected and educated, laborers have been granted equal rights with masters, the suffrage has been made almost universal. Dissenters, Catholics, Jews, and Atheists have been relieved of their disabilities, local governments and local courts have been established, and the whole system of representation altered. In the field of municipal government the extent of progress may be measured by the fact that, at the beginning of the last century, there were no sewers and no police.

In the law itself nothing but the main principles is the same. The courts are different, the practice is different, the education of the bar is different; even the substantive law is largely new. In the law of real property, the most difficult of all to change, extensive alterations have been made. Strict settlements have been rendered futile and transfers made easy. The difference between the criminal law of 1800 and that of the present day is the difference between barbarism and civilization. The lecturers agree that the descriptions of the treatment of debtors which we owe to Thackeray and Dickens, were correct. Jarndyce v. Jarndyce contains no exaggeration. So Mr. Augustin Birrell assures us, and proves his case by showing what the Court of Chancery was and how it has practically ceased to exist. The things that have disappeared from its jurisprudence would, he says, "if listed, as motions used to be towards the end of a term, easily engirdle all the Four Inns of Court."

Probably most of the changes have been statutory, but many of them have been due to the common sense of the judges. In former times the bailiff in charge of a jury was sworn to keep them "without meat, drink, or fire." On one occasion a juror asked for a glass of water, and the bailiff came into court and inquired of Mr. Justice Maule if he might comply with the request. "Well," said the Judge, "it is not meat, and *I* should not call it drink; yes, you may." We cannot believe that Lord Ellenborough was unconscious of his humor when he denied a motion to reduce the salary of his son, whom he had made chief clerk in his own court at £10,000 a year. "Reduction of salary must proceed on the ground of diminution in duty. Now, as nothing has ever been done in the clerkship of the Court of King's Bench, it is impossible that less could be done in it in future." And as the law has been improved through the efforts of intelligent and conscientious lawyers, so have the methods of its administration. We quote from Mr. Odgers, one of the readers to the Inns of Court:

"Of all the mighty changes that have taken place in the nineteenth century, the greatest change has been in the tone of the administration of both the civil and criminal law. The manners of our law courts have marvellously improved. Formerly judges browbeat the prisoners, jeered at their efforts to defend themselves, and censured juries who honestly did their duty. Formerly, too, counsel bullied the witnesses and perverted what they said. Now the attitude and temper of her Majesty's judges towards parties, witnesses, and prisoners alike have wholly changed, and the bar too behave like gentlemen. . . . The moral tone of the bar is wholly different from what it was when Bentham wrote; they no longer seek to obtain a temporary victory by unfair means; they remember that it is their duty to assist the Court in eliciting the truth."

Both in style and in substance Sir Courtenay Ilbert's book deserves to rank with Maine's writings. In a few luminous paragraphs he explains how and why English law has had a different development from that of France or Germany. He traces the stages of the improvement of the statute law, and epitomizes its history. It is altogether impossible within any reasonable space to do justice to the marvellously complete and succinct manner in which the analysis of the great body of statutory law is accomplished. The working of the legislative machine is explained so clearly that not only American lawyers but even American laymen can comprehend it. Indeed, we have here a manual for legislators, showing them

how statutes should be drawn and how they may be enacted.

When we consider the appalling mass of statutes of which our legislators are annually guilty—crude, blundering, ignorant, mischievous, and even dishonest, as many of them are—and contrast the spectacle with that presented by Sir Courtenay, we feel an emotion of despair. Such a book as his, one would think, would be the vade-mecum of every legislator and of every one who aspired to be a legislator. It is a scientific manual and the manual of a science. Yet among our thousands and tens of thousands of legislators we doubt if fifty readers of the book will be found. Most of our lawmakers appear to be quite incapable of conceiving lawmaking as a science; few of those who are capable of this conception would care to master so profound a treatise as this. But to legal scholars, and to such legislators as are of statesmanlike cast, this book will be a delight. It will show them not only how the incomparable progress of English law has taken place and is now going on, but also how that progress has been regulated and directed by living statesmen trained to understand what can be done by a legislature for the welfare of a nation, and how it is to be done best. So long as England can produce the material for such books, and men who can write them, so long will she keep her place as the country in which civilization has attained its highest development.

---

*Naval Efficiency:* The War Readiness of the Fleet. By Archibald S. Hurd. London: Chapman & Hall. 1902.

It is impossible, within the limits at our disposal, to do full justice to this interesting work, in itself a veritable mine of useful information as to the British fleet, for it runs over the whole gamut of naval thought from an empire's necessities in men-of-war to the speed of battle-ships and the future of the submarine boat. It deals thoroughly, or reasonably so, with only one topic, and that is, oddly enough, not naval efficiency, but naval supremacy. It is written with intense earnestness, with which is mingled despair that others should be wilfully blind to the dangers so patent to the author. Its real purpose is to preach the true doctrine of Great Britain's national defence—a predominant navy—a doctrine which is theoretically admitted on all sides, although the army stands higher in public and social estimation, and gets, generally, the lion's share in the appropriations for military objects. There is little that is novel in Mr. Hurd's argument, but his presentation of the case is forceful, and so tactfully backed by figures as to command attention without wearying the reader. Mr. Hurd begins with the relations existing between the navy and the nation, and passes to the "Functions of a Navy," which he illustrates by a reference to two recent episodes.

"It was not by adding to the coastguard ships, or patrolling our shores, that the Government of the day replied to the German Emperor's hasty telegram to President Kruger at the time of the Jameson raid, but by the commissioning of a special-service squadron, which immediately took to the seas, ready, as Viscount Goschen explained, 'to go anywhere or do anything.' When the Fashoda crisis occurred, were the far-flung squadrons recalled from their patrols and spread out around our shores in case the French Government decided to attempt a landing at Dover or a raid in the Thames? At the first whisper of serious trouble in the autumn of 1898, our shores were defended by the fleet taking the offensive. The reserve squadron rendezvoused at Portland, it is true, but the right arm of the empire was bared at Gibraltar and Malta. At the Rock the Channel Squadron assembled in all its might. . . . Simultaneously the Mediterranean Squadron hurriedly returned to Malta."

It was, we think, Sir George Clarke who first pointed out the fact that England's army is her arm of offence, her navy her arm of defence; and this view, although not so clearly stated by Mr. Hurd, seems to underlie, unconsciously, much of his criticism of governmental policy. "Usually the army has absorbed the far larger share of the money set aside for securing our national safety." This practice, our author believes, has resulted in denying the funds necessary to keep the navy superior to the navies of any two Powers that may combine against England, as recommended by a board of three distinguished Admirals in 1889, for he finds (p. 257) that she has three less modern battle-ships built, building, and to be laid down this year, than Russia and Germany, and only three more than France and Russia. This leads him into the dream of an imperial navy supported jointly by the home Government and the colonies, although he is obliged to admit that it is but a dream, after all, like Mr. Chamberlain's Zollverein.

Either dread is contagious, or there is a conspiracy to create a bogy, for Mr. Hurd soberly analyzes "The German Menace," and finds it real. "By 1908 they [the Germans] will have in the North Sea . . . seventeen battle-ships, a similar number of cruisers, and forty torpedo craft, with another great squadron of equal strength in reserve. Germany will dominate those waters in which the British are practically unrepresented," etc. It's a sturdy spook which can scare both Anglo-Saxon nations at the same time. Can it be that exorcising is in order? If so, where is the priest to come from? One of the ablest living writers on military matters once said to the reviewer, "Why not establish an international police for the maintenance of order? You Americans, with your vast and growing population, could undertake the shore part, and we English the sea part, the expenses to be shared by the great Powers. If an ambitious politician wished to gain notoriety by inconsiderately entering upon a war he would have to fight, not one country, but the whole of Christendom." Until this or a similar counsel of perfection prevails, the dreary rivalry in ship construction seems bound to continue, with its heavy burdens which no nation is able, or willing, to cast aside. What a distressing commentary on the world's progress towards the millennium that so large a proportion of the revenue of every Christian country is devoted to ways and means of killing men.

So far as naval expert opinion is concerned, this rivalry is not without its peril, for it is easy to fall into the same error as Mr. Hurd and to confound naval supremacy with naval efficiency. Maritime wars will not be decided by statistics; the sea habit and good gunnery will not cease to be the dominating factors in success. "There are no ships in the world which are so much at sea as those of the British fleet," says our author, yet he fails to derive from this momentous fact the comfort it should yield. As to the ability to hit the target, the sole purpose for which ships are built, he quotes the record of seven vessels, armed each with twelve six-inch guns, which in 1900 made percentages from the *Mars's* 28.4 to the *Terrible's* 76.8, and he hopes that the general average for the whole British navy may be doubled. "Thus, without adding a ship to the effective list, the power to sink the enemy may be increased two-fold." This is the real naval efficiency, or at least a part of naval efficiency, a subject to which practically but one chapter out of ten is devoted, although occasional references to it are made elsewhere. While all the rest is readable, it is this tithe which deserves especial study for the light it throws upon how to convert money into a fleet ready to go anywhere with dispatch, and give and take the frightful blows which modern science has devised for the adjusting of international differences.

The starting-point is a well considered organization at the Admiralty. With this the author expresses himself as satisfied. We fear our own Navy Department might be improved in this respect, and, indeed, we understand that a general staff, or something nearly akin to it, is to be instituted by the Secretary of the Navy, a measure which will be admirable in exact proportion to its turning the tide of an excessive centralization which takes from commandants of navy-yards and commanding officers of vessels pretty much all of their initiative, self-reliance, and self-respect. These words of Mr. Hurd's are pregnant with suggestion which might properly be heeded at Washington: "At last it has been decided to decentralize some of the authority which has been vested with the Admiralty, and give the port admirals wider discretion." On page 190 he has a valuable table of the division of duties among the British Lords of the Admiralty as introductory to his chapter on the "War Readiness of the Fleet." This table shows the way in which the affairs of some 120,000 officers and men are managed, and some $160,000,000 are disbursed. How to make good the wastage of so large a body and how to supply an adequate reserve, are questions to which no very satisfactory answers have yet been found. With a personnel but one-fifth as numerous, we are experiencing a similar difficulty on this side of the water—smaller but more acute, because we have so few deep-water ships and sailors. It should be gratifying to Americans to learn that our example has been followed "by establishing a school of naval strategy" modelled on the lines laid down in 1884 for our own Naval War College by Rear-Admiral Luce, Commander Sampson, and Lieutenant-Commander Goodrich.

Scattered throughout Mr. Hurd's volume are many excellent reflections on the unwisdom of excessive fortification; the need of more cruisers, especially for commerce protection; the folly of building single "specimen ships" rather than groups; on speed in warfare; naval manœuvres; the torpedo destroyer, and other new types of craft, etc., etc. The demagogues who de-

creed that battle-ships should be built in our own navy-yards might with profit read what our author has to say in this connection: "Portsmouth dockyard, in particular, has fallen from its high estate; work drags on from month to month, and the delays seem to increase. . . . It is almost a year since the armored cruiser *Kent* was sent afloat, and little progress has been made with her. Her armor plates are in the yard, but they are not being fixed."

The publishers deserve thanks for an agreeable piece of bookmaking, that inclines the reader at the outset to a sympathy with the author which is not lessened by the points wherein the two may differ, and which is heightened by the simple, direct style and the almost passionate fervor with which the author's pleadings are clothed. It is as if the fears and longings of the whole British navy were poured forth in the book, so completely does the advocate sink himself in his cause.

---

*Literature of American History:* A Bibliographical Guide. (American Library Association's Annotated Lists.) J. N. Larned, General Editor. Boston: Houghton, Mifflin & Co. 1902.

We have already editorially passed judgment upon the general scheme of appraisal here first exemplified. The work itself seems to merit somewhat critical examination, if only for the sake of its successors. What we first remark is, that the great libraries of the country are unrepresented on the staff of contributors, though it is of prime importance to have criticisms from men acquainted with large collections of books. This will partly, at least, explain the fact that many first-rate works are omitted, many minor works are included. Compare Barry's 'History of Massachusetts,' for which no place can be found, with Elbridge Brooks's 'Stories of the Old Bay State.' Again, a popular and illustrated account of the voyage of the *Mayflower* appears among a series of works on the colonial period, with a note much fuller than that given to Lechford's 'Plain Dealing,' and the first half of this comment is taken verbatim from the preface of the work. And why insert, under the French Régime in Canada, Sheldon's 'Early History of Michigan,' while omitting Smith's 'History of Wisconsin,' which has documentary material? Under Westward Expansion, we find Ford's monograph of sixty pages, which is very restricted in its scope, but a work like Onis's 'Official Correspondence,' which covers the entire negotiations with Spain to 1819, is not noticed. In this section Henry Adams's exposition of the Louisiana purchase given in his 'History of the First Administration of Jefferson' might well have been substituted for some valueless monographs which have been included.

There is a failure to select best editions and to notice the distinctive characteristics of various editions. The Parkman Club publication on De Tonty is preferred to the original edition of his narration, of which there are several issues of the English text. "The Journal of Christopher Gist," in the Massachusetts Historical Society Collections, is referred to, but the more accessible text presented by Darlington under the title 'Journals, with Historical, Geographical, and Ethnological Notes,' published at Pittsburgh in 1893, is neglected. The old edition of Yoakum's 'Texas' is referred to, but without mention of the fact that the new edition published in 1898, under the editorship of D. G. Wooten, gives the original text of Yoakum with new notes, and the history brought down to 1897. The new edition of the 'Westover Papers,' edited by John Spencer Bassett, which has illustrative material not contained in the earlier work, is equally passed over. Under the Colonial Period of New England we find Strachey's account of Popham colony contained in the Massachusetts Historical Society Collections, but no notice of the complete work published by the Hakluyt Society, or of the material gathered by Alexander Brown in his 'Genesis of the United States.' The Hakluyt publication is, to be sure, noticed further on in another subdivision, where the note states that the "work is highly authoritative, though the treatment is occasionally pedantic."

In the division on Constitutional History —Teutonic and English origins—great space is devoted to the late Herbert B. Adams's monographs, but no hint is given of Chamberlain's dignified and illuminating criticism. There seems to be quite as much reason to insert here Froude's 'History of England' as Gardiner's. Maitland's 'Domesday Book' is rightly included, but the works of Ashley, Round, and Vinogradoff, whose claims are equally good, are omitted. Waiving the point that Gross's 'Bibliography of British Municipal History' does not concern American history, his 'Sources and Literature of English History' has a better title to recognition.

The note under Mather's 'Magnalia,' stating that "the best and most usable edition of this extraordinary book is that published in 1853; but it has no index," reads curiously, in view of the fact that an edition was published in 1855, supplied with an index by S. G. Drake. Furthermore, this edition contains errata from Mather's MS. not found in other editions. The index, with a memoir of Prince, is sometimes found in a separate pamphlet. It is astonishing to find the Clayton-Bulwer treaty represented only by Curtis's 'Life of Buchanan' and a chapter in Tucker's volume on the Monroe Doctrine. The former title is found under the division, Period of the Slavery Question, and the latter under Comprehensive History. A book like Travis's 'Clayton-Bulwer Treaty,' which, although an academic thesis, has substantial value, is lost to view. It is a strange classification which includes separate treatises on the Monroe Doctrine under the heading "Comprehensive History." There is little uniformity in the entry of titles. For instance, the "Coleccion de Documentos Inéditos" is entered in one division under "Coleccion" and in another under "Pacheco." Margry's great collection of documents has two different forms of entry, one of which is distinctly inexact. In the classification of titles there are some curious juxtapositions: Knox's 'Historical Journal of the Campaign of North America' is followed by Leroy-Beaulieu's 'De la Colonisation chez les Peuples Modernes.'

In regard to the annotations, most of the writers seem to have had a poor conception of what constitutes a bibliographical note. Winsor has been drawn upon, and where he is quoted textually the notes are most effective. The proofreader or the editor shows lack of acquaintance with historical authors. The index recognizes only one person as the author of the works of the elder and younger Charles Francis Adams.

We are bound to add that some of these defects were to be looked for in the beginning of such an enterprise; yet the great difficulty must ever be to control the services of men having the requisite bibliographical knowledge, the proper critical capacity, and the faculty for condensed and pertinent annotation.

---

*The Sermon on the Mount:* Its Literary Structure and Didactic Purpose. By Benjamin W. Bacon, D.D. The Macmillan Co. 1902.

Professor Bacon's book has had a history. In its first form it was a series of six lectures delivered to the Bible class of a New Haven church. In its second form it was a single lecture delivered before the students of Wellesley College. That lecture is now printed, with considerable additions and with foot-notes in great abundance. Professor Bacon calls the form of the lecture "semi-popular," but the designation is too flattering to the intelligence of popular apprehension. Some of the sillier sheep at Wellesley must have looked up and not been fed, for Professor Bacon's talent for exposition is not equal to his scholarship, which is clearly of the best. The lecture is, however, clarity itself compared with the three appendices, which are intended "to exhibit by analytical and synthetic criticism the nature and inter-connection of the greater discourses of Jesus." But these appendices are not intended for the general reader. They are Professor Bacon's justification, to other scholars and to studious clergymen, of the results set forth in the lecture and of the methods by which they are obtained. They admit one to the processes of the higher criticism in a very interesting manner. These processes are conjectural to a considerable degree, and they will not be equally convincing to all who examine them. The more conservative will find them rash, if not irreverent, and some of them will prefer the New Testament as it is written to Professor Bacon's disintegration and reconstruction, which leave hardly one text of the original version standing securely on another. Even the lecture in its more popular form is not reassuring for those who are hoping that the results of the higher criticism can be made accessible to simple folk. Its processes, as here revealed, are extremely tentative, and Professor Bacon so frankly discloses his disagreement with other scholars of great reputation that he sensibly diminishes the appearance of certainty attaching to his own results.

In the fore part of the lecture, careful attention is given to the objections that have been urged against the existence of any Sermon on the Mount as a long, articulated discourse. These objections are: that the discourse as given abounds in neo-legalism, which was an afterthought of early Christianity; that the teaching of Jesus was made up of short, detached sayings; that, according to Luke, about one-fourth of the Sermon on the Mount, as given by Matthew, was given on other occasions. These objections are all met with partial concessions, the first by the very nice dis-

tinction that the neo-legalism in Matthew is that of the compiler, not that of Jesus himself, but that the Sermon as given by Jesus was quasi-legalistic, having the spirit of Paul's anti-legalism, but the form to some extent of a new law. This is considering very curiously, but the opinion is carefully worked out. The second objection is met with the contention, not perfectly made good, that Jesus was more prophet than scribe, and that much of his teaching had the character of continuity. The third objection is less confuted than confessed. But granted that the Sermon in Matthew is largely a mistaken synthesis, it need not be so in its entirety, and Professor Bacon insists that it is not.

Before passing to his own synthesis, Professor Bacon halts for a few pages to rebuke those who speak lightly or scornfully of the higher criticism. He is unduly sensitive to the blame that has been visited upon his guild. When he gets fairly to work, first to eliminate the elements that are incongruous with the main body of the Sermon, and then to construct this in a new and better synthesis, he is always interesting, and generally quite convincing, if not entirely so. The new synthesis as given is a coherent and effective discourse on "the higher righteousness." Both in its general amount and in the brevity of particular parts, it keeps much closer to Luke's than to Matthew's form. The Lord's Prayer is one of the eliminated parts. The third appendix, which endeavors to free the incongruous parts from their false agglutination and set them in their appropriate relations, is hardly more ingenious than persuasive. But that a professor of New Testament criticism in Yale University should handle his material in this free-and-easy way, setting the evangelists right in so many particulars, is a remarkable sign of the times, and of the length the doctrine of the Bible's verbal inspiration has been left behind.

---

*Life and Letters of Thomas Cromwell.* By Roger Bigelow Merriman. With a portrait and facsimile. 2 vols. New York: Henry Frowde. 1902.

The thesis on Thomas Cromwell which Dr. Merriman presented at Oxford for the Bachelor of Letters degree, has now been given permanent form in a book, and published by the Clarendon Press. The two handsome volumes before us are a production which any historical scholar might be glad to put forth as his "first heir." Both in point of learning and of expression this work is more than usually creditable, and should prove an incentive to sustained effort.

Dr. Merriman performs a double function. Besides writing an adequate account of Cromwell's life, he publishes a large body of his correspondence.

"To transcribe *in extenso* the letters he received would be almost the task of a lifetime, for they form the bulk of the enormous mass of material with which the editors of the Calendars of State Papers for the years 1533-40 have had to deal. But the number of extant letters he wrote is, comparatively speaking, extremely small; it has, therefore, been possible to make full copies of them in every case, and I trust that the many advantages—linguistic as well as historical—that can only be secured by complete and, as far as possible, accurate transcriptions of the originals, will be accepted as sufficient reason for editing this collection of documents, twenty-one of which have neither been printed nor calendared before."

We quote this passage because it refers to one of the most important features of the work. Not only "has it been justly said that Cromwell's correspondence is our chief source of information for the period immediately following the breach with Rome," his letters are, if we go by bulk, the chief factor in this study, and, thanks to Dr. Merriman's painstaking transcription, they now become accessible as they have never been before.

The early part of Cromwell's life is a subject notoriously obscure and difficult. Mr. James Gairdner has tried his hand at it, briefly, in the Dictionary of National Biography, and Mr. John Phillips has given portions of it minute attention in local researches regarding the manor of Wimbledon. Though Dr. Merriman supplies a clear examination of the evidence already known, he has nothing of material interest to add. On the whole, his attitude towards the meagre data which exist is a conservative one.

"It has been the fashion to decry Bandello and Foxe, and to disbelieve all their stories, because of the undoubted confusion of dates which vitiates their testimony. But if no reliance can be placed on them, or on Pole, Chapuys, and the chronicles of the period, must we not confess that our knowledge of the early years of our subject's life must reduce itself to an interrogation point?"

It must have been a remarkable chapter of experiences in Italy and the Low Countries which helped to shape Cromwell's character, and give him such practical rules of conduct in his dealings with men. The famous novel of Bandello regarding the courtesy of the Florentine Francesco Frescobaldi to a stranger who afterwards became the great and powerful Cromwell, may be overdrawn in particular details, but it does not exaggerate the vicissitudes of a phenomenal career. Dr. Merriman considers that Cromwell was at the battle of the Garigliano, in 1503, and not, as Galton would have it, at Marignano, twelve years later. There can hardly be a doubt concerning the incorrectness of the latter opinion.

More important than the question of Cromwell's adventures abroad is that of his personal character. Dr. Merriman rejects without hesitation the idea of Cavendish, Shakspere, and Froude, that he was loyal to Wolsey in any true sense of the word. The most that can be said in his favor is, that he was the chief means of securing the Cardinal's temporary pardon in February, 1530. The real crisis, however, came in the autumn of the same year, when Wolsey's enemies were drawn up in battle array. Then Cromwell did nothing for his master, and it seems most doubtful whether at any time he did more on behalf of the fallen statesman than was necessary to protect his own reputation from a charge of base ingratitude. He at once sought out Wolsey's great foe, Norfolk, as his patron, made his peace, and almost certainly entered the Parliament of 1529 through Norfolk's means.

Dr. Merriman has made no new discovery in demonstrating the selfishness of Cromwell's personal aims (where money and power were concerned) and the Machiavellianism of his political principles. None the less, the emphasis which he lays upon Cromwell's sinister practices is important because it is the fruit of thorough and impartial research. The preface claims exemption from religious bias, and, so far as we have observed, the claim is just. Directly and indirectly Cromwell helped forward the Protestant cause, but he is the last man, among somewhat unedifying associates, whose acts can be made a theme for edification.

Dr. Merriman has an admirable chapter on "The Work of Thomas Cromwell," in which, among other things, it is pointed out that some of his radical measures had unlooked-for results. For example, the transfer of monastic lands to families like the Russells, Seymours, the Cavendishes worked out badly for the crown. He thus enriched a new aristocracy that, in the days of the Stuarts, proved hostile to that absolutism which Cromwell sincerely upheld.

Looking upon Cromwell as a politician first and foremost, *mutatis mutandis* as an English Maurice of Saxony, as a minister who entered into religious matters merely because they were fixed conditions, Dr. Merriman rather inclines to set aside the deeper religious problems of the period. We would not call this a defect of his work, for the aims proposed exclude the consideration of such things; but when we close this admirable monograph we do so with the feeling that the best in the English Reformation is not represented by the sentiments and policy of Thomas Cromwell.

---

*A. W. Kinglake:* A Biographical and Literary Study. By the Rev. W. Tuckwell. London: George Bell & Sons; New York: Macmillan. 1902.

Mr. Tuckwell is the first to publish a separate volume on Kinglake's life and works. In size the book is a slight one, but it tells us far more than could be learned from the article in the Dictionary of National Biography, and much of it has been drawn from fresh sources. Madame Novikoff, whose friendship with Kinglake was a very important feature of his later years, permitted Mr. Tuckwell to use such portions of her correspondence as were essential to his purpose; and though he has not pressed this privilege too far, it has proved particularly valuable. After making his other acknowledgments, it is in the following terms that he confesses his chief indebtedness:

"Kinglake's external life, his literary and political career, his speeches, and the more fugitive productions of his pen were recoverable from public sources; but his personal and private side, as it showed itself to the few close intimates who still survive, must have remained to myself and others meagre, superficial, disappointing, without Madame Novikoff's unreserved and sympathetic confidence."

Kinglake was born in that *annus mirabilis* of birth-years, 1809, and gained wide reputation at the age of thirty-five by the publication of 'Eothen.' The important part of his life covered about twenty years, between 1844 and 1864. Then, for above a quarter of a century, he remained a figure at the Athenæum Club and in select society, with the standing of a man who had achieved his place, but with a fame that was historic rather than contemporary. During the period when he was at work on his 'Invasion of the Crimea,' he entered Parliament for Bridgewater, and held his seat

until 1868, when he was unseated for the corrupt practices of his agents. There is not much more to be told about his career save for his early travels in the East and his friendships. On the literary side he is known as the author of two striking books. As a personal force, he is memorable for his independence of view and a downrightness of utterance which sprang from conviction more than from bad manners. He was, Lord Houghton has said, "as bold a man-at-arms in literature as ever confronted public opinion."

Though a civilian, Kinglake had all the instincts of a professional warrior. His most prominent trait was fondness for the army and respect for those who showed themselves worthy to be its leaders. An amusing instance of this feeling is furnished by his comment upon the Salvation Army in the early days of its organization. "His deferential regard," says Mr. Tuckwell, "for army rank was like that of Johnson for bishops. Great was his indignation when the 'grotesque Salvation Army,' as he called it, adopted military nomenclature. 'I would let those ragamuffins call themselves saints, angels, prophets, cherubim, Olympian gods and goddesses if they like; but their pretension in taking the rank of officers in the army is to me beyond measure repulsive.'" Thus his hero-worship for Lord Raglan was neither surprising nor accidental. As the late J. C. Ropes was prevented by physical disability from being a soldier, and became a lawyer only by constraint, so it was with Kinglake. In his case, shortsightedness was the impediment, but he had courage and the venturesome spirit to the full. He was close behind Lord Raglan at the crossing of the Alma, and in the Crimea saw almost as much of action as the modern war correspondent does. From the same source sprang his reverence for the "strong man," wherever the latter might be discovered. He outlived, it is true, a large part of his admiration for Lord Stratford, but it was the Lord Stratford of later years whom he ceased to applaud. Of similar origin, too, was his friendship with Carlyle and with Froude. "Froude himself he often likened to Carlyle; the thoughts of both ran in the same direction, but, of the two, Froude was by far the more intellectual man."

Mr. Tuckwell's own criticism of 'Eothen' and the 'Invasion of the Crimea' is very fresh and entertaining. Kinglake, of course, looked upon the Crimean book as his masterpiece, and spent all his leisure to the moment of his death upon successive revisions of it. Unfortunately for the work, the subject tends to decline in importance, and our present standards of literary taste are averse to such hard hitting. 'Eothen,' however, remains and is still a delight. Those were fine days for travel books at the middle of the century, when 'The Monasteries of the Levant,' 'The Bible in Spain,' 'Eothen,' and 'The Crescent and the Cross' were appearing. Here Kinglake holds his own; and he more than holds his own in respect to character, for, with all his pugnacity, new evidence shows that he had sincerity of disposition.

Mr. Tuckwell is a lively writer, and his memoir is none too long. It should be especially praised for its copious supply of good stories.

---

*Oriental Series:* Japan and China. In Twelve Volumes. Vols. V.-VI. Japan: Its History, Arts, and Literature. By Capt. F. Brinkley. Boston: J. B. Millet Co.

These two volumes complete the first half of the proposed dozen on China and Japan. Besides a large colored folding map, there is an index to the six volumes. The historic point of view in Volume V. is that of one who surveys the Japan known to Europeans, its financial and economic conditions, foreign politics, steps of progress, creed and caste, religion and rites and superstitions. The ceremonial side of life and a history of commerce are presented in the concluding volume. The same mastery of his abundant materials, equal power of insight and interpretation, delight in his task, and clearness of expression characterize this portion of Capt. Brinkley's work, and the illustrations and mechanical outfit in quality and quantity are the same.

In discussing financial conditions, the author shows how finely the Japanese have been able to make much out of little—a trait, indeed, which seems to have distinguished the canny islanders throughout their whole history. Japan's great difficulty is still want of capital, and recourse to cheap money from outside seems to be the natural exit from difficulties that are pleasant rather than fearsome. While the currency was on a silver basis, Japan hesitated to contract gold debts, and European capitalists would not lend in terms of silver. Now her situation is much more favorable, but the conservatism of Western money-lenders is still great. Either they lack confidence in Japan's integrity, or they regard this as a still unknown land. Nevertheless, recent returns from sixty-eight joint-stock companies showed that these paid an average annual dividend of sixteen and one-half per cent. There are so many outlets to new industries, with so little home capital available, that temporary embarrassment is most natural.

The chapters on Japan's foreign politics are as strong as might be expected from one who discusses intricate questions of state with the native statesmen in their own tongue. They include a brief but luminous analysis of the Japanese campaigns on land and water in 1894-5. In showing "steps of progress," the viciousness of the quality of journalistic writing in Japan, which is marred by extreme and pedantic classicism, is shown. Even the imperial court is held in the grip of this Chinese old man of the sea, for when the Mikado (though Capt. Brinkley taboos this ancient and honorable word, which, besides having both significance and individuality, is entrenched in English literature) speaks, either by rescript or by edict, he never addresses the bulk of his subjects. His words are taken from sources so classical as to be intelligible only to the highly educated minority. Some of the newspapers ape this style also, sacrificing their audience to their erudition. Preferring classicism to circulation, their columns are a sealed book to the whole of the lower middle classes and to the entire female population. It seems strange that, while the Japanese should discard their picturesque costume, they still cling to a written language much more difficult to understand than their speech. Some of the journalists persist in making the national misfortune as great as possible. The greatest handicap upon Japan's progress, next to the bad mercantile morals, is her adherence to Chinese script and to the classic diction whose acquirement, even by a native, means the learning of a new language. Indeed, it seems almost like a paradox that the Japanese, so original in many respects, should so long have neglected the cultivation of their own tongue, and have given their intellectual strength to writing what is nothing but mispronounced Chinese. In "Creed and Caste" the author shows how powerfully, in times past, religion has made politics and shaped social organism; so much so that even at present the native scholar is instantly in peril who seeks to examine too critically the foundations on which the authority of the Emperor rests.

The chapter on superstitions is rich in delightful lore, showing how little removed from the intellectual habits of the North American Indian the average Japanese rustic is. Buddhism, with its doctrine of metempsychosis, is doubtless responsible for many phases of the belief, that makes the whole animal creation, from the elephant to the microbe, near relatives to the human family. Even yet in very respectable households a sword is placed near the corpse, to keep away cats, which, along with the fox and the badger, possess the power of transformation. The upper classes are comparatively free from such phantasies, but among the great multitude the traditional mysticism handed down from generation to generation in the secluded family circle of the Japanese nation has always been very considerable. Nevertheless, since Japan has never been troubled by the fiercer beasts of prey, lions and tigers, or by venomous reptiles, there are not many painful superstitions attaching to the lower orders of creation. Most of the notions are harmless and sunny. As tutelary spirits, or messengers of the gods, certain creatures are regarded with awe or amusement. Probably the colossal catfish whose writhings cause earthquakes is the largest of these imaginary beasts. The menagerie of mythical zoölogy is sufficiently stocked to enable blunderers and stupid folk generally to explain to scrutinizing wives or parents marks of personal damage. When escapades have happened through waywardness, illicit night adventures, or an overplus of alcoholic spirit, such imaginary creatures, that infest earth, air, and water, serve well as scapegoats.

What is here written on festivals, observances, and pastimes furnishes a key to much that would otherwise be inexplicable to the alien when he is studying the joyous side (a very large side) of Japanese life. Volume VI. might serve as a hand-book to spectators of the great processions which at certain seasons make the streets in Tokio so brilliant. Some of these *matsuri*, which last three days, show *dashi*, or profusely decorated cars with lofty platforms and images far up in the air, that have required months of preparation. These with the merrymakers rehearse, in brilliant color, famous episodes. Here one beholds how men get turned into gods, and how picturesque mediæval burglars masquerade as benefactors. Here sways aloft in air the bedizened traitor and villanous malefactor, to whom divine hon-

ors are paid in order to quiet his troubled spirit, or to win from him the approving smiles that bring prosperity. The great white elephant, with a man inside each leg, moves majestically on. The musicians who desolate the air with Korean and prehistoric music, the dancers, jesters, and posturers, delight thousands of spectators, and it is very evident that as long as these thieves, assassins, and ruffians are popularly glorified, Japan will reap fresh crops of home-grown assassins.

It is true that, as Capt. Brinkley explains, the real significance of these demonstrations is not mistaken in Japan, and that the worshippers at the tombs of murderers, and the bringers of offerings at the shrines of robbers, "abhor the sin without hating the sinner," and that the Government could stop these things in a moment if it would. Nevertheless, we believe that so long as the graves of the Forty-seven Ronins enjoy a perpetual decoration day, so long will the intending assassin find consecrated ground on which to nourish his murderous spirit and justify his purpose when, for the posthumous glory sure to be awarded him, he drives the knife home, considering himself the appointed "instrument of Heaven's vengeance." The late Fukuzawa by his pen drove hara-kari out of custom—yes, almost out of literature—and we believe that, in the future enlightened Japan, the burial-ground of the Forty-Seven Ronins will be closed as a public nuisance. In the history of commerce in Japan, our author presents, with liberal scholarship and critical acumen, almost every phase of this interesting subject, showing incidentally how the Japanese in their own way anticipated by their documentary expedients most of the methods of commerce in the West. As for the future, it is clear that the development in Japan's trade will be in the direction of manufactures. She may send abroad silk and tea, marine products, and some minor staples, but, unless Formosa develops unsuspected riches, her producing capacity has already shown its limits. Her extent of arable land is disproportionately small, there being less than twelve millions acres under crops, with little prospect of extension or of enlarged yield by new processes, while all the time population increases at the rate of half a million annually, and finer articles of food—for example, rice instead of barley and millet—are craved not as luxuries but as necessities. Japan must soon be obliged to import large supplies of rice, timber, of cotton and even of wool, for her pastures, rich in bamboo scrub but not in grass, are not for sheep. Nevertheless, with her cheap labor and her people, intelligent, docile, dexterous, and gifted with artistic taste, Japan has a great future in manufactures. The efficiency of the army and navy shows that it is not capacity but practice which the Japanese lack. What they have been able to do with soldiers on sea and land, they are likely to do in commerce and manufactures when they are less jealous of aliens and more coöperative in mind.

## BOOKS OF THE WEEK.

Burt, S. W. My Memoirs of the Military History of the State of New York. Albany: Published by the State.
Crimmins, J. D. St. Patrick's Day: Its Celebration in New York and Other American Places, 1737-1845. Published by the Author.
Desmond, H. W. The Heart of Woman. J. F. Taylor & Co. $1.50.
Douglass, J. M. The Riding Master, and Other Stories. F. Tennyson Neely. $1.
Fyffe, H. C. Submarine Warfare. London: Grant Richards; New York: E. P. Dutton & Co. $3.00.
Glasgow, Ellen. The Freeman, and Other Poems. Doubleday, Page & Co. $1.50.
Gudeman, Alfred. P. Cornelii Taciti de Vita et Moribus Cn. Jul. Agricolae Liber. Berlin: Weidmannsche Buchhandlung. 1 mark 40 pfg.
Henley, W. E. Views and Reviews: Essays in Appreciation..—Art. Scribners. $1.00.
James, Henry. The Wings of a Dove. 2 vols. Scribners. $2.50.
Lindsay, C. M. Cavalier Poets. Abbey Press. 75 cents.
Miller, Esther. A Prophet of the Real. J. F. Taylor & Co. $1.50.

Taft, W. H. The Philippines. The Outlook Co. $1.00.
Waterloo, Stanley. The Story of a Strange Career. D. Appleton & Co. $1.20.
Wells, Carolyn. Folly in the Forest. Philadelphia: Henry Altemus Co. $1.
Winslow, Helen M. Literary Boston of To-day. Boston: L. C. Page & Co. $1.20.

## Four Important Text Books

### Aikins's Logic.

By Prof. HERBERT A. AIKINS, Western Reserve University. 498 pp., 12mo, $1.50 *net.*

"I have found it a fresh, practical, and interesting treatment of logical doctrine, chiefly from an objective point of view, which is unusual with the deductive logic. This, I believe, will not only appeal more strongly to the interest of students, but will aid them more effectively in attaining to sound and critical habits of thought. I have been much interested in the book."—Prof. J. W. STEARNS, University of Wisconsin.

"I do not know of any elementary text-book that equals this of Dr. Aikins's in the presentation of the problems and methods of inductive logic"—Prof. W. P. MONTAGUE, University of California.

### Sanford's Elements of Physics.

By Prof. FERNANDO SANFORD, Stanford University. 426 pp., 12mo, $1.20 *net.*

A text-book for high schools, designed to include all necessary material for both text-book and laboratory manual.

"The distinctions between energy, force, motion, acceleration, and momentum are closely developed, and just sufficient formulæ are introduced to indicate their use. The various vibratory forces, clearly treated with a view to recent developments, with optics make the final subject for study. The close relation of the various phenomena of magnetism and electricity is insisted upon, and the dynamo as the foundation of modern industry is given a prominent place. Heartz' and Marconi's work are briefly shown."—SCHOOL JOURNAL, N.Y.

### Noyes's Organic Chemistry.

By Prof. WM. A. NOYES, Rose Polytechnic Institute. (*Oct.*)

An attempt to present the fundamental principles of organic chemistry for the use of beginners acquainted with the elements of inorganic chemistry. Its most radical departure in method consists in the dropping of the division into "fatty" and "aromatic" compounds and in the adoption of what appears to the author a more fundamental and logical classification.

### Echols's Differential and Integral Calculus.

By Prof. W. H. ECHOLS, Univ. of Virginia. (*Oct.*)

This text is designed to meet the needs of the undergraduate work in American universities. The treatment is elementary and clear. The subject is developed continuously and is based on the Law of the Mean Value. The text is divided into two books; Book I. treats Differentiation and Integration of Functions of One Variable, with extensive applications to Geometry; Book II. treats Functions of Two and Three Variables. Examples, geometrical illustrations, and figures abound throughout the text.

Henry Holt & Co.,

29 W. 23d St., New York. 378 Wabash Ave., Chicago.

## Some Recent Text-Books

### AN INTRODUCTION TO THE HISTORY OF WESTERN EUROPE.

By JAMES HARVEY ROBINSON, Professor of History in Columbia University.

**Part I—THE MIDDLE AGES.**

(Special edition for use this fall.) *Ready in Sept.*

### GARDINER, KITTREDGE, AND ARNOLD'S THE ELEMENTS OF ENGLISH COMPOSITION.

**THE MOTHER TONGUE. Book III.**

A book particularly well adapted for use in high schools.

### DAVIS' ELEMENTARY PHYSICAL GEOGRAPHY

A new book by the author of the Physical Geography.

### WITMER'S ANALYTICAL PSYCHOLOGY

Very few recent books in philosophy or psychology appeal to a more definite need than this book or meet it more adequately.—JOHN DEWEY, *The University of Chicago.*

### WHITE'S MONEY AND BANKING

Illustrated by American History. Second Edition. Revised and Continued to the year 1902.

### GAGE'S INTRODUCTION TO PHYSICAL SCIENCE

**Revised Edition.**

In this book the revision is thorough, and the book has been brought completely down to date.

### BLAISDELL'S LIFE AND HEALTH

A smaller and less difficult book than the author's "Practical Physiology."

### MYERS' MIDDLE AGES

**Part I. of Mediaeval and Modern History Revised.**

### YOUNG'S MANUAL OF ASTRONOMY

A text-book intermediate between the author's "General Astronomy" and his "Elements of Astronomy."

*Prices and descriptive circulars of these books will be sent to any address, postpaid, on application. Correspondence is invited and will receive the prompt and careful attention of the publishers.*

**GINN & COMPANY Publishers**
**Boston New York Chicago London**

*AN INSPIRING BOOK.*

## THE CODE OF JOY.

BY

**CLARENCE LATHBURY**

***Price 40 cents.***

*A Strong and Entertaining Novel.*

## Leaves from a Life-book of To-day.

BY

It is the ONE Great AMERICAN ENCYCLOPÆDIA—new text, new type, new illustrations. There is nothing in this country comparable with it. Its only peers are the great German Encyclopædias.

**A LIBRARY OF UNIVERSAL KNOWLEDGE, ANCIENT AND MODERN**

Every topic of human knowledge or investigation, **from the world's beginning to the present day,** is presented in clear, succinct, accurate, impartial, and popular statement. Art, science, history, biography, religion, discovery, government, and so on for **a hundred Departments,** are treated by specialists who are **recognized authorities.** One alphabetical arrangement embraces the entire field of subjects, making them instantly accessible for the busy man, student, or general reader. **There are more than 1,000 full-page illustrations, colored plates, maps, and charts, besides hundreds of text illustrations.**

**SILAS H. BERRY,** Librarian, Y. M. C. A., New York: "I have not during the past ten years seen an Encyclopædia that I was willing to recommend to our association libraries until Vol. I. of the NEW INTERNATIONAL came to my attention. You have, I believe, made an entirely new encyclopædia, supplying a real need in the book world."

**CRITICAL EXAMINATION INVITED**

# *Quaker Arrivals at Philadelphia*

**1682-1750** *Being a List of Certificates of Removal Received at Philadelphia Monthly Meeting of Friends.*

A valuable mine of information for the genealogist and for the historian interested in the early migrations into Pennsylvania. It includes a complete list of hundreds of Quaker emigrants from England, Ireland, Wales, Barbadocs, etc., arriving at Philadelphia Monthly Meeting during the above period, giving also the location whence they came, and usually other items of the condensed information especially valuable to the genealogist and historian. Compiled from the original manuscript records of Philadelphia Monthly Meeting by ALBERT COOK MYERS, M.L. A full alphabetical index of the names is appended. Price, **$1.25,** postpaid. **FERRIS & LEACH, Philadelphia.**

# Things to Consider in the Selection of a Girls' Boarding School

**The Director of the Gilman School desires to call attention to the following extract from a thoughtful article in *The New York Evening Post* of August 30, 1902. The writer had been speaking of some of the illnesses of school girls:**

"Now, are these ills to be laid to the school or to conditions outside? And if due to the school, does the fault lie mainly in excessive study? Doctors often seem to blame study. They say: 'Take Tom or Mary out of school, away from books, and give the child a good rest.' Yet such advice need not mean that hours of study have been excessive. The limit of work may have been too easily reached, and many causes besides study may impair vitality and sap endurance. It is easier to say 'Take the child out of school,' than to suggest investigating the school system of ventilation; and it is probably easier to get the average American parent to shorten a girl's school hours than to keep her from parties. Human nature, even in doctors, inclines to the line of least resistance. But there is need of looking deeper.

"Parent and teacher ought constantly to bear in mind the great truth that the child's life is a unit. You cannot break it up into bits, and hand over one part to the school and one to the home, bidding each keep within its own province. It is the same child which goes to school or playground, and then comes home again. A lack or disturbance anywhere affects the whole life.

"The school should provide proper space, ventilation, heating, lighting, sanitary precautions, and proper seating arrangements. These subjects have been thoroughly investigated, and there is to-day a fair agreement of opinion as to what 'proper' involves. The standards on such matters can be found in any good book on school hygiene, such, for example, as that by Shaw, published by Macmillan in the 'Teachers' Professional Library.' Professor Shaw gives certain minimum requirements as follows:

"'Floor space, per child, 15 square feet; air space, 200 cubic feet. Light should be admitted from the left; if necessary, from the rear; but never from the right. The glass surface admitting light should be from one-fourth to one-sixth of the floor space. The system of ventilation should be such as to admit 30 cubic feet per pupil of fresh air per minute. Children should never be kept in a room where the temperature is below 60 degrees or above 70 degrees. Each child should have a seat to itself, adjusted to its height.'

"These facts have been so well established and so fully discussed that obedience to their requirements is usually taken as a matter of course. Yet it is by no means a matter of course, even in schools of high standing. The parent owes it both to the school and to his child to visit the school and see things for himself. If things are in good shape, teachers will be grateful for appreciation. If all is not right, the parent can perhaps help to make improvements.

"Perfect sanitary conditions are expensive, and few schools can afford to follow ideals to which their patrons are indifferent.

"But the most ideal conditions in the school will avail little if children come over-stimulated by unwholesome amusements and late hours, or suffering from insufficient or improper food. Here the teacher's task is difficult, as parents may very naturally resent advice. There is need of the greatest patience and tact. The school must make clear the deep personal interest it takes in the welfare of each individual child."

**The GILMAN SCHOOL for GIRLS, at Cambridge, Massachusetts (originally called by its founder, THE CAMBRIDGE SCHOOL FOR GIRLS, but familiarly known as The Gilman School), is more generous than the above requirements of Professor Shaw in regard to floor space, provision for air and other sanitary arrangements. A booklet descriptive of the School and School life will be sent on request.**

THE PHARAOH AND THE PRIEST
An Historical Novel of ANCIENT EGYPT
From the original POLISH OF ALEXANDER GLOVATSKI,
BY JEREMIAH CURTIN, Translator of QUO VADIS, etc.

No novel of such interest and power as "The Pharaoh and the Priest" has been written about Egypt thus far.

In this book the Egyptian state stands before us as a mighty living organism.

ILLUSTRATED · 12 MO · $1.50
LITTLE-BROWN & CO. Publishers Boston

**The Alcotts in Harvard.**

By Mrs. ANNIE M. L. CLARK.

This monograph of 42 pages, with 7 views and 4 reproductions, gives an interesting account of A. Bronson Alcott's vegetarian community, "Fruitlands," at Harvard, Mass., and embodies Mrs. Clark's reminiscences of Louisa Alcott and her sisters, during the residence of the family at Still River (a village of Harvard), after the collapse of the community.

Printed on hand-made paper, and neatly bound in boards. Sent post-paid on receipt of price, $1.50.

J. C. L. CLARK, Lancaster, Massachusetts.

*TRAVEL AND DESCRIPTION*

## Quebec: The Place and the People

By Sir GILBERT PARKER, Author of "Pierre and His People," etc. In two vols., with over 100 illustrations. Cloth, 8vo, **$4.00**

*Also an edition on large paper limited to one hundred copies.*

## New England and Its Neighbors

By CLIFTON JOHNSON, Author of "Among English Hedgerows," etc. Profusely illustrated glimpses of charming phases of rural life. Cloth, cr. 8vo, **$2.00** *net.*

## The Scott Country

By WILLIAM SHILLINGLAW CROCKETT, Author of "The Minstrelsy of the Merse," "Poets and Poetry of Berwickshire," etc. Illustrated with numerous drawings. Crown 8vo, **$2.00** *net.*

## Ave Roma Immortalis.

*A New and Cheaper Edition in One Volume with Many New Illustrations.*

By F. MARION CRAWFORD, Author of "Saracinesca," "In the Palace of the King," etc. Cloth, crown 8vo, **$3.00** *net.*

## Pompeii: Its Life and Art

*A New, Cheaper and Revised Edition with many additions.*

By AUGUST MAU. Translated by Francis W. Kelsey, University of Michigan. Crown 8vo, **$2.50** *net.*

*FICTION*

## Children of the Frost

By JACK LONDON, Author of "The Son of the Wolf," "The God of His Father." Illustrated by R. Martine Reay. Cloth, 12mo, **$1.50**

## A Little Captive Lad

By BEULAH MARIE DIX, Author of "The Making of Christopher Ferringham," "Soldier Rigdale," etc. Illustrated by Will H. Grefé. Cloth, 12mo, **$1.50**

## The Crisis.

*The James K. Hackett Edition*

By WINSTON CHURCHILL, Author of "Richard Carvel," "The Celebrity." Illustrated with many scenes from the Play and Portraits of Actors. Cloth, 12mo, **$1.50** *net.*

## Bayard's Courier:

**A Story of Love and Adventure in the Cavalry**

By B. K. BENSON, Author of "A Friend with the Countersign," "Who Goes There?" Illustrated by Louis Betts. Cloth, 12mo, **$1.50**

*MISCELLANEOUS*

## How to Sing

By LILLI LEHMANN-KALISCH. Illustrated with diagrams and cuts. Cloth, 12mo, **$1.50** *net.*

## Theology and the Social Consciousness

By HENRY CHURCHILL KING, Professor of Theology in Oberlin Theological Seminary. Cloth, 12mo, **$1.50** *net.*

## The Diamond Mines of South Africa

**Some Account of Their Rise and Development.**

By GARDNER F. WILLIAMS, M.A., General Manager of the De Beers Consolidated Mines, Ltd. Profusely illustrated. Cloth, royal 8vo.

*Also a large-paper edition limited to one hundred copies, on hand-made paper.*

## American Municipal Progress

*New Volume in The Citizen's Library of Economics, Politics and Sociology.*

By CHARLES ZUEBLIN, B.D., Associate Professor of Sociology, Univ. of Chicago. Cloth, 12mo, **$1.25** *net.*

## An Ancient History for Beginners

By GEORGE WILLIS BOTSFORD, Ph.D., Lecturer in Ancient History, Columbia University. Cloth, crown 8vo.

## An Introduction to Celestial Mechanics

By FOREST RAY MOULTON, A.B., Ph.D., Associate Professor of Astronomy, Chicago University. Cloth, 8vo, Illustrated.

## The Psychological Basis of Religious Faith

By the late Dr. CHARLES CARROLL EVERETT, Professor of Theology and Dean of the Cambridge Divinity School for many years.

## From the Old World to the New:

**How America Was Found and Settled.**

By MARGUERITE STOCKMAN DICKSON. With many illustrations and maps. Cloth, 12mo.

## The History of South Carolina

**In the Revolution, 1780-1783.** Vol. IV. By EDWARD MCCRADY, LL.D., a member of the Bar of Charleston, S. C. Cloth, crown 8vo.

## The Principles of General Method

*Based on the Ideas of Herbart. (Revised and Enlarged.)*

By CHARLES A. McMURRY, Ph. D., State Normal School, DeKalb, Ill. Cloth, 12mo.

*Books published at* NET *prices are sold by booksellers everywhere at the advertised* NET *prices. When delivered from the publishers, carriage, either postage or expressage, is an extra charge.*

# The Nation.

*NEW YORK, THURSDAY, SEPTEMBER* 11, 1902.

## The Week.

On September 3 the President of this nation was exposed to mortal peril in the kind of accident which every day cuts off from the living one or more American citizens. The profound sense of thankfulness and relief universally felt at his escape is in striking contrast with the public apathy amid which obscurer victims of automobile and electric car meet mutilation and death. We make no complaint of this state of things: the President's life is justly held more precious than that of the average citizen. But we do quarrel with the indifference which turns the common roads over to every kind of swift and ponderous vehicle, and with the cynicism which gives to those who are bound to exercise the greatest care a virtual license for recklessness. It is well to inquire how it is possible for an American citizen, simply because he is also a motorman, consciously to put the President's life at hazard, for the sake of saving a few seconds of time. No doubt it will turn out to be the case that Motorman Madden acted with democratic impartiality. He is said to have told the expostulating and bleeding President that he (Madden) "had the right of way." The phrase is instructive. There are many reasons to believe that "Devil take the hindmost" is in some danger of being accepted as the rule of the road among us. It is only when a President's life is in danger that we so much as question the new theory of "right of way." Our high roads have greatly changed since De Quincey saw in the mail-coach an awful symbol of sudden peril by the way. Swift and dangerous means of locomotion have outgrown the older laws, the habits of the courts, and have dazed public opinion. If the President's peril brings this condition home to us, and suggests a remedy, it will be a striking instance of good as the "latter end of ill."

---

Whether a President of the United States should "swing around the circle," as Mr. Roosevelt has been doing in New England and the South, is a question that has suggested itself to many people and newspapers. The Boston *Herald*, for instance, is not at all sure that such extended and hasty tours as the President is now making are consistent with the dignity of the great office he holds, and believes that "the President was never intended to be anything like a stump orator." Those who see in the accident at Pittsfield a warning of what may happen to a President who leads too strenuous a life, would also prefer to have the President journey less, and only under conditions which insure his safety as far as possible. We do not, however, agree with what seems to be the Boston *Herald's* contention, that the President should hold communication with the people only by his messages to Congress. In the nature of things, occasions must arise when, by means of a public address in some great centre, the President will be able to arouse the public as in no other way. The question of our relations with Cuba is one in point. Congress having deliberately declined to come to the rescue of that ill-treated island, and having wantonly disgraced the American name at the behest of the beet-sugar interests, the President is eminently justified in going to and among the people in order that justice may be done.

---

As to the manner of doing this, we are not of the opinion that it calls for journeys to small hamlets throughout a particular section of the country. If the President favors New England, there will be calls for him from the Pacific slope, the Middle West, or the South, which the party managers will insist upon his acceding to. This is manifestly impossible. So vast is the country that the President cannot afford to take the time to travel to any great extent even once in two years. More important than this is the fact that there is probably no man living who can make more than half-a-dozen addresses without the necessity of repeating himself again and again, just as the President has done in his speeches on the Trusts. There is a distinct limit, too, to the number of persons and things that can be praised. Mr. Roosevelt has, for instance, expressed his unbounded admiration for Secretaries Hay, Moody, and Root, ex-Secretary Long, Gov. Crane, Gen. Wood, Gov. Taft, Attorney-General Knox, J. G. Blaine, the army, the navy, the Department of Agriculture, the veterans of 1861-1865 and of 1898, the locomotive engineers and firemen, the workingman, the helpful capitalist, and the non-hurtful Trust—and we forget how many more. Gradually, we fear, Mr. Roosevelt will have exhausted the all too short list of good men and women, and be in still greater danger of rendering himself cheap in the public eye. And the President of the United States cannot afford to do that, however much he may sincerely desire to be democratic and go about among the people.

---

Democratic stupidity has seldom been more flagrantly illustrated than in the recent Vermont election. For fifty years that party has advocated the principles of high license and local option. This year the regular Republican candidate was opposed by a bolter who represented those principles, and there seemed to be a chance of his election if the Democrats would give him their support. By themselves the Democrats were utterly helpless, while if they would vote for the candidate who represented Democratic doctrine on this question, they might secure the triumph of their cause. But the little group of managers who run the organization would not consider this idea, and insisted upon putting up a candidate of their own. Considerably more than half of the Democratic voters refused to abide by the decree of the convention, and supported Mr. Clement, the Republican bolter; but the Bourbon managers held over 7,000, and thereby prevented Mr. Clement's securing a majority. The full vote of the State was 28,117 for Mr. Clement, and 7,280 for the Democratic nominee—or a total of 35,397 if all had been cast for the bolter; whereas the regular Republican candidate had only 31,788, and the Prohibition candidate 2,525, making 34,313 together—a clear majority of over 1,000 for Mr. Clement if all of the Democrats had supported him. As it is, the Legislature will elect, and there will be a majority of members for the regular Republican candidate.

---

In nominating Dr. George C. Pardee for Governor the Republicans of California appear to have risen far above the level usually attained in the political affairs of that State. Dr. Pardee is distinctly a reform candidate, his nomination having been brought about as one of the results of exposures involving the Gage Administration in connection with the illegal manufacture of furniture, etc., at the San Quentin Prison. He is a physician of excellent education, which he acquired with high honors, both in this country and in Germany. He first attracted public attention as a member of the Board of Health in Oakland, and later as a Councilman. Here he became known as the persistent foe of neglect or corruption in any of its forms. He found the Oakland Council controlled by a ring of freebooters, and without delay he began a contest against them. There were times when he stood opposed by all but one of the other members of the Board, but he did not give up the fight. Publicity was his weapon, and exposure after exposure brought about by him finally caused the ring to abandon some of the worst of their plans. He then led a reform movement against the machine in control of the city, and was elected Mayor by a large majority, with the result of correcting many abuses, reducing taxation, and beginning several permanent municipal reforms.

---

This excellent nomination has been

matched by the Democrats. They have put up Franklin K. Lane, who has gained an excellent reputation in the city government of San Francisco, as Dr. Pardee has done in the small municipality across the bay. Mr. Lane is still a young man. After studying law he engaged in newspaper work for some years, first in New York city and then in the State of Washington, so that it was not until 1895 that he began practice in San Francisco. He immediately joined a group of young men who were bent upon overthrowing the corrupt Democratic machine, and he gained the public confidence so completely that he has been elected City Attorney three times, running at the head of his ticket. As an official he has shown independence and courage, enforcing the laws against strikers who had committed crimes, although he was warned that he would thereby lose the "labor vote." It is refreshing to see a man of this type winning merited recognition.

---

Quay and Penrose threatening the railroad presidents with the power of the Republican party in Pennsylvania if the coal strike continues, are a pair of ridiculous mice at the foot of a mountain in labor. The calmness of the aforesaid presidents in the face of such danger is easily accounted for. Quay and Penrose belong to them and to the capitalists affiliated with them. They can put both of them out of office as easily as they put them in—more easily, in fact, than they put Quay in the last time. Quay would never think of passing a law at Harrisburg without their consent. If anybody should attempt to pass such a law, Quay and Penrose would compass its defeat in some way. The Republican party in Philadelphia and Pittsburgh, and in the State at large, is the subservient tool and instrument of a corrupt ring, of which Quay and Penrose are the figureheads, but not the motive power. The real parties in interest are the corporations that furnish the money by which the springs of government are polluted, and the State made a hissing and a by-word to mankind. No wonder the railroad presidents snap their fingers when their two Senators talk about the Republican party and the power of the State in connection with the coal strike. Senator Platt, when interviewed about the strike, has not hinted at the use of political power as a means of ending it, but has merely predicted the end within two weeks. He is therefore less of a humbug in this instance than his fellow-Senators from the adjoining State.

---

The question of "sending money West to move the crops" is discussed every autumn, and has been re-discussed this season, but with such a confusion of facts and causes that the bewilderment of the average reader is inevitable. The simple facts of the matter are, that, in the few weeks of harvest-time, employment of labor in the grain districts increases by several hundred thousand hands. These laborers are paid in cash—usually every week. To make the payments, the farmers draw the currency from their banks, and the banks must be prepared to meet such customers' demands. A dozen years ago, when the banks of the harvest States were relatively poor, they would borrow the requisite money from Eastern institutions. Now they have plenty of money of their own; but, since its use in the country districts, at other periods than harvest, is limited, the country banks are accustomed to lend their own money, during the remainder of the year, in the larger city markets. It will be observed, however, that in either case large sums of actual money, now in the bank vaults of the East, would be needed by the West, and could be obtained by it. With an abundant harvest —for, of course, the larger the crop, the larger the weekly labor bill—thirty to forty million dollars is drawn from New York alone in the course of a dozen weeks. This is exactly what is occurring now. Taken altogether, the cereal crops are perhaps as large as have ever been gathered in this country. Moreover, the sum of money now in the New York market, but owned by Western banks, is probably quite as great as in any previous year. Last week's shipment of $2,500,000 currency from New York to the West and South was the opening of a perfectly normal movement.

---

Such a movement, thus occasioned, is a plain enough sign of real prosperity. The only reason why any one talks of it with misgiving is that the Eastern banks are not sure they can comfortably spare the money. This, too, is easy to understand. Demand for credits, in connection with the financial enterprises of the time, has been so great that Eastern bank resources are fairly strained. Saturday's statement showed that, in thirty-two out of the fifty-nine banks of the New York Clearing-house, the ratio of cash reserves to deposit liabilities is below the 25 per cent. minimum of the national banking law. In Boston the combined excess of reserves over such a minimum, in the thirty-one Clearing-house institutions, was last week only $185,000. These huge deposit liabilities were built up, very largely, on the basis of cash sent East, for the reasons already noticed, by interior institutions. Now that the West has need of the money, it must be sent back; but the Eastern banks must do something to make good the loss. There are three expedients possible—to reduce liabilities by shifting loans to other local institutions, increase reserves by importing gold from Europe, or simply call in and cancel the loans which are outstanding. Although the first expedient is now being used, and although relief through the second is hoped for, the fear that the absolute loan contraction may be resorted to frightens the speculative markets. The outcome, as usual, will be interesting. We make no mention of the Treasury as a factor of relief, because the Government is just now taking more money from the banks than it pays to them, and because we are skeptical over the possibilities of the new bank-circulation plan.

---

Mr. Yerkes and Mr. J. P. Morgan are not precisely the advocates of any kind of tariff reduction to whom Congress will lend a willing ear, but the reminder from these gentlemen that the tariff on works of art keeps abroad treasures which should be at home in this country is timely and necessary. The only excuse for this tax is that the wealthy can stand it. That it has any "protective" value to American art, or that American art desires any such protection were it possible, has been many times denied by our art societies. The fact that American collectors keep their pictures abroad shows that, if they *can* stand the duty, they will not. One may praise the public spirit of the late Mr. H. G. Marquand, who paid tens of thousands of dollars on the pictures which he intended for the Metropolitan Museum, but one cannot blame the collector who declines to pay an additional great sum on what is in any case an unproductive purchase. That the entrance of noble works into a country which is just forming an art of its own is desirable, needs no argument. It should be made easy to bring them in, and the present schedule, which was slipped into the Dingley Bill almost inadvertently, after the Wilson Bill had shown the practicability of the free list for works of art, is a disgrace to those who would tax civilization itself.

---

The Children's Court is, we are glad to say, at last at work, after months of aggravating delay. New York can now see for itself the value of such an institution, and judge as to the correctness of the views of those who, like Mr. Jerome, have believed that the old order of things should be adhered to. Of course, the success of the court will depend to a large degree upon the wisdom of the judge—to a far greater degree, indeed, than in most courts. The mind of the child is a study in itself. The limit of corrigibility is so far beyond that of the age of manhood or womanhood that seldom can a youthful offender be dismissed with a jail sentence as hopelessly beyond reform. The extent of the influence exerted upon a child by some mature mind, and the responsibility of the child abandoned by its natural guardians, are samples of some of the difficult questions which must be settled by the court in almost every case. The

boy who last week assured Justice Olmsted that he had no mother, because "if yer mother don't care for yer, ye ain't got a mother," is but a type—but a most pathetic and significant type. It would seem as if nothing but good could come out of this separation of immature wrong-doers from older and habitual criminal offenders, and from the close co-operation of the judge and our children's societies and institutions which is already assured.

---

One of the most significant happenings at the important dinner given to Governor Taft by the Manila Chamber of Commerce on Saturday week was the notice served upon him by the one hundred business men present that some other kind of labor besides that of the Filipinos is necessary for the development of the islands. The kind of workers these American merchants want is Chinese, since the climate discourages if it does not prevent Americans from attempting any kind of manual labor. Plainly, they do not share the opinion of Congress, as expressed at its last session, that the Chinese exclusion laws shall apply to our over-sea territory, but agree with Professor Jenks of Cornell in insisting that the whole future of the archipelago lies in the hands of coolie laborers. This is a cold-water douche, indeed, for our confident Expansionists, and particularly for the Pacific Coast brand. If it comes to a choice between the Philippines and the admission of Chinese into the United States by way of Manila, it is easy to prophesy how the Western Congressmen and Senators will vote. Of course, it will be urged that Chinese can be used in the Philippines, and yet be prevented from entering the United States. They would then constitute still another variety in our political mélange, to be used in enriching ourselves, while they are refused either citizenship or free circulation within our own domains. As it is, no one can believe that the Manila Chamber of Commerce has a high opinion of the wisdom of Congress, which not only made a complete failure in dealing with the Philippine money question, but also a fatal mistake about the labor needs of the archipelago. Yet have we not been assured a thousand times that the future of the islanders was absolutely secure in our hands, and certain to be determined by the all-seeing wisdom of our law-givers in Washington, ten thousand miles from the country for which they legislate?

---

The absence of intemperate comment on the sinking of a Haytian revolutionary gunboat by a German cruiser is significant. Not so long ago everybody would have been for humbling the pride of Germany and for immediate dispatch of a flying squadron to Hayti. Upon the basis of the present incomplete news, the rights of the matter appear to be as follows: The Firminist gunboat *Crête-à-Pierrot*, having been warned by our Commander McCrea, as representative of most of the civilized Powers, that no interference with commerce would be permitted, seized from the German merchantman *Markomannia* a cargo of arms. We believe that the Haytian "Admiral," since he had himself admitted the insufficiency of his blockade, and since the belligerent status of his faction had never been recognized by any great Power, undertook to confiscate contraband of war at his proper peril of being treated as a pirate. His case was not unlike that of the Peruvian revolutionary ironclad *Huascar*, which stopped British colliers on the high seas, and was worsted by a British cruiser in 1877. This action has always been regarded as justifiable, and except that arms are more definitely contraband than coal, it parallels at every point the present case. Still, the peremptoriness of Germany's action was no doubt proportioned to the feebleness of the Haytian navy, revolutionary or recognized, and to that scorn of the blacks which Napoleon manifested so brutally towards the same people.

---

Although the war with the Boers has ended, the discussion of its lessons goes on among military men without cessation. One of the most interesting contributions to the subject is from the pen of Lieut.-Col. F. N. Maude, long recognized as one of the ablest British writers on the art of war. He finds that there was a "stupendous advance" in English military preparedness between 1879 and 1900, and resents the imputation that this could have been accomplished by an army whose officers were conspicuously deficient in "professional keenness." Lieut.-Col. Maude's most original contention, which he bears out well with statistics of several wars, is that the modern breechloading rifle does not kill more readily than the old short-range muzzleloading weapon. Whereas charges made by Mamelukes, Turks, Ghazis, and Sikhs were easily stopped with the old weapon, such rushes, he finds, have frequently been successful in modern times, when the European troops had five times the distance and five times the rate of fire to meet their enemies with. His final conclusion is quite favorable to the attacking side, whereas most writers have seen in the Boer successes a substantial gain for the defensive. Lieut.-Col. Maude also believes that "the leaders' influence on the issue of a battle is greater, not less, than it ever was before." To those who have been hoping to see wars ended by the increased destructiveness of weapons, Lieut.-Col. Maude's conclusions about the modern rifle will bring distinct disappointment.

---

Criticisms of Russian finance by English and German publicists are commonly unfavorable, and are apt to end with the prediction of a great economic catastrophe. Such is the climax of a long review of the plans and doings of M. Witte in the columns of the Prussian *Jahrbuch*, which finds its way into the American press. But if the conditions now prevailing in Russia are as bad as those pictured by the *Jahrbuch*, a great economic catastrophe could not make them worse. When large sections of the country are reduced to starvation, a financial panic can hardly be expected, and if it comes, will not find much to destroy. In ten provinces, according to this authority, the death-rate is above 40 per 1,000, in consequence of insufficient food for the peasantry, while it is 34.8 per 1,000 for the whole country. This is very discouraging, certainly, yet it does not follow, as the *Jahrbuch's* article implies, that the Government ought to prohibit the exportation of cereals. It might buy the cereals, if it were able to do so, and distribute corn to the poor; but merely to prohibit the exportation would be to compel the owners to sell to their neighbors at lower prices than foreigners offer; that is, to put the burden of poor relief on the holders of grain exclusively or disproportionately. It is true that this method of poor relief is not unknown in Russia, but it is not to be commended as a mode of bettering the finances of a country. Nor is it sound doctrine to say that Russia ought not to have introduced the gold standard. The gold standard existed *de facto* in all commercial transactions of any magnitude long before it was adopted *de jure*, and the act of the Government merely put common practice into the form of law. The poor man was not harmed by the change.

---

No one more than the late Ernest Renan would enjoy the opposition to the project for setting up his statue at Tréguier. The great skeptic had studied in all its phases the phenomenon of the prophet without honor in his own country, and would have been delighted to see its signal illustration in his own case. The protest of the clergy of Tréguier is wholly logical. The village is profoundly Catholic, breathing a spirit of religion which Renan definitively renounced. The statue of the finished dilettante and smiling unbeliever which Renan became, would be strangely incongruous among the simple serious folk from whom he sprang. This lack of *rapport* between one of the greatest French scholars of our time and his natal village suggests the general query, "Are great men as a rule well fitted with birthplaces?" One must believe that they are; otherwise they would not have achieved greatness. The complementary form of the question, "Are birthplaces happily fitted with great men?" admits less readily of an answer.

*MORE LIGHT ON THE COAL STRIKE.*

The report of Col. Carroll D. Wright on the labor troubles in the anthracite coal mines is the first official statement that has been made of the causes of the cessation of industry in that region. Simultaneously with its publication we have a long statement of the operators' point of view from Mr. Baer, President of the Reading Railroad, in reply to a suggestion from Senators Quay and Penrose that it is time for the Republican party, as the custodian of the State's interests, to do something to bring about a cessation of the strike. The Senators clearly imply that, unless some steps are taken by the operators to end the strike, the political power will seek to accomplish that result. Mr. Baer, in reply, makes a statement which, if made at any time since the beginning of the strike, would have been helpful in enlightening public opinion and in bringing the force of it to bear on all the parties concerned. Mr. Baer does not, however, give any sign of being alarmed by the prospect of political interference which the words of Quay and Penrose presage, although he recognizes their right and duty to do whatever can be "legitimately" done to end the strike.

Mr. Baer, speaking for the coal operators, says that the miners make demands which render it impossible to mine coal profitably; that the State has enacted laws prohibiting the employment of men in the mines unless they have worked two years in anthracite mines; and, therefore, the operators cannot, for the time being, mine coal. "How then," he continues, "can there be any violation of public duty? If we yield to the extravagant demands of the miners, we shall lose money. If we attempt to increase the price of coal, we shall destroy the industries depending upon anthracite fuel. If we increase the price on the domestic sizes, we shall be called robber barons, oppressors of the poor, monopolists, and enemies of mankind." For these reasons he and his colleagues have decided to stand firmly on four propositions: (1) that the wages paid for anthracite mining are sufficient; (2) that wages cannot be increased without increasing the price of anthracite to such an extent as to drive the public to the use of bituminous coal, a cheaper and more abundant fuel; (3) that while the operators do not object to labor organizations, they will not allow such organizations to dictate who shall be employed or not employed in the mines; (4) that, considering the varying physical conditions of the mines, it is impracticable to adopt a uniform scale of wages for the whole region, but that each complaint and grievance should be investigated and treated separately and justly.

These propositions have the outward semblance of fairness, and would have carried more weight if they had been given to the public in an authoritative way at the beginning. They are open to criticism, more or less, and there would have been replies and rejoinders, rebutters and sur-rebutters, so that, long before the present time, the public would have been able to arrive at pretty sound conclusions as to the merits of the case. The question whether the present wages are fair and just cannot be determined by persons not engaged in the business. It cannot be determined dogmatically even by those who are so engaged, for when we come to examine Mr. Baer's reasons for his opinion, we are asked to take his affirmation that an increase of wages would drive the public to the use of bituminous coal, and so restrict the market for anthracite, and thus deprive the miners of anthracite of regular employment. It may be that the public ought to pay more for anthracite than it has been paying of late, or it may be that the rate of wages should be readjusted.

The latter conclusion is evidently favored by Commissioner Wright, who suggests that the operators should concede at once a nine-hour day to the men who are paid by the day, as an experiment for six months, in order to test its influence on production and its consequences generally. Mr. Wright's suggestions are six in number. The substance of them is that the mining of anthracite is subject to conditions so different from those of bituminous coal that it is impossible to govern the one by rules or terms applicable to the other; hence, that the attempt to control both by a single labor union is injudicious. There should be two separate unions, but they may properly be affiliated together, or may be affiliated with the American Federation of Labor. He holds that there should be a joint committee of conciliation of employers and employees, with powers to bind both parties in certain cases; that mining should be paid for by the ton wherever practicable, and that a fixed average should be established at each mine for deduction for impurities; and that there should be no interference with non-union men.

*Collier's Weekly* for September 6 has a communication from Mr. John Mitchell, President of the United Mine Workers of America, submitting the case of the miners in the present strike in the anthracite region. He says, first, that the proposition which he laid before the four railroad presidents on the 8th of May last, embodying the demands of the miners, was never given to the public by them, or by himself, until now. Since the whole controversy rests upon that proposition, we reprint it verbatim:

"Inasmuch as the anthracite mine operators have proposed to continue the present wage scale for one year, and inasmuch as the anthracite mine workers have unanimously resolved to ask that an increase of 20 per cent. should be paid on present prices to all men performing contract work, that eight hours should constitute a day's labor for all persons employed by the hour, day, or week, without any reduction in their present wage rate, and that coal should be weighed and paid for by weight wherever practicable; and inasmuch as in our recent conferences the anthracite mine workers and mine operators have failed to reach an agreement upon any of the questions at issue, we propose that the Industrial Branch of the National Civic Federation select a committee of five persons to arbitrate and decide all or any of the questions in dispute—the award of such board of arbitration to be binding upon both parties and effective for a period of one year."

In case this offer should be unacceptable, Mr. Mitchell proposed that a committee, consisting of Archbishop Ireland, Bishop Potter, and one other person to be selected by them, should be authorized to make an investigation into the wages and conditions of employment existing in the anthracite field, in order to decide whether the mine workers were able to make a decent living for their families, and to bring up their children properly, upon the compensation now paid to them; both sides to conform to any recommendations that such committee might make. To these alternative propositions, he says, no answer was received, except an informal intimation that there was nothing to arbitrate.

Mr. Mitchell denies point-blank that any "formal demand" has been made by the miners for a recognition of the union, leaving it to be inferred that an informal demand had been made. However that may be, Mr. Mitchell goes on to say in italic letters that "the real purpose of the coal operators, in refusing to coöperate with us with a view to ending this strike, is to destroy organization among their workmen"—an averment which Mr. Baer denies as emphatically as Mr. Mitchell denies the insinuation that the miners demand the exclusion of non-union men.

Mr. Mitchell's demand for higher pay for mining is divided into two parts—first, that men who are paid by the ton shall have an increase of 20 per cent., and that, for all persons who are paid by the day, eight hours (instead of ten) shall constitute a day's work, without any reduction in the present wage rate. The latter class would get no more money than they get now, but they would have more leisure. This needs explanation. It may be the aim of the miners' organization here to make room for a greater number of laborers, but it is certain that the economic condition of the present occupants of the places would not be improved, while the operator would get 20 per cent. less work for a given outlay. Mr. Mitchell says that anthracite miners ought to have as good pay as bituminous miners. His contention is not logical, unless he has some means to force the public to pay the difference when they go into the market to buy fuel.

And so stands the present situation, with General Jack Frost looming up on the horizon, and foreign coal pouring in,

*TOM JOHNSON TO THE FRONT.*

The Ohio Democratic State Convention at Sandusky on September 3 must challenge the attention of politicians throughout the country. It revealed Tom L. Johnson as the absolute dictator of the Democratic organization this year, and apparently assured his nomination for Governor by the party next year. Moreover, it has given him a position of such importance that his views regarding the proper policy for the Democratic party to pursue with reference to the campaign of 1904 will carry great weight.

Mr. Johnson's victory marked the application to the whole State of the power which he has wielded over the Democrats of Cleveland during the past eighteen months. A year ago last April he ran for Mayor of the city, and was elected by a great majority. In the following November he secured the election to the Legislature from Cleveland of several members who accepted all that he stood for. During the past few months he has been steadily extending his influence throughout the State, until at last he was strong enough to invade Hamilton County (Cincinnati), so long controlled by John R. McLean, and to beat that boss in his home. After that, all was plain sailing. Mr. Johnson controlled the whole organization of the Convention, became its presiding officer, and saw the platform which he had written accepted without the change of a word.

The man who has thus come to the front in Ohio Democracy is one of the most interesting and picturesque figures developed in our politics for a number of years. A poor boy, he made himself very rich by availing himself of all the advantages allowed by our laws, and then denounced the very laws by which he had so greatly profited. Thus, he enjoyed the undue protection granted the manufacturers of steel, and declared his conviction that free trade is the best policy for this nation. He dealt in street railroads charging five-cent fares, making vast sums by some of these operations, as in Brooklyn a few years ago, and then came out as a champion of three-cent fares. He improved every opportunity offered to such a man by our present system of taxation, and at the same time was the earnest supporter of Henry George and a vigorous advocate of the single tax. In short, he comes about as near as possible to standing on the platform that the methods which enabled him to acquire great wealth are wrong and ought to be abolished. He appears to have a wonderful hold upon laboring men, especially those who come within the range of his personal influence. The ordinary Democratic politicians who have aspired to the nomination for Governor next year, and who went to Toledo to push their "claims," found themselves utterly neglected.

Mr. Johnson stands for radical principles regarding corporations. He would have all taxable property appraised by assessing boards at not less than its selling value. He would have the proceedings and deliberations of those boards open to the public, and a representative employed to present the interests of the public in all hearings. He would specifically provide that the property of steam railroads and other "public-service" corporations be assessed "at not less than their salable value as going concerns." He would require all "public-service" corporations to make sworn public reports, and would give the power of visitation and examination over such corporations to the proper auditing officers, "to the end that the true value of the privileges had by such corporations may be made plain to the people." There are minor provisions, but here are quite enough to startle and alarm the average corporation man.

While Mr. Johnson urged that State issues should be pressed in the pending State campaign, he took pains to declare his position in regard to national politics. His platform expressly endorsed the Kansas City platform of 1900, and personally commended the candidate who stood upon that platform. Nor did he stop here. In his speech he served notice that nobody can be a good Democrat in 1902, 1903, or the first half of 1904 who is not ready to accept the platform of 1900 until that of the next Presidential campaign shall be framed. The Democrats of Ohio, he declared, can identify themselves unmistakably with the Democratic party of the republic "only by acknowledging the authority of the latest national expression of party doctrine on national questions"; and, of course, the rule must apply everywhere. This means that the new leader of Ohio Democracy will oppose the "reorganizers" in the party who would put a stigma upon Bryan, and who would have Democratic State conventions ignore the Kansas City platform, as was done deliberately in Indiana a few weeks ago, in Michigan somewhat later, and in Wisconsin on Wednesday week. He stands with those Democrats in Missouri, Arkansas, North Carolina, and other States in the South and West who have "reaffirmed" the Kansas City platform, and with that element in the Iowa Democracy which on September 3 fought for Bryanism on the convention floor, and cast 344 votes, as against 384 for omitting all mention of the Kansas City platform. This element is particularly strong in regions where the feeling against "the Money Power" is most pronounced; and many Democrats of this type openly say that they would rather have the Republicans carry the Presidency again than support a so-called "conservative" Democrat who represents the "reorganizing" element in the party.

*THE JOINT MANŒUVRES.*

Undoubtedly, the most striking fact about the joint army and navy manœuvres just concluded at the eastern end of Long Island Sound was their failure to hold the public's attention. For this there were several reasons—among others, the impossibility of getting clear accounts of what was happening, or of knowing which side had really won a glorious and bloodless victory. The descent upon the fleet of the Duchess of Marlborough on the "eve of hostilities" made the very beginning ridiculous. But, even before that, the lame conclusion of the navy game played in Massachusetts Bay, when Commander Pillsbury's fleet gave up an impossible task, regulated by impossible conditions, in broad daylight, and under circumstances which distinctly suggested opéra bouffe, had made the public turn to more important and more civilized things.

As to the value of this particular war-game, there is necessarily considerable difference of opinion. To one of our morning contemporaries it was so serious and so vital an event as to call for violent denunciation of any one who commits the offence of *lèse-majesté* by poking fun at the Gilbertian combination of a war fleet and a gallant admiral held up by a Duchess and a cup of tea. But it may be asked in all seriousness whether the problem presented to the navy was not from the beginning an insoluble one, and whether the outcome was not a foregone conclusion, provided conditions on both sides could be made to approximate those of war time.

If there has been anything clearly taught by our recent warring in different quarters of the globe, it is the weakness of floating guns when directed against shore fortifications. Even in the civil war this was demonstrated time and time again. The monitors were defeated in every attempt to take Charleston, and wasted endless powder and shell in fruitless bombardments of forts all along the coast. Every one can remember the "terrific damage" done by the *New York* off Matanzas in 1898, and with what denunciations of Spanish mendacity we received the news that one hapless mule was the sole victim of her Yankee gunners. Yet the mule was the only living thing killed during this engagement. Admiral Sampson believed that he could have reduced the batteries at Havana, but fear of the inevitable loss attendant upon the undertaking prevented his getting permission to make the attempt. Afterwards the very slight damage done to the land batteries by the fleet off Santiago and San Juan proved to many the wisdom of the Department's decision in regard to Havana. It also demonstrated the fact that Cervera's fleet and the Spanish troops might have held Santiago indefinitely had there not been an investing army to assail them from the rear.

In the taking of the Taku forts from the Chinese in June, 1900, they were assailed by a combined foreign fleet of British, Russian, Japanese, French, and German ships. Here, as at Forts Donelson and Henry in our civil war, it was the land force which captured the fortifications, and Lieut. W. C. Davidson reported to the United States Naval Institute that, save for the exploding of an exposed magazine, the forts were practically undamaged, and that "but for the assault of the landing party they could not have been taken." Another American naval officer to give interesting testimony to the ineffectiveness of naval guns when used upon land fortifications is Lieutenant-Commander Bradley A. Fiske, who served on the *Petrel*, *Monadnock*, and *Yorktown* during the war with Spain and the Philippine insurrection. In some "Personal Recollections" contributed to the *United Service Magazine*, he says of the results of a punitive expedition of four ships to drive several hundred Filipinos out of intrenchments at San Fernando:

> "This little engagement emphasized to me the small damage done by ship-fire to towns. Undoubtedly we silenced the fire of the insurgents, but I have no reason to think that we did very much military harm. All the insurgents had to do was to lie down on their stomachs behind their simple entrenchments, and let us shoot away our ammunition and set fire to a few houses. It would have been foolish for us to try to land, and so we steamed away."

His experience with the *Monadnock's* and *Petrel's* guns in other bombardments led him to similar conclusions.

It may therefore be accepted as an approved lesson of military history that land fortifications cannot be reduced by any fleet, unless it is accompanied by an army capable of landing at once to take possession or to assault fortifications. It is impossible, of course, to say that the late manœuvres will teach the same lesson, for it would be foolish to forecast the outcome of the battle of umpires, whose individual judgments in each movement must necessarily be affected by local circumstances, by weather conditions, and at night by the darkness. From the strictly military point of view it would have been well if no attempt had been made to get a decision as to victors and vanquished. Whatever benefits will result will be gained solely from the added experience in gun drill and searchlight practice of the crews ashore and afloat.

Such announcements as that "unexpected weaknesses have been developed in the Fisher's Sound forts" must be viewed in the light of the obvious efforts to use the manœuvres as a lever to get larger appropriations from Congress. They cannot affect the historic and indisputable fact that there is no navy powerful enough to conquer an American seaport without the help of an enormous army, against the oversea transportation of which the Atlantic is itself a perfect, and the cheapest, defence. Of the spectacle of a mighty republic which has risen to true greatness by its devotion to commerce and the arts of peace, engaged in playing at killing human beings 1902 years after the birth of the Prince of Peace, we shall not speak at this time.

## *THE FINANCIAL SITUATION.*

The full text of the London *Times's* editorial article on the financial situation in America contains much food for thought. We do not suppose that the *Times* has any better means of judging our position, so far as concerns the facts that govern it, than are available to critics in this country. But a thoughtful foreign critic nevertheless enjoys two advantages over home observers. He can judge current developments from a distance, not under the influences which, with observers on the spot, are apt to distort facts from their true relation to one another. And, being a foreigner, he is free from that very dangerous tendency which makes prediction of a continued "boom" a kind of patriotism.

The *Times* frankly confesses that expectation of immediate disaster—widely entertained last spring by critics of American finance—is proving to be erroneous. It shows the reason why such beliefs were held and why they have been abandoned. "The dice have fallen kind"; one of the largest harvests in our history is about to be gathered in, with consequent substantial increase both in domestic wealth and in our power of discharging foreign liabilities. Had the harvest failed, the reckoning for our capital inflation and the expanded floating debt of our bankers on the European markets would have come as the critics had predicted. As it is, the *Times* declares that "the day when financial trouble will be experienced by the United States has been postponed for another eight or nine months, and possibly, if no further commitments are entered upon, for an even longer period."

We should be reluctant, even conceding all the *Times's* premises, to fix with assurance on any date. Economic phenomena do not arrive on schedule time; in fact, they are very apt to come when the community has ceased to look for them. England itself has lately provided a noteworthy illustration of this principle. Trade prostration, and, in particular, depression on London's Stock Exchange, was to end with the peace treaty in South Africa. There were, to be sure, some cautious prophets with their warnings that the "boom" might not come in such proportions as optimists alleged. But the "turn" was fixed by all for the opening of June. Every one knows what sort of fulfilment these predictions had. Consols to-day are down nearly five points from their price on the day when peace was formally announced; English markets generally have fallen into renewed depression. Nor do we lack experience of our own. No one will have forgotten the repeated predictions that a reckoning for our silver debauchery in 1890 was about to be demanded. The reckoning came, but it came when prophets who named dates were weary, and when the rest of the community had about concluded that it would not come at all. So with the recovery which was to follow the repeal of the Sherman Act in 1893.

In the light of these various experiences, we should say that the *Times* is somewhat premature in declaring that trouble is to come at such-and-such a date. Nothing has been made more plain, in the course of the last three years, than the fact that this country's financial resources had been underestimated. Its capacity for development, its power of legitimate expansion in genuine wealth, were greater than the most hopeful had imagined. We are not speaking now of the stock market, which, after all, is only the mirror or barometer of underlying conditions. The country's tangible achievements, which are now matters of every-day commonplace, have been such as the most buoyant imagination, half a dozen years ago, would not have ventured to suggest. Nor should it be forgotten that the forward impetus, created by such remarkable achievements, is not an easy thing to measure. If it is true, as it often has been in the past, that reaction, when it comes, is proportioned to the scale of the previous expansion, it is also true that the power to carry along industrial prosperity even beyond the lines of safe conservatism must also bear some ratio to the original propelling forces.

It may be said, therefore, that American prosperity is continuing, and that the signs are on the whole more favorable than they were twelve months ago. We have no short crops to complicate the situation. Even cotton, which has cheated the high hopes based on the first month of the crop, will apparently yield pretty much the average of the last three years. There is no complaint from mercantile or industrial circles. Our export trade, cut down $112,000,000, wholly because of the decreased agricultural supplies, ought fairly to rehabilitate itself when the new and abundant cereal crops begin to move.

Our readers will observe that we have not yet touched that part of the subject on which the warnings of last season were chiefly based. It is the overcapitalization in our money market which must give us pause, even when conceding the most encouraging results in actual trade and commerce. That huge sums of capital are tied up in enterprises whose more or less inflated securities the investing public still fights very shy of, is a perfectly well-known fact. There is no reason to suppose that in

this regard the situation has improved, with this one exception—and the exception is significant—that the ability of the promoters of these schemes to borrow for their purposes is increased. "There will," the London *Times* admits, after speaking of our abundant coming harvests, "be plenty of means of borrowing fresh money in London, Paris, and perhaps Berlin." But the *Times* says further, what was pretty well known before to financiers, that already "the amount of money lent by Europe on short loan to the United States is larger than it ever was before." Short loans may be recalled—as they were by Europe, under extremely disquieting circumstances, exactly a year ago. Recall to-day of the several hundred millions thus advanced by the foreign institutions would be more awkward than last autumn; for the sufficiently well-known reason that our banks are less able now than they were then to assume the burden. Instead of paying off these liabilities, it is the present immediate purpose of the bank community to borrow more from Europe, in order to restore our deficient cash reserves.

Had plans for inflating capital and promoting huge corporate amalgamations been completed, so that the problem of the future might be only the distribution of securities created but not yet absorbed, it would be easier to foretell the outcome. The absorption process might be troublesome, as it was after 1882; it might be prolonged, and it might cause occasional convulsion in the money market. Probably all this would happen. But, at any rate, the community would be assured that the process of restoring true equilibrium was at work. Misgivings based on the knowledge that these huge undertakings, with their masses of unsold stocks and bonds carried on bank loans, were at the mercy of any money-market accident, have been perfectly warranted; but they would be lighter if the end of the process were in sight. But is it? That is the question which the financial critic of the day must face. The *Times* suggests a potent factor in the case when it quotes the view of the London market that "the great American financiers have no choice but to go on in the path they marked out for themselves when they had once entered on it." Can the efforts for control through amalgamation cease, so long as a powerful opposition stands outside to threaten all that has been already done? If not, what is to be the consequence? "Unless," the *Times* very properly concludes, "we are to accept the new-fangled doctrine that, in some mysterious way, the laws of economics need not be taken into account where America is concerned, the present state of things and the present fashion of finance cannot go on for ever." Thus regarded, the developments of the coming season ought to possess extraordinary interest.

## *THE LAW OF FOREST AND MOUNTAIN.*

It is often said that there is no law without a penalty. This maxim will not bear close scrutiny; and it may not be unprofitable to examine a case in which a code depends absolutely upon the unforced assent of those to whom it applies. We speak of the code which regulates the use of private property by woodsmen and mountaineers. The mountain hut and the forest camp, although absolutely unpoliced and practically beyond the jurisdiction of statute law, are protected by a sentiment which amounts to law and yet has no recourse against breaches of the custom of the region. You may leave your valuables on a trail in the Northwest secure of finding them again, and you may, under well-understood restrictions, use any camp in the woods of Maine or Canada. Similarly the mountain shelters of the Appalachian or Alpine Clubs, or those erected at private expense, are free to all who traverse the mountains. And the rules for their use by the casual occupant are so explicit as to have the value of law, and as binding as if a thousand penalties and precedents enforced each article. We are dealing with a very different code from Mr. Kipling's "law of the jungle"—the rule "of hoof and of claw"; we are examining the case of men free to be lawless, who, under a code of some complexity, are scrupulously a law unto themselves.

The limits of mountain law have been recently illustrated among the ice valleys of Mont Blanc. M. Joseph Vallot has for twelve years maintained a mountain observatory near the summit of this great mountain. The building was supplied with the usual instruments, and was fully provisioned. Near at hand he had erected a mountain hut for the use of all climbers, which has frequently harbored bewildered wanderers on the upper reaches, and has undoubtedly been the means of saving many lives. This hut proved too narrow for two German tourists who decided to make a stay of several days beside the Dôme du Goûter. So, acting under mountain law as they supposed, they broke into the observatory, helped themselves to the provisions, and made themselves free of all its accommodations, offering on their return to repay the owner for the food actually consumed. M. Vallot, learning meanwhile that his instruments had been disturbed, brought suit against the trespassers.

How jealously mountain law is guarded is shown by the protests which everywhere arose in Switzerland. M. Vallot had no difficulty in proving himself in the right, but the case brought out very clearly certain principles in mountaineering ethics. It was shown that the invaders were not storm-bound, but could at any time have descended to the valley. It was held that they entered the observatory, not in their need, but for their greater convenience. Every one declared that they had no right merely to prolong a holiday in this fashion, and that mountain custom granted them only the occupancy of the hut, not the right to enter the larger building or to use the provisions. It might be added that the offer to reimburse M. Vallot for the provisions was highly improper. They should have promptly replaced them after due notification. Thus, quite apart from the graver charge of vandalism, these two climbers were found in contempt of mountain law. Henceforth their mountaineering reputation, except in Coventry, will be of the worst.

The principle involved is clearly that of reasonable use. Illustrations might be cited indefinitely. One may not plan for a week in the woods, and then keep on from shelter to shelter for a month; yet if one, through an unforeseen mishap, needs food and shelter, they are his to take where he finds them, and upon the sole condition that he respect the property he uses and make good as soon as possible any impairment of its stores. Any Appalachian Club shelter in the White Mountains, with all its utensils, is free to every pedestrian until the tiny building is full. Beyond that point, members of the club justly require outsiders to give way; but the case almost never arises. In all these matters a fine sense of delicacy is shown by those who do not always receive credit for that quality. No logging camp in the country would refuse its best to a belated woodsman, and none would receive pay for any trouble and expense which his succor required; but these same lumbermen would decline to be used as a convenience by a party of improvident campers not actually in distress.

Into the minuter articles of mountain and wood law it is superfluous to go. One does something for the neglected or ill-defined trail over which he passes, not out of surplus benevolence, but because the unwritten law prescribes the lopping of the bush, the freshening of the blaze, or the rebuilding of the cairn. One takes a stray hound only to the next clearing, because such is forest law. Under this code most of the meannesses and crimes that are incident to civilization vanish. It is as if the vast solitariness of the forest and the mountain reproduced itself in a kind of largeness of soul in the woodsman and mountaineer. He feels more vividly than the man in the multitude the solemnity of any act that concerns another individual. In town you cannot safely leave an overcoat on the rack with the door ajar; in the North Woods you may leave in an open

shack the best gun that the forges of England, Belgium, or American can produce, and passers-by, who perfectly know its value, will hardly give it a second look. Human nature resents anarchy as Nature abhors a vacuum. And woodlife and mountain life would be very anarchy without stricter laws and finer morals than suffice for the abodes of men. The loss of a camp axe would put the owner to the gravest inconveniences, the depletion of a store of provisions might bring a party to the verge of starvation, the theft of a gun might mean a crueller but no less certain death than a bullet through its owner's heart.

It is salutary that, from time to time, men should thus be brought face to face with the whole consequences of their deeds; and it is creditable to human nature that it responds so trustily to the test. It is refreshing, too, to find a realm of law in which stern penalties are unnecessary, and it is strange that the advocates of philosophical anarchy have neglected the striking analogy which lies to their hand in the law of forest and mountain.

## BISHOP TALLEYRAND.—I.

PARIS, August 27, 1902.

A complete biography of the famous Talleyrand, founded on original documents, has yet to be written, though there is already an extensive Talleyrand "literature," and though we possess his own Memoirs, which were published by the late Duke de Broglie. We know that Talleyrand left these Memoirs to M. de Bacourt, after having suppressed or sophisticated many parts of it, and that further changes or suppressions were made by M. de Bacourt himself. Talleyrand's figuring as Minister of Napoleon, and afterwards as one of the great actors in the dramas of 1814 and 1815, has almost completely overshadowed the other parts of his life; his early career as Bishop of Autun is quite forgotten, and we must be grateful to M. Bernard de Lacombe for having given us, quite recently, a most interesting sketch of Talleyrand as Bishop.

Charles-Maurice de Talleyrand-Périgord was commonly called the Abbé de Périgord. As one of his legs was a little shorter than the other, his parents decided, though he was the eldest son, to make him a priest. It could be said of him, what Cardinal Retz said of himself in his Memoirs, that "he had the least ecclesiastical soul in the world." In 1838, Talleyrand, in making his retractation, wrote to the Pope: "The respect which I owe to those from whom I received life, does not forbid me to say that my whole youth was directed to a profession for which I had no natural aptitude." Talleyrand gives in his Memoirs a vivid picture of his life as a seminarist. He once met, near Saint-Sulpice, a young actress, who had taken refuge in a doorway while it rained. He had an umbrella and offered it to her. Like himself, she had been contraried in her tastes: "Her parents," he said, "had forced her to go on the stage; I had entered the seminary unwillingly."

After having left Saint-Sulpice, he received from the King the valuable sinecure of the Abbey of Saint-Denis, in the diocese of Reims, which gave him a revenue of 18,000 francs. He led a frivolous and worldly life, though he continued uninterruptedly his theological studies. The Abbé de Périgord was a marvellous "causeur." He became a rival of Boufflers, of the Prince de Ligne, of Ségur, the kings of conversation at the time. He counted among his acquaintances the Duke de Lauzun, Chamfort, Marmontel, Mirabeau; he saw nearly every day Madame de Genlis. Greuze has left us a portrait of the Abbé, in a blue coat, a white waistcoat, chamois-color breeches, a cravat of fine linen, very high in the neck. Talleyrand saw Voltaire twice, and was one of the witnesses of his funeral.

In 1780 the Province of Tours, which had that year the nomination of one of the two general agents of the clergy, named the Abbé de Périgord. The function of these agents was to represent the clergy before the King and his ministers; they participated in the council of ecclesiastical affairs, the management of the church property. Talleyrand astonished everybody by the qualities which he developed in these delicate functions. He had the reputation of a wit. He acquired the reputation of a man of great ability. In the Assembly of the Church, in 1780, he was appointed "promoter," and had to make several important reports; among others, one on the free gift of fifteen millions made by the Church for the expenses of the American war.

In 1785 Talleyrand was appointed secretary of the Assembly of the Church, and made at the end of the session a report which was very much admired. It was at that time that he was thick with Turgot, Malesherbes, Maurepas, and Calonne. His ambition was to be made a bishop; it was almost a rule that the general agents of the Church should obtain bishoprics at the expiration of their mission. But the levity of Talleyrand's life was for a time an obstacle; he had to wait two years. He owed the bishopric at last to the friendship of Louis XVI. for his father, Charles-Daniel de Talleyrand, who had been a companion of the King in his youth, a soldier in the Seven Years' War, and who sent word from his deathbed to the King that he asked him as a last favor to take his son into his good graces.

Charles-Maurice, the Abbé, was thirty-four years old when Louis XVI., triumphing over his scruples, appointed him, on the 2d of November, 1788, Bishop of Autun. This was but a small bishopric, yielding an income of only about 22,000 livres; but it was one of the most illustrious. Beside the old remains of Roman splendor—theatres, aqueducts, monumental gates—were many Christian monuments—churches, convents, chapels. The Cathedral of Saint-Lazare was renowned for its fine Roman and Gothic architecture. At the same time that Talleyrand was appointed Bishop, he received from the Count d'Artois the Abbey of Celles, which had an income of 7,500 livres. Talleyrand made the usual preparatory retreat at Issy, and his consecration took place on the 18th of January, 1789. He received the day afterwards from the Archbishop of Paris the pallium, an ornament of white wool sprinkled with black crosses, which generally belongs only to the metropolitan; but the Bishops of Autun had had the privilege of wearing it since the year 600, when Pope Gregory the Great gave it to Bishop Syagrius and his successors.

Talleyrand considered his bishopric merely as a stepping-stone to the government of the country; he had entered the Church by compulsion—his ambition had other aims. He for a time hoped to be made a cardinal direct, like Mazarin, a foreigner, an Italian, who found himself Prime Minister without ever having been a bishop. Once a bishop, he remembered Richelieu and Fleury, who had each been a bishop before becoming Prime Minister. France was agitated by the convocation of the States-General. Talleyrand felt that new times were coming; he was prepared for them by his superior knowledge, his familiarity with the leading men of the time, the independence of his mind, and a certain sort of skepticism—we might say of cynicism—which nothing could astonish or trouble.

The episcopal consecration in no wise changed his habits, but he performed with much decorum the duties imposed on him. He at once, on January 26, sent a mandamus to the clergy of his diocese, recalling the words of Saint Paul: "Testis est mihi Deus quod sine intermissione memoriam vestri feci." The mandamus is in parts very eloquent and almost touching. Talleyrand did not, however, show much haste to go to his diocese. He left Paris only when he thought it necessary to go to Autun in order to promote his election to the States-General. The electors were convoked in all the provinces. The Prince de Condé, Governor of Burgundy, summoned specially by assignation "the Lord Bishop of Autun" to appear in person at the General Assembly of his order. Talleyrand arrived at Autun on the 12th of March, and on the 15th took formal possession of the episcopal palace. He received the chapter, and, after the bulls of the Holy See had been read, he took in Latin, in a loud voice, the oath which had been taken for centuries by the Bishops of Autun:

"I swear by the Holy Gospels, and promise to observe inviolably and to defend all the privileges, liberties, franchises, immunities, statutes, exemptions, rights, and customs of the Church of Autun. . . . I will undertake nothing, in any way, directly or indirectly, against the said privileges, exemptions, and rights, whether my church owes them to the generous will of the Roman pontiffs, the emperors, the kings, dukes, and princes, or whether they have been liberally granted by the Bishops of Autun, my predecessors; so help me God!"

A great ceremony in the Cathedral followed the reception of the chapter, and at the end of it Talleyrand gave a solemn benediction to the people.

Talleyrand did not lose a day for his election. He entered seriously upon all his duties, in order to conciliate his clergy; he made many pastoral visits; he showed a most affectionate interest in the affairs of the Sulpicians and of the Oratorians; he defended the regular clergy against the secular clergy, without offending anybody. At the time of the election, two hundred and nine ecclesiastical electors arrived at Autun. They assembled at the Seminary, where they prepared their "cahier," or bill of grievances. Talleyrand presided at their meetings; he showed deference to the advice of all, even the most humble priests;

he charmed the assembly by his courtesy, his spirit of conciliation, the clearness of his views, which were all practical and sensible. His election was assured, and he made a sort of programme of the deliberations of the assembly at Autun. This programme is a quite remarkable document, and deserves to be read even now. In the preamble, Talleyrand set forth the necessity of a Constitution:

"It is indispensable that the National Assembly should occupy itself, before all, with a Constitution of the State, comprising several fundamental points: to renew the solemn adhesion of all Frenchmen to the monarchical Constitution; to prepare a charter stipulating the invariable rights of all; to declare that henceforth no public act shall become a general law of the kingdom if the nation has not solemnly approved it; to preserve the undeniable and exclusive right of the nation to establish subsidies, to modify them, to limit them, and to regulate their employment; to establish the basis of a proper national representation, beginning with the parishes; . . . to create provincial assemblies."

The rights of liberty and property were to be considered as the fundamental points of the Constitution. Talleyrand's *cahier* asked for the remodelling of criminal jurisprudence, the institution of the jury, the inviolability of private correspondence. We can recognize already in this notable document the ideas which inspired the Minister of Louis XVIII., and which determined Talleyrand to give his support to Louis-Philippe after the Revolution of 1830.

Talleyrand was elected deputy of the clergy by a large majority. He had remained only a week at Autun. He left it, not to see it again till thirteen years had elapsed. His relations with his diocese took the form of a correspondence, agreeable at first, and afterwards very bitter—so bitter that it had to be interrupted. The stormy times of the Revolution were approaching, and Talleyrand was to play a very important part in the Constituent Assembly.

# Correspondence.

## SCIENTIFIC HISTORY.

To the Editor of The Nation:

Sir: In his supplementary note of August 21, Prof. W. E. Dodd, by claiming that his letter in the *Nation* of August 7 was meant to be based on the conception of "scientific history," has touched upon one of the most pregnant questions in historical study in this country to-day, one worthy of discussion, as it seems to me. Professor Dodd gives no definition of the phrase, seeming to proceed on the assumption that there is substantial agreement as to the meaning; but this is to be doubted. It is easy to name books which nearly every historical student of standing would pronounce unscientific; but what about as large a list which the same number would consider scientific? What would be the vote on Macaulay's England? on Froude's England? on Green's England? All these have mistakes, as have also the most careful studies, but what proportion of errors can a man make before being excluded from the circle of scientific students? Again, how much of the author's individuality can come in before he is condemned as being below the standard? How far shall previous bias, sympathy, prejudice, be allowed to enter, without vitiating the author's title to scientific? Besides, what distinction is there between scientific history and other history?

Although I attended the leading graduate historical department in this country at that time, I am afraid I have not a clear notion of the matter. I cannot recall that Prof. H. B. Adams ever gave any formal deliverance on it; in fact, I am rather certain that he did not use the term very often. But in my own work I have felt that the words are not mere sounds, and that they have a reality at bottom that demands differentiation. As a feeble contribution towards a solution of the problem, I have a figure of speech drawn from legal conditions to indicate my notions in the rough. It seems to me that, aside from the sources, history writing may be divided into two great classes—that of the advocate who, with preconceived purpose, sets out to win the jury to his side; and that of the judge who, in passionless manner, without ulterior motive, sums up the points, emphasizes the important ones, with the aim of aiding the jury to reach a true verdict. Both deal with the evidence, but the lawyer puts his personality into it, at times twists, misstates, falsifies; while the arbiter on the bench is to handle it with the cold spirit that a chemist has in handling acid, crucible, and formula.

From this conception, if we leave out some exceptional cases, we may deduce four indispensable marks of scientific history: (1) the judicial temperament that dispassionately views all sides so as to get the correct gauge for truth; (2) an exhaustive knowledge of the subject based on (a) what is absolutely necessary, original sources (evidence), and (b) on secondary data, other treatment of same topic (precedents); (3) fitting style, comprising accuracy of statement, clearness of expression, plain distinction between knowledge and inference, so that the careful reader rapidly and truly gets the idea of the author; (4) reference, exact when possible, to the authority for essential points. It is easy to see that (3) may dwindle to a remnant, in an edition of writings for instance; and that (4) may disappear entirely on account of limitations of space. But the author must be fully equipped with both, and ready to bring them into play when required. Many subjects do not allow this method.

This crude effort at stating my position may be further elucidated by mentioning three concrete examples, Ropes, Livermore, and Jameson, who, on the most difficult subjects in our history, well exemplify, so far as I know, the above conception, though I admit great differences in the quantity of the output of the three. I do not undervalue other works or men, as I recognize that there are examples of both, of wider appeal and of greater direct influence, that may at the same time be just as scientific; but these three occur to me now as types of this advanced idea of historiography.

Yours truly, C. Meriwether.
Washington, D. C., September 1, 1902.

## TIBERIUS THE TYRANT.

To the Editor of The Nation:

Sir: The learned reviewer of Mr. J. C. Tarver's 'Tiberius the Tyrant' (*Nation*, 1902, II., p. 136) has overlooked the fact that the first historian who pleaded the case of Tiberius against Tacitus with a serious knowledge of Roman imperial institutions, was my lamented friend Victor Duruy, the best Minister of Public Instruction that France ever had, and the founder of that excellent institution, the École des Hautes Études. Duruy's work appeared in 1853; it was a Latin thesis for the doctorate, entitled 'De Tiberio Imperatore' (98 pp., 8vo). A summary of it can be found in that useful and little known work, Mourier and Deltour's 'Notice sur le Doctorat ès lettres; suivie du catalogue et de l'analyse des thèses' (Paris: Delalain, p. 136-137). Duruy often told me that the *soutenance*—that is, the public discussion—of his thesis at the Sorbonne created quite a sensation; he was accused of defending a tyrant, of upholding a paradox, etc. There is a curious chapter on the subject in Désiré Nisard's posthumous 'Souvenirs' (1888, I., p. 87), with a graphic description of that discussion, in which Nisard, who was one of the judges, spoke in favor of Duruy's opinion against the *doyen*, Victor Le Clerc.

Truly yours, Salomon Reinach.
Paris, August 28, 1902.

## AMERICAN TEXT-BOOKS OF THE CLASSICS.

To the Editor of The Nation:

Sir: It seems to me there are just grounds for adverse criticism of many of our text-books of the ancient classics. It is hard to see for whom they are intended. I have before me an annotated edition of one of Plato's Dialogues that contains references to nearly all the other dialogues, to the three tragic poets, to Demosthenes, to some half-a-dozen large German works, not to mention books more easily accessible. A good deal of space is also given to bibliography and to critical discussions of the text. Very little of this *apparatus criticus* is of any value to the student. He cannot understand it unless it is explained to him by the teacher; he never has the books referred to, and rarely has access to them if he would use them, while not one in a thousand can make anything out of a citation to a German work. Yet we are offered "notes for the use of students." This show of erudition can be of service to the scholar only, and he does not need it.

Comparing this little volume with Cron's edition of the "Apology," we find a remarkable difference. When a passage in a Greek or Latin author is referred to, it is almost always given in full. The learner has thus no difficulty in getting out of it what there is in it of value to him. This is the general plan according to which German text-books are edited. So far as I have used or looked through British text-books, they, like the German, are characterized by paucity of references even to grammars. Moreover, textual criticism, except of passages of unusual importance or of unusual difficulty, is generally avoided. The editor adopts the reading which he believes to be best authenticated, and is silent about the rest. It may be argued that we are wiser than our transatlantic confrères, but I fear the facts are against us. It is probable that both German and English students are generally more firmly grounded in the grammar than ours; but for that very reason they are better qualified to profit by more extensive references, if they were supposed to be of service.

I believe that, generally speaking, our notes to difficult authors, like Herodotus, Plato, Thucydides, and the poets, are too meagre. It would often be a real pedagogical gain to the learner if a hard passage were paraphrased for him. Knowing thus in a general way what the author meant, he should be required to give his exact meaning in the best English he could command. He would not then have to struggle with both the Greek and the English at the same time. There are signs that we are carrying the so-called scientific method to extremes in the study of literature. It is well to select a few passages from representative authors for minute dissection; but to take up all the student's time in this way is not likely to bring him much profit. Suppose he has a fixed number of hours to spend on the 'Aeneid.' Would it be most conducive to the cultivation of his taste—that is, to his education—to employ them all on the first book, counting the number of instances of alliteration, of initial sibilants, of verbs belonging to each of the four conjugations, and more of the same sort, or in reading the entire poem intelligently, but without special attention to all sorts of minutiæ?

To study literature as we study the natural sciences may be compared to the study of animal life from the specimens in our museums of natural history. Yet it is by just such a method that many of our annotators would lead us; and they are laying their blighting hand, not only upon works in foreign languages, but on those in English. We cannot expect to instruct more than a very small proportion of our students in Greek and Latin so well that they will continue to read these languages through life. But we ought, at least, to be able, by means of classic writers, to give them a life interest in and an enjoyment of good literature.

There are doubtless many men now living who know more about Greek and Latin than Plato or Virgil; for *they* probably concerned themselves as little about language, either grammatically or philologically, as Ruskin or Tennyson. But when we compare the ancients with the moderns in the power to use these languages with vigor and effect, there is hardly enough left of the latter to base a comparison on. The analytical or scientific study of a language or languages is a department of knowledge just like Egyptology or botany or chemistry. It can be pursued about as well with Bantu or Anglo-Saxon as with Greek and Latin; it is not necessary to a liberal education. On the other hand, no man can be called educated who is not, at least in some degree, familiar with one of the world's great literatures. C. W. Super.

Athens, Ohio, September 1, 1902.

## PROPERTY IN LETTERS.

To the Editor of The Nation:

Sir: The question raised by your correspondent of August 28, in regard to property in letters, is one that deserves wide publicity.

I recently wrote a personal and confidential letter to the President of the Board of Regents of a State university in regard to a person who was a candidate for a position in the faculty. After the appointment was made, this letter was given to the candidate. A few years since, I wrote the President of one of the great Eastern universities concerning an applicant for a fellowship. This letter was also returned to the candidate. Another letter, written by a friend, protesting against the prospective appointment of an unfit candidate, was also sent—presumably by mistake—to the applicant.

The point at issue would seem to be so plain as to need no elucidation or explanation, yet in some way it needs to be made clear to those having the appointing power that they will continue to receive the Delphic communications of which they so justly complain if they, on their part, adopt the plan of returning to applicants for positions all letters written *about* them as well as *to* them. Many persons, like myself, have made it a rule never, under any circumstances whatsoever, to write a letter of recommendation to be presented personally by an applicant. The rule is made for the sake of writing with absolute frankness, of writing in the interests of education and not of those of a particular candidate. If college authorities, however, are to return either to successful or to unsuccessful candidates personal and confidential letters written them concerning these candidates, many persons will be tempted to extend the application of the rule, and in future to write no letters either to a candidate or for a candidate.—Yours truly, L. M. S.

Poughkeepsie, N. Y., September 2, 1902.

## A PLEA FOR COMPOSERS.

To the Editor of The Nation:

Sir: A custom, brought over from England and rapidly gaining ground in this country, challenges a word of opposition before it gets beyond bounds and makes impossible the setting of modern words to modern music.

Perhaps, by stating a few facts, the case may be most easily made plain. For instance, a composer happens upon a volume of poems in which he finds some verses suggesting a musical thought, which develops into a song. The composer, remembering that the poem is by an English poet, published in New York and copyrighted in England, writes to the publisher asking permission to print the song; the publisher replies, granting permission, provided the composer see that the name of the poet, the name of the volume from which the verses are taken, and the name of the publisher all be printed on each copy of the song, and, in addition, that the composer send the sum of $35 to the publisher for the use (not exclusive) of the verses, $25 to go to the poet and $10 to the publisher. A similar application to another publisher for permission to print a song brought the same answer, with the difference that the sum demanded was $15, and in this case the poem was by an American, published in America.

Now the practical side of the matter is this: The first song in question would sell perhaps for forty cents a copy, catalogue price. As the composer's royalty is 10 per cent. on this price, it would be necessary to sell 900 copies of the song to cover the fee of $35 to the poet and publisher before the composer could receive a penny. Now, everybody knows that few songs sell more than 900 copies and that many sell less; so it is all a lottery, in which the composer should have a winning chance, instead of assuming all the risk. The poet has already received royalty for his book containing the poem, and, although good words are better than poor words, it is the music that sells the song, and if the music should not happen to please, the words alone would never sell a copy.

In England, where the custom started, the composer writes a song, pays for the words (for a poem of Tennyson's, five guineas, it is said), the publisher prints the song, in many cases gives a series of concerts to introduce it with other new publications, not only pays a singer to sing it, but also pays him a royalty on every copy sold, making it worth his while to sing it as often as he can—a system of machine politics, rotten for art, but not without its commercial advantages.

In America the publisher prints a song, advertises it in his catalogue, and if a singer happens to take the song up, well and good; otherwise it is left to make its own way.

In view of these facts, would it not be better, instead of importing a custom from England, where the conditions are so different, to establish one of our own? And since poet and publisher are both freely advertised on each copy of the song, ought this not to be sufficient compensation to the poet for the use of his poem, for which he has already been paid? If not, then let the composer agree to share with the poet the royalty until the poet shall have received $10, $15, or $20, according to the agreement. Such an arrangement would give the composer a chance of covering his expenses, recognize the claims of the poet, and settle a question which, at present, is open to the caprice of every publisher and poet in America to settle as they may please. A Writer of Songs.

# Notes.

Houghton, Mifflin & Co.'s autumn list embraces Lyman Abbott's Life of Henry Ward Beecher; T. W. Higginson's 'Longfellow,' Professor Woodberry's 'Hawthorne,' Professor Carpenter's 'Whittier,' and Professor Bourne's 'Motley,' in the American Men of Letters Series; John W. Chadwick's 'Channing'; Lowell's Anti-Slavery Papers, in two volumes; 'Life and Correspondence of Henry Ingersoll Bowditch,' by his son Vincent Y. Bowditch; 'Daniel Ricketson and his Friends,' by Anna and Walton Ricketson; 'Reminiscences,' by John T. Trowbridge; 'Texas,' by Prof. George P. Garrison; 'American Navigation,' by William W. Bates; 'American Diplomacy in the Orient,' by John W. Foster; 'Historical Geography of the United States,' by Ellen C. Semple; 'Tracts relating to the Currency of the Massachusetts Bay, 1682-1720,' by Andrew McFarland Davis; 'Correspondence of the Colonial Governors of Rhode Island, 1723-1775,' edited by Gertrude S. Kimball; 'Where American Independence Began' (Quincy, Mass.), by Daniel Munro Wilson; 'The Silva of North America,' concluding volumes xiii. and xiv., with index, by Prof. Charles Sprague Sargent; 'Handbook of Birds of the Western United States,' by Florence Merriam Bailey; 'A Sea-Turn, and Other Matters,' stories by Thomas Bailey Aldrich; 'Library Values' and 'Far and Near,' by John Burroughs; 'A Guide to the

Use of Reference Books,' by Alice B. Kroeger; 'An Index of Portraits,' by Nina E. Browne; a supplementary Index to the *Atlantic Monthly* (1889-1901); 'A Study of Prose Fiction,' by Bliss Perry; 'Captain Craig,' poems by Edwin Arlington Robinson; 'A Pocketful of Posies,' rhymes for children, by Abbie Farwell Brown; 'Grimm Tales Made Gay,' by Guy Wetmore Carryl; 'A Primer of Right and Wrong,' by J. N. Larned; and 'Americans in Process: A Settlement Study,' for Boston, edited by Robert A. Woods.

Professor Lounsbury's 'Shakspere and Voltaire,' Bishop Potter's 'The Citizen and the Industrial Situation,' 'Human Nature and the Social Order,' by Prof. Charles Horton Cooley, and 'The Book of Joyous Children,' by James Whitcomb Riley, are in the press of Charles Scribner's Sons.

A. Wessels Co. have in preparation Newton's 'Life of Captain John Brown'; 'The Story of Fish Life,' by W. P. Pycraft; and 'The Story of Euclid,' by W. B. Frankland.

George W. Jacobs & Co., Philadelphia, will publish 'Some Early Printers and their Colophons,' by Joseph Spencer Kennard; 'Spain and her People,' by Jeremiah Zimmerman; and 'Wit and Humor of American Statesmen,' compiled by Frederick Reddale.

Benjamin H. Sanborn & Co., Boston, announce for September a new 'Atlas of the Geography and History of the Ancient World,' for school and college use, consisting of 33 maps, with a complete index, and bound in paper and in cloth.

During the present month, Duckworth & Co., 3 Henrietta Street, London, W. C., will issue, in a small and limited edition of eighty copies, a volume of 'Reproductions of Drawings by Old Masters,' in the Chatsworth collection of the Duke of Devonshire. Mostly unknown and unexplained examples will compose the seventy plates, to which Mr. S. Arthur Strong contributes a critical text. The facsimile reproductions will be put on Japanese vellum.

Ex-President Kruger (Krüger, as the Germans prefer to spell the name) has been dictating his Memoirs, and the competition to publish them has naturally been great on both sides of the water. The Munich house of J. F. Lehmann has secured the coveted monopoly for all countries, and expects to bring the work out in November simultaneously "in allen Kultursprachen."

The 'American Newspaper Annual' for 1902 of N. W. Ayer & Son, Philadelphia, makes a volume of nearly 1,500 pages, exclusive of advertisements. Fulness could hardly further go; in fact, the total of newspapers and periodicals recorded is but 152 more than last year, and the editor notices in his preface the continued tendency to consolidation even among journals of importance. The revised maps exhibit "practically every newspaper town contained in the Annual," and, with the statistics of population affixed in the text, make this work a gazetteer and atlas serviceable to others than advertisers. There are also classified tables of towns from 3,000 population to 50,000 and upwards, and the last Presidential vote is recorded for States and counties. This work has an established place at the front.

The Concise Standard Dictionary of Funk & Wagnalls brings some 28,000 words into small compass by confining the data to pronunciation and definition on the well-known lines of the greater work. Room is still found for a certain number of illustrations, as that of an automobile. The usual appendixes, including coinage and weights and measures, are given.

In our recent notice of the first number of the *Ancestor* we had it in mind to say that it contains very little relating to America; in fact, it is rather pleasant to see how completely the heraldry of America is ignored. There is, however, some reference to an interesting but little-known episode in the annals of Roxbury, Mass. There are extracts from Carr-Ellison's MSS., as printed in Appendix X. to Report XV. of the Historical Manuscripts Commission. They relate to the Lady Hesilrige (originally and now Hazlerigg), wife of Sir Robert Hesilrige, eighth Baronet of Noseley. He married, but when and where does not exactly appear, Sarah, daughter of the Rev. Nathaniel Walter of Roxbury, and was almost wholly disinherited by his father, Sir Arthur. His only son, Arthur, succeeded as ninth baronet, but was not ancestor of the present holder of the title.

Dr. Eugen Kretzer's 'Joseph Arthur Graf von Gobineau: Sein Leben und sein Werk' (Leipzig: Seemann) is in its main features a contribution to the already extensive and constantly increasing Nietzsche literature —a fact which invests it with peculiar interest at the present time. Although Nietzsche rarely refers to Gobineau, and always in a somewhat disparaging tone, the author of this biography argues that the German thinker, whose originality is so strongly emphasized by his admirers and adherents, was indebted to the Frenchman for the cardinal points of his philosophy. Whether he consciously borrowed his ideas from Gobineau or not, he was certainly anticipated by him in his views concerning the inequality of races, the gradual decadence of mankind, and the evolution of the "overman" as a redeemer. Both of them regarded the belief in a personal God as the chief hindrance to human progress, and Nietzsche interpreted the words of Christ, "The kingdom of God is within you," as implying that the Deity is otherwise non-existent. The most complete divine incarnation is the "overman," but his development demands absolute freedom from superhuman supremacy. Nietzsche's writings are full of contradictions, and he took pride in characterizing himself as a thinker whom no one need refute, since in this respect he is sufficient unto himself (*Er genügt sich dazu selber*).

A timely contribution to comparative philology and ethnology is Prof. Dr. Renward Brandstetter's pamphlet 'Tagalen und Madagassen' (Lucerne: Dolischal), which contains a careful study of the racial and linguistic peculiarities of the principal inhabitants of the Philippines and of Madagascar, both of which are scions or subdivisions of the widely diffused Malay stock. Treatises of this kind would naturally be read by imperial Americans, but how many such really give any thought to their subjects except as ministering to their pride of conquest or their pockets?

The celebration of the fiftieth anniversary of the founding of the Germanic Museum at Nuremberg, fully described in a recent number of the *Nation*, was accompanied by the publication of a *Festschrift* entitled "Das Germanische Museum von 1852 bis 1902," prepared under the direction of Dr. Theodor Hampe, conservator and librarian of that institution, and issued by J. J. Weber in Berlin. It is a finely illustrated quarto of 150 pages, containing a full account of the origin and character of the Museum and its development till the present time.

The growth of morality in the brute creation through gregariousness is the subject of an article in the *Revue des Deux Mondes* of August 15 by M. Alfred Fouillée. It is hardly to be remarked for its novelty or its philosophy, but it usefully groups facts which are seldom viewed in the aggregate by the lord of creation. "Animal morality," concludes this writer, "is, like our own, a struggle against the struggle for existence; it is organization in society, devotion to a common cause. The social question has been raised by the animal world as by the human world," but has been solved by the former.

The July number of the *Library Journal* is wholly given up to reports of the Boston and Magnolia conferences (in June) of the American Library Association. Much stimulating reading is the result. Mr. George Watson Cole sums up and tabulates the gifts and bequests to American libraries in 1901-02 (July 1 to June 1). The money value of these benefactions, whether for running expenses or for buildings, was nearly twelve millions. Eight-tenths of the more than nine and a quarter millions for buildings proceeded from Andrew Carnegie, who found even in Massachusetts a foothold for his generosity to the extent of $200,000. To Michigan he gave $914,000, leaving only $500 to come from outside sources; to Kentucky $395,000, leaving $50,000 to other donors.

The monograph by Senator Hoar on Charles Allen of Worcester, a powerful and once distinguished jurist and statesman of Massachusetts, is the longest and not the least interesting paper in the Proceedings of the American Antiquarian Society (vol. xiv., part 3), at their October meeting a year ago. Judge Allen's portrait is very impressively drawn. But here are also to be found Charles Francis Adams's "The Confederacy and the Transvaal," and Reminiscences of John Fiske by S. S. Green.

The United States Coast and Geodetic Survey has issued Special Publication No. 7, devoted to a discussion of the "Eastern Oblique Arc of the United States and Osculating Spheroid," by Charles A. Schott. The development of this arc is the result of the necessity for a main triangulation binding together the detached surveys of the harbors on the Atlantic Coast, and forming a base upon which all subordinate triangulation along that coast might be brought into accord. The triangulation upon which the oblique arc is based begins at Calais, Maine, on the St. Croix River, opposite the Canadian boundary, follows the trend of the Appalachian Mountains, reaches the Gulf Coast at Dauphin Island, near Mobile Bay, and terminates at New Orleans. The total length of the geodetic line is 1,623.2 statute miles, and in its course it traverses sixteen States. Near the middle of the arc the triangulation crosses the thirty-ninth parallel, and for some distance in Maryland and Virginia the same triangulation is employed in discussing the oblique arc as was used in the discussion of the transcontinental arc. The results of

this survey are of far-reaching consequence, since for the first time a measurement oblique to the meridian has been executed on a grand scale, and valuable material has been furnished for a more exact determination of the figure of the earth. The oblique arc contains within itself all that is necessary for determining the dimensions of a spheroid which corresponds most nearly with the existing geoid within the area covered by the triangulation. Previous discussions of parts of this arc, taken in connection with the transcontinental arc of the thirty-ninth parallel, have led to the substitution of Clark's spheroid of reference for Bessel's, and the adoption for the whole country of geographic coordinates based on a uniform system. The volume fills 394 pages, and contains 38 illustrations, including portraits of Hassler and Bache. It is accompanied by two folded maps, one showing the area covered by the arc, the other the distribution of astronomic stations from Maine to Louisiana.

The Geodetic Survey of South Africa has published the second volume of its reports, which contains a "Rediscussion of Bailey's and Fourcade's Surveys and their Reduction to the System of the Geodetic Survey," by Sir David Gill. The survey of Capt. Bailey, which, beginning at the southern end of the arc of meridian executed by Sir Thomas Maclear, extended for a considerable distance along the southern coast of the Cape Colony, is of permanent value as a basis for future subsidiary triangulation and the cartography of the colony. Mr. Fourcade triangulated a large area of the Knysna district, from Krakeel River to Belvedere.

In a paper on Japan's commercial future, read by Mr. Henry Satoh, director of the Imperial Commercial Museum in Tokio, before the Japan Society of London, he points out fields of enterprise for the foreigner in Japan, especially in textiles and the manufacture on the soil of iron and steel. He shows that the larger part of Japan's industries, and notably keramics, are still individual and part of the household routine. Under the direction of the same author, the well-known writer of 'Agitated Japan,' the Imperial Department of State for Agriculture and Commerce sends forth a bound and indexed Abstract of Statistics for 1900, showing in most carefully digested tables the progress of agriculture, commerce, industries, fisheries, forest and mine products. The historian cannot afford to neglect this picture in figures of contemporaneous Japan, which shows modifications of diet (the potato taking the place of other vegetable food) and enlargement of flesh food (with the corresponding multiplication of cattle and increase of pasturage), the decrease of tea-plant acreage, and the increase of mulberry-tree, the astonishing development of native goods manufactured for export, etc. Formosan statistics are not included. Evidently this little publication No. 1 is to be a serial.

Commercial education in Germany is one of the most important subjects treated in the Consular Reports for August. Instruction is now thoroughly organized in five distinct grades, from the primary commercial schools to the commercial universities of Leipzig and Cologne. Many of the primary schools have been founded and are maintained by the chambers of commerce, which, in nearly every city of the empire, are actively engaged in promoting commercial education. An object-lesson as to the value of this training is given by our consul at Hong Kong, who tells of the great success of two young Americans in selling goods of American manufacture in China, owing largely to the fact that they prepared themselves for their trip by learning to speak the Chinese language. The great decrease in the importation of alcohols into the Congo Free State is a hopeful sign, while progress in an Asiatic state is shown by a translation of the recent Siamese copyright law. The fifteenth section provides that one copy of every copyrighted work shall be presented "to the King's library, one copy to the Vajirayana library, and one copy to the ecclesiastical library." Several of the reports refer to the production of sugar in different parts of the world, and, though there has been a decrease of 17 per cent. in this year's sowings of beet sugar in Europe, "it is expected," writes our consul at Bremen, "that the visible supply of sugar in the world on August 31, 1903, will continue to show an enormously overstocked market."

The Damascus-Mecca railway, officially styled the Hedjaz or Pilgrim line, is one of the latest and most interesting projects for the development of the Levantine countries. It is worthy also of being ranked among the great enterprises of the day, as it is to run for 1,100 miles through a waterless desert, peopled by Bedouins hostile to the scheme. Nearly two million dollars has been raised by subscription from Moslems, and work was commenced some fifteen months ago from the terminus of the existing Hauran Railway, sixty-three miles from Damascus. Turkish soldiers and foreigners, mostly Italians, have been employed, and it was hoped that the line would be completed as far as Ain Zerka, 125 miles from Damascus, on August 29, the anniversary of the Sultan's accession. The chief engineer is a German, who has under him some Turkish officers from the corps of engineers. The material comes from Belgium, with the exception of some machinery and of the wooden ties, which are supplied gratis by the vilayets of Aidin and Salonika from their forests.

—Musical periodicals are not, as a rule, profitable unless they cater to the vanity of singers and players. The majority of professional musicians are not great readers even of the literature bearing on their art—which is one reason why they belong to the majority—and the general public seems to be contented with what it gets in the columns of the periodical press. This is true in Germany as well as in other countries; in fact, the editors of German musical periodicals seem to be particularly hampered by the lack of funds. A good deal of attention was therefore aroused last year by the appearance in Berlin of a new fortnightly, in magazine form, *Die Musik* (New York: Breitkopf & Härtel), which has shown an enterprising spirit quite unusual in its sphere. A notable instance is the recent "Bayreuth Heft," comprising the issues twenty and twenty-one. Its twenty articles (144 pages), mostly by well-known specialists, contain a surprising number of new details regarding a subject on which there has been a superabundance of writing for more than half a century. There are also numerous illustrations—portraits, facsimiles of Wagner letters and manuscripts, pictures of the houses in which Wagner lived, Bayreuth Nibelung scenery and singers, and the music of a short waltz which Wagner composed (with a humorous dedication) in Zürich (probably in 1857), and which is here printed for the first time. It has only thirty-two bars, and will not eclipse Johann Strauss.

—The most valuable new document in the "Bayreuth Heft" is the first sketch of the "Meistersinger." It is dated July 16, 1845, and was therefore written at the same time that "Lohengrin" was planned, and seventeen years before its completion as a dramatic poem. It takes up ten pages of type, and contains all the scenes of the completed poetic drama except that between Eva and Hans Sachs in Act II. One cannot but marvel at the dramatic vividness with which the details of the whole comedy are indicated in this preliminary prose sketch, while at the same time the finished poem compares with it as an oil painting with its pencil sketch. A more interesting and instructive glimpse into the workshop of genius has never been afforded. Wilhelm Tappert, who is always making new discoveries, has an article showing that there are not two, as commonly supposed, but three different endings for "Tannhäuser" made at various times by Wagner. Hausegger discourses on Rousseau and Wagner, and Egidi reports some conversations on the subject of Wagnerism which he had with Nietzsche, whose rarely more than semi-sane utterances on diverse topics have received altogether too much attention in Germany. Of greater interest are the sixteen pages devoted to extracts from the letters of Esser relating to Wagner and his works. Esser was a Viennese composer and conductor who was commissioned by the publisher, Schott, to make arrangements for piano of Wagner's later operas. How well he was qualified for this task may be inferred from his reference to the second act of "Siegfried" (which pleases even the boxholders of our Metropolitan Opera-house) as music "in which a melody occurs only sporadically," and most of which is "repulsively tiresome." In one of his letters to Schott he expresses his surprise that that publisher should be willing to risk his money in printing the scores of the Nibelung operas.

—Prince Nicholas Galitzin, Keeper of the Archives in the Foreign Office, Moscow, in the second section of the *Annales Internationales d'Histoire*, Congress of Paris, 1900 (Paris: Armand Colin), deals with "The Question of the Emancipation of the Serfs under the Empress Catharine II." He asserts that this Empress was the first to raise the issue of liberating the serfs (but Maxim Kovalevsky, in a note, not only denies that Catherine had that honor, but calls attention to the fact that she imposed serfage in the South of Russia, which had hitherto been free from it); and gives a brief narrative of the rise and progress of that institution. Until her accession to the throne, Catharine II. was imbued with the ideas of Montesquieu, Rousseau, Voltaire, and the French Encyclopædists, and her first efforts were in the direction of complete emancipation; but she ended by doing nothing to ameliorate the condition of the serfs, because she did not know where to begin in practice, and

her attempts to apply her theories merely served to set all classes in an uproar, and to bring about some serious open revolts.

—More curious and interesting, in the same volume, is the article by M. Vinavert, a lawyer of St. Petersburg, on "French Influence upon Russian Codification under Nicholas I." The *Svod*, or systematic code of laws in Russia, in fifteen volumes, was prepared under the direction of Speransky, at the command of Nicholas I. Speransky had been the greatest statesman under Alexander I., admired everything French, and fairly adored Napoleon I., especially after the interview at Erfurt between the two Emperors, at which he was present. In 1810 Speransky elaborated a civil code which was, in great part, copied from the Code Napoléon. As the war of invasion of 1812 approached, his French sympathies—in particular this civil code—raised a tremendous storm against him, and in 1812 he was banished to a remote province and subjected to the strict surveillance of the police. In 1821 he was allowed to return to St. Petersburg, and appointed a member of the Council of State. When a section of his Majesty's Chancellery was formed, in 1825, to edit the Code, Speransky was not placed at the head of it, but the work fell into his hands, and his chief was warned by the Emperor that he would be held responsible for any actions in the line of those committed by Speransky in 1810—*i. e.*, for any copying from the French code; Russians being persuaded that they possessed, of native origin, everything requisite. But Mr. Vinavert has cleverly analyzed the Code prepared under these conditions, and finds that Speransky got his own way, after all, using half a dozen different devices to conceal his borrowings. Meanwhile, in his Introduction, Speransky asserted that "the articles of the code were set forth without the slightest change, in the very words employed by the ukases on which they were based"; and that "all our wealth in this line belongs to us by right, was acquired by us, and contained nothing borrowed." Mr. Vinavert explains, in detail, several of Speransky's disingenuous and baffling methods of procedure, and shows how, in many cases, the law, which was clear in the Code Napoléon or in Pothier, has been rendered obscure by the manner in which the Russian editors handled it. Mr. Vinavert's labors on this subject are very instructive and important.

—Prof. Ernest W. Clement is the Atlas supporting the little world of the Asiatic Society of Japan in the latest publication of its Transactions. Volume xxx., part i., contains but two papers, both by this author, one on "Japanese Calendars" and the other on "A Chinese Refugee of the Seventeenth Century." In more senses than one, the Japanese have plenty of time. They have solar, lunar, Japanese, Chinese, and Occidental time, two national calendars, and several chronological year periods or era-systems. Of the two vernacular calendars, one called Ki-gen (history-beginning) starts in the mythology of 660 B. C., and the other, Meiji (enlightened rule), began after the accession of the present Emperor Mutsuhito. The country people and most of the Buddhists still observe the old style of reckoning based on the twelve signs of the Chinese zodiac and the sexagenary circle, or period of sixty years. This "cycle of Cathay," in all its divisions and subdivisions, rests upon, or at least receives its terminology from, the ancient philosophy of China. The old Japanese hour was one hundred and twenty minutes long, and the order of numbering was not what to us is the logical order, one, two, three, etc., but followed a style of computation based upon the multiples of nine (1x9=9, 2x9=18, 3x9=27, 4x9=36, 5x9=45, 6x9=54), and in each case the tail figure of the product was chosen as the name of the hour (9, 8, 7, 6, 5, 4). In announcing time by the bell, three preliminary strokes were always struck, in order to warn people that the hour was about to be sounded; hence, to avoid confusion, the numbers, 1, 2, 3, were not used. In most old Japanese clocks there was but one hand or pointer, which stood still while the dial went around it. Despite watches and modern clocks, it will probably take the average Japanese, of the thirty-five millions in the empire, several generations to get accustomed to such trifles as "minutes" and "seconds"—common words for which did not exist in the old vernacular, at a time when "punctuality was the thief of time." The full calendar for 1902 and the list of year periods from B. C. 660 to the present Meiji, with much interesting folk-lore and illustrations of the Zodiacal animals, are given. To his previous studies of the Chinese refugee scholars who fled to Japan on the fall of the Ming Dynasty, causing a renascence of learning something like that of the Greek scholars in Europe from Constantinople, Professor Clement adds another study of one who was a priest, a physician, and an engineer. The Transactions are to be had at the Librarian's Office, 56 Tsukiji, Tokio.

—The yearly consumption of morphine, cocaine, ether, and similar drugs grows out of proportion to the increase of population and to the legitimate demands of medicine. The vice of addiction to narcotics accounts for this. Its immediate consequences are less obvious than those of alcoholic intoxication, but have quite as disastrous ultimate effects, and their very elusiveness makes the slavery more inexorable. We may not discuss here its probable causes, and can only insist that the use of narcotic drugs is a fascinating peril, whose gravity increases with its charm, and from which escape by self-help is practically impossible. 'Morphinism, and Narcomanias from Other Drugs' (Philadelphia: W. B. Saunders & Co.) is the somewhat inexact title of Dr. T. D. Crothers's hospital and other experience, and his deductions therefrom, in book form. His warnings and his advice are good, especially as applied to the more mischievous poisons, and his general deductions may be accepted with confidence. But we can hardly commend this as a model book. There are lapses in construction, and especially there is frequent failure to give exact references when authorities are cited. The latter is apologized for in a general way in the preface, but the deficiency is none the less tantalizing when the reader wishes to consult the originals. Should the precise data have been lost, it would be quite worth while to recover them, as might easily be done through the superb Surgeon-General's Library and Catalogue. The following case is gravely made a part of the record (p. 303): "Some very curious instances of coffee intoxication have been reported. One, of a prominent general in a noted battle in the civil war: after drinking several cups of coffee he appeared on the front of the line, exposing himself with great recklessness, shouting and waving his hat as if in a delirium, giving orders, and swearing in the most extraordinary manner. He was supposed to be intoxicated. Afterwards it was found that he had used nothing but coffee."

## PAULSEN'S KANT.

*Immanuel Kant: His Life and Doctrine.* By Friedrich Paulsen. Translated from the Revised German Edition by J. E. Creighton and Albert Lefevre. With a Portrait. Charles Scribner's Sons. 1902. 8vo, pp. xix, 419.

Of the three "parts of the soul," as they used to be called, Sensibility, Energy, and Thought, Kant was decidedly deficient in the first and by no means a hero in the second. That he was genuinely great in thought would seem to be overwhelmingly proved by Vaihinger, from the manner in which he has commanded the attention of all subsequent thinkers. Yet very many of these thinkers, if not most of them, would hold Kant to have been wrong in almost every one of his arguments. Let us reëxamine his capacities in sensibility, energy, and thought.

As for sensibility, we call to mind a single passage in Kant's writings as having been admired æsthetically. It is the well-known parallel between the starry heavens above and the moral law within. That genuine eloquence must be attributed to this passage is sufficiently attested by the general admiration it has excited, for it clothes an ethical doctrine which, nakedly presented, would be repugnant to the majority of admirers of the passage. This seems to be the one passage in all Kant's writings that can really be called fine. Professor Paulsen is of opinion that Kant might have become one of the great writers of Germany. He gives sundry reasons for thinking so—such as that Kant's style is marked by great emphasis, that he has a goodly stock of fine phrases and no little ingenuity in bringing them in, and that his "waggishness" is strongly marked. There is no reason to suppose that Kant might not have made a good writer, like anybody else, had he been trained under a good master. Any exaggeration of tone would have been repressed, his elegant extracts dismissed, and his wit subjected to good taste. A good writer, of course; but whether a great writer, or not, is one of those questions of which Kant himself would have said that they transcend the limits of possible experience. Measuring his sensibility by known facts, we find that his style, though it has qualities which excite the gratitude of a student who many times rereads and deeply ponders every section, is devoid of any other grace than that of keeping to the point—is not even always grammatical. Kant never contemplated matrimony, and apparently was never in love. He never had an unreasonable attachment. Though for years he was a distinguished lecturer on physical geography, he was never moved to go to look upon a mountain, never even tramped to the neighboring sea, never saw other town than his own little East Prussian capital. In sensibility, then, Kant must be rated as below the average.

Energy is of two kinds; that which reacts upon the outer world, and that which inhibits one's own impulses. We must be careful not to mistake a deficiency of either kind for an excess of the other. Kant was never moved to any enterprising action, nor even to making any troublesome observations. On the occasion of his being reprimanded for his religious philosophy by minister and king, the little fellow meekly promised to say no more upon the subject. It is true that he was seventy years of age; but then he was a bachelor, without dependents, and by far the most illustrious person in Germany, not even perhaps excepting Goethe. He declares, in a well-known paper, that he has read Swedenborg's 'Arcana Cœlestia.' If he really did that, it was the most heroic effort of his life. He would have been better employed in reading Hume's 'Essays' or 'Treatise on Human Nature,' which concerned him more than any other books in the world; but Paulsen is quite right in saying that he never did read Hume in the sense of apprehending his meaning. It must be granted that Hume is an enigmatical writer. His so-called "easy" writing makes hard reading enough. It allows the superficial student to read into it ideas that the author never intended to express, especially the student unacquainted with what was going on in the English world of letters of the period. But take the ordinary traditional logic. A schoolboy can master that. Yet Kant's pamphlet on the 'Falsche Spitzfindigkeit' is devoted to setting forth as a novel discovery of Kant's own the very doctrine of the reduction of syllogism taught in every book of traditional logic. The only real novelties it contains are two or three absurd blunders. Kant probably did read Baumgarten's 'Metaphysica'; but one must doubt mightily whether he ever really read any other book of philosophy.

These things are most significant. In self-control Kant appears to be a prodigy. A man more systematic than he would not be reckoned among the sane. When, during his afternoon constitutional, he reached a certain corner, the good people of Königsberg would pull out their watches, not to see whether Herr Professor Doctor Kant was on time, but to see whether their watches were going right. His more important books were put together, as he expressed it, architectonically. That is, just as architects, until recently, used to insist upon designing buildings upon an arbitrary plan supposed to have certain merits, but not determined by the purposes which the buildings were to subserve; just so, Kant would enslave himself to an elaborate system of divisions and subdivisions—*Hauptheile, Theile, Abtheilungen, Bücher, Hauptstücke, Abschnitte,* and *Paragraphen*—laid down beforehand, not arising from the peculiar character of his theme, but supposed to be dictated *à priori* by reason and to be derived from the idea of pure reason. Such method either bespeaks extraordinary self-control or a singular defect of *élan*. Several circumstances besides Kant's apparent inability to read a work on philosophy somewhat incline us to the latter hypothesis.

At any rate, it was exclusively in the way of thought that Kant can be deemed great, if he was great at all. There are different kinds of thought: there is mathematical thought, that works by diagrams; there is the thought which, from observing a fragment, divines a whole; and there is logical analysis. Kant was certainly not a mathematician. In scientific theorizing, however, he was decidedly strong. He is accounted by astronomers the author of the Nebular Hypothesis. In his younger days, he was a physicist; and he always remained a physicist who had taken up philosophy (naturally, less strikingly so as his powers declined), contrasting in this regard with Fichte, Schelling, Hegel, and Schleiermacher, not to speak of Baader, Günther, etc., who were all theological students, and as strongly with Jacobi, Fries, Krause, etc., who came to philosophy by the route of theology; and even, more or less, with Schopenhauer, Herbart, Beneke, and all the others before Fechner and Lotze, who, at any rate, breathe rather the atmosphere of the seminary than that of the laboratory. Every scientific reader feels the philosopher of Königsberg to be of his kindred.

When we think of the stupendous amount of close study which intellectual men of every stripe have bestowed upon Kant, and when we ask ourselves, What is it, then, which has attracted all this attention? We are led to answer, it was his power of constructing a theory, which is the kind of intellectual feat that marks the man of science—the Young, the Faraday, the Darwin. We shall not, of course, be misunderstood as saying that constructing theories made any of them the great men that they were, any more than it did Kant. As a scientific man beneath the skin, Kant is comparatively free from the besetting fallacy of the philosophers, which may be described, without exaggeration, as consisting in producing arguments to prove a micron, at most, and in concluding a light-year, at least. Kant, perceiving in some measure this universal fault of the philosophers, was naturally led to his evident ambition to be the arbiter of philosophical disputes. But he could have exercised this office only in the weak manner of the Eclectics, allowing so much weight to this consideration and so much to another diametrically opposed to it, if he had not fortunately been gifted with a great strength in logical analysis, that enabled him at once to do full justice to the arguments and tendencies of both sides, and to make both contributory to a third unitary conception. Yet even his logical analysis would not have sufficed, if it had not been for a supereminent share in a characteristic that may be remarked in all the more powerful scientific intellects, the power of making use even of conceptions that resisted his logical analysis, and of drawing from them nearly the same conclusions as any clear mind would have done that had analyzed them. We cannot, in a few words, make our meaning very clear; but one might say that an ordinary intelligent mind has an upper layer of clear thought, underlaid by muddled ideas; while in Kant's mind there appears to be a pure solution down into those depths where daylight hardly penetrates. He thinks pretty correctly even when he does not think distinctly.

The volume under consideration contains a careful account of Kant's place in history, of his life and character, and of his philosophy, by one of the most accomplished and popular of the German philosophers of to-day. It is not a suitable guide for a beginner in Kant. The 'Critic of the Pure Reason' is, perhaps, as wholesome a book as a student of force could find with which to begin the study of philosophy. But the only accompaniment to it that is advisable at first is a textual comment. Such books as Paulsen's are best left for later perusal. We need not say that the student must not allow himself to imagine that in going through the 'Critic' for the first time without preparation he can understand Kant entirely, far less duly estimate him, until he has read the discussions which led up to the 'Critic.' Deeper students will find this volume interesting and convenient. It leaves hardly any question of metaphysics untouched.

We have said that it is drawn up with care. We will now give two specimens of its inevitable inaccuracies. In summing up Kant's historical position, Paulsen says that to have cleared the ground and pointed the way to a poetic naturalistic pantheism as the fundamental form of the conception of the world, is the imperishable service of Kant. This not only forgets that Lessing introduced "poetic naturalistic pantheism" the year before the 'Critic' appeared, and that its propagator, Goethe, was uninfluenced by Kant, but conveys the idea that Kant's importance is exclusively theological and poetical; and accordingly, in the summary of his philosophy, his scientific writings are left unmentioned, and, throughout, his relations to theology are made infinitely more important than his relations to what is generally called science. But Kant, as we have said, was, on the contrary, mainly a man of science—not oblivious of aspirations towards God, freedom, and immortality, but yet dwelling in the realm of experience; and his theory of cognition—its general design, at least, and some of its corner-stones—still stands, as far as scientific thought is concerned, firmly established. Under these circumstances, and since he himself was not a pantheist, it is unjust to sum him up as a forerunner of what he condemned.

The following is an example of another kind of inaccuracy. On p. 147 we read:

"How synthetic judgments *à posteriori* can have actual validity seemed to him to be no problem at all. If he had raised the question, it would have shattered the whole structure of the 'Critique.' He would have been forced to reply that there can be no such judgments; synthetic judgments *à posteriori* are a *contradictio in adjecto.*"

Compare this with the following from page 8 of the 'Critic of the Pure Reason':

"In synthetical judgments, I must have, in addition to the concept of the subject, A, something else, X, upon which thought may react, in order to cognize a predicate, B, as belonging to A, although not a part of it. In empirical, or experimental, judgments there is no difficulty in fulfilling this condition. The X is merely the complete experience of the object of the concept A, which is but a part of that experience. [Having expanded this remark very clearly, he concludes]: Experience, then, is that X which extends beyond the concept A, and upon which the possibility of the synthesis of the predicate B with the concept A is founded."

We thus find that Kant does consider the very problem which Professor Paulsen says he does not consider. He does not, indeed, consider it in all its branches, but he does so quite sufficiently to show that his answer, had it been more complete, would have borne not the slightest resemblance to the absurdity which Professor Paulsen says he would have been drawn

into. The answer that Kant gives is easily susceptible of natural expansion to cover every possible phase of the question, quite in opposition to the theological logicians of Germany. Kant looked upon such questions as a clear physical thinker would—that is to say, in a manner of which Professor Paulsen has not the least conception.

We will add one word concerning the title of the 'Critik der reinen Vernunft.' The word *Kritik* already existed in German, meaning a critical writing. But Kant declares, with all his emphasis, that that is not the word he uses. He borrows a word from the English of Hobbes and Locke, and spells it (in his first edition) with a C. He used it, as the English writers had done, to mean the art or science of criticising. Since this word *critic* exists in our language in that meaning, and is, in fact, the very word Kant borrowed, while the word *critique* is English, if at all, only in the sense against which Kant almost violently protests, the first word of the title should be restored to its English form 'Critic' in translation.

In the best philosophical use of English words, "reasoning" is a well-known operation of a mind, and "reasoning power" (or, less well, "reason") is the faculty of performing it. "The Reason" is a totally distinct faculty by which we are supposed to know the truth of first principles. "Reason" means nothing more nor less than conformity to the best result of deliberation. Kant, not being insane, did not propose to criticise Reason. Neither did he criticise the Reasoning Power, unless to approve it in one paragraph. But what he chiefly criticised and had reference to in his title was the faculty of knowing first principles, *The* Reason. Consequently, his book, the 'Critik der reinen Vernunft,' is a work concerning 'Critic of the Pure Reason.'

---

*The Lower South in American History.* By William Garrott Brown. Macmillan. 1902. Pp. xi, 271.

The three papers which give title to this volume of essays are an interesting attempt to exhibit the conditions, social, economic, and political, which characterized the lower South between 1820 and 1860, and which caused it to exercise during that period so marked an influence on the course of national affairs. Between the lower South and the upper South there were, as Mr. Brown points out at the beginning, marked differences. The society of the lower South, from South Carolina to eastern Texas, was, to be sure, sprung largely from Virginia and Carolina, but it was a selected stock of energetic men to whom the material conquest of a new and wonderfully fertile country was an attractive task; and when, with the retirement of Monroe, the ascendancy of Virginia came to an end, the influence which Virginia had wielded in national affairs was taken up and continued, not by New England or the newer West, but by the "Black Belt." It is this vigorous and masterful society that Mr. Brown, unable to see, in the pictures of it drawn by such writers as Cairnes and Olmsted, "a true likeness of that which was," has endeavored to analyze and weigh.

The illustrative State with which he particularly deals is Alabama. In 1850, at the end of thirty years of Statehood, Alabama had a population of about three-quarters of a million, three-sevenths of whom were slaves. The 335,000 slaves, however, were owned by less than seven per cent. of the white population, while less than ten thousand whites owned three-fourths of the negroes. The average annual value of the cotton crop, the principal product, was $20,000,000, practically all of the cotton going to New England or to Europe. While thus contributing largely to the prosperity of the East, the cotton States also offered to the West the best market for corn, bacon, and mules, not even the most progressive planters always growing food enough for their own demands. In the "concentration of land and slaves in fewer hands, in the greater immediate profitableness of agriculture, and in the greater rapidity with which lands were exhausted" (p. 37), the industrial life of Alabama and the lower South was marked off with most distinctness from that of Virginia. The poor whites in the hills and sand barrens were a class apart, apparently as unaffected by slavery then as they are by freedom now. Among the planters, a high degree of religious interest accompanied a small measure of intellectual concern. The best men in Alabama went into politics, though without a resulting marked predominance of the planter class. Government was democratic, after the Jeffersonian order of democracy; "governors and legislators were chosen from various social ranks; many prominent men were distinctly of the self-made type" (p. 44). It was a social régime that bred personal ability and masterfulness, and developed powers of business organization, while the patriarchal character of its home life long continued to have, alike for strangers and those who lived under it, an undeniable charm.

What the representatives of the cotton States in Congress stood for was,

> "not slavery alone, . . . not agriculture alone, but the whole social organism, the whole civilization, whose decay in Virginia had been arrested by the rise of the States from which they came. They were committed to the maintenance, in the most progressive country in the world, of a primitive industry, a primitive labor system, and a patriarchal mode of life. They held that their main industry could be successfully prosecuted only with slave labor, and while it was so prosecuted it tended to exclude all other forms of industry. Its economic demands were imperative; its political demands were hardly less imperative. Economically, it demanded that the fewest possible restrictions be placed upon the exchange of its two or three staple products for the products of other countries, and that it be permitted to extend itself constantly to fresh lands. Politically, it demanded protection from criticism and from social and humanitarian reforms and changes" (pp. 57, 58).

In this contention the lower South could count on the support of Virginia and the upper South, and had little difficulty in making allies among the manufacturers of New England and the farmers of the West. The first clash over protection showed the firmness of the cotton States, though the majority of their public men were too strongly devoted to Jackson and the national idea to follow South Carolina into nullification; and the Walker tariff of 1846 was "more clearly in accordance with the principles of free trade, more clearly contrary to protectionist ideas and devices, than any other tariff law since 1789" (p. 66). The same determination to defend a system was shown in the effective opposition to internal improvements, while the absence of cities caused the South to take a "country view" of public finance, to favor State banks, with a currency easily expanded at harvest time, and to oppose a national bank. Yet, although on all these points the influence of the lower South was against the development of a strong national Government, the majority, probably, of the great planters, at the division of the old Republican party, became Whigs rather than Democrats.

The primary cause of the final struggle Mr. Brown finds in the differing mental and moral habits of the sections. It was, he says,

> "the belated concern of the Northern mind about the things of the spirit, not its absorption in material enterprises, that boded ill to the plantation system. It was the North's moral awakening, and not its industrial alertness, its free thought, and not its free labor, which the Southern planter had to fear. The New England factory made no threat, the town meeting did. The Northwestern wheat farms and pork-packeries and railways were harmless; but Oberlin College and Lovejoy's printing-press and the Underground Railway were different. . . . [The true danger] was in that freedom of individual men which had made the North prosper, and in that national feeling, that national theory of the Government, that national antagonism to whatever was weak or alien under the flag, which had resulted from the development and the denser peopling of the North. The final conflict came only when these things were thrown clearly into competition with the picturesque Old World social system, the limited nationalism, the unprogressive industrial contrivances of the South for the occupation of new lands" (pp. 88, 89).

Yet, as Mr. Brown points out, while the South struck at abolition, not only because abolition was hateful to it, but also because, if it would preserve its own social structure, it could not do anything else, it did not stand on the defensive alone. There was a vigorous counter-movement in favor of slavery to offset the Northern denunciation of it. From the standpoint of the Southern leaders, the presence of the negro in the South could be met only by keeping the negro in subjection and building a society with slavery as one of its foundations. Such an adjustment of race relationships as Mr. Bryce has lately spoken about, in which the superior race shall grant to the inferior the full measure of actual equality before the law, seemed to the men of the South fifty years ago, as it seems to many of their descendants to-day, too visionary to be seriously worth trying.

Of the remaining papers in the volume, three—on William L. Yancey, "the orator of secession," on the resources of the Confederacy as set forth in Professor Schwab's recent book, and on the Ku-klux movement—appeared originally in the *Atlantic*, and were favorably commented on at the time. The others, entitled respectively "A New Hero of an Old Type," and "Shifting the White Man's Burden," are printed now for the first time. The "new hero" is Hobson, whom Mr. Brown, apparently writing from personal acquaintance, praises with much rhetorical warmth and glow. The subject of the other is the disfranchisement movement in the South, in which Mr. Brown, though anxious to do justice to the motives of those responsible for it, naturally finds no solution of the race question in its political phase, nor any progress towards free government. In so

far as the movement is a recognition of actual conditions and an attempt to bring the law into harmony with the facts, it may, in Mr. Brown's opinion, result for the time being in a better conduct of affairs; but the primary difficulties which it at present contemptuously ignores will surely return to vex alike the whites and the blacks.

The value of Mr. Brown's rather sketchy papers lies mainly in their suggestiveness. They do not make any considerable contribution of fact, but disclose some interesting points of view. Taken together, they are stimulating and helpful attempts to deal fairly and broadly with a period and region of which, in spite of all that has been written, we still know very little. The observations are keen as well as sympathetic; critical and discriminating as well as broad. The style, too, though often artificial and over-picturesque, is entertaining and very readable. Altogether, Mr. Brown's book is not only worth reading, but even more worth pondering.

---

*Matthew Arnold.* By Herbert Paul. [English Men of Letters.] The Macmillan Co. 1902.

This is a surprisingly poor addition to an excellent series. The wonder is not that Mr. Paul should have written such a book, but that he should have been afforded the opportunity. Among English men of letters none more than Matthew Arnold needs a skilful, conscientious, and highly qualified biographer. In many respects the typical English man of letters, with an engaging temperament, in which traits of the poet and the critic, the idealist and the agnostic, were subtly interfused, living a life of multifarious literary activity closely allied to most of the significant tendencies in Victorian opinion, Arnold might have been made the subject of a really notable brief biography, a fitting conclusion to the set. Instead of this, we have, in the present volume, a stiffly constructed work, wherein, between the summary chapter misnamed introductory and the conclusion, are comprehended seven chapters of desultory narrative, followed by a series of essays upon "Mr. Arnold's Philosophy," "Mr. Arnold's Theology," "Mr. Arnold's Politics."

The texture of the book is jejune animadversion—Mr. Paul's assertion of his own opinion against Mr. Arnold's on points of rather unimportant detail. He reiterates endlessly that Arnold's unrhymed lyrics are "detestable," but gives no reason, and the reader is not convinced. He points out and quotes the "gems" of certain pieces, but nowhere catches or imparts the peculiar flavor of Arnold's poetry in his best and most characteristic manner. He nowhere firmly exhibits the singular effectiveness of Arnold's poetic work as a whole, so largely the result of applying the cool and careful methods of classic art to the expression of the troubled mood of the mid-nineteenth century. The chapter upon "Mr. Arnold's Theology" is equally inadequate.

At times, indeed, Mr. Paul puts forth a remark of considerable suggestiveness and insight. The dictum that "Mr. Arnold has the gift of seeing his own faults without seeing that they were his own," is excellent, despite its trickiness; and there is much pertinence in the reminder, apropos of Arnold's attitude toward dissent, that "the religious freedom in which he so lavishly indulged was secured for him by the objects of his constant gibes." We are grateful for the delightful story of the Bampton lecturer, who passionately adjured his hearers: "I beseech you, brethren, by the mercies of Christ, that you hold fast to the integrity of your anthropomorphism." Unfortunately, such good things are the exception. The writing is, in the main, quite in the author's wonted manner—flat and jerky prose, relieved by occasional smartnesses, but lamentably devoid of the *ordo concatenatioque veri* for the "pedantry" of desiring which he pokes ill-advised fun at Arnold.

Errors in taste are accompanied by errors in fact. We find, for example (on page 51), the statement that the Oxford professorship of poetry was founded in 1808. It was, as a matter of fact, founded by the will of Henry Birkhead, who died in 1696. It may be, however, that this minor discrepancy should be referred to the demon of misprint, for Joseph Trapp, styled by a contemporary "an ingenious, honest gent," became the first incumbent in 1708.

It is hard to know just what impression of Arnold's personality a reader unfamiliar with his life would derive from the book. Mr. Paul so constantly keeps his finger on the wrong place, so continuously avoids analysis and pursues minor faults, that the running reader is likely to conceive Arnold to have been a learned, but intellectually temerarious and often frivolous person, whose chief business in life was to make mistakes. In fact, at times Mr. Paul seems to pause for fear lest he make Arnold appear too insignificant a subject for his abilities as a biographer. At such times he is prone to remark that Arnold was, after all, a genius. There is, moreover, a good deal of misplaced praise that is even more irritating than the fault-finding to the true lover of Arnold. We hear a great deal of Arnold's learning, and are told that, "next to Milton, he was the most learned of English poets." A scholar, in a fine sense, he certainly was; but is there any true sense of "learning" in which Arnold was not less learned than such poets as Ben Jonson, or Southey, or even, one is disposed to add, Mr. Swinburne? The fact is, that Arnold was a man of ideas rather than of erudition. He was blessed with a certain beneficent singleness of mind. He kept strictly to the high road of literature, with rare side excursions to the shrine of some minor writer of "distinction." The "hundred best books" were his province. It was this limitation of the field, this renunciation of the more devious coverts of true humanistic learning, that had much to do in begetting the "sad lucidity" of Arnold's poetic art, and in forming the critical method and manner which make his work of permanent importance to a literature in which "sweet reasonableness" is a perennial issue.

Something of this is stated in Mr. Paul's conclusion, but it scarcely avails to counterbalance what has gone before. The final impression is one of hopeless confusion. All of this goes to show that in biography, as in life, the mood of admiring sympathy is better than the mood of superiority for getting at the real nature of a man.

---

*Savings and Savings Institutions.* By James Henry Hamilton. Macmillan Co. 1902.

The subject here treated, as the author remarks, has not received the attention that it deserves. The desire of man to better his condition, and especially to give his children advantages which he did not enjoy, is the most potent factor in civilization. It flourishes even under misgovernment, and is not extinguished by war, pestilence, and famine. To examine the manifestations of this desire in the form of institutions is certainly a praiseworthy undertaking.

We cannot speak very favorably of the manner in which this examination is here carried on. The author appears to be ignorant of the causes which lead to the establishment of savings banks in some places and not in others, and to believe that Government can cause savings to be accumulated where they are not now made. He seems to suppose that the deposits in the institutions established under the auspices of the European governments represent capital that would have had no existence had not these institutions been provided. Such an inference is fallacious. In an agricultural country land is altogether the safest and most profitable investment for the savings of those who are in active life, and loans secured on land are the best security available to those who depend on the income from invested capital. It is only where large accumulations of capital exist that institutions for its investment are required.

The scheme for the reception of small deposits by the Post-office is superficially attractive. If men were induced to save by making it convenient for them to deposit their savings, such a scheme would be highly satisfactory. No doubt the existence of facilities constitutes a motive for their use; but the virtue of providence is chiefly due to other considerations. It is a comparatively small matter to receive deposits; to invest them—*hic labor, hoc opus est.* A Government, it need not be said, is incompetent for this task. There is not a national Government which has not at one time or another cheated its creditors, and some of them have repudiated whole issues of their bonds. Every one knows the financial standing of Turkey, of Greece, of Spain, of Italy. Austria is only beginning to emerge from insolvency; whether Russia is solvent or not, who can tell? France has so loaded itself with debt that it would certainly be bankrupted by another war, and England and the United States have each recently invested a thousand millions in the pursuit of empire, from which no pecuniary return can be expected.

By far the greater part of all existing public debts has been incurred in war or in warlike preparations, and there is little reason to hope for better things in the future. But if a Government assumes control of the savings of its subjects, it can invest them, generally, only in its own obligations. The French Government has recently compelled the savings banks to turn over their deposits to the Treasury—an abominable act of oppression. The British Government, some years ago, undertook to pay depositors in its savings banks 2½ per cent. interest. But it invested these deposits in consols bought at such prices as do not produce that interest, and the depositors are thus paid a bonus at the expense of the taxpayers in general. No private bank could or would adopt such a policy, and when the Brit-

ish Government had assumed this responsibility, it went to war with the Boers, and impaired the value of its consols one-fifth. It owes the depositors in the savings banks really more than their investments amount to, and in that department of the finances is probably insolvent, judged by the standard of private commercial morality. Doubtless consols will now rise; but what would have happened if the issue of the war had been different? What will happen if a general European war breaks out?

The author of this book has collected many facts concerning building associations, insurance, and the various methods of saving and of caring for savings. His accounts, however, are not sufficiently complete to be very satisfactory, and he does not succeed in getting a comprehensive grasp of his subject. But his aim is laudable, and this essay may lead to others of a more substantial character.

---

*The Ethical Treatises of Berachya*, Son of Rabbi Natronai Ha-nakdan; Being the Compendium and the Masref, now edited for the first time with an English translation, etc., by Hermann Gollancz, M.A., D.Lit. London: David Nutt. 1902. Pp. lvi, 362, 154.

*The Improvement of the Moral Qualities.* An Ethical Treatise of the Eleventh Century by Solomon Ibn Gabirol, printed from an unique Arabic MS., together with a Translation and an Essay. By Stephen S. Wise, Ph.D. Columbia University Press. 1901. Pp. 120, 47.

The awakening of the East is affecting not the living only but the dead as well. Books supposedly laid to their rest long ago, over whose dusty graves the drums and tramplings of many conquests have passed, are being brought forth into a new life as immortal (through the kindly art of the printer) as any sublunar life may be. Not so many years ago such a resurrection would have seemed a pious dream, but the utterly impossible is steadily coming to pass, and these sheeted dead, often strangely and uncomfortably enough, are beginning to move in twentieth-century life. For the Muslim East its mediæval scholars and sages, so awakened, still have kinship of aspiration and habit of mind; but in Europe, for all our rigors of historical science and *pietas* towards the founders and transmitters of our thought, there is almost a Hamitic element in the exposure of the nakedness which oblivious time itself had perhaps more wisely veiled. The soaring geniused few who, by the universal within them, were kin to all the ages, may have nothing to fear; but the little men who clung and groped around them, who understood the masters so little and were yet so confident, so definite, and so particular—for them there is great pity in this awakening.

Such dismay and sore puzzlement would surely have befallen Berachya if he, like his books, had come to life again in our time. A worthy man, come of a family of Massoretic scribes and probably in youth plying that art himself, he—so Dr. Gollancz has with singular skill and acuteness reconstructed his life—must have turned early to the science of the time and translated a 'Lapidarium' of most miscellaneous stone-lore and the 'Questiones Naturales' of Adelard of Bath—that queer dialogue between an uncle and a nephew on the respective values of eastern and western methods; both probably through the French. Later, it would seem, he took up ethical philosophy as accessible to him in Hebrew, French, and Latin. Arabic he plainly did not know; the new life which was to come from it through the families of Tibbonids and Kimhids, was only just beginning. Last of all, he, like so many of his time, wrote fables. These he managed so to dress in easy Scriptural Hebrew, barbed with Biblical allusion, that they have remained, and with them his own name, very much alive to the present time. Practically, up till now, Berachya has been Berachya of the fables. Round them has centred the burning question of his place and date. He himself has been only a name, or rather several names, and some witty Hebrew fox stories. Mr. Joseph Jacobs, after his wont, had a fantastic hypothesis that he was a certain "Benedictus le puncteur," a Jew of Oxford who was mulcted by Richard I. towards his ransom. But this hypothesis was smitten sorely by both Neubauer and Steinschneider, and now Dr. Gollancz has very fairly demonstrated that Berachya was really of Languedoc, one of the brilliant circle gathered in the twelfth century at Lunel round the Jewish Mæcenas Meshullam.

This he has done by bringing into court and publishing the present ethical treatises. For themselves, it must be confessed that these are of a phenomenal dulness. They are a rehash of sections from the great work of Saadya, the Gaon—from whom, indeed, all Jewish ethics dates and comes—in part straight, in part mingled with matter from Ibn Ezra, Bahya and Ibn Gabirol. All these he knew in the older Hebrew translations only; to the broader Arabic culture he had no access. And thus, as a link in the chain of ethics, he is frankly valueless. His line ends with him. The intellectual energy which sprang from Ibn Gabirol's 'Fons Vitæ' did not reach him, though it reached and affected Europe down to the Renaissance; he appears even to have known nothing of Halevi or Maimonides. In ethics his face was set backwards into that past which is so unintelligible to us; only by the art of his beast fables can he have part with modern men. We may therefore rejoice at Dr. Gaster's promise of an edition of them. We shall learn from it what relation, if any, Berachya had to Marie de France, and what part he played in the whole Isopet development.

In Dr. Gollancz's own work only one point seems open to criticism. That is the *obiter dictum* that the old translation, so long ascribed to Berachya himself, of Saadya's 'Amanat' was made in the East. When we consider that learned Oriental Jews wrote regularly in Arabic and that the ordinary language of the masses of Oriental Jews was Arabic, it is hardly explicable how such a translation could have there been called for. In Spain and Italy the case was different. There a Hebrew version would be required as soon as the book was known.

With Ibn Gabirol the matter stands otherwise. He would be no uneasy ghost in modern life. If his Hebrew poems, and especially the "Kether Malkuth," give him part in the devotions of the synagogue, his 'Fons Vitæ'—the authorship of which was so long ascribed to a shadowy *Doppelgänger*, Avicebron—connects with the Muslim neo-Platonic school, and puts him in the great line of philosophical development that runs from Plato and Aristotle to our day. His influence was heavy on Duns Scotus and Giordano Bruno, and from them has passed on. But the present ethical treatise gives little suggestion of his weight as a thinker. In spite of independent flashes, it is of the old type, and evidently formed part of his more public writings as distinguished from the esoteric tractates in which his real opinions were given out. Dr. Wise does not seem to have appreciated this economy of teaching which characterized all Arabic philosophy, nor to have divided sharply enough this book from the 'Fons Vitæ.' The two have little in common; they are intended for quite different audiences. As to details, it is a pity that the Arabic text—the first edition of the original, though there have been many of the Hebrew translation—should have suffered so in printing. The diacritical points have been too often broken away, and the text would be hard to read if its vocabulary were not of a well-worn monotony. Dr. Wise, too, might have paid more attention to the vowels; they seem sometimes to be scattered in at random. Further, his translations, especially of the verses, might often be improved. Ibn Gabirol, whether sincere or insincere, was worthy of more care. Finally, the remark on the *Todtschweigen* of Ibn Gabirol will hardly hold. Berachya, though of the steadiest orthodoxy, quotes him repeatedly.

---

*A History of Greece to the Death of Alexander.* By J. B. Bury. Macmillan. One volume. 1900. Library edition; two volumes. 1902.

In the preface to his first edition, the author intimates that the work is intended not only for the general reader, but also for use as a text-book in universities and schools. He writes under the conviction that those histories which are capable of enlisting the interest of mature readers are best also for informing younger students. This perhaps would be a sound view, if it were only practical; but, at least in America, secondary teachers universally demand short, simple books; and even college instructors say that they find works of the compass of Holm and Bury too detailed for use as texts. Another opinion of the author, as to the superior usefulness of a one-volume history, must have been modified somewhat by experience, else we should not now have his far more attractive "library edition" in two volumes. The new edition omits the cuts, but retains the maps and plans. Of the few changes in the text, the most important is that which notices the progress of the Cretan excavations. "The other chief additions are a fuller account of the diplomatic transactions between the peace of Nicias and the first battle of Mantinea, a short biographical notice of Herodotus, and a clearer statement regarding the character of Thucydides as an historian." It is difficult to understand why the author ended with the death of Alexander; the broad view of Greek history now prevalent ought to have influenced him to continue the work to the beginning of the period covered by his 'Later Roman Empire.'

Mr. Bury is favorably known to classical scholars by his edition of Pindar, and to students of modern history as the editor of the "Foreign Statesmen" series. His 'History of the Later Roman Empire' is a valuable contribution to our knowledge of the neglected period which it treats, and his 'Student's Roman Empire,' though scarcely more than a compilation, has served a good purpose in bringing to the English reader the views of Mommsen as to the early imperial Constitution. The breadth of the field in which Mr. Bury works, however, prevents him from being a specialist in anything. It is true that he brings to the preparation of the present history not only his long experience as a writer and editor, but also the broad, sympathetic knowledge of Grecian literature rarely found except in the professor of Greek, and a good acquaintance with the best modern authorities in his field. Yet he is wanting in that mastery of the material which distinguishes Busolt, Holm, and others who have devoted their lives to this one subject. In everything excepting literary form and expression he lacks originality. In his treatment of Athens the influence of Wilamowitz-Möllendorff appears on nearly every page, but the greater part of his work seems to be drawn from Busolt's exhaustive history. He goes so far as to take credit for suggestions offered years ago by Busolt. For instance, in volume ii., p. 474, the suggestion as to the original application of *pentacosiomedimni* was made in 1891 by Busolt (Philol, l, p. 396), and repeated in his history (ii., p. 182, n. 3). In such cases Mr. Bury's memory is doubtless at fault. It is a question, on the other hand, whether the kind of work he does is just toward the original investigators. After the Germans, with infinite toil, have advanced historical science in a given field, is it fair that an English writer, competent to handle every subject in the ancient or modern world with equal brilliancy and success, should leisurely reap the fruit of all their labor? In the instance before us, it is highly probable that, had the works of Busolt and Wilamowitz-Möllendorff been translated into English, Mr. Bury would never have attempted a history of Greece. But the fault is not his alone; the custom of preying upon German scholarship is so general that we have become hardened to the injustice of it.

Mr. Bury's work has enabled the English reader to think the thoughts of the most advanced German specialists in the field of Grecian history. For instance, he does ample justice to the merits of Herodotus; he calls attention to the partisan attitude of Thucydides toward the leaders of the Athenian democracy; and he appreciates the part taken by Themistocles in the making of Athens. Had he followed the principles of historical inquiry more strictly, he might even have acquitted the great Athenian statesman of the charge of bribery, as Eduard Meyer has done. Following Köhler, Mr. Bury dares in one case to prefer the authority of Aristotle ('Constitution of Athens') to that of Thucydides. To scholars of like mind with Mr. Evelyn Abbott, this judgment will doubtless appear sacrilegious. These conservatives will find our author heretical on so many other subjects that we may expect to see them putting their ban upon his work and denouncing him as no true historian of Greece.

In the early part of the work Mr. Bury shows little evidence of dependence on German scholarship, but leans rather upon those English archæologists who are directly interested in the Cretan excavations. An archæologist, it is to be noted, is as a rule an untrustworthy historian. In the historical interpretation of his "finds" he indulges in the most fanciful speculations; two or three facts furnish him with material for a whole chapter of "history." Taking his clue from the English archæologists, Mr. Bury attempts to follow in minute detail the fortunes of the Pelasgians, Achæans, and many other races through the third and second millennia B. C. Nearly all that he says about primitive Greece might possibly be true; it is easy, however, to imagine a hundred other ways in which the movements and the development of the primitive races might have taken place. Had these speculations appeared in a paper rather than been prefixed to a history, whatever value they may have would not thereby have been diminished, and the public could more quietly await the judgment of the sober historian as to the bearings of the recent discoveries.

The weakness of this first chapter is not confined to the interpretation of archæological material, but in various respects the treatment is unscientific. The founders of cities whom we have long regarded as legendary, Mr. Bury considers historical. In his view, Ilios was named after "King Ilos, who perhaps was its founder." Similarly, he supposes that whenever two cities of Greece are found with the same name, one must be a colony of the other. The truth is, that identity of name does not of itself prove connection of any kind. His reasoning, too, from later to earlier conditions is often faulty. "The Javones," he says, "were a people who had settled on the coasts of Argolis and Attica, but there the name fell out of use, and perhaps passed out of memory, until on Asiatic soil it attained celebrity." There is in fact no historical hint that those early people of Argolis and Attica called themselves Javones—it is nothing more than a possibility. But history is something more than a chain of possibilities; and if we are to have a history of early Greece, it must be based on a more scientific method than is to be found in the present work.

As a whole, Mr. Bury's history answers to a need which could have been better supplied by the translation of certain German works into English, but this limited value can hardly be more than transient.

---

*The Alps in 1864:* A Private Journal by A. W. Moore, edited by Alex. B. W. Kennedy, F.R.S. Edinburgh: David Douglas. 1902. 8vo.

Moore's Journal has long been one of the most sought of the rarities of Alpine literature. It was written for the author's own amusement, privately printed for the pleasure of his friends, and is now offered to the public, fifteen years after Moore's death. Moore was a remarkable man, about whom the world knew nothing. For many years he was the soul of the India Office, where he came to occupy a high position. He was Lord Randolph Churchill's confidential assistant. He was a silent official who exercised great influence over his chiefs. All who knew his work agreed that he was the beau-ideal of a civil servant. He died of overwork. This book is his only monument, except the warm remembrances of his friends. The Alpine Club was largely made by him. He was its organizing mind at a critical period. Moore took part, and a very important part, in many of the first ascents described in Whymper's 'Scrambles.' Whymper described them picturesquely; Moore's descriptions are written with all the accuracy and clearness of an official dispatch. If there are books that can be described as Alpine classics, Moore's book should stand high, perhaps at the head of the list. It would be impossible to write such a book on the Alps now. The freshness is gone from the climbers' hearts; the Alps have become *vieux jeu*. Hence the possible permanent value of this book. It may live long after those who knew the author and admired or loved him have all passed away.

The new edition is well printed, carefully edited, and beautifully illustrated with choice heliogravure reproductions of photographs by the editor and other well-known Alpine specialists.

## The Kindred of the Wild

**By CHARLES G. D. ROBERTS**

Author of "The Heart of the Ancient Wood," "The Forge in the Forest," etc.

Magnificently embellished with 51 full-page plates and many decorations from drawings by

**CHARLES LIVINGSTON BULL**

Price $2.00.

"It would be hard for me to express the pleasure I found in reading 'The Kindred of the Wild.' It is throughout the work of a keen and loving naturalist as well as of a man of letters—a rare combination. . . . Mr. Bull undoubtedly stands in the front rank of living animal illustrators. The book is bound to take its place as a standard classic." —ERNEST THOMPSON-SETON.

"An admirable work for students, young and old."

*The Book for Nature Lovers*

## The Heart of the Ancient Wood

$1.50

"If one would enter the forest primeval, let him read Mr. Roberts." —*Chicago Chronicle.*

*Three Important Novels for September*

## Barbara Ladd

**By CHARLES G. D. ROBERTS**

Author of "The Kindred of the Wild," "The Heart of the Ancient Wood," etc.

**Illustrated in tints by FRANK VER BECK**

A fascinating story of colonial days.

$1.50

## Hope Loring

**By LILIAN BELL**

Author of "Abroad with the Jimmies," "The Expatriates," etc.

**Illustrated by FRANK T. MERRILL**

The story of a wilful, unconventional, lovable girl—the most charming character ever drawn by Miss Bell.

$1.50

## The Last Word

**By ALICE MacGOWAN**

Fully Illustrated.

The story of a woman's heart told by herself, and such a story of the heart as has not made its appearance since the days of "Jane Eyre."

$1.50

*READY SEPT. 15th*

"One of those exquisitely simple and truthful books that win and charm the reader, and I did not put it down until I had finished it. . . . I cannot think of any better book for children than this. I commend it unreservedly."—CYRUS TOWNSEND BRADY.

*READY SEPT. 30th*

## The Little Colonel's Hero

**By ANNIE FELLOWS JOHNSTON**

Author of "The Little Colonel" Books, "Asa Holmes," etc.

Large 12mo, cloth, decorative, fully illustrated.

Price, $1.20 *net.* Postage 12c. extra.

Since the time of "Little Women" no juvenile heroine has been better beloved of her child readers than Mrs. Johnston's "Little Colonel." In this volume Mrs Johnston takes her abroad, and her experiences and adventures in the Old World are as interesting and delightful as they were at Locust—and no more could be said to arouse the anticipations of the Little Colonel's little friends.

*OTHER WORKS OF MRS. JOHNSTON*

**THE LITTLE COLONEL.** Price, 50 cents.
**THE GIANT SCISSORS.** Price, 50 cents.

## NEW SCRIBNER PUBLICATIONS

### All the Russias

**By HENRY NORMAN, M. P.**

Travels and Studies in Contemporary European Russia, Finland, Siberia, the Caucasus and Central Asia. By **Henry Norman,** M.P., author of "The Peoples and Politics of the Far East," etc. With over 100 illustrations. 8vo, $4.00 *net*, postage 26 cents.

**More than double in size and importance over its projected scope.**

"He is a traveller of no ordinary kind. . . . He has the gift of rapidity; he carries you along with him. He is racy, individual, picturesque; sees things with the clearness of a good observer, and makes you see them."—G. W. SMALLEY in the TRIBUNE.

The best contemporary picture of the great Empire and its affairs which is accessible to the English reading public, and above all an entertaining study of an observer thoroughly up-to-date in his knowledge of all political questions and their bearings, deeply interested in a country and race whose future he regards as superlatively important, and well able to communicate his enthusiasm.

### Wayfarers in Italy

By **Katharine Hooker.** With 50 illustrations and many decorations. $3.00 *net*, postage 22 cents.

This beautiful book records the impressions of a discriminating traveller who unites a subtle appreciation of the art, history and scenery of Italy with a sympathetic comprehension of the spirit and genius of the people.

CONTENTS: On the Lombard Plain.—Sojourning in Florence.—Driving Through Tuscany.—April in the Marches.—In the Abruzzi.—Roman Excursions —Monte Cassino and Ravello.—The Heart of Umbria.—Across the Apennines.—The Shore of the Adriatic.—Siena and the Palio.—Tower'd Cities.—Venice.

### Human Nature and the Social Order

By **Charles Horton Cooley,** of the University of Michigan. 12mo, $1.50 *net*, postage 13 cents.

"The best treatment of the human-nature problem that we have had since the social point of view began to receive attention," says Professor Giddings of this important contribution to sociology. It is characterized not only by an obvious familiarity with the literature of its subject in its very latest phases, but, to quote Professor Giddings again, by "so much individuality and discrimination that the author may fairly be said to have made the subject his own."

### Shakespeare's Portrayal of The Moral Life

By **Frank Chapman Sharp.** 12mo, $1.25 *net*, postage 12 cents.

A novel and important study of Shakespeare, the subject of which is the attitude of the characters in the different dramas to the fundamental principles of moral science. To the student of Shakespeare and the student of ethics it makes a special appeal, showing to the former the variety, depth and breadth of moral life in the dramas, and to the latter the more important characters as concrete examples of the working of moral principles.

### Shakespeare and Voltaire

By **T. R. Lounsbury, Litt.D., LL.D.,** Professor of English in Yale University. 8vo, $2.00 *net*, postage 15 cents.

Professor Lounsbury follows his "Shakespeare as a Dramatic Artist" with a volume devoted entirely to the part played by Voltaire in Shakespearean controversy, a volume which is not only a monumental piece of research and exposition, but a captivating chapter in the history of criticism. It is well known that Voltaire's part was most conspicuous and most influential, not only on the Continent but in England itself.

# The Nation.

NEW YORK, THURSDAY, SEPTEMBER 18, 1902.

## The Week.

It is not so much the case itself as the fact that there *is* a case before the Hague Tribunal that is significant. For a year and a half the International Arbitration Court has been duly constituted, but until recently has had no international dispute brought before it for adjudication. There was some danger that its very existence might be forgotten. We are glad that it has fallen to two American nations, Mexico and the United States, to make the first appeal to its jurisdiction. The case of the "Pious Fund" is a very pretty quarrel from every legal point of view, and it is not so important but that the decision may be accepted without any strain upon the loyalty of either nation. This promises that the first session will be of considerable interest, and that the judges will have the great advantage of proceeding imperturbably without regard to ulterior embarrassments. As for the Pious Fund, its story is a curious one. Originally a private benefaction, it was administered by the Jesuit missionaries of California from 1697 to 1767. After the expulsion of the Jesuits it was transferred to the Franciscans, from whom the new-born Mexican Republic took it, guaranteeing however, by way of indemnity, the payment in perpetuity of 6 per cent. on the capital to the church authorities. "Perpetuity" and the payments stopped abruptly with the cession of California to the United States, and now the church in California sues the Mexican Government for arrears of interest amounting to about $1,000,000. Certainly, a case which involves three changes of custody and one of sovereignty should put the quidnuncs of the Hague Court on their mettle. But these jurists are doing more than to settle a curiously complicated case in equity, they are passing upon the first case ever presented to a permanent international tribunal. They have a hand, we believe, in a historic event, the magnitude of which future generations will acknowledge more fairly than we, with our heritage of international mistrust, can hope to do.

---

Evidence of bad faith on the part of Mr. John Mitchell in his recent statement that no response was given by the coal operators except a vague intimation that there was nothing to arbitrate, has come to hand since our comments last week. It now appears that President Baer replied by telegraph on the following day in a perfectly civil way, and at considerable length, giving the reasons why Mr. Mitchell's proposal could not be complied with. The reply was accompanied by an offer to open the books of his company to examination by experts appointed by the miners' organization, which he said would show that it was impossible for his company to pay higher wages. This was an important fact, and it relieves Mr. Baer from the charge of treating Mr. Mitchell and the miners' organization in a contemptuous manner. It is much to be regretted that the public were not promptly informed of these facts. The foregoing perversion of the most important incident connected with the strike casts suspicion on all Mr. Mitchell's statements, and compels impartial onlookers again to question the justice of his cause. Meanwhile, the collapse of Gov. Stone's mission makes it certain that the strike will go on until the miners surrender. A communication from Mr. Markle, one of the independent operators, says, in the most emphatic terms, that no political party will attempt to interfere with the anthracite situation — an affirmation which Gov. Stone's withdrawal tends to support. Mr. Markle says, also, that the great majority of miners would gladly return to work now if they were not in fear of violence from the lawless minority. If that is the state of affairs, the strike cannot last many days longer, and when it is broken, the anthracite miners will probably have less use for Mr. Mitchell hereafter.

---

We feel that Gov. Stone of Pennsylvania is justly criticised for his attitude toward the coal strike. He was not in a position to arbitrate the dispute, nor could he promise such aid to either party as would shorten the contest. The talk of convening the Legislature was malapropos when one considers that the Pennsylvania lawmakers are primarily in the hands of the capitalists, and, secondarily, afraid to do anything to offend organized labor. This backing and filling would ordinarily be harmless enough, but at the time when common sense dictates a return to work, a complete reorganization of the anthracite workers, and a fair conference between the operators and their several mine forces—to hold out even vaguely the hope of State interference was to do the miners a wrong. Furthermore, to prolong the period when the unionists are beginning to feel the pinch of want and the operators are gradually opening the mines with non-union workmen, was to incur grave peril of serious disorder. In fact, the whole episode suggests that the political settlement of last year's coal strike, while it may have been immediately advantageous, was as a precedent deplorable. The steadily increasing production of anthracite, estimated at 130,000 tons for the past week, is the sure sign that the operators are winning. When the strike is over, it will be time to point out the vices of organization that made Mr. Mitchell's campaign hopeless from the first.

---

President Roosevelt has once more rebuked an army court-martial. This one failed in its plain duty properly to convict and sentence Capt. James A. Ryan, Fifteenth Cavalry, for cruelties inflicted upon Filipinos. His particular form of amusement was standing people on their heads and immersing them when they refused to give him the information he desired. The court acquitted him on all specifications except one, of which they found him guilty "without criminality," and let him off scot free. The speech which he made to the court in his own defence should alone have brought a severe sentence upon him by reason of its disgraceful tone, and its plain proof that he lacked the self-control and good judgment indispensable to any officer exercising an important separate command. The President merely disapproved the sentence without giving reasons, which is regrettable. This is the fifth or sixth case in which the final reviewing officer has found fault with the verdict of the courts-martial trying officers for cruelty, and Gen. Chaffee's and the President's disagreement with the sentences inflicted in almost every case should convince even the most unthinking defender of the army that it needs a radical toning up of its ethical standards.

---

It occasionally happens that a statesman, not before accused of familiarity with finance, suddenly blazes forth into an amazing display of facts and figures. Such displays are impressive to the untutored public which has not been supplied with the latest "Trade Bulletin" of the Bureau of Statistics. But these documents contain pitfalls for the statesman, because the Bureau often takes for granted some elementary knowledge of the former trade conditions, and therefore leaves fundamental facts untold. Into this pitfall Senator Beveridge abruptly descended in his speech at Ogden, Utah, on Thursday, when he demonstrated how our appropriation of the Philippine Islands was the cause of the whole expansion of our recent trade in the Orient. "Since we acquired these islands, American exports to Asia and Oceanica have risen from $43,000,000 to $120,000,000." Certainly; that is, if we acquired these islands in the fiscal year 1896, which is the period selected by Mr. Beveridge for his comparison. Had he taken the trouble to inquire, the Bureau could have supplied him with other bulletins, showing that $24,000,000 of this increase, or nearly

one-third of the total gain between 1896 and 1902, occurred in the two years before the war with Spain. The regular monthly publications of the Bureau would have further shown that, of the $54,000,000 increase since that war began, $12,000,000 has occurred in exports to Australia, and $15,000,000 in trade with China, neither of which, it would seem, has yet been annexed to the United States. Another interesting line of inquiry, which it might have been safest for Mr. Beveridge first to pursue, is how much an American army of 72,000 quartered in an Oriental archipelago and supplied by this country with its necessaries and luxuries, is taken account of by genuine statisticians in drawing conclusions as to permanent trade developments.

---

The Republican literary bureau took counsel on Saturday on the subject of endorsing Roosevelt for nomination in 1904, and decided that it would be best to do so. This course was foreshadowed by the *Sun* on Saturday morning, which gravely rebuked the *Times* for objecting to that policy. The *Sun* thought that such an endorsement of President Roosevelt's aspirations would be "quite as proper, natural, and legitimate as those aspirations themselves." The literary bureau came to the same conclusion later in the day, but did not put its reasons in writing, preferring to leave them to the public imagination. Some reasons for not doing so were handed to the reporters in an exculpatory way. It was unprecedented to pledge delegates two years in advance. It was impossible to bind men who were not yet chosen to represent the party in the national convention. Of course; and so much greater is the merit of doing it. *Credo quia impossibile est.* Not only was the impossible done, but "there was no recrimination," says the bureau, in doing it. We are fully prepared to believe this statement. How could anybody recriminate when Platt had had a talk with Roosevelt beforehand and the subject had not been mentioned between them? Under such circumstances Platt could come to the meeting in an impartial state of mind. He could say that reflection had convinced him that it would not be wise to leave the question of endorsing Roosevelt for 1904 to the delegates to be chosen at the convention of that year, or even of the present one, but that it would be best to decide it at the Fifth Avenue Hotel now, and to decide it in the affirmative, and without recrimination. He must feel greatly relieved now that he is rid of such weighty responsibility.

---

It is quite evident that Dr. Joseph Struthers of the United States Geological Survey is not a politician. If he were, he would not introduce into his report on the production of borax in the United States figures showing the profits of the international borax combination. That combination has been cited, the reader will remember, as one example of a tariff-protected monopoly fattening at the public crib. When, under a tariff of five cents a pound, borax selling in England at two and a half cents brings seven and three-quarters cents per pound here, it is no wonder that the Borax Consolidated, Limited, can report "a very favorable business for the fiscal year ending September 30, 1901." Net profits for that year were £190,278, which is something more than 13½ per cent. on the capital of £1,400,000. As business goes, that is more than a legitimate profit, and every cent of the excess was filched, with Government aid, from the pockets of the American consumers.

---

When the last of the war taxes were swept away by the Act of April 12, 1902, the estimated reduction in yearly revenue was $72,500,000. The June appropriations for the new fiscal year footed up, by the committee's official statement, $19,700,000 above the drafts of the year before; this without reckoning in the provision for the Isthmian Canal. On the basis of the last fiscal year's results, the outcome for the fiscal year 1903 should have been a very close levelling of revenue to expenditure; for the smaller internal revenue and the increased expenses would, between them, cut down the annual surplus $92,000,000, and $92,000,000 was exactly the surplus reported for the fiscal year 1902. These facts are now in point, because on September 10, for the first time in the new fiscal year, the total revenue since July 1 exceeded total expenditure. The public surplus, from which, in July, $7,500,000 more was paid out than in 1901, is now rising again at exactly the pace of a year ago. If customs receipts continue to increase at the present rate, the year's surplus revenue, despite the $41,000,000 reduction in 1901 and the $72,500,000 cut in April, will exceed both last year's and that of the year before. With the war taxes now removed in full from the public schedules, it would certainly seem that the next pruning process must be in the customs duties.

---

A novel, but seemingiy effective, means of breaking up the collection of political assessments from State employees has been discovered in Illinois, where recent exposures have revealed the fact that for years 5 per cent. of the wages of members of the State civil service has been deducted by the disbursing officers and turned over to a committee, to be used for political purposes. The employees were supposed to consent to this deduction, and the money extorted was said to be the result of "voluntary contributions." Before the light of publicity was shed on the scheme, no member of the civil service dared to complain; but after the exposures a State employee came forward and sued the disbursing officer for the return of the money deducted, making Gov. Yates a party to the action. There was a hurried consultation at Springfield, and a representative was sent to the court with an offer of payment in return for a discontinuance of the suit. This was agreed to after the representative of the Governor and his associates had paid costs amounting to $5 in addition to the sum demanded by the employee. A statement was then given out as coming from Gov. Yates, declaring that the 5 per cent. collection would be discontinued, and that any employee who desired his money back could get it. Few employees are likely to respond to this invitation, for their future is still in the hands of the extortioners, but the assessment scheme is evidently checked, temporarily at least, and public sentiment may now force the Legislature to enact proper laws preventing this abuse.

---

Although New Hampshire Democrats cannot win, they have done the next-best thing by deserving to win. They have nominated a Gold Democrat for Governor, and have placed him upon an old-fashioned Democratic platform—the kind of platform on which the Democrats triumphed under Cleveland. There is no halting in their position on the tariff issue, not even at the half-way house of "Tariff Reform." They declare for a tariff for revenue pure and simple, the only logical reason for the existence of a tax—and if that means free trade, why, make the most of it. This, coupled with a demand for the immediate abolition of all tariffs on Trust-made articles, with expressed opposition to subsidies, and with demands for reciprocity to Cuba and independence for the Philippines, makes a platform on national issues which is commended to Democratic conventions in other States. There was not a word about silver or about Bryan. This was no violent wrench for New Hampshire Democrats, however. In May, 1896, they had declared in convention for the gold standard, and had commended President Cleveland for his firm stand in maintaining the public credit in the face of formidable opposition. Four months later they adopted the Chicago platform "as authority for party action on all political subjects," but they did it with wry faces, and they shied at 16 to 1. They continued to be "regular" Democrats in 1900, but again with no specific mention of silver, and now they have proclaimed their independence of Bryan and Populism. They are pointing the only way to Democratic success in 1904, and probably the only way to relief from public taxes for private pockets.

---

After eight years of political wandering, Senator Teller appears to have landed safely within the ranks of the Demo-

cratic party. Speaking to a Democratic convention in one of the Colorado counties the other day, he said: "I came here particularly to connect myself in the most public manner possible with the Democratic organization." Now the Colorado Democrats have completed the circle by declaring that they "recognize Senator Henry M. Teller as one of the greatest of the nation's living statesmen," and by formally nominating him to succeed himself in the United States Senate. Mr. Teller was first elected to the United States Senate when Colorado was admitted to the Union, taking his seat in 1876. With the exception of the period from April, 1882, until March, 1885, during which he served as Secretary of the Interior in President Arthur's Cabinet, his membership in the upper branch of the national legislature has been continuous. His course has always been exceedingly erratic, but there seems to have been method in it, too, for otherwise he could hardly have succeeded in stemming the peculiar tide of Colorado politics which has submerged so many other men. When he tearfully walked out of the Republican National Convention in 1896, he seemed to be severing the associations of a lifetime, but this appears to have been the only course which could have kept him on the top of the wave. The next Legislature, which was to choose his successor, was controlled by an overwhelming majority of Fusionists, and Senator Teller was reëlected, receiving 94 out of the 100 votes on joint ballot. Whether his latest venture will prove as successful, remains, of course, to be seen.

---

In showing, in his speech at the Buffalo State Fair, the effect on Greater New York of the abolition of the direct State tax, Gov. Odell brought out some comparatively new points which are of undoubted interest. If it is true, for instance, that this city actually pays some $4,000,000 less of the State tax under the indirect system than it would under the direct, this is worthy of note and attention. The general belief, we think, has been the contrary. New York city, however, does not complain of the amount she is called upon to pay for the support of the State government. At present her chief interest in the regulation of the State finances centres upon the question of whether or not the policy of exclusively indirect taxation for State purposes can be maintained. Granting that $17,000,000 will be raised this year for the State by the indirect levies, $5,000,000 at least remains to make up the $22,000,000 of expenditures. This year this sum can well be provided out of the surplus, which now amounts to more than $8,000,000. But what of next year? Can the indirect taxes be increased by so large an amount, or the expenditures further reduced? These are questions which must be answered before we indulge in complete satisfaction over the abolition of the State tax, however great the benefits of the change if finally and permanently effected.

---

One of the familiar moves, in relieving a tight money market through the Treasury, is the paying, ahead of time, of interest on Government bonds. To this expedient Secretary Shaw has resorted, as his predecessors, on similar occasions, resorted before him. It is obvious enough that the relief thus provided can be but temporary. The four millions paid this week against accruing October interest will give the present money market more cash than it could otherwise command; but two weeks hence the market will, to the same extent, receive less than it normally should look for. In other words, the sole virtue of "interest-anticipation" rests on the assumption that the strain itself is temporary. There is some ground for this belief to-day. The banking community expects that the market will very soon be relieved by import of gold from Europe. In such case the Treasury's payment of interest somewhat ahead of time would serve to bridge over the period between now and the arrival of relief from other quarters. We doubt whether much tangible relief can be had from the plan of inducing national banks to use their unpledged Government bonds as a basis for increased public deposits. The amount of bonds thus held is trifling, and they are not, as a rule, held in the larger city markets, where relief is at present needed.

---

From the Treasury's report on the country's foreign trade in August, published on Monday, some light is thrown on the Government's drain of money from the markets, and on the question of relief through imported gold. Last month's total merchandise imports, free and dutiable, though very large, have been frequently exceeded, even in the present year. But the month's import of dutiable imports alone has only once been equalled in the last dozen years. Returns for July, the last month for which full details have been published, showed a rather noteworthy distribution of the increase over 1901. A $2,200,000 increase in import of iron and steel goods had been foreshadowed by the state of the domestic iron trade. But such further increase as $500,000 in import of cotton manufactures, chiefly from Germany, and $700,000 in import of silk goods, mainly from France, has a more novel interest. It raises the question whether Europe may not be now exerting itself to recover some of its lost trade in this country. As for the August export trade, that, it is true, once more shows heavy decrease. But it is nevertheless to be observed that the whole of the decrease was caused by the fall in agricultural shipments. In this direction improved conditions are near at hand.

The extraordinary proposals of the Boer Generals at their recent conference with Mr. Chamberlain would give grounds for deepest apprehension if it were any question of formal demands. Fortunately, the conference on the Boer side was merely a dicker, in which the size of the "asking price" was proportioned to the expected abatement. Such a way of opening the negotiation shows a thrifty Dutch spirit, perhaps; but the calm disregard of the peace articles signed at Vereeniging was extraordinarily presuming. It was puerile to suppose that the British would agree to reappoint all Boer officials, or, failing that, to pension them; that the conquering nation would assume the entire debt, including that caused by the late war, of the conquered republics; and that indemnity would be granted to the Boers for the ordinary damage of war. To hear such proposals must have put Mr. Chamberlain's *sang froid* to the test. That he has learned much since he first began to deal with Boer officials, his admirably calm reply showed conclusively. He had the grace to take the presentation of the Boer case with absolute seriousness, to argue from the historic precedent of reconstruction after our civil war, and to maintain courteously the essential liberality of the terms granted at Vereeniging. This required tact, and was carried off, if one may judge from the dispatches, with sincerity and eloquence. The next Boer proposals will doubtless be drawn up with the peace protocol at least remotely in mind.

---

A recent letter to the London *Times* describes the Prussian law against offensive advertising in the country. The act, which was passed at the last session of the Landtag, is remarkable in several respects. It regards, first of all, the mere disfiguring of natural scenery as sufficient ground for action. This is a considerable advance upon the opinion of the English and American courts, which still incline to limit the right of restrictive legislation in the matter of signs by the usual considerations of public health and safety. This attitude of the courts has made it very difficult to restrict advertising nuisances in the country. In Prussia the offence to the eye is frankly regarded as a nuisance. Furthermore, the act is permissive, not obligatory. The influence of the central Government in Prussia, however, will be exerted to make the local governments take appropriate action under the general law. It is an admirable feature of the law that it leaves each community free to live up to its best lights, giving absolute authority to each to decide what kind of advertising constitutes a disfigurement of the landscape, and to prohibit absolutely advertising in scenery of great natural beauty. This power to reserve "particular spots and areas" would mean much to an American town.

*THE SOUND OF A VOICE THAT IS STILL.*

What the President has said in his stumping round, everybody knows—or might have known. What he should have said but has not, is less generally recognized. Mr. Roosevelt's popularity has come of the general conviction that he scorns expediency and speaks stoutly the thought that is in his heart. It is on this account that he is largely freed from the necessity for perfunctory utterances, and may more strictly be judged by his words than is customary with those in great place. It may well have occurred to him—after his recent peril—to ask how, in case that untoward accident had had another ending, his score of speeches in New England would have weighed with Mr. McKinley's last address at Buffalo. When Mr. McKinley pleaded the cause of international fraternity at Buffalo, he did not rest in vague generalities, but advocated the negotiation of reciprocity treaties. Mr. Roosevelt has been speaking on the subject of Trusts without a single recommendation more practical than that of a Constitutional amendment, and in complete disregard of that most relevant matter—the relation of the tariff to the Trusts. This has not previously been Mr. Roosevelt's way.

But before we point out the President's omissions it will only be fair and right to recall what he actually said during his tour in New England. He made in all twenty-four speeches which were reported in the *Tribune*. Three of these—those at Providence, Boston, and Fitchburg—were weighty deliverances on the subject of Trust regulation. Two minor addresses were also devoted to this theme, by way of explanation and reassurance. The other nineteen speeches were given up to what might be called occasional and general eloquence. The Monroe Doctrine did service twice. Praise of the army and navy, laudation of the President's colleagues in the Cabinet, defence of the policy of expansion were the themes of six addresses. Under aspects of patriotism, then, we may range eight. The remaining eleven utterances were devoted to practical and transcendental morality, including the nurture of children, the obligation to be an honest citizen, a good citizen, a courageous citizen; the duty of using prosperity with discretion; the joys of Republican brotherhood, and the privilege of equal laws; finally, eulogy of the public service of the Hon. Thomas B. Reed. Now we have no inclination to judge the President harshly for his commonplaces—often the theme was set for him by the place or the day; but would not the intelligent foreigner, following these speeches through the *Tribune* files, be likely to fall into the error of believing that the framing of emphatic platitudes is Theodore Roosevelt's way?

His omission of the words tariff revision from a discussion of the Trusts may have its reasons. He may be going on the theory of one thing at a time, and saving the words for Western consumption. If so, we think he is mistaking his tactics. The country should know his attitude. If he believes that the tariff does not foster Trusts, let us hear that; if he believes that a Constitutional amendment is the readiest remedy, let him at least explicitly reject the other remedy, which many of his own party have proposed. Does he not realize that he is at any hearer's mercy? Suppose some Western Republican asks in open meeting, "Mr. President, what of the tariff-protected Trusts?" Will it be easier to meet that question then in confusion of spirit than it is now to answer it manfully and once for all?

But the failure to take a position for or against tariff reform is, it may be said, at worst a lapse of logic. The failure to plead the President's own cause, the cause of justice and generosity to stricken Cuba, comes perilously near to being a lapse in honor. Nothing is more painful to a sincere well-wisher of the President than to notice the fading from his mind and heart of the most urgent cause now before the American people, a cause he had made peculiarly his own. At Hartford, in his first New England address, he spoke on the matter in terms which were painfully inadequate. Four days later he touched briefly upon the same matter at Lowell. There may have been other instances too passing to be reported, or so casual as to have escaped our notice, but his wholly incidental deliverance at Hartford is the most elaborate presentation of his chosen cause which he saw fit to make in a region ever hospitable to generous emotions. He said of Cuba:

> "She must be in a sense part of our economic system. We must expect her to accept a political attitude towards us which we think wisest both for her and us. In return we must be prepared to put her in an economic position as regards our tariff system which will give to her some measure of the prosperity which we enjoy. We cannot, in my judgment, avoid taking this attitude if we are to persevere in the course which we have outlined for ourselves as a nation during the last four years; and, therefore, I believe that it is only a matter of time, and I trust of a very short time, before we enter into reciprocal trade relations with Cuba."

These words are mild and judicious; they are adequate—if one were deliberating the renewal of a pew rent. From Theodore Roosevelt, on the subject of Cuban reciprocity, they are of chilling import. Can it be that he has accepted Secretary Shaw's dictum, that reform is "academic"—a matter to be deferred to the fulness of time, which is the Greek Kalends? Is this the voice of Theodore Roosevelt and his thought?

When all efforts to relieve a nation ordained to adversity by our negligence fell through in Congress, when the fears and hatreds of politicians and the machinations of the beet-sugar ring balked what the President had declared to be a measure of duty and honor—then we were told that Theodore Roosevelt would appeal over the heads of the wranglers direct to the voters, and we believed that his voice would as no other penetrate to the very conscience of a generous people, and compel the politicians to sullen assent in right-doing. Now the fight is waging; a popular demand for Cuban legislation must be created now while the Congressional elections are pending, or never—and Theodore Roosevelt, whose voice should have given heart to this fight, is silent, or rather he appeals against the Trusts to the national pocket, studiously avoids an appeal to the national honor, and pays off his audiences with vague counsels to do good. Does he not know where his strength lies? Can he not see that the love that the West gives to the man who speaks his own mind could not survive the suspicion that Theodore Roosevelt is playing politics? Finally, does he mean to face the possibility of the battle for Cuba won without him? And can he, in victory or in defeat, wish to brook from those he should have captained, Henry of Navarre's taunt to Crillon, "Go hang yourself, my good Crillon! We fought at Arques—and you were not there"?

*OLD LIGHTS AND NEW IN CANADA.*

Sir Wilfrid Laurier recently said to his French hosts at Lille, "Our political relations are broken, but our commercial relations may be resumed. I saw to-day with my own eyes the characteristics of manufacturing France. You have, Messieurs, an open market in Canada, and I flatter myself with the hope of seeing in France an open market for Canadian products." The whole address was notable for the tact with which a French-Canadian Premier of a British colony maintained his loyalty to his sovereign while grudging no affection to those of his race; but it was chiefly significant because it showed that the opportunist leader of the Canadian Liberals had turned towards the old lights of the party, had set himself against the protective idea, and bound himself to facilitate international commerce with the Dominion.

The suggestion of a reciprocity treaty with France implies that Sir Wilfrid would refuse a greater British preference than the present 33⅓ per cent., and will not raise the tariff schedules generally—for, of course, no reciprocity convention could be negotiated when either party had radical tariff changes in prospect. Sir Wilfrid Laurier must be congratulated upon having taken his stand firmly, and in time. He would have been under increasing pressure to adopt in behalf of the Canadian manufacturer a policy of tariff exclusion towards the rest of the world. The Manufacturers'

Association raised last August its cry of "Give! give!" and the manufacturing lobby is potent at Ottawa. It was accordingly the part of wisdom for the Premier to meet and beat the protectionists before Parliament should assemble.

There is every sign that the bold policy has been the good one. Mr. Israel Tarte, to be sure, the Minister of Public Works, has been talking protection, at the Toronto Industrial Exposition, and the Conservatives have tried to make the casual utterance of a man whose opinion is of little weight seem like the beginning of a Liberal faction. There is no less influential voice in the Cabinet. Even more indicative of the response of the country to the old Liberal doctrine of a revenue tariff is the fact that Mr. Borden, the Opposition leader, in stumping the Northwest, has dealt as lightly as possible with protection, taking refuge in such random topics as Chinese exclusion, and insinuations as to Sir Wilfrid Laurier's loyalty. Mr. Borden knows—and the Premier knows—that the farmers of the Northwest have no intention of paying through the nose that the manufacturers of the centre and east may prosper unduly. When the Manufacturers' Association formulated its demands at Halifax, the Winnipeg *Free Press* reminded its readers that tariff revision must mean not increase, but reduction.

In fact, for a country that seemed to be sunk in all manner of fiscal heresies, Canada has been hearing a great deal of sober truth lately, and apparently has been taking it in. Sir Edmund Barton, fresh from Mr. Chamberlain's Conference of Colonial Premiers, recently said to the Toronto Board of Trade: "An imperial zollverein would be simply a dream. . . . Free trade between the different parts of the Empire would cripple the revenue of each part of it to such an extent that she could not carry on her internal affairs. We can leave it outside the ring fence of practical politics." If Canada needed any further argument against undertaking on her sole account a policy of exclusion which would prove disastrous even to an Imperial Federation, she might find the philosophy of the whole matter set forth in that ably conducted journal, the Toronto *Globe*. It says in a recent issue:

> "If under any scale of duties the industries of a country are prospering, higher duties cannot be justified even on grounds of expediency. The country has now been for five years under a tariff very considerably lower than that which prevailed in the previous seventeen years, a period amply sufficient to test the efficacy of high protection. The prosperity of our industries under the low tariff has far exceeded that enjoyed under the high tariff. The result is that the extreme protectionists are forced back upon the idea of retaliation pure and simple. The United States will not buy our goods as freely as we buy theirs. Therefore we must cut down our American imports until something like equality is established. Germany has made some foolish discrimination against Canadian wheat; we must, therefore, aim to strike a blow at Germany. In this way the word protection loses its meaning. *What is sought is not the protection of our own industries, but the injury of somebody else's.*"

The real political strength of the protective policy—hatred and distrust of the foreigner—is here admirably described. For signs that Canada is learning to repudiate the principle of hatred, all her friends should be grateful.

But it might be asked, What does it signify to us across the border that Sir Wilfrid Laurier and his Liberals have found their bearings? It signifies this, that since the danger of retaliatory legislation is over, the way lies open to a reciprocity treaty which nothing can now prevent but the dulness or the cowardice of our own Government. The time is ripe for all who are materially or disinterestedly concerned in the cause to agitate. There are feeble voices from New England manufacturers who seek Canadian markets, and stronger demands from the milling companies of the North which naturally cannot see why Canadian grain should not come to their hoppers. Many thousands of our own citizens are working the new farms of the Canadian Northwest, and should be shippers to their former neighbors. In short, the Manitoba line is likely to prove the weakest point in the "Chinese wall." It is there that the breach should be made. But the wood-pulp industry also will at no distant time be in straits for raw material which Canada produces abundantly. Those who see clearly the rights of the present and the needs of the future in this matter have still a terrible body of ignorance and prejudice to combat; but it should somewhat hearten our downcast Democrats to see that their traditional tariff policy is likely to prevail in Canada. The stirring in our own West is significant. Our farmers are beginning to see dimly what the farmers of Manitoba and the more northern provinces now see clearly, that trade should be as free as possible. This feeling could find no more fitting expression than in bettering the tariff relations between ourselves and our Northern neighbor.

## *THE NEW YORK CANAL QUESTION.*

Slowly public attention is awakening to the fact that we have a canal question which must soon be brought before the Legislature, and most probably be submitted to popular vote. The press of Buffalo teems with articles on it, and that of the rural districts is taking more and more interest in it. The press of New York city has hitherto been rather hard to move when the subject has been mentioned—a fact due, perhaps, to the prevailing lethargy of the summer months. In order to impart some zest to the discussion hereabouts, the Canal Association of Greater New York gave a dinner at Delmonico's on Thursday evening, at which the newspapers were represented in a private way, and where the canal question was discussed in brief speeches by persons familiar with it. The only mistake made at this dinner was in excluding reporters. The speeches, although mostly impromptu, were of a high order of merit. A full report of them would have been very useful in the way of enlightening the readers, as well as the makers, of newspapers.

Usually the first question asked by one who seeks enlightenment on the canal question is, "What is your plan? Are you in favor of a ship canal or a barge canal? Do you want merely the Erie Canal enlarged, or the Oswego and Champlain Canals also? What is the probable expense of the work, and how is the money to be obtained?" These questions may be answered with a fair degree of certainty now. The men who are seeking to convince the people of New York that canal enlargement is a wise and economical policy for the Empire State aim to have the Erie Canal, from Buffalo to Albany, so improved as to admit barges of 1,000 tons capacity, which can assemble in fleets of four to six under one motive power. They assume that this work can be executed at a cost of $60,000,000, as tabulated in the report made to Gov. Roosevelt by the committee of which Gen. Greene was chairman. Whether the Oswego and Champlain canals should be included may be left for after-consideration. We observe that some papers in the interior of the State favor a ship canal around Niagara Falls, and an enlargement of the Oswego Canal as a much cheaper line, cutting off two hundred miles of canal work and shortening the time for completion of the work, as well as the time for making the passage after it is completed. Under this plan there would be no breaking of bulk at Buffalo. The same ships that bring cargo from the Western lake ports would carry it to Oswego.

The next question most commonly asked is, "Why do you want the canal at all? Have you not sufficient avenues of communication now?" On the answer to this question everything else depends. It was affirmed by responsible members of the Produce Exchange at the dinner on Thursday evening that the means of transit between the Mississippi Valley and the Atlantic Coast are insufficient to do the business which already exists; also that vexatious delays in the transmission of freight in large bulk are of frequent occurrence; that a "car famine" exists, and is sure to continue throughout the autumn months, and that these conditions are likely to become more aggravated as time progresses. The productiveness of the country increases from year to year, not merely by bringing new land under the plough, but by more scientific methods of tillage and by new discoveries and inventions in all departments of industry. The things to be moved are multi-

plying faster than the means of transit. The best, if not the only, way to meet the want is to enlarge the waterways of the country. Of these the Erie Canal is the most important one East and West, unless the St. Lawrence River may be considered its rival. The St. Lawrence, however, is not a route by which New York city can reap much profit.

If this difficulty did not exist—if the means of transportation were already sufficient—there would still be good reasons for putting the canal in a state of the highest efficiency. The railways are rapidly passing under the control of a small number of men. By means of centralization, or community of interest, or Trusts, they are likely to cease competing with each other. Then the only sure regulator of freight charges will be found in the waterways of the country. The Erie Canal has served the people well in this particular in times past. It has had an influence on freight charges on bulky commodities not merely between the great lakes and the Atlantic, but between the Mississippi and Missouri valleys and the Gulf of Mexico. Of late, however, the improvements in railway equipment have placed the canal at such a disadvantage that it has lost most of its former power as a regulator, and will soon lose the whole unless it is put abreast with the improvements in other means of transport. When it ceases to be a competitor, competition itself will cease, and the people will have to pay such prices as the railways may choose to charge. It is no answer to say that the rates have been going down steadily for a quarter of a century. They were not reduced voluntarily, but because competition was active and the managers could not help themselves. We are now contemplating a situation, which seems not far distant, when real competition shall cease to exist.

The reason why New York city is particularly interested in canal enlargement is that, under the differential charge which the railways make against this port, we are losing our relative importance as a grain market. The differential is an extra freight charge on grain coming to New York for exportation, intended to offset our superior advantages. We have the lowest railway grade across the Appalachian range, the best harbor, the largest and fastest steamers, the greatest amount of capital, and the prestige which all these things give. So the railways terminating at other Atlantic ports say to those terminating at New York, "You must charge more than we do for carrying grain to the seaboard in order to balance your advantages, natural and acquired, since otherwise we cannot carry our share of freight." Commodore Vanderbilt, representing the New York Central, refused to comply with this demand. The result was a railroad war of three years' duration, which inflicted enormous losses on all parties. He was compelled to yield, because his rivals had no choice but to continue the fight. The differential against New York still exists, and nothing can ever remove it except the enlargement of the canal.

---

### *AN APOLOGY FOR NEWPORT.*

Mayor Garretson of Newport has issued a serious and even heated answer to Col. Henry W. Watterson's comments upon the "smart set" of that city. Obviously, Mr. Garretson is unfamiliar with Col. Watterson's mode of speech. The valiant Colonel has, as Matthew Arnold said of Macaulay, his own "heightened and telling" way of saying things, as a result of which the Kentucky style in journalism has long been recognized as a close rival of the justly famed "Oregon style." When Col. Watterson calls the society leaders "Cyprians and debauchees," he probably means to convey the impression that, although for their characters in general he has the highest esteem, candor compels him to admonish them for occasional lapses into pardonable frivolity and extravagance. Since we have so often expressed our admiration of the simple elegance of Newport entertainments, we feel constrained to offer an apology for Newport, less acrimonious than Mayor Garretson's, and therefore more likely to convince the Kentucky editor of his error.

Putting even the most favorable interpretation upon Col. Watterson's remarks, we can see that he does not wholly understand the point of view of a member of the "smart set." His ideal man seems to be one who spends no more than half an hour a day in dressing, and an hour and a half at his meals. Such a man, driven with business from dawn to dark, disregards the niceties of his toilet, sickens at the idea of being fussed over by a valet, chooses his waistcoats at haphazard, and often—*horribile dictu*—buys his trousers ready-made. While eating, he chats busily with his friends or his family about his latest deal in stocks, the doings of his sisters, his cousins, and his aunts, and about President Roosevelt's views on Trusts. Unless he is dyspeptic and pampered, he fails to notice whether the mayonnaise dressing contains just enough red pepper, he cannot detect the difference between native and imported champagne, and an hour after dinner he has clean forgotten what the ice-cream was flavored with.

If Col. Watterson, who is, we take it, a typical member of this sturdy bourgeoisie, were invited to dine by Mrs. X. at Newport, he would say to himself: "Yes, I remember, she married the corespondent. Her present husband doesn't know enough to go in when it rains, and his friends are equally imbecile. In order to keep them from yawning in each other's faces, Mrs. X. will provide a stupid vaudeville entertainment that I wouldn't be hired to listen to. I shall be tired with my day's work, and I'll be hanged if I'll sit through three hours of stuffing with such a crowd." Accordingly, he would write a polite note of regret. Would he be prompted by the stern moralist's desire to frown upon dubious Mrs. X., or simply by an ordinary human wish to escape an evening of infinite boredom?

But let Col. Watterson imagine himself one of the "smart set," and view the situation more sympathetically. He will have time to spend at least two hours a day in dressing, and even more in thinking about his clothes; no wonder if he grows finical about cravats and shirts. He will devote four or five hours to his meals. Since he has made no deal in stocks to talk about, since the doings of his sisters, his cousins, and his aunts are as uninteresting as his own performances, and since he is incapable of comprehending President Roosevelt's views on Trusts, incapable of discussing any public question, he is driven to think about his food. The red pepper in the mayonnaise becomes the chief concern of his life.

When he receives the invitation from Mrs. X., he also remembers her past, but he says, "Poor woman, she is trying to lead a decent life, and why should I put a stone in her path by refusing her dinners? Besides, all my friends will be there. We shall have one of those jolly and clever vaudeville performances. She has the best cook in Newport, who makes the most delicate mushroom sauce I've ever tasted. Going to the dinner will at any rate be something to do." Accordingly he accepts. Is he prompted by a charitable desire to rescue Mrs. X. from her unhappy past, or by the average man's wish to avoid perishing of ennui?

No, members of the "smart set" are as human as Col. Watterson and the rest of us. They live up to their best lights, and Col. Watterson's only just ground of complaint is that those lights are not very bright, and they are not exactly the same as his. All this so-called laziness and extravagance, for example, are very easy to explain. If a man has an income of $1,000,000 a year, he is really bothered to find ways of spending it on himself and his immediate family. To go to work and earn more is simply to heap up additional trouble, for he will not only have a larger income, but less leisure in which to get rid of it. While Col. Watterson studies to secure the largest return for his expenditure, the problem of the idle millionaire is to secure the least return. He naturally devotes the whole of his energy and intellect to devising the most costly methods of disposing of his surplus. Of course, Col. Watterson, with his wider outlook and greater abilities, could beat the idle

millionaire at his own game. Col. Watterson would doubtless found colleges and libraries, would build hospitals and museums. All this is very well, but it is beyond the mental range of the "smart set." They are earnestly doing the very best they know how. What more can Col. Watterson ask?

Then, too, the charge that Newport is haughtily exclusive and refuses to recognize anything except money, is wholly groundless. Never was there a society more eager to welcome what it regards as brains. It is only a year or so ago that a young champagne agent acquired a reputation for the easy wit and repartee that everywhere marks the commercial drummer; and instantly all doors were open to a man who, in the set in which he now moves, is held to be a miracle of cleverness. There is not the slightest question that Newport would be equally hospitable to authors, artists, and such intellectual fry if they would consent. The trouble is not that the "smart set" is exclusive, but that other people are.

We trust that these few words will clear up the misunderstanding in the minds of Col. Watterson and other harsh critics of Newport; and that we shall have proved that the simple and guileless children of wealth who try to be happy at Newport deserve from the rest of the country not blame, but sympathy and pity.

## *SCIENCE AND THE COMMON WEAL.*

One of the most striking features of the nineteenth century was the rapid increase of population, especially in the most highly civilized countries. From 1801 to 1900 the population of the earth grew from 900 or 950 to 1,558 millions, or considerably more than 50 per cent.; but this increase was due mainly to the growth of the population during the same period from 170 to 510 millions in Europe, America, Australia, and other lands settled chiefly by Europeans. At the time of William the Conqueror, in 1086, the population of England and Wales was 2,150,000; six centuries later it was 5,500,520, and in 1800 only 8,500,520; but from 1801 to 1901 it rose to 32,500,000. In Germany the increase was from 24,800,000 in 1816 to 56,300,000 in 1900; and in France, where the growth of population is relatively slow, it was from 27,300,000 in 1801 to 38,400,000 in 1900. Ireland is the only part of Europe that shows an actual diminution of population during the same period. This decline began in 1851, in consequence of unfavorable political and economical conditions, famine, and emigration.

A little more than a century ago Malthus published his 'Essay on the Principles of Population,' in which he asserted that the increase of population tends to overpass the means of subsistence, and that this disproportion necessarily leads to general destitution and starvation, unless counterbalanced and corrected by the devastations of pestilence and war; the only other remedy of the evil being the voluntary or coercive restriction of propagation. From his point of view, the material welfare of the people ought to have been much greater when the population was small than it is at present, but statistics show the reverse of this to be true. In an address entitled "Volkswohlstand und Wissenschaft," recently delivered by Professor Brentano, Rector of the University of Munich, on the four hundred and thirtieth anniversary of the founding of this institution —the university was founded at Ingolstadt in 1472, transferred to Landshut in 1800, and to Munich in 1826—the eminent political economist examines the Malthusian theory, and explains why its pessimistic predictions concerning the future of mankind have not been verified.

In 1794 more than 6 per cent. of the men over twenty-one years of age in Bavaria were beggars. The peasants were virtually serfs, and it was forbidden by law to pay a laborer more than fifteen kreuzers (about ten cents) a day. Whoever offered more than this sum rendered himself liable to a fine of ten thalers ($7.15); and the workman who demanded or accepted such high wages was condemned to eight days' imprisonment at hard labor and on bread and water, and to receive each day twelve stripes with the scourge. It is no wonder, as the Bavarian historian Westenrieder remarks, that "the jails were crowded with culprits, and the highways adorned with gallowses instead of fruit-trees." Since that "good old time" the population of Bavaria has doubled, while the condition of the individual has constantly improved. Still more conclusive is the refutation of Malthusianism furnished by England, where the increase of population, accompanied by a corresponding increase of prosperity, has been greater than in any other country of Europe. According to the statistics tabulated by Sir Robert Giffen, the wealth of Great Britain and Ireland amounted in 1812 to 160 pounds sterling per head, and in 1885 to 270 pounds sterling per head. That this advance was not due to the enrichment of the rich, attended by the impoverishment of the poor, but benefited all classes, is evident from the fact that from 1840 to 1900 the average wages of the common workman rose from 43 to 100, or about 133 per cent. The fact that compassion for poverty finds stronger and more frequent expression with us than with our ancestors, and that more persistent and systematic efforts are made to relieve it, is not due to its greater prevalence, but to the clearer perception of its evils, the prevalence of a higher standard of living, a more correct conception of what is necessary to human comfort, and stronger sympathy with all forms of suffering.

The chief cause of the increase of population has been the decrease of mortality. From 1810 to 1820 the death-rate in Europe was 31.5 per thousand, while from 1886 to 1890 it was only 27.3 per thousand; in western Europe, where the progress of civilization was most rapid, the death-rate diminished during the same period from 28 to 23.4 per thousand. In Germany it sank from 28.8 in 1870-1880 to 23.5 in 1891-1900. Malthus maintained that every improvement in the conditions of human existence would be followed by a multiplication of marriages, and consequently of the human species by natural generation. This anticipation, however, has not been realized. The enormous increase of wealth during the latter half of the nineteenth century has not resulted in an increase of marriages. In England the number was 8.5 from 1851 to 1860, 7.5 from 1881 to 1890, and 7.9 from 1890 to 1900. In other parts of Europe this fluctuation is still more marked; but, on the whole, the number of marriages in proportion to the population, and also the average number of births to each marriage, have greatly diminished during the last decades of the nineteenth century. This is true not only of France, where the ideal of the family is to be attained by not having more than two children, but also of lands inhabited by more prolific races, as, for example, England, where the number of births to a marriage has fallen from 4.36 in 1884 to 3.63 in 1900. Taking these factors into consideration, the extraordinary increase in population in recent times must be ascribed to the diminution of the death-rate, and especially of infant mortality.

The question now arises why the principle enunciated by Malthus and accepted by the most prominent political economists of his day should have been so greatly qualified by subsequent events; the increase of population, so far from producing general distress, having been attended by a still greater increase of human welfare, the people being better provided with the means of subsistence at the present time than they were a century ago. This favorable result we owe to what Malthus could not foresee, namely, the evolution of modern science, and its practical application for the relief of human wants, especially in the production of food. We need only mention the progress of agriculture, to which organic chemistry and physics have so largely contributed; the social amelioration attending technical and industrial development, and commercial expansion by the aid of forces such as steam and electricity, which make the remotest regions of North and South America and Australia convenient market-places for supplying the daily needs of the densely populated cities of Europe; and the effi-

ciency of medical science, jurisprudence, and ethics in promoting longevity by sanitary regulations, inculcating justice and equity, and elevating the standard of morals, thus leading to the relative decrease of crime.

It is only to countries unaffected by the progress of science that the Malthusian theory may be said to apply. Outside of Europe and nations of European origin or under European influence, like British India and Japan, the population, according to the statistics of Sir Robert Giffen, remains very nearly stationary. In British India the number of inhabitants has increased during the last century from 150 to 294 millions, and in Japan, since 1870, from 31 to 45 millions.

## LATE SPANISH OPINIONS ON BULL-FIGHTING.

MALAGA, September 1, 1902.

The first opinion I shall mention was that of a Spanish gentleman who took me up into a high mountain back of this place, not to show me the kingdoms of the earth, and the glory thereof, but to show me a small country-house he had to rent there. It was a pleasant, rural house enough, but with the radical objection that it could be reached only by the dried bed of a torrent after a long ride on donkey back. The August Festejos, or summer carnival, were on just then. Every Spanish town is especially lively in August, and as 20,000 people or more come to Malaga for the sea-bathing, something unusual has to be done for their benefit. The gayeties were thinly spread out over a fortnight: one day a battle of flowers, another an evening concert, and so on, and especially the bull-fights. My companion spoke of staying a few days quietly at his country-house. "But you will be coming down for the great bull-fight on Sunday, of course?" I said. "Not I," he replied, and, waving his forefinger with disgust and emphasis, "á mi no me gustan los toros" ("Bulls are not to my taste").

Another typical opinion was that of the lady who was our hostess during our stay in the city. She was an elderly person, a good housekeeper, sympathetic in time of sickness, a sterling and attractive character. We used to call her, among ourselves, "Doña Perfecta"—not that she had any disagreeable trait whatever; but a look of severity that would occasionally cross the prevailing amiability of her smile, recalled the impression produced by Pérez Galdós's fictitious personage. We were going to the bull-fight one day, as strangers go "just for once" to what is curious in foreign countries, and we asked our Doña Perfecta if she were. "I have never seen one in all my life," she replied vigorously, "nor do I ever think of going." A handsome young widow, a guest from Granada, whom in like manner we had slyly dubbed 'Pepita Ximenez'—though I found, in passing, that she herself had never heard of 'Pepita Ximenez,' nor of its author, Juan Valera—then spoke out plainly against the cruelty and even against the monotonous tameness of the national diversion.

So here are three different opinions, taken quite at random, which clearly indicate the existence of a body of enlightened sentiment on the subject. But far more important was the appearance of an article in the leading newspaper, the *Union Mercantil*, of Malaga, headed, "Sin Picadores" ("Without Picadors," the mounted men in the fight). It consisted of a scathing denunciation of the whole wretched sport to which the unfortunate country is addicted.

"If we should put on savage war-paint and feathers," it said in part, "and dance hand in hand, as do the red Indians of the West about their prey, we should only be in keeping with our true position when attending these bloody spectacles. What an odious piece of hypocrisy, too, to lecture children for tormenting birds and insects, when the same people go perhaps from that very lecture to feast upon the magnified horrors of the bull-ring!"

It went on to speak of the work of the picadors as being the most brutal part of the exhibition, as it is, and called for the abolition of that feature as a preliminary to further reform. The poor horses, as we know, are spurred blindfolded upon the horns of the bull for the express purpose of being ripped open, and they are often seen going about treading on their own entrails.

"What a premium and final reward is this," exclaims the *Union*, "for the patient labors of this faithful servant of man! Such baseness and treachery, such a cowardly vileness, enter into this conduct, that few actions can be more degrading to human nature. If a cry of horrified protest does not arise from all the spectators—a cry which would do them honor—it is because their finer feelings have been calloused by familiarity with the sight from childhood; such a vicious education makes the devotee of the bull-fight himself a brute beast and nothing less."

This is as strong language as the most humane foreigner could desire. To give to its suggestions a practical effect, this paper proposes that the different local societies for the Protection of Animals and Plants, which exist throughout Spain, should meet in a congress and endeavor to obtain the proper legislation from the national Government. An active propaganda should also be begun through the teachers of the public schools, who should be induced, by money rewards and otherwise, to include, as a part of the regular moral lessons they give, abhorrence of the bull-fight.

The article in question drew out hearty approval from many in the succeeding numbers, and found favor in other journals. Señor Garcia de Toledo wrote. He had already worked much for the cause, and it came out that a large meeting had been held, and numerous signatures to a petition obtained, at Barcelona in 1901, but the movement died a natural death. This writer wants the agitation to be entirely Spanish and without the coöperation of foreigners. If the sport is called "national," then let the protest against it be thoroughly national, too. The journalist, Alfredo Calderon, known on a wider than the local field, says:

"Apart from the horses, the bull is the only one who is in the right of it; the animal conducts himself like a man, but the man like a brute animal. Our national diversion is the Waterloo of reason and the Austerlitz of instinct. A crowd of people gather to these villainous shows, some to massacre helpless beasts, the rest to delight in the carnage. They tell us that this should prove a stimulus to Spanish spirit and valor. Precisely the opposite is true; this is the apotheosis of cowardice. True courage is generous and merciful, only wretched cowardice is mean and cruel."

All this was very encouraging as to the future of Spain, and it was the pleasanter to read after coming again fresh from the bull-fight. For surely, as a game, apart from the cruelty, it is very dull indeed; the bull is so unfailingly simple and stupid; he turns away every time from the man to dive idly at the flaunting cape; the men are never in danger, at least from intent of the bull, and cannot come to harm except by accident. There is nothing of it, then, except the cruelty. But, on the other hand, friends who know the country longer, point out to me that Spanish newspapers are fond of dealing in fine sentiments, and Spain generally abounds in good intentions which amount to little.

On the other hand, too, the new young King, who was brought up by his careful mother to know better, has been induced to attend the bull-fights, to cultivate popularity with the mob. And, on the other hand, again, a new and more brutal form of bull-fight has come in. A law on the statute-book, the Ugarte Law, endeavors to infuse a certain amount of decency into the thing, by restraints as to times and places, combats with too tender animals and by inexperienced performers, and so forth. This law is evaded or openly defied. The *Heraldo* of Madrid stated a day or two ago, that the numerous country fairs all over Spain have come to be only an excuse for bull-baiting of the most barbarous sort. These fairs consist now of one day of market and two of torturing animals to death. It cites, in passing, the case of one worthy citizen who spends his time going from one to another of these shows, and has jotted down in a notebook a record of some two thousand.

For lack of better opportunity, the denizens of the market village or hamlet will buy some poor animal of the bovine race in common, some inferior bull or a bull calf, or a frisky cow. "I will put in five reals," says one, "and I seven," says another. They massacre the victim in common, and divide up the meat afterwards. If the authorities do not apply the Ugarte Law, through fear of losing their votes or fear of riot and personal injury, they do this in the open plaza; otherwise, in the yard or even the court of some private house. Each one appears with such a weapon as he may have—this with a dagger, that with a sword-cane, the other with a sharpened table-knife—and they set to work like demons; they stab and hack their helpless prey to death, but by slow stages, that the pleasure may last the longer. If death does not come the first day, the animal is brought out again a second, and even a third day. *Vaya!* (Go to!) exclaims the *Heraldo*, here is a fine, magnanimous people! And it continues:

"Bulls and bulls only are what the country is clamoring for from one end of the land to the other; it is a veritable madness; the Spanish nation will not see or hear of any other form of diversion. Where blood does not flow, there is deemed to be no festivity, no amusement. Thus in bloodshed we are reared, and in blood we live and have our being."

If the *Heraldo* be right, the good *Union Mercantil* of Malaga has a slow and toilsome campaign before it.

WILLIAM HENRY BISHOP.

# Correspondence.

COLOR-SEEING.

TO THE EDITOR OF THE NATION:

SIR: Having lately returned from a summer resort which is much frequented and exploited by artists in all stages of development, I was interested by the article headed "A Corollary to Nature-Study" in the *Nation* for September 4. One passage in this article runs as follows: "Try him on a beech or a smooth maple, and when he answers 'Gray,' bid him look and see that the real color is one of the blue purples or violets." Now I shall not venture to criticise this suggestion. I can usually see blue or violet where the water-colorists say it exists, and I quite agree to the proposition that we should try to see things as they really are. But how far will this effort, honestly and reasonably maintained, carry us in the perception of "lilac" where the untutored impression is "brown," or of purple or violet where the child at first sees only gray? As far as the average water-colorist would lead us? By all that is sane, no. The fact seems to be that the artist, once perceiving that there is a shade of blue or violet where the careless, unprofessional eye sees only gray, begins to pride himself on seeing the obscure, and presently comes to think that the more conscious he can make himself of it, and the more glaringly he can reveal it in his work, the better artist he is. It is the old story. The one per cent. of fact which was lost and is found, obscures for the time being the ninety and nine per cent. which has been all the time evident till now, and which will be evident again as soon as the excitement of discovery dies out.

And so I have a suggestion to add to those made in "A Corollary to Nature-Study." Let the nature-study teacher have in reserve, not for ordinary exhibition, but for uncovering at the psychologic moment, one of those beautiful, really beautiful, water-colors representing, for example, a New England seacoast sand dune, with its clumps of scrubby bushes. After the pupils have been led to see the lilac shade of pine-boles and the violet tinge of beech bark, let the teacher bring forward this water-color, point to the base of one of the pictured clumps of bushes, and ask: "Now, children, what do you think is represented here?" If the pupils are still possessed of normal color perception, they will probably reply, "A bed of violets." Then let the teacher say, "No, children. This patch of vivid color does not represent violets. This is the way a very talented artist now pictures the stalks and the dead twigs and leaves of these green-topped bushes. No doubt she once saw these things just as you would see them if you looked carefully, but she got the blue into her eye and into her mind, and her grays kept on growing bluer and bluer till they came to what you see here. Let us keep our senses, children, and beware the fate of this very talented artist. Let us not persuade ourselves that skim-milk and purple ink look just alike. At least, let us not do so while we are at 'Nature-study.'" EDWIN H. HALL.

CAMBRIDGE, MASS., September 10, 1902.

[The writer of this agreeable letter is in so promising a way that the *Nation* can have no controversy with him. Let him continue to frequent the water-colorists, who, in spite of their exaggerations, have still much to teach him on the difference between real and conventional color.—ED. NATION.]

# Notes.

Preliminary fall announcements by G. P. Putnam's Sons include 'A Political History of Slavery,' by William Henry Smith; 'The American Republic and its Governments,' by Prof. James Albert Woodburn; 'Government and the State,' elementary principles with their practical application, by Frederic Wood; 'Famous Families of New York,' by Margherita Arlina Hamm; 'The Hudson River from Ocean to Source,' by Edgar Mayhew Bacon; 'The Romance of the Colorado River,' by Frederick S. Dellenbaugh; 'Christopher Columbus,' by John Boyd Thacher, in three royal octavo volumes containing some 300 illustrations; Carlyle's 'French Revolution,' edited by C. R. L. Fletcher, M.A., Fellow of Magdalen College, Oxford; 'The German Revolution of 1849,' by Charles W. Dahlinger; 'The Youth of La Grande Demoiselle,' from the French of Arvède Barine; 'Life and Times of Robert Harley, Earl of Oxford,' by E. S. Roscoe; 'William Morris,' by Elizabeth Luther Cary; 'Studies of a Biographer,' by Leslie Stephen; 'Tolstoi as Man and Artist,' with an essay on Dostoyevski; 'Saint Augustine and his Age,' by Joseph McCabe; 'The Sons of St. Francis,' by A. MacDonell; Blake's Illustrations to the Book of Job, in photogravure, a limited edition; Mrs. Browning's 'Sonnets from the Portuguese,' with colored illustrations and decoration by Miss Margaret Armstrong; 'Spiritism or Telepathy?' by Minot J. Savage; and 'The Use of the Voice in Reading and in Speaking,' by Ernest Partwee.

The Crosscup & Sterling Co. of this city announce the immediate commencement of publication of the Complete Writings of Henry Fielding, edited by William E. Henley, with an essay; the whole in sixteen octavo volumes, illustrated, to be delivered to subscribers before the new year.

Little, Brown & Co., Boston, are to publish 'The Struggle for a Continent,' an abridgment, in one volume, of Parkman's works by Prof. Pelham Edgar of Victoria College, University of Toronto. Also, a thirty-two-volume edition of Charles Lever's works, and the Oxford edition of Plutarch's Lives in five volumes.

Fifteen pictures from the *Century Magazine* and *St. Nicholas* are to be reproduced among the Copley Prints of Curtis & Cameron, Boston, in sizes suitable for framing. This firm will also undertake, upon private order, to reproduce family portraits in the manner of the Prints.

A treatise on 'The Law of Copyright,' by E. J. MacGillivray, embracing Great Britain and her possessions and the United States, will be issued directly by E. P. Dutton & Co.

The Baker & Taylor Co. have nearly ready 'Reciprocity,' by Prof. J. Laurence Laughlin and H. Parker Willis, and a Life of Zwingli, by Samuel Simpson.

James Pott & Co.'s autumn list embraces C. H. Firth's 'Cromwell's Army'; J. G. Alger's 'Paris, 1789-1794'; Hugh H. L. Bellot's 'The Inner and Middle Temple: Legal, Literary, and Historic Associations'; Sir Wyke Bayliss's 'Five Great Painters of the Victorian Era'; Funck-Brentano's 'Cagliostro and Company'; J. T. Bonney's 'The Mediterranean: Its Storied Cities and Venerable Ruins'; and 'Motor Cars, or, The Application of Mechanical Power to Road Vehicles.'

Besides Edgren and Burnet's 'Italian and English Dictionary,' already announced, Henry Holt & Co. are on the point of bringing out Auguste Fournier's 'Napoleon I.,' with a critical bibliography of Napoleonic literature; 'Standard English Prose, from Bacon to Stevenson,' by Henry S. Pancoast; 'Variations in Animals and Plants,' by Dr. H. M. Vernon; a 'Synopsis of Animal Classification,' by Prof. H. H. Wilder; Tardes's 'Laws of Imitation,' translated by Mrs. Herbert Parsons, Ph.D.; and 'Borrowed Plumes,' burlesques of popular writers by Owen Seaman.

The Century Company will make a book of their magazine's 'Confessions of a Wife,' by "Mary Adams"; and will issue a fresh instalment of Cole's wood-engravings, 'Old English Masters,' with text by Prof. John C. Van Dyke.

From R. H. Russell's list we select 'A Century of Sonnets,' by Mrs. S. B. Herrick; 'The Queen's Rosary,' by Alice D. Van Cleve—sixty sonnets devoted to Queen Victoria; 'Ad Astra,' selections from the Divine Comedy, by Margaret Armstrong, who also illustrates the volume; 'Mr. Sun and Mrs. Moon,' child's verse by Richard Le Gallienne; 'The Baby's Baedeker,' by Col. D. Streamer; and 'Plantation Bird Legends,' by Eli Sheppard.

Harper & Bros. publish directly a new volume of verse by Edward S. Martin.

'Wayfarers in Italy,' by Katharine Hooker, and 'Shakspere's Portrayal of the Moral Life,' by Frank Chapman Sharp, are in the press of Charles Scribner's Sons.

'Every Day in the Year,' a collection of anniversary verse by James L. and M. K. Ford, is announced by Dodd, Mead & Co.

Fleming H. Revell Co. have nearly ready 'Two Wilderness Voyagers,' a true story of Indian Life, by Franklin Wells Calkins.

Fresh announcements by McClure, Phillips & Co. are 'Gabriel Tolliver,' a novel of Reconstruction, by Joel Chandler Harris; 'Golden Numbers,' a poetic anthology for children, edited by Kate Douglas Wiggin and Nora Archibald Smith; 'Indian Boyhood,' by Charles A. Eastman; 'Little Stories of Married Life,' by Mary Stewart Cutting; and 'Fictional Rambles about Boston,' by Frances Weston Carruth.

*Life's* book budget for the season includes 'Rhymes and Roundelays from *Life*,' 'The Social Comedy,' full-page drawings; and '*Life's* Gibson Calendar.'

J. B. Lippincott Co. will give the American imprint to Arthur F. Davidson's 'Alexander Dumas *père:* His Life and Works.'

'Letters from a Self-Made Merchant to his Son,' by George Horace Latimer, is the serious title of a humorous work to be issued by Small, Maynard & Co., Boston.

The Oliver Ditson Co., Boston, will begin their series entitled "The Musician's Library" with 'Fifty Mastersongs,' edited by Henry T. Finck, in two editions for high and for low voices, and 'Frédéric Chopin,'

forty piano compositions, edited by James Huneker. October 1 is the date of issue.

From the University Press, Chicago, we are to have this month 'The Second Bank of the United States,' by Ralph H. C. Catterall, and 'The Place of Industry in Elementary Education,' by Katharine Elizabeth Dopp.

'Life without Principle,' an essay by Thoreau, with Emerson's brief biographical sketch of this author, is to be given a handsome dress at "the Sign of the Hop-Pole, Crockham Hill, Eden Bridge, Kent, England."

*Artistic Bookplates* is to be changed from a quarterly into a monthly by the publisher, George F. Kelly, No. 1135 Broadway.

A brush and colors in the margin, as in the 'Mother Goose Paint-Book' of the Saalfield Publishing Co., Akron, O., is a happy thought; but why should taste and refinement be discarded in the typography and in the designs for coloring? Is not art related in all its forms?

'Modern Polo,' by Capt. E. D. Miller (London: Hurst & Blackett; New York: Charles Scribner's Sons), comes to us in a revised and enlarged second edition, with a list of the polo ponies in England at the beginning of the present season. The game is discussed in detail, with the rules, with the records of tournaments, and with much good advice to beginners. Chapters are also devoted to choosing, training, and managing ponies. The illustrations are excellent, particularly those showing the strokes.

The more than prettily made book, 'Two Thousand Miles on an Automobile; being a Desultory Narrative of a Trip through New England, New York, Canada, and the West' (Philadelphia: Lippincott), is the vehicle of the author's reflections on Anarchism, the Concord philosophers, the Morgan mystery, and any other subject suggested by the station, or not suggested. "Nothing disturbed Shakspere's equanimity. Neither Stratford nor London bounded his life." "Women are the arbiters of social fate, and as such must be placated, but not too servilely. In society a blow goes farther than a kiss." These are some of "Chauffeur's" precious sayings, though he can be more interesting. The chief worth of his diary lies in his account of roads and his comparison of machines.

It is questionable whether the title 'A German Buddhist' is rightly applied to a sketch of the life of Theodor Schultze, by Dr. Pfungst, the translation of which, by L. F. De Wilde, has just been published by Luzac & Co., London. Schultze is an interesting epitome of the modern view of many metaphysicians towards Buddhistic philosophy. He accepted the "nucleus of Buddhism," but refused to believe in the church, the cosmogony, the doctrine of Buddhas, recreations, and even Karma, except in a very modified form. In a word, he was no Buddhist, but he regarded the ethics of Buddhism and the Buddhistic philosophy of pessimism as more satisfactory than Christian doctrine. Patience and sympathy make a better religion than hope and love, in his opinion. The sketch is significant of the ingrowth of Hindu philosophical ideas since Schopenhauer.

Georg Conrad's 'Majestät' (Berlin: Otto Janke) is what he calls a "Königsroman"—not an historical novel, but one in which a royal personage is eulogized and glorified. The hero in this case is Ludwig II. of Bavaria, whose morbid eccentricities are described as brilliant emanations of genius. The author is an enthusiastic Wagnerite, and naturally dwells at length upon the relations of the monarch to the musical dramatist, justly censuring the shortsightedness of the Munich people in preventing the erection of a Wagner theatre in that city. Utterly unjustifiable in a writer of fiction is the putting into the mouths of Maximilian II. and the youthful Ludwig II. depreciatory views of the distinguished poet Paul Heyse, which neither of these sovereigns ever expressed or even entertained. The creative imagination has a sufficiently large legitimate field of activity without resorting to calumny.

If there are any irreconcilables in Porto Rico, a minor consolation for being taken over by the United States may be found in the much bigger language to which the island inhabitants have been promoted. At least, we suspect some such motive for a bet sent up from Porto Rico for adjudication, and recorded in the Princeton University Bulletin for May, viz., that "there are twice as many words in the English vocabulary as in the Spanish vocabulary." Dr. Charles P. G. Scott undertook to analyze rather than answer this inquiry, and his report is given in full in the Bulletin. Incidentally, he says of the French Academy's Dictionary that "it is, in fact, nothing but a nice large spelling-book, with discursive definitions and gossip about phrases. It is not a monument of learning, but a monument over learning." He also sets for the industrious the task of counting exactly the number of words in the various extant concordances of English writers from Shakspere to Browning. Dr. Scott estimates that the Oxford Dictionary, when completed, will reckon about 240,000 principal words and about 140,000 compounds, cross-references and minor entries.

A unique educational experiment has been begun in Wertheim, Baden, in the shape of a "Deutsche Nationalschule." The founder is an experienced educator, Dr. Krapff, with the architect August Schilling (active in American schools for seventeen years) and Major Kressmann as coadjutors. The purpose of the new venture is to prepare young men to become representatives of German thought and life, trade and business, abroad. The course of study covers nine years, and accordingly makes this institution a full-grade secondary school, in which are taught chiefly modern languages, the natural sciences, and mathematics, with manual training on an extensive scale and a thorough business training. Boys are expected to enter the school at the same age at which they are accustomed to be admitted into the gymnasia. The new school has the warm sanction of the official and educated classes of Germany, its scope being so much wider and deeper than that of the "Colonial Schools," of which a number have been founded in recent years, but have been conducted with only partial success.

The University of Bern is the first Continental university to institute a regular department of journalism. The announcements for the lectures during the coming winter semester include courses on editing and the publishing of newspapers. They will be delivered by Dr. Gustav Schmidt, a member of the law faculty and editor of the *Schweizer-Handelsblatt*.

The Musée Guimet in Paris, the great storehouse of materials for the study of the history of religions, has received from the traveller Dinghello, now engaged in archæological work in Palestine, a number of recently discovered bronze images which, no doubt, are specimens of the household gods of the Jews so often mentioned in the Old Testament, but of which none had ever before been found. They show undoubted Semitic features. There are a Baal and an Astarte with plaited hair, the latter with a crown. The height of these images is 37 centimetres.

The Sudan, in the not very distant future, may be a formidable rival to the United States as a cotton-raising country. At a recent meeting of the Association for British-Grown Cotton at Manchester, Count Gleichen, the Sirdar's secretary, stated that "there were 15 millions of acres of land suitably irrigated on which cotton could be grown"—an area more than half as large as that which we devote to its culture. Upon it the natives already grow cotton in small quantities for their own consumption, but they are few in number, the dervishes having killed four-fifths of the population of the Sudan. The Government accordingly intends to let the land on the easiest possible terms, and it has already made some successful experiments in cotton-growing. When the Suakin-Berber railway is completed, which it is hoped will be at the end of two years, these will be the nearest extensive cotton fields to the English market.

The instruction of the Boer farmer in modern methods of agriculture is absolutely essential to the future prosperity of the South African colonies. Acting upon this conviction, the home Government is sending carefully selected parties, under competent guidance, to visit Canada, Australia, and New Zealand. They will make a study of the latest scientific agricultural methods, with a view to putting them into practice on their own farms and imparting their knowledge to their neighbors. One member of each party, at least, is to have a knowledge of photography and be provided with a camera.

Mildura, an "irrigation settlement" in the arid country in northwestern Victoria, was founded thirteen years ago by emigrants from Great Britain, who have invested more than five million dollars in the cultivation of vineyards, orange groves, fruit farms, etc. The enterprise, notwithstanding mistakes and difficulties, the chief of which is the want of railway communication with Melbourne, 350 miles distant, has proved a remarkable success. The production by irrigation of raisins and currants has proved exceptionally remunerative, the settlers, who number 4,000, being "reported to be making a return of as much as $600 per acre in some instances from these vineyards." The Government is building a railway, 100 miles in length, to connect Mildura with the capital, and proposes to add largely to the irrigated territory, on which it is now seen other valuable commodities can be profitably raised for home consumption and for exportation.

The latest issue of the German Asiatic Society of Japan is a stout supplement of 300 pages, making the fifth book, in addition to the eight portly volumes of papers

on special themes sent forth by this learned body. In it Pfarrer Hans Haas treats of the History of Christianity in Japan, this first instalment dealing with its introduction by Francis Xavier. Despite the fact that so many writers in many tongues have handled the same theme, Mr. Haas makes it almost a new subject, because he shows familiarity with both the native religions and with what critical scholars and men of research have done on the soil. He thus gives us an inside view of things. Along with this supplement comes the *Festschrift* (pp. 97) in celebration of the twenty-fifth anniversary of the founding of the Society, giving its history, list of contributors, and titles of papers read, together with an analytical index of subjects. In generous rivalry with the (British-American) Asiatic Society of Japan, this "Gesellschaft" has produced what in bulk probably equals, and in weight and seriousness of matter falls no whit behind, the output of the other. Both series are indispensable to the student of Japan, past and present.

—Apart from the report of the Commencement exercises, the September number of the *Harvard Graduates' Magazine* possesses exceptional interest. Justice Oliver Wendell Holmes's portrait is at the front, and Professor Grandgent's tribute to the late Prof. Ferdinand Bôcher is accompanied by an excellent likeness of that genial scholar, in former years a constant and generous contributor to the *Nation*. There is a very neat inquiry into the question whether Burgoyne and his officers were ever quartered in the college buildings as the State sought to have them, and Mr. F. H. Smith makes it pretty evident that they were not. The Editor gives timely notice of the approach of the centenary of the birth of Emerson (May 25, 1903), and urges a commemoration of it by the University. In calling Emerson the greatest Harvard graduate, Mr. Thayer is speaking, of course, in terms of the spirit; and has in mind, not the greatest poet or the greatest stylist alone, but the most liberalizing influence of the sort which best abstracts the university ideal. In lower planes of comparison, one has, not to speak of living Presidents, to remember John Quincy Adams as somewhat of a great man. Professor Hart's farewell review of the University's life is of the same high quality that has marked his eight years' comment. He surveys the changes in the past ten years, noting the invasion of the catalogue by strange un-English names and nationalities, the outstripping of Latin by Greek in the electives, the increase (sometimes doubling and much more) in attendance upon all the departments save the Divinity School and the abandoned School of Veterinary Medicine. The event at Radcliffe this year was the conferring of the doctor's degree for the first time, and in two cases. Of this college, Professor Gray skilfully sums up the history *ab ovo*. In the class news, mention is made of a graduate who lately died the richest clergyman in the United States, a ten-millionaire, whose public bequests were a quarter of a million. More notable, and as rare, is the return by a beneficiary of the aid he received from a scholarship, and the simultaneous founding of a new scholarship—a total gift of $6,050.

—Col. Silas W. Burt's memoirs of New York military history in the war for the Union, edited by the State Historian and published by the State as "Bulletin No. 1, War of the Rebellion," represents raw material of history. As auditor of military accounts during Gov. Morgan's administration, and later, the author had the situation before him; and the special merit of his pamphlet, which closes with 1862, is his plain narration and his candid and sometimes pungent expression of opinion as to the men and affairs of those exciting days. It is well for this generation, for whom that generation wrought, to read contemporaneous and unadorned records of hopes and fears, of efforts, failures, and successes in transforming peaceful citizens into organized armed bands. There were militia accepted for three months, volunteers for two years and three years; again, militia taken for nine months, and regiments that offered themselves for three months and were held for three years. Under these various conditions, New York sent out more than 222,000 men prior to 1863. There are described questions of supply, of pay, and of bounty, of recruiting and of commissions, of State authority and of Federal authority, of the patriotic and efficient Union Defence Committee and its allies, of the unpatriotic and mischievous Copperhead faction, and many more, all which represented real problems. The question was a burning one in those days whether the volunteers were to be regarded as State militia or Federal troops; and in the collision between the State and the general Government on the question of commissioning generals, Col. Burt notes that "the former had the right and the latter the victory." A useful feature of the paper is the frequency with which biographical data concerning men of moderate note, as well as those of distinction, are to be found. Where Col. Ellsworth's Eleventh New York Volunteer Infantry is given the alternative designation of Fire Zouaves (pp. 29, 35), there is probably confusion with "Billy" Wilson's aggregation of roughs, the Sixth New York, which was so styled. This is not pretentious literature, but it is a truthful record of what one man in not very conspicuous public life observed, and it would be well if his later notes, to include the close of the war, were printed.

—Lowell could not have been more amazed at beholding an old French text edited by an American than classical scholars will be to learn that the latest addition to the well-known Haupt and Sauppe series of Greek and Latin authors (Berlin: Weidmann) is "based," as the common phrase goes, upon an American edition of the same work. This is the 'Agricola' of Tacitus, the appearance of which in Bennett and Rolfe's series we noted in 1899. The editor in each case is Prof. Alfred Gudeman, the eminent Tacitean critic, who, after lending distinction for some years to the University of Pennsylvania, is now, we understand, about to proceed to Cornell. The two books are very much alike so far as introduction and explanatory notes are concerned; but, for the text and critical apparatus of the second, Professor Gudeman is the first editor of this famous biography who has had the advantage of using Leutze's collation of the newly discovered Codex Toletanus. We will not discuss in detail the resulting changes, but shall content ourselves with the compilation of a few statistics, which are as correct as a first reading could make them. There appear, then, to be 39 passages in which Gudeman's new text differs from that of 1899. Of these, 19 are due solely to the readings of Codex T; four depend upon T supporting an early conjecture; four are conjectures by Gudeman (one of them strongly supported by T); and the remaining dozen are orthographical corrections or miscellaneous changes. Among them, however, we note one which is apparently a misprint in the text: *timebatur* (25), where the apparatus seems to suppose the same *timebat* which stood in the earlier edition. With this exception, lovers of the 'Agricola' will find that nearly all the new matter deserves their very careful consideration, and we believe that a good number of the new readings will meet with ready acceptance.

—Now and then conventional literary opinion is chastised for its good. This time the punishment falls upon such as have admired the famous tract of Diderot, 'Paradoxe sur le Comédien.' This discussion of the actor's art has been frequently quoted; it is, indeed, the best known of Diderot's critical writings. To find it set down as a mere fraudulent farrago composed by his Secretary, Naigeon, is for the moment startling. That such is the case M. Ernest Dupuy has proved conclusively in a recent edition of the essay. The manner of the imposition is too interesting to be passed in silence. To begin with, Naigeon had worked intimately with the encyclopædist, and imitated very precisely his more formal and poorer style. When the Empress Catharine of Russia, who had bought during his lifetime the papers of her old protégé, became known as an eager purchaser of all sorts of Diderot memorials, Naigeon saw his opportunity, and rose to it. He had the good sense to base his fabrication upon a genuine but obscure work of his late master, "Observations upon the Actor's Art." Taking this vivacious article from the Grimm correspondence, he diluted it with his own rhetoric, and sweetened the resulting thin mess with all manner of unacknowledged quotations from contemporary authors. Thus he gave to the Empress an excellent money's worth, and to the critics of the century an object of respectful investigation. From internal evidence M. Dupuy had fairly made out the fraud when a fortunate "find" on the Quai brought objective proof. It was nothing less than the original draft of Naigeon's forgery—purporting, indeed, to be a copy from Diderot, but bearing corrections, erasures, and interlineations which could have been made only by the veritable author. It is apparently only the fact that the 'Paradoxe sur le Comédien' was published posthumously, and separately, in 1830, which has given it notoriety, while the far better expression of its doctrine has lain unregarded. It is a singular instance of the insensible worship that men of the cave after all pay to the idols of the market-place.

—If this trite moral needs further enforcement, it finds it in a recently published letter of the composer, Hector Berlioz. He knew the value of a name, and once, at the time of his greatest unpopularity, imposed one of his oratorios upon the critical public by presenting it as a rediscovered work of an old composer. At times his critics saved him the pains of deceiving them, as is explained in a letter of December 16, 1854, to the Princess Sayn-Wittgenstein, Liszt's friend and correspondent. The letter was

recently published in the *Ménestrel*. Berlioz writes: "In 1830 I was sent to Rome as scholar of the Académie des Beaux-Arts. The rules obliged me to compose at Rome a piece of religious music, which at the end of my first year of exile should be judged publicly at the Institute of Paris. Now since I have never been able to compose in Italy—why, I don't know—I simply had a copy made of the Credo of one of my masses, which had already been given twice at Paris before my departure; and I sent it on to my judges. They declared that the piece showed the favorable influence of my Italian residence, and that everybody must note the complete abandonment of my unfortunate musical tendencies. How many academicians there are in the world!"

## A MODEL HISTORY OF MODERN MUSIC.

*Geschichte der Musik seit Beethoven (1800-1900)*. Von Dr. Hugo Riemann. Berlin and Stuttgart: W. Spemann.

German historians of music used to make a division which was as simple as it was silly. Bach, Handel, Haydn, Mozart, and Beethoven were treated as the great tone-heroes whose every trifle was flawless and above criticism; while all subsequent composers were "Epigonen"—followers, imitators, more or less clever men of talent, who might be patted on the back, but could hardly be considered immortals. The champion among these historians was Emil Naumann, whose voluminous work is a marvel of critical ineptitude. A few writers, notably Brendel and Langhans, evinced a more liberal spirit and a gift of recognizing modern genius. Their works are still of value, but they far from exhausted the matter, leaving plenty of room for a history of music up to date in every respect, such as that of Dr. Riemann, which (like the same author's 'Musik-Lexikon,' now in its fifth edition) is beyond all comparison the most satisfactory, reliable, and useful book on its subject; a book which ought to be promptly translated into English.

After some introductory remarks on modern style, concert-giving in the olden times, musical centres of Europe, the collapse of Italian supremacy, and the revival of interest in Bach, Dr. Riemann devotes a chapter of sixty pages, biographical and critical, to Beethoven. Chopinists will dissent from his assertion that Beethoven's sonatas represent the culmination of pianoforte music up to the present day; nor can we subscribe the opinion that Bach unlocked all the secrets of harmony and Beethoven all the marvels of rhythm; but the author's subsequent remarks on Wagner, Liszt, and other modern masters indicate clearly enough that he does not intend such assertions to be taken too literally. In his view, Beethoven's claim to superiority over his predecessors of the "classical" school lies not so much where it is usually sought—in his free treatment and enlargement of traditional musical forms—but in the manner in which he eliminated all display and deepened the means of expression. He had the tenderness of Mozart and the exuberance of Haydn, but added to them a seriousness and a demoniac power which they lacked. Dr. Riemann does not agree with Thayer that Beethoven's slow and laborious method of composition was due to a lack of facility in expressing himself, but thinks it was a result of his extremely refined and acute critical sense, and a feeling that only by a supreme effort could he surpass his predecessors.

One of the merits of Dr. Riemann's history is good perspective. He never indulges in the German vice of hiding the most important facts in foot-notes, but gives his chapters and subdivisions headings which at once indicate the relative importance of composers and "schools." The eighteen chapters are named as follows: Music at the Meeting of Two Centuries; Beethoven; Schubert; Weber; The Change in Concert Conditions; Mendelssohn; Schumann; Chopin; Opera after Weber and up to Wagner; Berlioz; Liszt; Wagner; The National Tendencies (Russian, Bohemian, Scandinavian composers); The Buffo-Operetta and the Ballet; The Followers of the Classical and Romantic Composers in Germany; The Latest Productions Abroad; Brahms, Bruckner, R. Strauss; Musical Science. In commenting on the next great name after Beethoven, our author dwells pertinently on the fact that Schubert, in his songs, not only practically created a new type, but an endless variety of new types, leaving little for his successors to add. "It is easy to base a complete treatise on song-composing on Schubert's *Lieder* alone." Without going quite so far as Dr. Dvorák, who is inclined to place Schubert's instrumental works higher even than his songs, Dr. Riemann writes *con amore* of the magic charm of his symphonies, quartets, and pianoforte pieces, noting their surprising originality, and independence of Beethoven and all other masters. He also defends them against the charge of excessive elaboration and length: "In itself length is no fault, if only the composer knows how to impart to his elaborations incessantly fresh charms; and this, if not always, Schubert certainly succeeds in doing in most cases." Emphasis is also placed on the romantic features in Schubert's instrumental works, wherein they differ from those of Haydn, Mozart, and Beethoven, both in the enchanting characteristic tone colors and in the capacity of the music to suggest pictures of a wonder-world.

While Schubert was thus developing the romantic spirit in instrumental music and in the *Lied*, Weber was doing the same thing for the opera. Dr. Riemann's pages on Weber and operatic romanticism (165-191) are the most luminous and suggestive ever written on the subject. When Dr. Hanslick and the other venomous opponents of Wagner abused him on account of his predilection for supernatural, legendary subjects, they were blindly hitting at nearly all opera-writers; for, as our author points out, the opera has been romantic since its beginning, "if we may understand by romanticism the intrusion of supernatural powers into human life." It is true, the librettos were formerly based on Greek mythology, but are not Pluto and Cerberus of the lower world, the gods and goddesses of the sea and the mountain summits, the nereids, tritons, and muses, as romantic as the gods, giants, and dwarfs, the nixies and kobolds, of the northern myths? Musically, however, the opera-makers learned only gradually how to create the impression of the marvellous, mysterious, phantastic, supernatural; and it remained for Weber's orchestra to teach audiences the *gruseln* so dear to Teutonic children of all ages. This he accomplished particularly by deliberately utilizing, for purposes of dramatic realism, certain instrumental registers and sounds which previously had been tabooed or subdued as inimical to euphony. In other words, "Weber provided in the magic of tone-colors a musical equivalent of the romantic traits in poetry." While thus paying a just tribute to Weber's originality, our historian is perhaps hardly fair to Schubert when he intimates (p. 139) that his characteristic tone-colors, and their mixtures, "if not derived from Weber, are at least parallel with his." The euphony of Schubert's pianoforte music (which marks an advance on Beethoven) is certainly not derived from Weber; nor, we believe, is his epoch-making use of the trombones *pianissimo*, and other exquisite details of clang-tints in his symphonies. The question how far Weber may have influenced Schubert in orchestration is an interesting one, and can be decided only by a detailed study of compositions and the dates of their performance in Vienna, for which no one is better qualified than Dr. Riemann himself. In this country Mr. Edgar Kelley might be called on for an essay on the subject.

After an intermezzo on choral societies, music festivals, conservatories, reforms in methods of instruction and historic investigation, the gradual displacement of virtuosi by interpreters, Viennese dance music and conductors of the old schools, Dr. Riemann proceeds with the next two men of genius on his list, Mendelssohn and Schumann. Both are criticised from the modern point of view in an admirably judicial spirit. Both were of a thoroughly lyric cast; both were more impressive as inventors of themes than as developers of them; both preferred the shorter to the longer forms; but whereas Schumann (at least in his early period) fascinates by the profusion of his ideas, Mendelssohn is more economical with his. Inasmuch as Mendelssohn's symphonies, overtures, and concertos are constructed after classical models, it may be true, as our author remarks, that his preference of short pieces to sonatas does not argue that he considered the pianoforte sonata as antiquated. But he omits to state that Schumann did express the opinion that the sonata had had its day, and that among his successors even Brahms devoted himself to the musical short story, excepting a few sonatas which belong among his earliest works. On this topic much light is thrown by Mr. Shedlock in his 'History of the Pianoforte Sonata' (recently reviewed in these columns).

It is an odd fact that Robert Franz (to whose admirable additional accompaniments to works of Bach and Handel Dr. Riemann does justice, as well as to his superb songs) began his musical career as a writer of pianoforte sonatas. These, however, he destroyed when he had discovered that his special vocation was that of a song-writer. Specialization was beginning to invade music, like everything else. Chopin devoted himself to the pianoforte almost exclusively. Dr. Riemann hardly gives him as much space as he deserves in comparison with some German masters, Spohr and Mendelssohn for instance, who play a very small rôle in modern concert halls compared with Chopin, and whose influence on other *great* composers has been much less deep and lasting than his. But he by no means underrates Chopin, as German historians usually do. He severely cen-

sures those who, like Louis Köhler, classed him among the drawing-room composers, to whom, in fact, he is directly antipodal. In his first sonata he anticipates some of Wagner's "Tristan" harmonies. What Field and others absurdly called "morbid" in his music is not a result of ill-health of mind or body, but is an elegiac trait which is found in his earliest works, written when he was thoroughly well and enjoyed life. It is a mistake, too, our author adds, to represent Chopin as the singer of Poland's tragic fate. What his music proclaims is not so much grief at Russian oppression as the peculiar character of Slavic music in distinction from Germanic and Romanic. "Chopin, therefore, is one of the sources of the national currents in musical production which take up so much room in the second half of the century."

To these currents Dr. Riemann devotes a special chapter, in which Rubinstein, Tchaikowsky, and Dvorák are prominently discussed. In the section on the Norwegians, Grieg is referred to as "beyond doubt the most important of the Scandinavian composers after Gade." But surely Grieg is infinitely more original than Gade, whose music is now as antiquated as most of Mendelssohn's, whereas Grieg's is only just beginning to be estimated at its true value, and is exerting an unmistakable influence on not a few of the younger composers, including D'Albert, Pugno, Paderewski, and MacDowell. He has created the latest harmonic atmosphere in music, and this atmosphere is much more Griegian than Norwegian. While Grieg doubtless has the charm of local or national color, he has borrowed much less from Norwegian folksong than is commonly supposed. His most characteristic songs are those in the third and fourth volumes of the Peters edition; these appear to us even more inspired and original than the early ones concerning which Dr. Riemann justly declares that they "speak a tone-language reminding one of Schubert in his greatest moments." To us it seems a blessing that Grieg left the German school and founded one of his own, even though the German be more universal in character. When we travel in Norway, we expect the women to have a beauty peculiar to themselves; why not the composers too?

One of the features which distinguish Dr. Riemann's history most favorably from the works of his predecessors is that he first assigns to Liszt the prominence that genius deserves. Of the four books into which his volume of 816 pages is divided, the third is headed "Epoche Wagner-Liszt," and to Liszt's life and works he devotes 32 pages which are a model of condensation, combined with clearness and a sense of what is most important. A chapter like this, by a recognized musical authority, has long been a desideratum, as too many professionals are still in the habit of looking on Liszt as a mere freak and a law-breaker in the realm of harmony. It is extremely significant, and indicative of the fact that the musical world "do move," to find the leading German theorist of our time expounding his views that Liszt, harmonically, grew out of Schubert; that his boldest and most intricate innovations are capable of explanation and justification; that the ear recognizes their legitimacy before the eye does; that they reveal Liszt's intuitive comprehension of the most intricate formations; and that the study of them is highly conducive to the development of musical insight.

"To be great is to be misunderstood," said Emerson. The fact that Liszt, early in his career, tried to become the Paganini of the pianoforte created the belief, still widely current, that, like that Italian, he made dazzling technical display the chief aim of his art. But Liszt himself wrote an essay, in 1841, on Paganini, in which he declared that thenceforth other and higher methods would have to be pursued to attain the greatest eminence. These methods he adopted in making his incomparable technical skill a mere means for the elucidation and popularization of the art of the great masters, from Bach to Chopin. To be sure, he also wrote and played fantasias on operatic melodies by Rossini, Donizetti, and Bellini; but in these cases he chose only melodies of genuine musical worth, and gave them settings as original and fascinating as they are brilliant. The catholicity of his taste enabled him to recognize beauty in all branches of the art; as our author puts it: "As interpreter and teacher Liszt manifested an exemplary universality and a previously unknown capacity for entering into the peculiarities of the most widely separated epochs, styles, and individualities." This same gift enabled him to become the apostle of Hungarian music, though he did not devote himself to it till he was thirty years old.

Our orchestral conductors, who have so long favored Berlioz and ignored Liszt, will do well to read Dr. Riemann's remarks on Liszt's superiority to Berlioz, both as a creative musician and in his treatment of programme music (pp. 365-369, 548). To the subject of programme music, naturally, a good many pages are devoted in this book. Raff's, Richard Strauss's, and Wagner's relations to it are fully discussed. The treatment of Wagner in general is as satisfactory as that of Liszt, and use is made of the latest contributions to the subject. Brahms, Bruckner, and R. Strauss have a chapter to themselves. Brahms sustained the Beethoven tendencies, while Bruckner transplanted Wagnerian practices to the concert-hall—where they do not belong—and therefore failed. Strauss began as an absolute musician of the Beethoven-Brahms persuasion; but in 1885 he "shed his skin" and went over to the camp of the programme musicians. The last two hundred pages of the 'History' contain a bewildering profusion of names of minor musicians, and a few great ones, in Germany, France, England, America, and elsewhere. The school of the "Young Italians," which made so much noise a few years ago, is disposed of (p. 739) as entirely a thing of the past, and Mascagni's "Cavalleria Rusticana" is characterized as "a tragic operetta."

## TWO TRANSLATIONS FROM THE GREEK DRAMATISTS.—I.

*The Prometheus Bound of Aeschylus*, rendered into English verse by Edwyn Robert Bevan. London: David Nutt. 1902.

*The Comedies of Aristophanes*. Edited, translated, and explained by Benjamin Bickley Rogers. (IX., The Frogs. X. The Ecclesiazusae). London: George Bell & Sons; New York: Macmillan. 1902.

Mr. Bevan, in his preface, expresses the opinion that no worthy rendering of the "Prometheus" has yet appeared in English, and herein we must agree with him. Dean Plumptre's and Miss Swanwick's are scholarly, but somewhat pedestrian and uninspired. Mrs. Browning indulged in freaks and mannerisms and careless feminine embroideries, till it is no wonder that she shocked poor FitzGerald beyond the bounds of decency, and involved her husband in a corresponding indecency of retaliation. Such fits sometimes possess celestial minds. We cannot go so far as to agree with Mr. Bevan when he modestly condemns himself and is ready to consign his own experiment to the list of failures. He has sketched in his preface a sensible and well-founded theory of the patterns and methods which a translator should follow in dealing with this great poem; and he has illustrated his theory by producing unquestionably the most satisfactory version that has yet appeared. This should win respectful attention for his theory.

In order to reproduce the effect of the Greek drama in English, he would make the basis of his style that of the Elizabethan dramatists, purged of Elizabethan eccentricities; he would give this "more of elemental breadth and simplicity by approximation to the language of the Bible," and in the especially elaborate and sonorous passages, it might echo and recall the sound of Milton. This is surely a programme well laid out, and, for the "Prometheus," especially appropriate. That poem must have breathed an archaic air to the Greeks who first listened to it and saw it acted; the translator of the Book of Job might have dealt worthily with a large portion of the play, and the remainder might safely be entrusted to the vocabulary (and style, so far as it is imitable) of Shakspere and Milton. As an Englishman, Mr. Bevan assumes that the language of the Bible is still familiar to the ear and to the associations of his public; and even in our own country we may fairly make the assumption for any public which will trouble itself to read a rendering of the "Prometheus Bound" We cannot answer absolutely for the democracy which listens with rapture to "The Old Oaken Bucket" and the fatigue grammar of the dialect poem. But the subtle and composite magic of the style which, in Tennyson and Swinburne, draws its enchantment from the old-fashioned sources, still, beyond question, works its spell over many readers on both sides of the water. These fibres are so wrought into the fabric of our nineteenth-century poetry, that it is as yet a little fantastic to inquire how soon the generation will come for whom the spell will vanish, and the threads of which it is woven will be frayed out and forgotten. It may come, perhaps, before the coal fields are exhausted. If, as some ingenious spirits hint, the oracle is growing dumb, yet, as literature simply, it must long survive; as English literature it might be taught and read in our schools, without let or hindrance, when its authority as a divine voice had ceased entirely.

Mr. Bevan throws out the interesting and plausible suggestion that the present is exactly the literary period which is best fitted and tempered to produce an ideal and final translation of the Greek poets. Our age, he remarks, displays "a great variety of imitative manner"; if it cannot produce,

it possesses, at any rate, an unprecedented power of reproduction." And this is certainly, in a manner, true. Anybody and everybody has the knack of versifying—it is exercised by one's butcher and baker and candlestick-maker. There are, in the United States alone, we are credibly assured by a lady with a turn for statistics, "more than twelve hundred poetesses," and most of these write better verses than the late Mrs. Hemans. They publish, too, and their friends frequently read their verses. It is not by such aid, perhaps, that the final and permanent version of the Greek masters in poetry will be made; and Mr. Bevan, we presume, is not thinking of these when he suggests that it might be brought about by the coöperation of many minds, in which "the idiosyncracies of each would find correction." The King James's Bible is, of course, the weightiest proof that such collaboration may result in the most precious literature. For the literary syndicate which our author ingenuously suggests, we should name Mr. Swinburne as honorary President, and Mr. Bevan himself as one of the collaborators.

While we have our doubts about the labors of the syndicate and the acceptance of Mr. Swinburne, we are quite serious about the value of Mr. Bevan's services. His translation, if not entirely adequate—and no one understands better than he how impossible it is in such a task to attain one's standard—is much more than accurate and scholarly; it is eloquent, strong, sonorous, the work of a trained and dexterous artist, who has, besides the proper literary equipment, the poetic sense and the poetic touch. It reads well, it declaims well, and it should be read aloud to be thoroughly appreciated. The test of such work is that it should be effective in masses and as a whole, and this test the translation will bear. We cannot, of course, prove this by quotation, but there are single lines and felicities of detail of which we may permit ourselves a specimen. Here are some samples of that sententious "Stychomythy," so dear to the Grecian heart, which are faithful to the best Elizabethan manner, and yet free from the irritating effect of mere dexterous imitation:

KRATOS.
Lose not thy labour on what helps nowise.

HEPHAISTOS.
Woe worth the cursed cunning of these hands.

KRATOS.
Why curse thy craft? that, surely, to plain thinking,
Is innocent altogether of this coil.

HEPHAISTOS.
This arm at least it were a task to free.

KRATOS.
Now pin thou this as surely. Let him learn,
Wise as he is, there is One of nimbler wit.

HEPHAISTOS.
Such binding none could censure—save the bound.

And again:

OKEANOS.
But for the will, for making the adventure,
Were one the worse? If thou see'st loss, declare it.

PROMETHEUS.
Superfluous pains and fond simplicity.

OKEANOS.
Suffer that ill to cleave to me; 'tis gain
To be simple-seeming, being simply good.

PROMETHEUS.
The folly will be written down to me.

If we have any quarrel with Mr. Bevan's method it is that he has fettered himself a little by the closeness with which he follows his author, line by line. The number of lines in the English and the Greek is, we believe, exactly the same. We must call this numerical fidelity a foible, though it leans to virtue's side. There is no particular objection to it, except that it involves an acrobatic feat. *Solvitur ambulando;* and Mr. Bevan has solved it so gracefully that it is only when the choruses are reached that the feat obtrudes itself upon the attention. The roll and swing of the closing anapæsts are caught and suggested with that power which Mr. Swinburne has taught us is native to the cadences of our own language. We doubt whether Mr. Swinburne would have closed the stanzas with a parœmiac, which sounds like putting a brake on a rapid drag; and he surely would not have closed the grandiose final strophe containing the splendid and curiously accurate prophecy of a disaster like that of Pelée, with the weak line

"behold me
How I suffer outrageous things!"

This is what comes of hyper-fidelity, steered by the exigencies of rhyme. But it is a lapse altogether exceptional; and here, on the other hand, is a specimen which does justice to Aeschylus as well as to the workmanship of Mr. Bevan.

PROMETHEUS.
Or ever his lips had let it go,
I knew his burden; that foe of foe
Should suffer evil is no new law.
Light on me now the writhen hair
Of a flame two-edged; let all the air
Be lash'd with levin, with passion grieved
Of winds exasperate, earth up-heaved
From her roots by the inly-prison'd flaw!
Let him mingle a welter of bitter brine,
The froth of the seas, with the paths divine
Of the heavenly stars; down quick let him fling me
Where the face of the day is blotted and blacken'd,
By a might that masters, and twirls unslacken'd;
To death can he nowise bring me.

## SOME SUPERFLUOUS BOOKS.

*Sir Joshua Reynolds, P.R.A.* By Elsa D'Esterre-Keeling.—*Sir Edwin Landseer, R.A.* By James A. Manson. (The Makers of British Art, edited by James A. Manson.) London: The Walter Scott Publishing Co.; New York: Charles Scribner's Sons. 1902.

*Decorative Brushwork and Elementary Design.* By Henry Cadness. London: B. T. Batsford; New York: Charles Scribner's Sons. 1902.

*Views and Reviews: Art.* By W. E. Henley. Charles Scribner's Sons. 1902.

If people who have nothing to say would say it, silence would be less often disturbed. If all that was not worth writing remained unprinted, the task of the reviewer would be less wearisome. Under such blessed circumstances, the present Life of Reynolds would hardly have appeared at all. The author announces it as "an attempt at achieving something on the one part less bulky, and on the other part less meagre, than the lives . . . heretofore published." As to number of pages, this ideal is perhaps attained; but nothing could well be more positively meagre or more relatively bulky than this volume if the amount of interesting information and enlightening comment is taken as the measure. There are very few plums in the pudding, and a sample will show the quality of the duff. Chapter viii. opens with this paragraph:

"The year 1770 was one of great political excitement, which in London went to the cry of 'Wilkes and Liberty!' In it took place the resignation of the Grafton Administration, which included many of the friends of Reynolds. The authorship of 'Junius' was the question of the hour, and, though three of the men on whom the daring Letters were fathered, Barrie, Burke, and Shelburne, had in their day sat to Reynolds, it was now no time for politicians to sit for their portraits, but the Lady Mayoress of London, who was the wife of one of the foremost of them—Beckford's Beckfordian successor, Trecothick—sat to Reynolds."

That is all. The next paragraph skips to an entirely different subject, and we are told nothing about this portrait of the "Lady Mayoress"—not even where it is or if it has been engraved.

The fact is that no life could have been more uneventful than that of Sir Joshua. It was essential to his business as a portrait-painter that he should be on good terms with everybody, and his somewhat cold temperament made it easy for him to abstain from politics and almost every other activity except painting. His pocket-books give us a record of his sitters and their sittings day by day, but this is valuable only as it is used to settle the dates of his work and to explain the evolution of his style. Otherwise, a bare catalogue, or the pocket-books themselves printed without comment, would be as valuable as the "bulky" works of Taylor and Leslie.

What little criticism of man or painter is here attempted is for the most part mere twaddle. Here is an instance: "An unpleasant story has it that it needed the bribe of £500 to induce him in 1787 to promise to contribute three pictures to Boydell's Shakespeare Gallery." What, in the name of common sense, is there "unpleasant" in the fact that he expected to be paid for his professional work? And why is his very moderate price to be called a "bribe"? On p. 121 is reproduced a blunder of Leslie's—a blunder which it is surprising that a painter should have made, and one which seems, as is the way of such blunders, likely to be immortal. Dr. Beattie had expressed his pleasure in watching, in a mirror, the progress of his portrait, whereupon, "Leslie comments: 'Sir Joshua was painting from the reflection in the glass—his usual practice.'" Now, apart from the inherent improbability of a portrait-painter's habitually reversing the features and gesture of his sitters, there is one consideration which shows the impossibility of Leslie's explanation. If Sir Joshua was painting from the mirror, he must have faced it, in which case Dr. Beattie would have seen nothing in the glass but the back of the canvas, although he might possibly have seen the picture itself by direct vision. Reynolds undoubtedly had a mirror behind him that he might occasionally see his work reversed, thus getting a fresh notion of it when his mind and eye had become jaded—a "usual practice" with many painters besides himself.

The illustrations of the volume are almost uniformly reproduced from engravings, and have, therefore, no value beyond that of memoranda of composition. On the whole, there is nothing in the book to relieve it of the charge of superfluity. Why could we not have had a cheap reprint of Armstrong instead?

The 'Landseer' of this series is composed on the same lines as the 'Reynolds,' but is somewhat better. There is the same chronological treatment of pictures, in lieu of biographical detail which is wanting, but there is more description of the pictures

mentioned and something approaching criticism, and there is a better picture of the man. Some of the anecdotes are entertaining, and the matter is all less hackneyed. The illustrations are again almost all from engravings, but this is of less importance in the case of a literary painter like Landseer, who had nothing in common with the great masters but technical facility. The question in this case is rather whether the thing was worth doing at all than whether it is done in the right way.

Mr. Cadness is evidently a practical designer, but it cannot be said that he has produced a practical book on design. There are useful hints in it, and bits of good advice, but, as a whole, it is fragmentary, rambling, and unsatisfactory. Delivered by word of mouth to a class of students, and taken in connection with class work and individual criticism, it may have answered its purpose well enough; for the solitary student it takes far too much for granted, and is likely to prove confusing rather than helpful. Whether the book ever has been or ever can be written, on any other subject than perspective, from which the practical student of any branch of art could derive any real instruction, is, after all, more than doubtful, though he may, of course, get much assistance from books of plates of costume, ornament, or what not. His teaching he must continue to get directly from a master.

Except that he is a man with a robust interest in himself, to whom nothing that he has ever done or said can cease to be entertaining, it is difficult to see why Mr. Henley should have cared to reprint nine-tenths of the present volume. Not that it is bad—much of it is, for what it is, exceptionally good; but, after all, it is hack work. The matter is collected for the most part from various catalogues of various exhibitions where another man would have been content to let it lie. We all know the kind of brief "appreciation," semi-critical, semi-biographical, which is expected in such publications. Mr. Henley is too vigorous and self-confident a personality to be commonplace even in the execution of such tasks. He is sometimes illuminative, often sound, generally bumptious, and always picturesque; but a hundred-odd pages of such notes, many of them mere paragraphs, present a patchy and unsatisfying aspect. So to present them is, perhaps, in the author's own words, "to take one's self more seriously than he may do that would sit well with posterity."

Two longer essays, "A Note on Romanticism," with which it opens, and "A Critic of Art" with which it closes, go near to take the little book from the category in which we have ventured to place it. The first deals more with literature than with painting, and rather fails in grasp of the essential nature of the Romantic revolution in the latter art, but is readable and interesting enough. The second is a hearty tribute of admiration and personal friendship for the late R. A. M. Stevenson which it is good to have. It would be almost altogether admirable but for the hint of a sneer at the other Stevenson, whose name Mr. Henley rather unnecessarily persists in spelling "Lewis."

---

*The Principles of Logic.* By Herbert Austin Aikins. Henry Holt & Co. 1902. 8vo, pp. 489.

Amid the flood of logical treatises that gushes from the press, passes under our notice, and soon vanishes in the ground-mist, this book is distinguished by some slight differences from the uniform color of the general mass. We seem to detect in it the beginnings of a more living and effective thought. It is by no means a scientific treatise devoted to the exposition of the theory of scientific reasoning. It is didactic mainly, and extremely elementary—spoon-food for the puerile mind. The author is influenced most by Venn's helpful (though often mistaken) work with a somewhat similar title. He has studied Mill and Jevons. He has picked up an idea or two from Lotze. But the authors he seems most to esteem are of the grade of Whately and Minto. He declares his intention of treating logic in a thoroughly objectivistic manner.

Perhaps our readers would like to know what is meant by an objectivist treatment. We will explain. Every man who sits down to write a logic, unless he is to content himself with copying right and left without regard to consistency, as many do, must ask himself, "What am I to set up as the criterion by which to distinguish good reasoning from bad?" Good reasoning is reasoning which conduces to the truth; and every single act of reasoning feels itself to be pursuing a general method conducive to the truth. This indisputable fact suggests the objectivistic criterion according to which, in order to determine whether a given reasoning is good or bad, one must examine whether, from the nature of things, the method which the reasoning understands itself to follow must lead to the truth, supposing that there is any such thing as attainable truth, and supposing that it leads to any conclusion at all; and the method must lead to the truth in the sense in which the reasoning understands that this method leads to the truth. With more or less consciousness and consistency, oftener less than more, the mass of English logicians stand upon that ground. The Germans, on the other hand, regard our instinctive judgments of rationality to be the ultimate criterion. That which a man's reason deliberately approves is *ipso facto* good reasoning. This is the subjectivist position.

The subjectivist says to the objectivist, "So you distrust the instinct of rationality? To what, then, do you resort in order to establish or overthrow the validity of reasoning? Why, to reasoning itself! How, then, do you know that this critical reasoning is valid? Even if I grant you that it is so, what informs you of this? Nothing but the instinct of rationality, *par die!* So, then, you only come back to our criterion after an aimless beating round. You are compelled at last, willy-nilly, to place your trust in the instinct of rationality. Besides, your critical reasoning requires premises. On what do they rest? On experience, say you. Experience presents itself in the form of percepts; but premises are propositions, and so of a different nature from percepts. Moreover, not *all* your premises can be perceptual judgments. One, at least, must be more general. What can assure you of the truth of that, if you refuse to trust to instinct?"

To this the English logician replies, "I am not skilled in your artificial instruments of thought; so, if you please, we will consider the very facts themselves. You speak of man's having an instinct of rationality. I suppose you mean that a man is sometimes constrained to believe a thing without being able to say distinctly how he is constrained, and that among the things which he is so constrained to believe is that numerous consequences are reasonable. If this is your meaning, then when you talk of 'trusting' to the instinct of rationality, you mean that we should acknowledge that we cannot help regarding a consequence as perfectly evident. When we are under such compulsion, it is altogether out of our power to have the smallest shade of doubt; and we seem to see plainly that we never could be brought to doubt it. To call the recognition that a proposition seems beyond all possible doubt and perfectly evident 'trust,' and to give this as a reason for following my first impressions of rationality in cases where I can and do entertain doubt, is as if you were to say to a man who had been compelled to surrender his watch to a highwayman, that, since he has already 'trusted' the highwayman with his watch, he will behave inconsistently if he refuses to go bail for him when the police catch him. A man's voluntary conduct cannot be compromised by anything beyond his control. To ask whether a given method of reasoning is good or bad is either mere pretence, or it implies a doubt whether the reasoning be good or not; and such criticism is idle unless the man has some control over his reasonings. In fact, it is next door to absurd to say he has a doubt and yet can exercise no control over his thought. The moment he sees room for doubt, he does doubt; and to ask him to decide according to the prompting of instinct, which is, more probably, a loose association of ideas, is to ask him to surrender reason altogether."

That is the way in which the dispute stands at this moment; the German not yet, apparently, having taken cognizance of what has been said only out of Germany. We can, however, imagine the discussion to be carried a few steps further, somewhat as follows:

*The German:* "But after all, why not trust to the instinct of rationality? You know that instinct is incomparably keener and surer than reason."

*The Englishman:* "Would you counsel the entire abandonment of reason? If you are only thinking of cases in which the dicta of instinct are imperative and unconditional, I have already admitted that then there is no option, for the proposition which instinct so urges upon us appears evident. But what if uninstructed instinct should say, 'I incline to prefer method A to method B,' while whispering, as she always does in those cases if you listen well, 'but, really, you must not trust to me'; while reason, on her side, makes it clearly evident that, in the long run, method B must lead to the truth, and there is nothing in the nature of things to prevent method A from going hopelessly wrong?"

*The German:* "You English are for ever talking of the 'long run.' What is this 'long run'?"

*The Englishman:* "It is a succession of instances, as they present themselves in experience, indefinitely long, yet not endless."

*The German:* "Well, I might, perhaps, admit that pure science, which can afford to wait a century, or, if need be, five centuries,

or indeed any time not endless, before coming to a conclusion, might trust to reason's 'long run,' provided instinct, on reconsideration, compels it to do so. But how about an individual who has to make up his mind promptly concerning a practical proposition, and be ready to act when the occasion arises?"

*The Englishman:* "The individual should consider that his case is of insignificant importance in comparison with countless other cases."

*The German:* "Yes, yes; we know how lofty is your British altruism, especially when it happens to be altruistic altruism; but the practical man had better do what his instinct teaches him is reasonable without regard to your objectivistic logic."

*The Englishman:* "Equally without regard to your subjectivistic logic; unless he is to do what he likes not because he likes, but because your system teaches that he likes to do as he likes."

This explanation will serve to show what the strictly objectivistic treatment is that Professor Aikins professes to adhere to. We shall not pretend to be neutral. We think that the objectivistic method is the only way of enlightening instinct; and that wherever logical rules are to be of any use, they must be rules of objectivistic logic. But Mr. Aikins professes to strike an original path only in applying the objectivistic method to necessary reasonings, where no rules of logic are needed—for that which is evident cannot be made more so. Moreover, he chiefly has in view practical reasonings where men must be guided by instinct or lose all claim to good sense. Neither is Mr. Aikins at all consistently objectivistic. If he had not told us so, we never should have discovered that he made any endeavor to be so. He talks of "the three laws of thought" in the good old way, the somewhat obsolescent way. He speaks of "the test of Inconceivability"; thus making it something to be trusted to, and thus surrendering the key to the English position. He ought to have said, "I will not make inconceivability a *test;* but whatever, with all my efforts, I cannot entertain the smallest doubt of, I won't pretend to criticise." The best we can say is, that the author appears to recognize, in some measure, the futility of the common books, and makes some endeavors to do better. Whether it be from immaturity, insufficient reading and reflection, or lack of vigor of thought, he has not succeeded to any striking extent. But he writes in an agreeable style and makes himself intelligible to every boy. There is a list of exercises filling nearly sixty pages of fine print; and many of these are very good indeed. There is also a sufficient index.

---

*A Short History of Germany.* By Ernest F. Henderson. Two volumes. Pp. xii, 517, viii, 171. The Macmillan Co. 1902.

The antiquary studies the past for its own sake: the historian, for the purpose of making the present intelligible. The present is influenced, perhaps not more profoundly, but in more directions, by the near past than by the remote; and in historical writing it is as legitimate as it is usual to describe the remote past with relative brevity and to amplify the narrative as it approaches the present. Mr. Henderson, however, in his 'Short History of Germany,' carries this method further than is defensible without some indication, in the title of the work, of his plan of treatment. To the period or periods from the battle in the Teutoburg forest to the election of Rudolf of Hapsburg as Emperor—nearly thirteen centuries—he gives but one-eighth of his total space, and in another eighth he conveys the reader through almost two and a half centuries, and down to Martin Luther. At this point the method of presentation changes almost abruptly. Room is found for careful characterization of leading persons and for illustrative details. To the period that begins with the posting of the ninety-five theses and ends with the Peace of Augsburg (1517-1555) even more space is allotted than to the longer and more recent period within which the narrower Germany attained Constitutional government and national unity (1815-1871). In reality, therefore, Mr. Henderson's work is a history of Germany from 1517 to 1871, with an introductory sketch covering the preceding fifteen centuries.

This introductory sketch is not nearly so well done as is the remainder of the work. It is, of course, much more difficult to write history at the rate of ten or twenty pages to the century than at the rate of two hundred pages to the century; but the thing can be done if the writer is able to discern the chief trend of events, and has the courage to suppress or put in the background all facts of secondary importance. Oddly enough, Mr. Henderson has displayed this ability and courage much more conspicuously in the chief part of his work than in the introduction. His history of Germany from 1517 to 1648 is almost exclusively a history of the Reformation and the religious wars; from 1648 to 1871 it is practically a history of the rise and aggrandizement of Prussia. In the introduction we grope vainly for any such leading motives. These might well have been found in the gradual formation of a German nationality, and in the persistent but unsuccessful effort to give to this nationality a satisfactory political organization. We do not say that these tendencies are not set forth; but they are not set in the right relief, chiefly because this part of the work is cumbered with details improper to so brief a sketch. Moreover, the author's treatment of the Middle Ages is unsympathetic and one-sided. He does not make the reader understand the historical necessity of feudalism; he does not appear to appreciate the historical mission of the Roman Church, nor the immense services it rendered to Germany and to Europe. He impresses upon the reader only the absurdities and oppressions of a decadent feudalism and the abuses of a corrupt church. The best that can be said of this part of the work is that the author is familiar with recent German work—at least with purely historical work—and that, as regards the naked facts, he is accurate. If he were more familiar with the historical investigations of German lawyers and economists, his construction of the facts would, we think, be sensibly modified, and his presentation of the mediæval church and the feudal state would gain in clearness of outline and in solidity.

The deficiencies of this introduction are the more to be regretted because they may prematurely discourage readers who would find the body of the work both profitable and enjoyable. Those who wish to get what is really best in the book will do well to begin at page 228 of the first volume, with the chapter entitled "German Life on the Eve of the Reformation." It is at this point that the conscientious reader who has begun at the beginning and has not fallen out on the road, loses the sense of being crammed with imperfectly elucidated facts. Not only are the central movements of German history since 1517 brought out in bold relief, but the story is made interesting. Mr. Henderson has no mean power of characterization, and the leading personages not only are in most cases justly estimated, but are vividly presented. He has also a keen appreciation of dramatic situations, and is not afraid to give it play. If his style is somewhat journalistic, it is on the whole good of its kind. Purists will be shocked by the omnipresent split infinitive, and a critic need not be a purist to be pained when "flown" is treated as the past participle of the verb to flow (vol. ii., p. 391). There is also a redundancy of purely decorative adjectives. These, however, are minor blemishes in writing that has the positive merits of making the author's meaning clear and of holding the reader's attention.

As regards the substantial value of the work, we may repeat what was said of the introduction, that the author is familiar with the recent literature, and we may add that for the period subsequent to 1517 he has evidently done considerable work in the sources, especially in memoirs. Here again, however, the economic basis of the historical development is not always sufficiently emphasized, and matters of public law are in many cases treated with a vagueness that suggests the caution of uncertainty. Diplomatic negotiations, also, especially where legal questions are involved, are rather hazily sketched, and sometimes the technical point at issue is not brought out. It is quite possible that the author's appreciation of these matters is more precise than his treatment shows: it is conceivable that he is afraid of wearying his readers if he calls upon them for any exact thinking. If this is the ground of his superficiality, we think that he has committed an error of judgment. Those who wish really to understand things have rights which a serious author should not disregard, and readers of the other sort will slide over technicalities with little friction.

Mr. Henderson's point of view is Protestant and Prussian, but the Protestant bias, in his case, is not so strong as the Prussian. He fails, indeed, to do full justice to the Roman Church, but he does not fail to show up the weak sides of the Protestant Reformation and of the reformers. His leaning toward Prussia makes him more one-sided, and his construction of modern German history is essentially the same as Treitschke's. He takes Frederick the Great's Silesian claims much more seriously than they were taken by that monarch himself, and his attitude toward William I. and Bismarck is one of complete sympathy. The victorious cause, however, has always a presumption in its favor, and it usually pleases not only the gods, but also the historians. Mr. Henderson's book is certainly the best work in English for the period which he really covers—from the beginning of the Reformation to the establishment of the new German Empire.

The work is fairly, though not exhaustively, indexed, and there is, at the end of

each volume, an excellent chronological table. This serves in some cases to correct misleading passages in the text. For example, the author states that, in the autumn of 1869, it became known that the Spanish throne had been offered to Prince Leopold (vol. ii., p. 418). As nothing is said of the Prince's refusal, nor of the final offer and acceptance, in the summer of 1870, the reader might naturally infer that the French agitation against the candidacy continued all through the winter of 1869-70 and the following spring. Of course, the earlier offers, of which there were several, were known to the French Government, but the French people heard nothing of the matter until July; and the brief popular agitations which preceded and accompanied the negotiations at Ems were confined to the first part of that month. The chronological table speaks only of Prince Leopold's acceptance, July 3, 1870, and of the chief diplomatic events which followed. Dates are too sparingly given in the text. It would greatly help the reader if they were freely inserted in connection with the marginal notes which indicate the contents of each paragraph. There are eight good maps. That which shows the growth of Prussia to 1806 would be more useful if the territory acquired by the Hohenzollerns before 1640 were made distinct, either by shading or by color, and not left in the same blank white as the territories which were not and did not become Prussian.

---

*William Hazlitt.* By Augustine Birrell. [English Men of Letters.] New York: The Macmillan Co. 1902.

Landor's comment on Hazlitt: "His books are delightful to read; pleasant always, often elegant and affecting in the extreme. But I don't get much valuable criticism out of him"—probably embodies a final verdict. Hazlitt's books are most agreeable reading—fresh, vigorous, vivid, full of happy touches, often eloquent, and always sincere; yet somehow they leave in the mind no seed that germinates. They never get below the surface of things. The secret is that Hazlitt is an impressionist. In neither philosophy, art, nor literature did he have any fixed principles or guiding lines; his criticisms are but happy expressions of the way the book, the play, the picture struck him at the moment, and the associations it called up; and he would probably have been indignant if called upon to give a reason for his likes or dislikes. When we find a professed literary critic grouping Campbell and Rogers as of the same school, and signalling Homer, the Bible, Dante, and Ossian as four of the supreme poems of the world, we should close his book at once and finally if we believed that these were the conclusions of his sober judgment. But they are nothing of the sort. In the one case, something in each of the two poets struck him as "timid"; in the other, he happened at the moment to be under the impression of the misty, grandiose semi-sublimity of the bard of cloudy Morven. These impressions he mistook for well-weighed judgments—"sinewy convictions" he calls them somewhere—and they were proof against reasoning or fact. Having hailed Bonaparte as the champion of human freedom and the foe of kings, not even that champion's destruction of popular liberties, nor his assumption of the tinsel and trappings of a histrionic imperialism, nor his attempted foundation of parasitic dynasties of mushroom monarchs, could shake his votary's constant devotion.

His few friendships, his many enmities, were of much the same sort. To him the world teemed with Doctor Fells. And he had a most biting tongue, and the shrewdest knack at finding the joint in the harness and the tender spot in the hide. He even brought the gentle Lamb to the verge of exasperation; yet we find him, in a letter to Hunt, wondering why "everybody has such a dislike to me."

Of Hazlitt's not very eventful life, Mr. Birrell has given a candid, vivacious, and extremely readable account. William Hazlitt was born in 1778, his father being a Unitarian minister, who, having incurred popular animosity by his humane efforts in behalf of some American prisoners, migrated with his family at the close of the war to America, where they remained about four years, returning to England in 1787. It was the wish of the father that William should be a minister, but for this he had no vocation, and remained with no definite aim in life until he was twenty years old, when he made the acquaintance of Coleridge, whose enchanting conversation kindled in him a sudden passion for literature and philosophy. Presently he was seized with an intense ambition to be a painter, visited the great galleries, and worked hard until 1805, when, in a fit of discouragement, he laid aside his brush and came forward as a writer on philosophical and political subjects. There was no living to be made out of these; so we next find him a Parliamentary reporter, and then a dramatic critic, thus feeling his way to his real vocation, which was that of essayist, or "professor of things in general." His criticisms, as discursive literary papers, were excellent, but they dealt rather with the play itself than with its presentation on the stage. As Talfourd says, "the players put Hazlitt out." The step to essayist and miscellaneous writer was an easy one, and some of his best work appeared in Hunt's *Examiner* between 1815-17. His brilliant but unequal lectures on English poets and the drama were delivered in the following year; and, though to the last degree impressionist, they can still be read with pleasure. He had now acquired a most charming style—flowing, easy, and vivid; at its best, little inferior to the incomparable Elia's. And it is oddly characteristic of his destiny to miss marks that he aimed at, and hit those at which he had not aimed, that the style which he most admired and desired to possess, was that of Jonathan Edwards—perhaps the man most unlike himself of all the children of men since Adam.

Hazlitt's aggressive liberalism and admiration for Bonaparte drew upon him the wrath of the truculent Gifford, who took every opportunity to fling at him shovelfuls of his coarse vituperation, until Hazlitt concluded, as he says, that "it is time to tell you what you are"; which he did, thoroughly and delightfully, in a published letter which remains a monumental specimen of a trouncing.

Of Hazlitt's matrimonial aberrations we shall say nothing, as the subject is neither edifying nor amusing, though, of course, not to be omitted in a biography. Mr. Birrell tells us enough about them, and not too much. Hazlitt's last years were darkened by poverty and sickness. His great work, the 'Life of Napoleon,' was a pecuniary, if not a literary, failure. He died, not uncheerfully, on September 18, 1830, having lived to see the downfall of the hated Bourbons. After all, his biographer does not go beyond the truth in saying: "A life freer from greed of gain or taint of literary vanity is not to be found in the records of English literature."

---

*Animal Forms:* A Second Book of Zoölogy. By David S. Jordan, M.S., M.D., Ph.D., LL.D., President of Leland Stanford Junior University, and Harold Heath, Ph.D., Professor in Leland Stanford Junior University. D. Appleton & Co. 8vo, pp. 258, illustrated.

The text of this volume is very interesting and is handsomely illustrated and printed. Types of the larger groups of animals are dissected and described; the details given are few and selected. The work "is designed to meet the needs of the beginning student of zoölogy." The arrangement is good, but, proceeding from the lower to the higher, is perhaps better for advanced pupils. Naturally the beginner gathers his knowledge first from the highest types, then gradually enlarges it in the direction of the lower. As if in recognition of this, the introduction is built about the squirrel.

Our severest criticism relates to numerous items that need something more than positive assertion to make them accurate and scientific. Thus, we are told in regard to the bee: "The queen may lay three thousand eggs a day, and be fully occupied during the three or four years that she lives; the drones, or males, fertilize most of the eggs, and are then driven out from the hive, after a stay of a month or two; the eggs unfertilized by the drones are placed in large cells, and the young fed on pollen develop into males; the fertilized eggs may produce queens or workers at the discretion of the queen." Entomologists say the eggs are laid in the breeding season, not through the entire year, that the queen is impregnated by the drone but once, during her nuptial flight, and that thereafter she lays unfertilized eggs in drone cells and fertilized eggs in worker cells and in queen cells; discretion on the part of the workers in building the cells and in feeding the larvæ making the differences. The "cutworms" are classed with the millipeds in the crustacea; as they are the caterpillars of certain moths, they should be among the lepidoptera of the insects. On their raids the ants are said to capture plant lice and carry them into their nests and carefully tend them; in fact, it is while the aphids are feeding on the plants that the ants tend them. The lancelets are said to live in the sand in warm seas, but the habits of the pelagic species are not yet known. The figure named "Dogfish (*Squalus acanthias*)" has no spines on its dorsal fins and has an anal fin; which proves it to be a different species of a very different family. The short-nosed sturgeon in figure 101 is not correctly identified as *Acipenser sturio.* "Clinging with its tail head downward" is given as the habit of the seahorse. The under side of flounders is described as white, without mention of the

exceptions. It is asserted that the egg-laying time of fishes usually comes with the spring, but this is not the case with the Atlantic salmon, the dog salmon; the brook, lake, brown, and the blueback trouts; the lake whitefish and herring; the cod, tomcod, and others, which spawn in the fall or early winter. The habits of animals are said to depend on structure; it was the habit of creeping on the belly that modified the structure and lost the legs of snakes and many lizards. "Eyelids are present in all except the snakes, together with a third, known as the nictitating membrane"; various genera and families of the lizards have no eyelids, and few of the reptiles possess the third eyelid. The size of alligator eggs is likened to that of the goose eggs. The horned toads (lizards) are said to capture insects "by the aid of their long tongue." The turtles are said to "lay several perfectly spherical eggs"; some lay several hundred—few, if any, lay so small a number as several, and of some the eggs are not spherical. Quail and grouse also are said to lay several eggs; these birds are noted for large numbers of eggs. The duck mole is asserted to be the only egg-laying mammal, and to lay but one egg per year; Echidna also lays eggs, and two is the number laid by the duck mole. The brown or cinnamon bear "lives on berries and juicy herbs, while the grizzly prefers the flesh of animals which it kills"; a closer acquaintance with these animals will much reduce the value of this distinction. The following from "How Species Originate" exemplifies ease in establishing things that are, by means of things that may be:

"One bird may have a larger bill than another of the same brood which excels in length of wing. . . . Those best adapted to their surroundings will have the best chances of survival. . . . A premium is placed on length of wing or bill generation after generation, with the result that a long-billed species arises distinct from the long-winged which trace their ancestry back to the same parents."

---

*An Introduction to the Bacteriological Examination of Water.* By W. H. Horrocks. London: J. & A. Churchill. 1901.

The dominance of scientific thought in this country by German ideals and German methods has brought with it a certain neglect of the work carried on by English investigators. Professor Horrocks's clear and complete summary of British practice in bacteriological water analysis furnishes a wholesome reminder that in sanitary science, at least, England still holds a pre-eminent position.

The first thing which this book reveals is the fact that the London bacteriologist by no means imitates the provincialism of his confrère in Berlin, for it contains reviews of the most recent work, on the Continent and in America as well as at home. For the first time since the Franklands published their 'Micro-Organisms in Water,' the literature relating to the conditions controlling the life of bacteria in water, the effect of light, sedimentation, and food supply, and the normal bacterial content of waters from various sources, is brought fully up to date. The work of Sirotinin, Garré, Freudenreich, and Horrocks himself on the effects of antagonism is of especial interest.

The quantitative analysis of water does not appear to have been so fully developed in England as in this country. In treating of its methods the author outlines a needlessly cumbrous process of plating, but fails to lay emphasis on the urgent need for nutritive media of a known composition, and for a definite period of incubation under standard conditions as to temperature, moisture, and oxygen. It cannot be too often stated that the one and only essential in this work is constancy of conditions. It is by no means necessary to obtain the development of the largest possible proportion of the total bacteria present, but only to be sure that the same proportion will always develop when a similar water is tested. Towards this ideal the work of the American Public Health Association Committee has brought us measurably near in this country. Professor Horrocks does not dwell on this need for uniformity of method at sufficient length. His treatment of the interpretation of the results of the quantitative analysis is also vague and inconclusive. It is, of course, difficult to formulate any general standards. Bacteriological tests are too delicate to give the off-hand judgments which are often demanded of them; but it is certain that, in the hands of an expert, they furnish the only thoroughly safe criterion of the character of a drinking-water. For instance, a study of the bacterial analyses of well waters which, if protected from surface drainage, rarely show the presence of any intestinal bacteria, would have saved our author from the extreme statement that, "unless surrounded by at least an acre of virgin ground, shallow wells must be considered its dangerous sources of supply."

In the treatment of the most important branch of water bacteriology, the qualitative analysis, Professor Horrock's work is admirable. The first chapter in this section includes descriptions of the bacteria normal to unpolluted waters, which are grouped under twelve headings. As the attention of bacteriologists turns away from the vain attempt to fix rigid species to the more fruitful task of studying the limited number of well-marked types, the question of grouping becomes of vital importance. Horrocks's groups of the green, fluorescent bacteria, the red chromogens and the blue and violet chromogens, correspond to the same classes in the Fuller and Johnson scheme usually accepted in this country. The English observer combines the yellow and orange chromogens in one type, and adds a group for *B. brunneus* and other forms which produce a brownish color in nutrient media. Horrocks's *B. aquatilis sulcatus* group corresponds to the Typhosus type of Fuller and Johnson, whose Proteus type (including *B. mycoides* and *B. mesentericus*), and Subtilis type, are combined by Horrocks in one. Similarly, the Cloacæ type, the Liquidus type, and the Superficialis type of the American scheme are placed together. In Horrock's Group VIII. are included certain forms belonging to the Typhosus type and the Candicans type of Fuller and Johnson. Finally, he adds special groups for the Micrococci, the Sarcinae, and the Spirilla.

After the water bacteria, the sewage bacteria are treated, beginning with the colon bacillus. In considering the significance of this organism, Professor Horrocks points out clearly the two conditions which must be fulfilled if it is to be used as evidence of the presence of sewage. First, the organisms present must show the reactions of the typical *B. coli* and must not belong to the so-called para-colon groups, and, second, the number of colon bacilli present must be carefully considered. The conclusion finally drawn is as follows: "I would say that a water which contained *B. coli* so sparsely that 200 c. c. required to be tested in order to find it, had probably been polluted with sewage, but the contamination was not of recent date." The author recommends in the case of such remote pollution the examination of large quantities of water concentrated by filtration through a Berkefeld filter. It seems to the reviewer very doubtful whether this concentration, or even the examination of samples as large as one hundred cubic centimeters, has any great practical sanitary value. If colon bacilli are found only in such small numbers, the chance that virulent typhoid germs are present must be almost infinitesimal.

The typhoid bacillus is treated by Horrocks in great detail, and he supplements an excellent account of its general cultural characteristics by a full discussion of the significance of the serum test. In treating of the isolation of the typhoid bacillus from water supplies, the author points out the very small chance of a positive result, quoting Wathelet, who found only ten colonies of *B. typhi* among six hundred colonies having the characters of the colon and typhoid groups, isolated from typhoid dejecta. Here should be mentioned also the results of Laws and Andrewes, who in 1894 failed to find the typhoid bacillus at all in the sewage of London, and isolated only two colonies from a long series of plates made from the sewage of a hospital containing forty typhoid patients. None of the positive isolations published prior to 1897 will stand, as the differential tests used were inadequate. Three recent cases are quoted, however, in which the evidence seems fairly conclusive—those published by Kubler and Neufeld in 1899, by Genersich in 1899, and by Fischer and Flatau in 1901. The last organism, from a well at Rellingen, was worked out with special care.

Three chapters which add notably to the value of Professor Horrocks's book, treat of subjects somewhat beyond its direct scope. In the section "Relation of a Quantitative Bacteriological Analysis to Filtration of Water through Sand" he considers the proper depth of filters, the rate of filtration, the frequency of scraping, the source of the bacteria in the effluent, and the significance of *B. coli* as a measure of purification. The brief chapter on nitrifying and de-nitrifying micro-organisms contains a good condensed review of the history of the subject. Finally, to an admirable treatment of the question of household filters, the author adds some observations of his own. Freudenrich, Schöfer, and other European observers obtained the most conflicting and obscure results as to the growth of water bacteria and typhoid and colon bacilli through Pasteur and Berkefeld filters. Woodhead and Wood, and Lunt, in 1897, went over the whole question with great thoroughness, and apparently established the fact that (1) all filter candles, if properly sterilized, give a sterile filtrate on the first day; (2) water bacteria grow through the filters and appear on the second or third

day of using; (8) typhoid and colon bacilli in tap water and sewage fail to grow through the filters even after a long period. Horrocks confirms these results for the Pasteur filters, and concludes that "if proper care be taken to prevent the direct passage of organisms through flaws in the material and imperfections in the fittings, the Pasteur-Chamberland filter ought to give complete protection from water-borne disease." With the Berkefeld filters, on the other hand, he found typhoid bacilli in the filtrate after nine to eleven days, when potable water was used as a medium, and after four days when broth cultures and sewage were filtered. He concludes that such filters must be sterilized by boiling water or saturated steam every third day.

It is to be regretted that the valuable citations all through the body of the 'Bacteriological Examination of Water' are not connected by reference figures with the titles in the bibliography, and still more that many of them are not represented by any titles in the bibliography at all. As a whole, however, the book is a credit to British sanitary science. On the qualitative side it could scarcely be improved; and for all working water bacteriologists and teachers of sanitary bacteriology it is simply invaluable.

## BOOKS OF THE WEEK.

Albee, Ernest. A History of English Utilitarianism. Macmillan. $2.75.
American Newspaper Annual, 1902. Philadelphia: N. W. Ayer & Son.
Baldwin, J. M. Development and Evolution. Macmillan. $2.60.
Bardeen, C. W. A Manual of Civics for New York Schools. Syracuse: C. W. Bardeen. $1.
Barnett, J. M. Mother Goose Paint Book. The Saalfield Pub. Co. $1.25.
Briggs, C. A. The Incarnation of the Lord: A Series of Sermons. Scribners. $1.50.
Capes, W. W. The English Church in the Fourteenth and Fifteenth Centuries. Macmillan. 7s. 6d.
Chambers, R. W. Outdoorland: A Story for Children. Harpers. $1.50.
Chefs-d'œuvre of the Exposition Universelle, Parts 18 to 25. Philadelphia: George Barrie & Son. $1 each.
Clerke, Agnes M. A Popular History of Astronomy during the Nineteenth Century. 4th ed. London: Adam & Charles Black; New York: Macmillan. $4.
Colt, Stanton. The Message of Man. London: Swan, Sonnenschein & Co.; New York: Macmillan. 75 cents.
Complete Art Reference Catalogue. Boston: Soule Art Co.
Connolly, J. B. Jeb Hutton. Scribners. $1.20.
Cooley, C. H. Human Nature and the Social Order. Scribners. $1.50.
Craddock, C. E. The Champion. Houghton, Mifflin & Co. $1.20.
Cunningham, D. J. Text-Book of Anatomy. Macmillan. $9.
Customs Tariff Act of 1897, Revised to July 1, 1902. R. F. Downing & Co.
Cuyler, Rev. T. L. Recollections of a Long Life: An Autobiography. The Baker & Taylor Co. $1.50.
Dahn, Felix. A Captive of the Roman Eagles. (Translated by Mary J. Safford.) Chicago: A. C. McClurg & Co. $1.50.
Davies, G. S. Frans Hals. London: George Bell & Sons; New York: Macmillan. $14.
Douglas, Langton. Fra Angelico. 2d ed. London: George Bell & Sons; New York: Macmillan. $6.
"Gilhooley, Lord." Son! Frederick A. Stokes Co. 80 cents.
Hadley, S. H. Down in Water Street. Fleming H. Revell Co. $1.
Hornung, E. W. The Shadow of the Rope. Scribners. $1.50.
Jerome, J. K. Paul Kelver. Dodd, Mead & Co. $1.50.

Wiel, Alethea. The Story of Verona. (Mediæval Towns Series.) London: J. M. Dent & Co.; New York: Macmillan. $1.50.

# Henry Holt & Co.

*PUBLISH THIS WEEK:*

## Borrowed Plumes

By Owen Seaman. 16mo, $1.25.

Mr. Seaman has been favorably compared with Calverley, and is perhaps without a superior among living parodists. His "Battle of the Bays" is now in its fourth edition. "Borrowed Plumes" commences with a visit of the Elizabeth of the *Letters* to Elizabeth in her *German Garden*. Parodies follow of *Mr. Dooley*, and of books by Hall Caine, Henry Harland, Ellen Thorneycroft Fowler, John Oliver Hobbes, Mrs. Humphrey Ward, Hewlett, Henry James, Sir John Lubbock, Maeterlinck, etc.

*NOW READY.*

# The Manor Farm

**A Novel**

**By M. E. FRANCIS**

(Mrs. Francis Blundell)

Author of "Pastorals of Dorset." "Fiander's Widow," "Yeoman Fleetwood," etc., etc.

With Frontispiece by Claud C. Du Pré Cooper. Crown 8vo, cloth, ornamental, $1.50.

**LONGMANS, GREEN, & CO., New York.**

By MARGARET E. SANGSTER Just Ready

## JANET WARD

A College Girl's Experience, at College, Among the Mountain Whites in Tennessee, etc.

THE

# HIBBERT JOURNAL

A QUARTERLY REVIEW OF
RELIGION, THEOLOGY, AND PHILOSOPHY

The Hibbert Journal will be devoted to the discussion of religious, theological, and philosophical subjects, and will be open to writers of every school of thought. The editorial board, which will assist Messrs. L. P. Jacks, M.A., and G. Dawes Hicks, M.A., Ph.D., the editors, in their work, will include such representative men as the Deans of Ely and Durham, Dr. John Watson, Professor Cheyne, Dr. Drummond of Oxford, Mr. Montefiore, Sir Oliver Lodge, Professor Gardner of Oxford, and Professor Muirhead.

London: Williams & Norgate,
14 Henrietta Street, Covent Garden, W. C.

# A HISTORY OF EGYPT

**From the End of the Neolithic Period to the Death of Cleopatra VII., B.C. 30.**

By E. A. Wallis Budge, M.A., Litt.D., D.Lit., keeper of the Egyptian and Assyrian Antiquities in the British Museum. *Illustrated.*

Vol. I. Egypt in the Neolithic and Archaic Periods. Cloth. $1.25.

Vol. II. Egypt under the Great Pyramid Builders. Cloth, $1.25.

*For sale by all Booksellers. Send for Catalogue.*
**OXFORD UNIVERSITY PRESS: (AMERICAN BRANCH)**
**91 and 93 Fifth Avenue, New York.**

## FOR SALE.

Set complete **"WAR OF REBELLION,"** published by United War Department. 136 volumes and 124 maps of Battlefields. First class condition. Address, D. Robinson, 315 West 94th St., New York

## The Right Princess

By **CLARA LOUISE BURNHAM.** 12mo, $1.50.

A story of much interest and one which comes as a novelty in the field of fiction. It tells how the young heir of an English family is restored to health by a New England girl through the medium of Christian Science. Mrs. Burnham tells the story so admirably that it will prove of great charm both to Christian Scientists and to the unbelieving.

## Japanese Girls and Women

By **ALICE M. BACON.** With colored illustrations and sketches by a Japanese artist. 12mo, $4.00.

Miss Bacon has thoroughly revised her charming account of the Girls and Women of Japan, and has made additions to each chapter. The book contains many exquisite illustrations, chiefly by the distinguished artist Keishu Takenouchi, of Tokyo, Japan, and is bound in Japanese silk. It will make an exceptionally attractive gift book.

## Nathaniel Hawthorne

By **GEORGE E. WOODBERRY.** *In the American Men of Letters Series.* With portrait. 16mo, $1.10, *net.* Postage, 10 cents.

This biography is exceptional and noteworthy. Professor Woodberry is fitted both by temperament and by literary training to portray and interpret Hawthorne's subtle and fascinating personality. He has here produced a life of our greatest novelist which will take a permanent place both as biography and as literature.

## Bret Harte's Works

*Riverside Edition*, with Portraits, 16 vols., 12mo, $24.00. (Sold only in sets.)

This is the only uniform edition of Bret Harte's works. It contains Introductions and glossary prepared by Mr. Harte himself, is bound in attractive library style and will meet a long-felt demand.

## Lockhart's Scott

*Cambridge Edition*, with eleven Photogravure Illustrations. 5 vols, 8vo, $10.

This well-known biography is now made particularly valuable by the addition of much important material, concerning both Lockhart's and Scott's life. It has been edited with the utmost skill and scholarly care, and contains many notes of marked importance.

## Eternalism:

**A THEORY OF INFINITE JUSTICE**

By **ORLANDO J. SMITH.** Crown, 8vo. $1.25 *net.* Postage 7 cents.

A stimulating argument for the preëxistence of the soul. It is written in a clear, vigorous style and will command the attention of thoughtful readers.

*For sale at all Bookstores.*

**HOUGHTON, MIFFLIN & COMPANY**
**Boston and New York**

## NEW TEXT-BOOKS

**BABBITT'S GRAMMAR OF ATTIC AND IONIC GREEK.....$1.50**
By FRANK COLE BABBITT, Professor of the Greek Language and Literature, Trinity College, Hartford.

**FLAGG'S A WRITER OF ATTIC PROSE.....$1.00**
By ISAAC FLAGG, Professor in the University of California.

**HEIDEL'S PLATO'S EUTHYPHRO 1.00**
With Introduction and Notes. By WM. A. HEIDEL, Professor in Iowa College.

**FRIEZE'S VIRGIL'S ÆNEID**
**First Six Books, $1.30; Complete..... $1.50**
With Introduction, Notes, and Vocabulary. By HENRY S. FRIEZE, late Professor of Latin, University of Michigan. Revised by Walter Dennison, Professor of Latin, University of Michigan.

**HARKNESS & FORBES'S CAESAR'S GALLIC WAR.....$1.25**
With Introduction, Notes, and Vocabulary. By ALBERT HARKNESS, Professor Emeritus, Brown University. Assisted by CHARLES H. FORBES, Professor of Latin, Phillips Academy, Andover, Mass.

**AMERICAN BOOK COMPANY**
**New York Cincinnati Chicago**

## A NEW NOVEL & A GOOD ONE

## *THE BEAUTIFUL MRS. MOULTON*

BY

Nathaniel Stephenson,

Author of "They That Took the Sword."

## The Historic Highways of America

**By ARCHER BUTLER HULBERT**

A Series of Monographs on the History of America as portrayed in the evolution of its Highways of War, Commerce, and Social Expansion.

1 Paths of the Mound-Building Indians and Great Game Animals.
2 Indian Thoroughfares.
3 Washington's Road: The First Chapter of the Old French War.
4 Braddock's Road.
5 The Old Glade (Forbes's) Road.
6 Boone's Wilderness Road.
7 Portage Paths: The Keys of the Continent.
8 Military Roads of the Mississippi Basin.
9 Historic Waterways.
10 The Cumberland Road.
11 and 12 Pioneer Roads of America, 2 volumes.
13 and 14 The Great American Canals, 2 volumes.
15 The Future of Road-Making in America.
16 Index.

In all sixteen volumes, crown 8vo, cloth, uncut, gilt tops. A limited edition only will be printed direct from type, and the type distributed. Each volume will be handsomely printed in large type on Dickinson's hand-made, deckle-edged paper, and illustrated with maps, plates, and facsimiles.

The first volume is just published, and hereafter a volume will be issued every two months until completion.

The work is sold only in sets. Price, volumes 1 and 2, $2.00 net each; volumes 3 to 16, $2.50 net each.

**Fifty sets will be printed on large paper,** each of which will be numbered and *signed by the author.* Bound in cloth, with paper label, uncut, gilt tops. Price, $5.00 net per volume.

### *EXTRACTS FROM LETTERS*

*"The old Indian trails have always had a fascination for me."*—PRESIDENT ROOSEVELT.

*"I think very highly of your plan as outlined in your prospectus. The history of American trails and carries in colonial times, of paths, roads, and highways in our national beginnings, and of our great lake, river, and railroad traffic in later times is and has been of the first importance in our social and political history. Mr. Hulbert has shown himself abundantly able to investigate the subject and put in good form the results of his labors."*—WILLIAM M SLOANE, Princeton University.

*"As shown by his publications, and still more by the manuscript of prospective work which I have had the favor of seeing, Archer B. Hulbert has entered a new field of American research and scholarship—a field in which ethnology, archæology, and history blend in most enticing fashion. The ways trod by our pioneer ancestors, by the Red Men before them, and by beasts of the woodland and prairie still earlier, ought to have place in our knowledge: they are gone from the maps and are fading from memory. Mr. Hulbert is helping us to hold fast to our rightful heritage."*—W. J. MCGEE, Smithsonian Institution.

*"The plan strikes me as an admirable one, and I am sure the result will be useful to historical investigators as well as to the general reader. I have found Mr. Hulbert's former volumes very useful in my work on Western history; they make much of the military and pioneer period easier to understand and emphasize the close connection of physiography and history."*—FREDERICK J. TURNER, University of Wisconsin.

*"I learn with great pleasure that you are intending to enlarge your series of monographs on Historic Highways of America. This important subject has been too little treated. I have found the volumes that you have published both interesting and instructive, and I am sure that historians throughout the country will thank you for continuing your valuable researches."*—ALBERT BUSHNELL HART, Harvard University.

*"The author has the true historic spirit, the rich imaginative vision and the true descriptive power—all in keeping with his most fascinating subject."*—GEO. H. SPAULDING, D.D., LL.D., New York City.

**327 BROADWAY, NEW YORK**

WHEN Nova Scotia was still a novelty to the summer tourist Miss Eliza B. Chase visited it, and as a natural sequence portrayed it with pen and pencil in her "Over the Border,"—a book which has since served to introduce large numbers of sojourners to that Province. In her new volume, "In Quest of the Quaint," she pursues her rambles farther, and brings into view a group of charming regions around the lower Saint Lawrence, as yet unspoiled by excessive exploitation. They are exactly such spots as sportsmen and fishermen delight in, and artists treasure up as choice retreats to be preserved from the vulgar crowd.

The loving interest with which Miss Chase has studied her subjects has enriched her pages with many "bits" and "finds" which would be missed by the casual tourist. Old canoe songs and quaint chansons, handed down from the original settlers, were taken down as sung, and are given both in the original and in translation; many hitherto unpublished legends of the Indians and early settlers are set forth; and the notable and interesting antiquities and personalities have been seized with the eye of the connoisseur.

12mo, 260 pages, half ooze-sheep, *profusely illustrated*, $1.50 postpaid.

**FERRIS & LEACH, Publishers. 29-31 North Seventh St., Philadelphia.**

# The Nation.

*NEW YORK, THURSDAY, SEPTEMBER 25, 1902.*

## The Week.

In his address to the Spanish war veterans in Detroit on Monday, President Roosevelt at last found tongue and opportunity to plead for reciprocity with Cuba, coincidently with a discussion of matters Philippine and Porto Rican, and the restatement of his now familiar "gospel of hope." It was in a sense carrying the war into the enemy's territory, for the Michigan delegation in Congress comprised, perhaps, the strongest opponents of the President's Cuban policy of last winter. If, as is reported, Representatives Corliss and William Alden Smith of Michigan have now surrendered to the President and foresworn their opposition to his demand for justice to Cuba, it is an encouraging indication of the growing strength of the President's policy, even in beet-sugar States. We cannot but hope that, from this time on, the affairs of Cuba will have the prominence in this campaign to which they are entitled and which has thus far been denied them.

---

*Harper's Weekly* is in a state of agitation on the subject of Roosevelt. It doubts whether his habits of life are consonant with such effort as is required for the real work of a constructive statesman, such as he aspires to be. Wild gallops, rough-riding, and much conversing are not, in its judgment, the best signs of statesmanship. In short, it doubts "whether, after all, Mr. Roosevelt is the right kind of a man for the Chief Magistracy of the nation." The *Sun* also has its doubts, although they have hitherto been veiled. It had an article a few days since suggesting ex-President Cleveland as the kind of man for the crisis of 1904, and suggesting his former law partner, Francis Lynde Stetson, as a man fit to receive a nomination for the Presidency from the Democratic party. If this issue of the *Sun* came under Mr. Cleveland's notice, he must have been much surprised to find himself the object of such a flattering testimonial from that quarter, and also gratified to observe the *Sun's* high appreciation of Mr. Stetson. We commend the *Sun's* Democratic candidate to the favor of *Harper's Weekly* as the very opposite of the "wild-galloping, rough-riding, much-conversing" Theodore Roosevelt, and therefore eminently fit to receive its support.

---

Consternation reigned in the higher circles of the Republican party when Speaker Henderson's resignation, and his reasons therefor, became known. President Roosevelt made the mistake of sending him a telegram asking him in urgent terms to change his purpose. This was an error of judgment, since it disclosed the extreme anxiety which Mr. Henderson's action has awakened. Most of the politicians who have been interviewed have assumed that there must be some other reason for Mr. Henderson's withdrawal than the one he assigned, but no evidence has been advanced to support that belief. On the other hand, a morning newspaper says that "Mr. Hepburn received a telegram yesterday from Gen. Henderson, in which the Speaker said it would be impossible for any person outside the State to imagine the bitterness engendered there. He added that in Waterloo, for which he had obtained a public building costing $150,000, the two Republican newspapers were exhibiting personal hatred toward him." The prevailing view among the Republican leaders seems to be that, even if Mr. Henderson thought that the Iowa platform went too far in its treatment of Trusts and the tariff, he ought to have kept his mouth shut till after the election.

---

Massachusetts and Delaware are two more States whose Democrats have done away with Bryanism and free silver. There never was the slightest excuse for the acceptance of these doctrines in the Old Bay State. Yet the Gold Democrats have calmly allowed George Fred Williams and his gang to control the party councils until this year, when his domination and, it is to be hoped, he himself have been done away with once and for all. But the slowness with which the party is recovering from the attack of Bryanism was shown on September 17, when the Washington Democrats reaffirmed the Kansas City platform with all its follies. Evidently the party is not to be got together this year, despite the magnificent opportunity afforded by the break in the Republican party over what is essentially a Democratic issue, and on which a united and well-led Democratic party should have no difficulty in capturing the House. Among the many encouraging signs to be noted, besides the action of such States as New Hampshire and Massachusetts, is the recantation of Senator Cockrell of Missouri. That Democratic veteran is shrewd enough to see that the tide is turning and the silver issue "played out." Of course, he does not free his mind in these words, but he none the less finds it "inadvisable to press the issue" at present. It is to be hoped that other leaders of influence will now return to financial sanity, and improve the unparalleled opportunities of the political hour.

With the choice of D. Clinch Heyward for Governor of South Carolina comes, it is believed, the dawning of a better day for the politics of that State. The choice means, if we read the signs aright, a lessening of the hold on the State of Senator Tillman and his following, and a return to control by the educated men of affairs, who in the past placed many citizens of national reputation both in the Governor's chair and in the United States Senate. In its immediate aspects it is a triumph for decency in politics. No one a year ago would have ventured to predict the defeat of the Tillman following. For years that faction, having its origin in the growth of the agricultural population, securing its strength in the spread of the populistic Farmers' Alliance, and buttressed by the Liquor Dispensary machine, has ruled the State, sending Tillman and men of his calibre to the State's Executive Mansion and to Washington. It was the régime of the poor, unlettered whites, in whose marshalling Tillman exhibited something of the skill of a political leader, and to whose untutored ears his uncouth mouthings were oratory, and his demagogic championship of the rights of the "lower classes" statesmanship. But cotton-mill prosperity has offset cotton-field extension, the balance of power has shifted, and the people of the State have tired of buffoonery and fist fights in politics. This change in popular feeling was emphasized in the primaries just closed. In contrast with the swashbuckling Tillmanites, Capt. Heyward appeared the cultured gentleman. Against their county and State organizations, made up of veterans in politics, he arrayed a volunteer organization of young men. To their abuse, their characterization of him as a Trust advocate, a Roman Catholic, an aristocrat, and an opponent of everything for which the "Reformers" had fought, his only reply was that he was ready to serve his State if the voters wished; and altogether he conducted one of the cleanest campaigns the State has ever known.

---

Even more significant than his victory is the relegation of the political hacks to the rear. Only two of the men chosen for State or Federal office were old enough to have served in the Confederate army, and many on the list were born after Appomattox. They are of the new South, identified with its material advance, and seeing in Populism only a drag. Their leader, Capt. Heyward, is only thirty-eight years of age, a graduate of Washington and Lee University, and described by his home papers as a man with no private interests to serve. He enters office unpledged, un-

hampered by combinations, and with a purpose to be Governor in fact as in name. Thus early he has put his finger on an evil, an outgrowth of the primary system—the practical transfer of appointments to office from the Governor to the State and county party organizations. The new Governor is under obligations to neither organization, and, while declaring his belief in home rule as a principle, and his intention to give due weight to county organizations concerning affairs within their immediate view, he has served notice that he will examine into the character, reputation, and fitness of all men recommended to him for appointment. He further declares his intention to devote himself to the development of every material interest of the State, and he aptly summed up his attitude on the race question by quotation of the words of Wade Hampton: "God bless all my people, black and white."

---

With the election of C. F. Murphy, the "Sport" of the late triumvirate, Tammany Hall becomes again a one-man power. In form only, we hasten to say, for the new chief takes his orders from Croker at Wantage, and is furthermore wholly under the thumb of "Big Tim" Sullivan—the only brave in sight whom the Wigwam universally fears and respects. "Big Tim" undoubtedly prefers to have his chestnuts pulled for him; and as the Wantage influence wanes, Murphy will more and more assume that self-effacing office. Lovers of good government could ask for nothing better than the present situation. The election of a figurehead—or, as Devery more picturesquely puts it, a "lobster head"—as leader of Tammany can only foster the demoralization of the organization, signs of which are everywhere apparent. For the first time in years, and possibly in its history, the delegates of Tammany Hall are going to a Democratic State Convention unpledged—nay, without a slate, a leader, or a candidate. No delegation of mere mugwumps or reformers could find itself in a more miserable, disorganized condition. It is a rare opportunity, we believe, for those who share Mr. Shepard's and Mr. Peabody's ambition to reorganize the Democratic party, to take the direct and courageous course. The farcical regency of Murphy will last for some time—until a divided and humiliated Tammany compels Sullivan, or some other real leader, to come out into the open. During this time a genuine Democratic movement might permanently cripple the power of Tammany Hall.

---

Gov. Stone was constrained on Monday night to order out the Thirteenth Regiment of State troops. This is not the first call that he has made. Other troops have been under arms looking on in an idle, desultory way for weeks, while men desiring to work have been assaulted and murdered around them, and almost under their very eyes. To keep these troops idle is an act of injustice in itself, since every one of them is perforce neglecting his own vocation. We have heard of some cases where the business of officers of the militia is going to destruction by reason of their service to the State, and yet they have done little or nothing to put down the disorder and violence which called them from their homes. It is high time for Gov. Stone and all others in authority to contemplate the situation in which society will soon be placed without the usual supply of coal. It has already been announced that sufficient fuel cannot be obtained in either city or country to heat the public schools. Therefore, we are facing a suspension of the whole system of public education. This is only a part of the calamity that society is approaching. The same want that closes the schools will deprive the poorer classes of the means of heating their rooms and cooking their food. Possibly the factories and shops which furnish the employment may continue to run on soft coal, but it is inevitable that these will be compelled to pay an enhanced price for their motive power, with the coming of cold weather, which will bring a greatly increased demand for all kinds of fuel. No words can exaggerate the calamity impending if means are not found to secure the reopening and working of the mines of anthracite.

---

As is usual under such circumstances, the fall of the New York bank reserves below the 25 per cent. ratio to deposits has been followed by much ill-informed discussion. It so happens that this is only the third occasion in ten years when such a deficiency was reported. The last occasion was in November, 1899, when the outbreak of the Boer War, with London's consequent recall of capital, came upon an active money market and an outflow of currency to the West. In the second week of July, 1893, a similar deficiency occurred. It was then occasioned by the panic withdrawals of currency by Western banks—a movement which, along with heavy export of gold to Europe, drew out of the New York bank reserves $40,000,000 within seven weeks, a loss of one-third of the whole supply. The present situation of the banks has little or no resemblance to that of 1893, and it differs from 1899 in that no war or other shock to financial confidence has upset the money market. Described concisely, the meaning of last Saturday's statement is that the New York banks entered the crop-moving season ill prepared to meet the recall of currency to the West, and were then taken wholly off their guard by the sudden rise in the Treasury's surplus.

---

It has been declared, since Saturday's deficit was announced, that the situation is simple enough, since the purpose of the surplus reserve is its use in emergencies. This is entirely true; but something more remains to be said about the cause of the present emergency and of what the banks have a right to do at this time. The National Bank Act speaks on this point as follows (section 31):

> "Whenever the lawful money of any association [bank] in any of the cities hereinafter named shall be below the amount of 25 per centum of its deposits, and whenever the lawful money of any other association [that is, 'country bank'] shall be below 15 per centum of its deposits, such association shall not increase its liabilities by making any new loans or discounts otherwise than by discounting or purchasing bills of exchange at sight."

In other words, the bank must cut short its accommodation to the market after its reserve has passed below the limit; and severe penalties, discretionary with the Comptroller, are prescribed for continuous refusal by a bank to do so. In 1893 it was impossible for the banks to keep good their percentage of reserve without aggravating a highly critical situation, and the Banking Department recognized the fact. To-day the general situation is not critical at all, and no such dilemma as now exists would have arisen had not money-lending institutions persistently fed fuel to the stock speculation of last summer. Every impartial critic has warned the local banks, during six months past, that they were heading for precisely this situation. Practically every weekly bank statement since last winter has shown a surplus reserve lower than at any corresponding date in a dozen years, except for 1893. On the whole, it is quite as well that this last note of warning should have been sounded loudly from the Clearing-house returns themselves. Fortunately, the banks are able, without distressing any non-speculative borrower, to regain and keep a proper status of reserves, and they should be required to do so.

---

Commander McLean's interpretation of his duty of maintaining Isthmian neutrality has led to almost comic results. Some two thousand Colombian troops have been disarmed and transported across the Isthmus as ordinary passengers, and their arms and munitions carried separately as freight, both arms and men being under the protection of an American naval force. The paradoxical side of the proceeding is this, that these troops were technically sovereigns of the route which they traversed under surveillance, for the United States guarantees not only the neutrality of the Panama railroad, but also the "rights of sovereignty and property which New Grenada has and possesses over the said territory." Commander McLean told his Colombian brothers in arms: "You are sovereigns, but you must not fight on this particular part of your sovereignty, and you must not even

pass in an array which might make others wish to attack you." This, it must be said, is a peculiar position for sovereigns to find themselves in, and yet the spirit, if not the form, of the act is fully justified by precedent. The United States has set itself merely to the practical task of preventing the various revolutions from interfering with traffic. We fear, however, that Colombian susceptibilities may be offended by Commander McLean's personally conducted military excursion. The whole affair recalls Mr. Hannis Taylor's epigram, in his 'International Public Law,' that he who can reconcile the right of intervention with national independence is fit to pass on to the problem of predestination and free-will.

---

Rear-Admiral Lord Charles Beresford has always spoken with a frankness which has made him the *enfant terrible* of the British marine. This character was perfectly borne out by his naval confidences to the press on landing in this city. Naturally he was asked to talk about the recent naval manœuvres, and on manœuvres in general, about which, as usual, he told truths with a smiling irresponsibility. He said that manœuvres "prevent men from going to war as an experiment." Now whether this be the truth or not, it is a striking admission of the pent-up bellicosity that is found in every great navy. We doubt if manœuvres are the proper exorcism for this demoniac possession, but there is no doubt of the fact that sub-calibre practice and the destruction of targets pall, and that the naval mind longs for an experiment upon real ships and real human lives. It is well to be reminded that in naval science we are building up an experimental method which most logically requires living subjects to work upon. If Lord Beresford can prove that manœuvres dull this scientific zeal, he will have discovered a sedative which civilization has longed for in vain.

---

Minister Pelletan's amazing speech at Bizerta only shows that it is unseemly for a naval minister to stand on an African headland and talk as Capt. Mahan writes. We hasten to add that the ambition and the indiscretion do a certain credit to M. Pelletan in his naval, if not in his ministerial capacity. Sailor-men are supposed to have that familiarity with international law and high diplomacy which breeds contempt, and M. Pelletan's wanderings, over the coffee and cigars, from Suez to Gibraltar and then across to Corsica, sweeping imaginary foes from the Mediterranean, were in the broadest style of nautical grandiloquence. So thoroughly is it understood that a jolly seadog like the French Naval Minister must be taken in the spirit of his remarks, rather than in the letter, that even the Germans, whom M. Pelletan qualified with "barbarism and brutality," feel that such words are inoffensive in the context of a "champagne speech." England, who was in imagination driven back from the straits and the canal, takes her constructive discomfiture with perfect equanimity. Italy has yet to be heard from, but will presumably follow a like course. So no harm is done. But it must cause a certain amount of trouble to a Ministry to be always explaining that so loquacious a member as M. Pelletan means absolutely nothing.

---

The process of Russification which works so admirably in barbaric Asia is being applied with extraordinary vigor in civilized Finland. Already the Finns are placed under laws authoritative only in Russian, and find the Finnish version regarded as an official concession. Russian governors, contrary to the law and precedent of the land, which Russia had engaged to respect, will displace Finns in every province, and permanently. The appeal of the municipality of Helsingfors against the replacing of the local police with Cossacks has been refused by the Emperor. Everywhere the Russian official succeeds the native. The process of crushing out a national spirit under the forms of humanity has rarely been so carefully planned and so unsparingly promoted. Germany in the conquered provinces pursued a more gradual way. It should be remembered, too, that the Russification of Finland means, broadly speaking, the substitution of an inferior civilization. It is this which gives to the spectacle a peculiar poignancy. No relief is in sight; but one must imagine that the better educated Finns will not wish to become subjects in a Russian province, and the prophecy might be ventured that we shall see from Finland an emigration of the class represented by the French Huguenots and our own Puritans.

---

The correspondents did not think it worth while to cable the proceedings of the Italian Socialist congress at Imola. but it was an event of high importance for Italian politics, and not without bearings upon all nations which have influential Socialist parties. In a word, the Socialist organizations of Italy, by a vote of 521 out of 800 delegates, declared against the revolutionary branch of the party, and gave their adhesion to so-called moderate, or parliamentary, Socialism. This means that the "war of classes" and "the social revolution" cease to be orthodox Socialist doctrine in Italy—a decision which recalls to leadership Signor Turati, who for lukewarmness was read out of the party last spring. M. Guesde and others of the "Reds" witnessed the rout of the revolutionary faction. It would be unsafe to accept the vote of a convention as an indefinite mandate, but it seems reasonably certain that the Turati Socialists will continue to work with the Ministry, and generally will apply themselves to the gradual attainment of specific industrial reforms. Well-wishers of Italy will hope to see the conversion of Socialism into a genuine Liberal movement. Whether that can be, will depend upon the personal ability of Turati and his lieutenants—and no little upon the integrity of the rank and file. Without exaggerating the importance of the Imola congress, it has at least raised a legitimate hope that the power of professional politicians is to be broken, and that the Italian proletariat is at last to make itself felt in a salutary way. See on this head our correspondent's account of the recent sympathetic strike in Florence.

---

It would be unwise to give an alarmist interpretation to the dispatches which tell of a Boxer uprising in the province of Sze-Chuen, and yet the gravity of the situation is apparent. The province itself borders Tibet. The centre of revolt, the capital city of Cheng-Tu, lies a round thousand miles from Pekin, five hundred from French Tonquin, and nearly as far from British Burma, with no approach by railway except on the Burmese side. This complete isolation means, of course, that the suppression of the present disorders, which have already extended over two months, depends upon the power and good will of the newly appointed Viceroy, Tzen-Chun-Hsuan. However wild the situation might become, it would be impossible for the European Powers to repeat the campaign of Pechili, and it is needless to say that the Imperial Government is almost impotent in the premises. But it should not be forgotten that the fanatical secret societies of China have never yet had a sufficiently perfect organization to conduct a genuine revolutionary movement. Civil war in any proper sense has for centuries been impracticable in China, and even Prince Tuan's attempt of 1900, with its appearance of regular warfare, the possession of the capital, and the support of the army, was hardly more than a riot on a tremendous scale; though it took the genius of Secretary Hay to see the reality under the show. Without the intervention of the Powers it is probable that the revolt would have smouldered out gradually. One may assume that the rising in Sze-Chuen will, no more than the Boxer rebellion in Pechili, assume revolutionary proportions. But it is an amazing state of things when a horde of 50,000 fanatics can swiftly be assembled and hurled against a capital city. And it is a striking reminder of the real weakness of the Imperial Government, that it should have no other means of securing public order in a province containing over 67,000,000 souls, than to change an old Viceroy for a new.

### *PRESIDENT ROOSEVELT AT CINCINNATI.*

On Saturday last three Republican statesmen of the highest rank made speeches on the relation between the tariff and the so-called Trusts. President Roosevelt spoke at Cincinnati, Secretary Shaw at Chicago, and Senator Fairbanks at Anderson, Ind. None of them threw much light on the subject, but all of them testified unconsciously to the significance of Speaker Henderson's withdrawal from Congress and of the reasons which he gave therefor. This sudden and simultaneous unlocking of tongues can be accounted for in no other way. We cannot say that any one of the three did himself much credit or helped the cause for which all of them profess to labor.

Protectionism was originally based upon the theory that American producers needed the shelter of a tariff for a certain time, in order to give them a start and enable them to compete with foreign producers. It has no other logical ground. It was a part of the theory also that the rate of duty should be no more than sufficient to balance the cost of production between American and foreign manufacturers, and that it should continue no longer than the time needed to bring about that condition. Its advocates always maintained that, although domestic consumers would be compelled for a time to pay higher prices for the protected articles, domestic competition would soon bring down the prices to the general level, so that the producers of them would receive no greater profits than other members of the community. This was a plausible doctrine, and it is quite certain that if the protectionist party in the early days, the days of Henry Clay, had said that it was a good thing *per se* and ought to last forever, it never would have gained a foothold at all. It would have been expelled from the halls of Congress with derision.

There is good reason for thinking that domestic competition would have brought down the prices of protected articles to the proper level if competition itself had not been throttled. As soon as the protected classes saw that their own prophecy was likely to come true, they took steps to neutralize it by combining together. This they accomplished by uniting all the producers in particular lines of industry into Trusts. The object was to control the home production, but that would have been of no avail unless importation could be limited also. This new and strange development took the leading Republicans of the country by surprise, and some of them, notably Senator Sherman of Ohio, declared that they would vote to repeal all duties on articles thus monopolized. Prof. Robert Ellis Thompson of the University of Pennsylvania, one of the foremost publicists on the protectionist side, took the same position, saying that protection had no ground to stand on if it became the shelter of monopoly.

President Roosevelt, although making a campaign against the Trusts, is opposed to this plan of dealing with them. In his speech at Cincinnati, he said:

> "The language commonly used by the advocates of the method implies that they mean all articles made by large corporations, and that the changes in tariff are to be made with punitive intent toward these large corporations. Of course, if the tariff is to be changed in order to punish them, it should be changed so as to punish those that do ill, not merely those that are prosperous. It would neither be just nor expedient to punish the big corporations as big corporations; what we wish to do is to protect the people from any evil that may grow out of their existence or maladministration."

The first thing to be noted here is that the tone of the speech is apologetic. The President has become in appearance a defender of the organizations that he has been arraigning as dangerous and oppressive to the community. The change of tone is noticed and welcomed by the *Sun*, which, a few days ago, was comparing Mr. Roosevelt to Eugene V. Debs and William J. Bryan. Victories are not won in the political field by occasionally espousing the side of the enemy.

The next thing that calls for criticism in the foregoing paragraph is the misuse of the word "punitive." Nobody desires to punish the Trusts for any wrongdoing in the past. Those who think with Senator Sherman and Professor Thompson that protection by tariff should be taken away from domestic monopolies, do not say that the Trusts do wrong in taking what the law gives them. The thought of punishment does not enter into their aims. They merely desire to change the law and prevent the continuance of the operation. The President, therefore, should have used the word preventive instead of punitive; but if he had done so, this part of his speech would have had no meaning whatever.

The President next says that "some of those corporations do well and others do ill. If, in any case, the tariff is found to foster a monopoly which does ill, why, of course, no protectionist would object to a modification of the tariff sufficient to remedy the evil." But this phrase is quite inconsistent with the remainder of his argument, in which he contends that "the Trusts can be damaged by depriving them of the effects of the protective tariff only on condition of damaging all their smaller competitors, and all the wage workers employed in the industry." If this is true, it applies with equal force to those which do ill and to those which do well. Any ill-doing Trust, if there is such a thing, could easily shelter itself by starting a few small concerns to represent the minority, and to create the semblance of competition.

If President Roosevelt has no better message than this for the Western people, his mission will bear no fruit. He is playing into the hands of the very men who are seeking his overthrow, and even now they believe that they have nothing to fear from him.

### *SPEAKER HENDERSON'S SURRENDER.*

Although it has been known for six months past that there was considerable fermentation among the Republicans of Iowa on the tariff question, nobody outside the State was prepared for Mr. Henderson's announcement of his intention to withdraw from public life. This not only discloses a schism in the party in the West, but brings this schism into the next House of Representatives. It necessitates the choice of a new Speaker, and in the selection of the Republican nominee for that office the issue of tariff reform will surely enter. Mr. Henderson says that he withdraws because he is opposed to any change whatever in duties on imports, but he rather inconsistently favors reciprocity with Cuba. "I do not agree with many of my people," he says, "that Trusts, to which I am and have been opposed, can be cured or the people benefited by free trade, in whole or in part." What free trade is in whole we can easily understand. It means the repeal of all protective duties—which nobody in Iowa, certainly no Iowa Republican, has ever dreamed of. Free trade in part would mean any reduction of any protective duty—as, for instance, a lowering of the duty on steel billets from six dollars per ton to five dollars per ton. Such a reduction would, according to Mr. Henderson's view, be ruinous to the country. Yet in another place he says that he has never been opposed to making "needed changes" in the tariff, but he extinguishes that gleam of light by adding:

> "I must say, and emphatically, that I do not believe that a single schedule of the Dingley tariff law can be so amended as to relieve the people from the oppression of Trusts or combinations of capital, however named, and that such action may involve the retarding of our expanding commerce and getting and holding of foreign markets. Indeed, I believe such a plan to be fraught with grave dangers to the people."

Mr. Henderson concludes his interview on this subject by saying that he is "opposed to unnecessary legislation which would plunge the country into panic and bring back the horrors of the last Democratic Administration." He refers to the panic of 1893, which was brought on by the Republican legislation of 1890, including the Sherman Silver Law and the McKinley tariff. The direful consequences of the former are now pretty well understood. It is quite generally conceded that the process of injecting the proceeds of 4,500,000 ounces of silver monthly into the currency in the form of new legal-tender notes, created distrust in financial circles at home and abroad—a distrust that grew with every monthly purchase of bullion. This alone would have produced a panic

in time, but it was accelerated by the McKinley tariff, whose declared purpose was "to reduce the revenue," and which accomplished its aims to such an extent that the outgoing Harrison Administration barely escaped a deficit, while the incoming Cleveland Administration had to face one immediately. These two measures made the panic of 1893 inevitable. Everybody could see that the gold reserve in the Treasury must be used to meet the current expenses of the Government; and how could the greenbacks and the Sherman notes be redeemed when the gold reserve was drained off for other purposes? Everybody knows, moreover, that the Wilson tariff bill was not passed till August 15, 1894. The last Democratic Administration simply fell heir to the mischievous legislation of the preceding Republican Administration, of which Mr. Henderson himself was no inconsiderable factor in the House.

The most probable explanation of Mr. Henderson's withdrawal is, that he feared that he would be beaten in the coming election. He must have known the state of feeling among his constituents, and he would hardly have yielded to the opposing forces in his own party if he had believed that he could be elected in spite of them. At all events, his withdrawal is the most striking demonstration possible of the strength of the tariff-reform sentiment among the Republicans of the Middle West. It must have tremendous influence in stiffening the purpose of the young and progressive element to burst the bonds of the high tariff. Hundreds of thousands of plain people—farmers in the West, and small shopkeepers, clerks, and laborers in the East—have felt with growing unrest the pressure of the tariff. They have seen the cost of living rise far faster than their earnings, and they have laid the blame largely at the door of the Dingley Act and of the Trusts that have flourished under it. When Senator Hanna and Speaker Henderson join in the sentiment that not "a single schedule of the Dingley Act can be so amended as to relieve the people from the oppression of the Trusts," then the Western farmer, who sells in an open market and buys in a protected one, who is therefore convinced that he pays toll both going and coming, begins to think of electing as Senator or Congressman some one who has the courage and independence to amend the preposterous Dingley Act.

This desire for revision is not a sudden outburst. Any one who is familiar with the temper of the West, as revealed in the newspapers or in common talk, knows that the fire has long been smouldering. Congressman Babcock knew it last winter, when he proposed to strike protection from every commodity controlled by a monopoly. The flames have been fanned, not merely by Democrats and Populists, but by the most conservative Republicans. The time has come, then, for the protected interests to stop playing about this volcano; to make timely concessions; to grant at least a little in order to save much. It has not been for the sake of providing entertaining reading that Republican conventions in Oregon, Idaho, Wisconsin, and Iowa have recently declared for revision. The Republicans are in such dead earnest about the matter that Speaker Henderson says their bitterness in his own district can hardly be imagined. They want reform, and sooner or later they will get it. If President Roosevelt does not lead in the fight, he will be superseded by some one who will.

### *THE RUMANIAN CIRCULAR.*

The condition of the Jews in Rumania forms the subject of an eloquent discourse on the part of Secretary Hay in the form of an official protest addressed to the Powers of Europe, the signatories of the Treaty of Berlin. The fact that we were not one of the parties to the treaty is acknowledged by Mr. Hay. He rests his appeal on broad principles of humanity and morality, and thus far he deserves the support of all men in all countries whose hearts are moved by the spectacle of suffering and injustice. "He takes my life who takes the means whereby I live," is what the persecuted Jew has been saying for a thousand years in all the countries of eastern Europe, and the saying is no less true now than it was at any other time in the world's history. The Jew is not subjected to the thumbscrew and the boot to compel him to disclose his treasures to needy princes. Modern cruelty takes another form. It begins at the bottom of the ladder instead of the top, and prevents the Jew from earning a living in fair competition with his fellows. This form of cruelty is apparently increasing in severity in the countries named. In Russia, not long since, the Jews were actually expelled from large districts where they had resided from time immemorial. Notwithstanding all these facts, we are not exactly the people to point the finger of scorn at other nations in this particular. It is open to Rumania to retort upon us that we have several millions of citizens who are excluded from a large range of employments, not on account of their religious belief, but on account of their complexion. Of the two reasons for discrimination, the one based upon color is the more unreasonable, since the Ethiopian cannot change his skin, whereas any man may change his religion. If the Rumanian Minister of Foreign Affairs spares us such retort, it will not be for want of sufficient material.

The semi-official *Vossische Zeitung* speaks of Secretary Hay's circular as "one of the most interesting documents in contemporary history," and as "one of the most remarkable political acts of the present day." This is the general opinion of the European press, and in many directions the humanitarian intention and skilful form of the American note find generous recognition. But all European comment, so far, concerns the spirit rather than the letter of this unique document, which diplomacy will, after all, judge very strictly by its letter. Accordingly, it would be as foolish to take the friendly comment of the press of England, France, and Germany to be indicative of the success of the note, as it would be to regard the raging of the anti-Semitic journals as a sign of its failure.

Secretary Hay's appeal to the signatories of the Treaty of Berlin is indeed extraordinary both in substance and in form. The protest against Rumanian oppression of the Jews is of two-fold character. First, Mr. Hay alleges a specific grievance—the forced emigration to the United States of an undesirable class of refugees; second, he avers that this oppression is of so extreme and inhumane a nature as to warrant intervention by the Powers. This double character—practical and humanitarian—of the protest should be kept clearly in mind, for it is evident that what might be excellent humanitarianism might or might not be good diplomacy. Any appeal against an unwelcome immigration at New York or maltreatment of the Jews on the Danube would naturally be made to the offending party, and it seems to be implied in the note that Secretary Hay has made tentative and unsuccessful efforts to open direct negotiations with Rumania. However that may be, he has chosen finally a method rarely used except against semi-civilized nations—that of an appeal for joint action by the Powers.

But, again, his initiative is of an unprecedented kind. Finding that under her terms of inauguration by the Treaty of Berlin, Rumania is forbidden to discriminate against any person on grounds of religion, Secretary Hay points out that this contract has been broken by Rumania to the detriment of the United States. For this reason he requests the signatory Powers to take measures to make Rumania keep faith. Now the United States is not a party to the Treaty of Berlin; and if that were the whole of our case, Mr. Hay would undoubtedly receive an identical note reminding him that in this matter neither the signatory Powers were under contract to the United States, nor was Rumania, with which direct negotiation was always practicable. But Mr. Hay is too fine a hand at the diplomatic game to lay himself open to so facile a rebuff. To provide against that contingency, he secured the support of the British Foreign Office. The terms of its circular to the signatory Powers have not been published, but they are

undoubtedly such as to require a distinct and formal reply. The United States becomes technically associated with the English note, and the plea for the Rumanian Jews can neither be ruled out of court nor answered by a curt identical note. Whatever the outcome of the case, it will remain as a signal instance of joint action by Great Britain and the United States in behalf of an oppressed race. Secretary Hay, too, will receive a certain credit for contriving to appear at a tribunal before which he really has no standing whatever.

As for the grievance: in the three years ending July 31 last some twenty-one thousand Rumanian immigrants, presumably Jews for the most part, have come to this country. Our immigration laws have provided for the deportation of all paupers, criminals, and diseased persons, so that those who have been passed are technically at least desirable immigrants. They have been in any case an inconsiderable fraction of our total immigration. If the remaining 400,000 Jews of Rumania constitute a menace to us, we have the remedy of making our immigration laws more rigid, even to excluding Rumanians as we do Chinese. Such a course we should not take, but it would be far more consonant with our traditions than is interference with the domestic concerns of a remote Balkan state.

Then it might fairly be maintained that Rumania has outlived her tutelage. Clearly, no treaty erecting a dependent into an independent state has indefinite duration. Sooner or later the new nation outgrows the conditions of its founding, and assumes all the dignities of an independent power. Rumania may hardly admit that dependence upon the signatory Powers which Mr. Hay assumes with such confidence. She is a valued adjunct to the Triple Alliance, to the members of which her obligations are more recent and vital than to the Powers at large. Her area of approximately 50,000 square miles far exceeds that of Portugal, or Greece, and is a third larger than the combined areas of Denmark, Holland, and Belgium. Her population of 5,912,000 souls is greater than that of Denmark, Greece, Holland, Portugal, Sweden, or Norway. Her annual revenue is nearly 9,000,000 pounds sterling, imports upwards of 13,000,000 pounds, war strength 168,000 men. This is a lusty state to be kept in nonage, and to be dealt with under a contract compulsory to begin with, and violated with impunity for twenty years past. We may safely surmise that the Triple Alliance will not give Mr. Hay any answer that can be construed as a rebuke of its new coadjutor, that Russia will do nothing to heighten the distrust in which Rumania already holds her, that the appeal to the Treaty of Berlin will be disallowed, and that England and the United States will remain benevolent voices crying aimlessly in the wilderness, and saved from ridicule only through the fact that there is a certain humane intention in their appeal, which, however, the next punitive expedition of England or disfranchising of an American negro population may strikingly belie.

### *INDIFFERENCE TO ART.*

Artists are, as a rule, convinced that the public is not only profoundly ignorant of art, but profoundly indifferent to it, and this conviction is by no means confined to artists who are materially unsuccessful. Even those whose work is bought and paid for on a fairly liberal scale, have a dissatisfied feeling that it is not really understood, but is admired and liked for what are, to them, inessential qualities. Perhaps they are, at times, a trifle unreasonable—they may even, conceivably, be mistaken in what they think essential. They are frequently accused of caring for nothing but technique, and the accusation is sometimes true. On the other hand, it seems to them that the public cares for nothing but subject. Our landscape painters are, perhaps, least out of harmony with their environment, but even they must sometimes feel that the interest in the thing depicted is out of proportion to the interest in what the artist has made of it: our figure-painters and our sculptors feel it much more.

Two of the most remarkable developments in art, of recent years, are in mural painting and in monumental sculpture. Building after building has been filled with decorations; some of our best artists have been kept constantly busy at such work, and have almost ceased to produce easel pictures; the people have thronged to the Library of Congress and the Boston Public Library to see the paintings. Monument after monument has been erected; our best sculptors have commissions three deep; no soldier or politician appears too unimportant to have his statue. All this seems, at first sight, to show a lively interest in art, but does it? Watch the people in the Boston Library, before Sargent's "History of Religion," consulting their guide-books and puzzling out the meaning of the figures, and you will conclude that the subject is all that interests them. The action of committees, the tone of criticism in the press, all point the same way. The first business of a work of art is to be beautiful; the first business of a decoration is to decorate. But let a painter spend his best energies on devising a scheme of beautiful and appropriate line and color which shall set off and complete the architecture of the room, and he is almost certain to be sneered at for his "meaningless figures," and to be scolded for "not telling anything." Let him make a clever illustration of history or legend, and he will be praised no matter how confused is his composition, or how full of holes his color-scheme. The true decorator has to pretend to be an illustrator to satisfy his patrons, and he has to fight committees to escape from utterly unmanageable "historical subjects," or to devise ingenious circumventions and allegories which shall allow him some beauty while nominally conforming to the demands made upon him. He does not give art because the public asks it of him; he gives as much art as he is allowed to give by a public which is interested in other things.

The case is much the same with sculpture. Our sculptors are kept busy, but they are kept busy modelling trousers and hats. How often does one of them have an opportunity to produce a really sculpturesque and ideal work—a figure, nude or draped, treated for its sculpturesque beauty alone? Our parks and squares are full of statues; how many of them have any real beauty or are really ornaments of the places in which they stand? It is not wholly the fault of the sculptors—they would do better if they were allowed. Of course, there are incompetents among them, but there are also great and true artists, who seize every chance for beauty and often achieve it, though sometimes in devious ways and by side issues. What the public wants is not a work of art, but a monument to this or that man, of whom, often on slight enough grounds, it has made a hero; and generally it insists on a portrait statue, no matter how unstatuesque the hero may have been, and resents, more or less, even the poor little accessory allegory by which the artist tries to escape, for a moment, from the hideous and the real. Our statues are ugly, in the main, because we like to have them so.

The newspaper press may be thought to give a fair reflection of the wants of its readers, and the newspaper reports of the unveiling of statues show a marked indifference to the question of art. Examples abound, and are to be drawn even from journals which habitually show interest in art. Such a one must print the news, sometimes, as it comes to it; and one such printed, the other day, a quarter of a column on the dedication of a statue to Governor Flower, in which the name of the sculptor was not so much as mentioned, though that sculptor happened to be our greatest master. The reporter may well have thought that art criticism was not his province, and that he was not called upon to attempt it; but he was so convinced of the indifference of the public to art that it did not occur to him that any one might like to know, merely as a matter of news, that the statue was by Saint Gaudens. But if the journal in question took one statue from Mr. Saint Gaudens, it made up for it by presenting him with another, for a few days afterward it spoke of the Channing statue, which is to be erected in the

Boston Public Garden, as "one of the best of Saint Gaudens's efforts." It is possible that the real author of the work in question, Mr. Herbert Adams, may be annoyed at this attribution, but he should consider the compliment to his skill implied in it. Besides, he is probably used to this sort of thing. The editor who should confuse the author of 'Captain Macklin' with the author of 'The Crisis' would never hear the end of it; but nobody cares about sculptors.

No, the public does not really care for art—that is the truth of it; and so art matters are carelessly reported or not reported at all, and silences and blunders which would hardly occur in the sporting column, escape the notice of the editors. They are symptoms of that indifference to art, as art, and that interest in art mainly for its subject-matter, of which we have been speaking. The reporter could not possibly have omitted the name of Governor Flower from his account; the paragrapher could not have confused Dr. Channing with, for instance, Deacon Chapin—these are the subjects of the works of art, and sure to be interesting. But he could forget the artist entirely, or negligently confuse him with another. There is some consolation, however, in the reflection that it has never been otherwise, and that good art has been produced just the same. At some epochs there has been a more sensitive and educated public than at others, but in the days of Pheidias, as in the days of Titian, it was, after all, the subject that was talked of; and then, as now, the art was something beside the bargain, which the artist gave because he wanted to, not because he was asked for it. The patron has always asked for history, or religion, or likeness, or anything but art; and the artist has always given as much of these as would gild the pill, or the pill has been refused and the artist has starved. Art has gone on because there are always some men born artists, and always some born appreciators of art. The many have been indifferent to art, but they have been tickled with the subject, and have consented that the artist should live; and the few appreciators have, by dint of iteration, convinced the many that the art of this or that artist is worthy of attention; so that, if he has but been dead long enough, we will take (or feign) an interest in his art, even when the subject does not please us. Those of our artists who deserve the name will go on putting into their work as much art as they can, if not as much as they might, and in the long run they will get due credit for it.

## *THE PASSING OF 'FESTUS.'*

There are books which fortunately outlive their authors. There are books which, perhaps still more happily, die before those who made them. But the once famous 'Festus'—the English embodiment of what the Transcendental period represented in America—has lived in the prolonged years of its author, has passed through eleven or more editions in England and thirty or more in this country, and has been growing, alas! bulkier and far heavier as years went on. Theology and metaphysics, which were at first the mere by-play or by-work of its youthful and romantic scenes, had gradually submerged its early attractiveness, and had made it at last unreadable to those who were the compeers and spectators of its early fame. The edition of 1839, which bore no author's name and which the author tried to call in for suppression, is now the only one which recalls to its first lovers the treasure they once thought they had found. The recent death of Philip James Bailey, at the ripe age of eighty-six, will produce for a month or two some added sales of 'Festus,' and it is altogether likely that the book itself will then pass away, like that once almost equally famous under the name of 'Proverbial Philosophy,' each slowly perishing with the period and atmosphere that gave it being. Nor is it in the least likely that either of these will come back, centuries hence, to establish what may be called a post-mortem fame, like William Blake's 'Songs of Innocence,' or like the Quatrains of Omar Khayyám.

Yet Margaret Fuller Ossoli, the keenest American critic of her time—she who announced in the *Dial* the arrival of Browning when even his own country had not discovered him—could commit the error of placing the author of 'Festus' in society where he did not quite belong; as when she criticised some other work of that day as "an interpretation of the spirit of the age far less penetrating than that of Faust or Festus." But it was a time of dreams and romance as essentially as this is a period of great mechanical discoveries; young people talked sentiment instead of business or slang, and were only too ready to be thrilled or inspired. The book itself, though long-winded, with feeble structure, imitative groups, and ineffectual endings, yet rose at unexpected moments into strong lines and even regal phrases—lines that, like the rhythm of Marlowe or Keats, uplifted life into glory. The author's very conception of literature was on its stateliest side:

"Homer is gone; and where is Jove, and where
The rival cities seven? His songs outlive
Time, tower, and god—all that then was, save
Heaven."

Or take this other passage, a quotation which often reappears with the name of some earlier author attached to it:

"Trifles like these make up the present time;
The Iliad and the Pyramids, the past."

Or this:

"We live in deeds, not words; in thoughts, not
breaths;
In feelings, not in figures like a dial;
We should count time by heart-throbs. He most
lives
Who thinks most, feels the noblest, acts the best;
And he whose heart beats quickest lives the
longest.

One generous feeling, one great thought; one deed
Of good, ere night, would make life longer seem
Than if each day might number a thousand days
Spent as is this by nations of mankind."

The gayety of 'Festus' was rather forced, its sentiment overstrained, its essential structure directly imitative, and even as imitation ineffectual. Goethe's Satan is always Satan, his hero human in strength, human in weakness; but Bailey's Lucifer is as young and fresh as Faust himself, and is as liable to say fine things; and his student, unlike Faust's fellow-student, is as wise as his teacher. But all of them are young, all have glimpses of life, all break into lines with a Keats-like variety and vigor of cadence; sometimes almost Shaksperian in their sweep:

"There are points from which we can command
our life;
When the soul sweeps the future like a glass;
And coming things, full freighted with our fate,
Jut out, dark, on the offing of the mind.
Let them come! Many will go down in sight;
In the billow's joyous dash of death go down."

In short, Festus represented youth, and was always at his best where youth was most in evidence:

"I speak unto the young, for I am of them
And alway shall be. What are years to me?
. . . . . .
Oh for the young heart like a fountain playing!
Flinging its bright fresh feelings up to the skies
It loves and strives to reach—strives, loves in
vain;
It is of earth and never meant for Heaven.
We laugh at love, and make a jest of Hell,
While we fear each, and seek. The sphinx-like
heart,
Consistent in its inconsistency,
Loathes life the moment that life's riddle is read;
The knot of our existence is untied
And we lie loose and useless. Life is had;
And then we sigh and say, Can this be all?
It is not what we thought—it is very well—
But we want something more—there is but death!
. . . . . .
And to die young is youth's divinest gift—
To pass from one world fresh into another
Ere change hath lost the charm of soft regret,
And feel the immortal impulse from within
Which makes the coming, life—cry alway, on!
And follow it while strong—is Heaven's last
mercy.
The firefly only shines when on the wing;
So is it with the mind; when once we rest,
We darken. On! said God unto the soul
As to the earth for ever. On it goes,
A rejoicing native of the infinite—
As is a bird of air—an orb of heaven."

Into how many albums of young people were such lines copied; in how many conversations were they quoted, one half-century ago! Their influence led some to suicide, some to lives of heroic self-devotion; but it has now well-nigh passed away and become untraceable. As for the book which represented the period, it must follow its long-lived author into oblivion; for fame itself, like all else that belongs to the human mind, when it once rests, is darkened.

## THE GENERAL STRIKE IN FLORENCE.

FLORENCE, September 2, 1902.

Cowper's dictum, "God made the country, and man made the town," came back to mind yesterday on my returning to Florence after six weeks of quiet sojourn in Panzano di Chianti, a village perched on the summit of one of the many hills nested at the foot of the mountains which shelter the province renowned for the most famous wine of Italy. There I found what I sought—fine air, comparative coolness, perfect peace. Here the métayer system prevails, as throughout the Tuscan provinces.

Though only twenty miles from Florence, with a steam tram thence to Greve, no tidings come from the city save on Friday, the market day, when some of the factors go down in their traps and by tram to learn the prices of wheat, wine, and, this year, of the famous root of the purple flag which furnishes the violet powder and essence once much used for ladies' toilettes, but which, owing to over-production and the growth of a coarser quality in Verona, has fallen from the price of 350 lire to 40 or 45. But last market day, though it was the 29th of August, they brought up no special news. On Saturday, however, the post-woman, instead of bringing in the *Nazione* (for which you must specially subscribe up there), brought a placard to the effect that, as the printers, despite their

pledges, had suddenly gone on strike, no paper could be printed. As the *Nazione* is especially obnoxious to the working classes —is, indeed, the organ of the Florentine clique to which was due the state of siege of 1898—this did not surprise me; but on Sunday night the Panzanians, who are early to bed and early to rise, while thronging the *sala* where the last lottery tickets were sold and the best prizes drawn, began to inquire how it was that the diligence which brings up the last post had not arrived even at eleven o'clock? Had it been assailed by bandits who near Greve have from time to time attacked and robbed unwary travellers? Just before midnight the diligence arrived, but no post. The last two trams had not reached Greve, had been stopped by the strikers, and the most exaggerated accounts spread—that the troops called out had fired on the populace; some declared that they had heard cannon-shots, etc. This was vexing, as I had decided to go down by Monday's tram, stopping at Gabbiano on the way; but if there were no trams, this would be impossible.

Monday I sent to see if trams ran. They left Greve (which is the terminus), but as to reaching Florence, that was by no means certain. After much persuasion, I induced a wizened old man to take me direct to Florence in a *bagher*, the most uncomfortable two-seated vehicle imaginable. The driver would not let us halt at Gabbiano, fearing to have to sleep in Florence; but till we got to the place where the trams meet and one goes off to San Casciano, the capital of the province, nothing unusual occurred. At Tavernuzzo, however, the population were in the street, the shops closed, and all the diligences which ply to and from Florence in the courtyards. All along the road the people looked gay enough; the men were in holiday attire, loafing about, the women and children plaiting straw and knitting with their usual diligence. Several men told the driver that he ought to be on strike, and that traps were not allowed in Florence. He seemed much bewildered, but evidently thought that if he set me down in the road he would lose his fare, and so proceeded to Galluzzo, a suburb of Florence much affected by workingmen, as house rent is cheap and the odious *dazio* (octroi) is not exacted. All evidently on strike, and seemingly enjoying it; but a regular hail and rain-storm came down in torrents, wetting us to the skin, and, finding the ordinary road to Porta Romana barricaded, I had to go round by the Poggio Imperiale down the Viale, where there was no sign of any tram arriving, though we had passed one going to Greve guarded by carbineers and soldiery all armed.

Once in Florence things looked serious: the shops all closed, the streets filled with military, no bread to be purchased save at three central markets where it was provided by the municipality, not a single newspaper to be had since Friday night. Little by little we pieced things together, though no person told the same tale. A strike had been threatened on and off for the last month at the iron and steel foundry of the Pignone, where about 200 men are usually employed. About a month since the director turned off twenty-two of the men, on pretext of slack work. The rest offered to work shorter time at the same wages, so that twenty-two families might not be left to starve, but the director refused. The men struck; he called in outsiders, refusing to treat with the secretary of the Chamber of Labor (Camera di Lavoro), who is the representative of the federated societies of the arts and trades of Florence. Here, according to general opinion, he was in the wrong; but the leading Socialists who seem to lord it over the Chamber of Labor out-heroded him. On the 27th of August they decided to call on all the arts and trades of Florence to demonstrate their "solidarity with the workmen of the Pignone by coming out on strike." On the 28th they issued a proclamation giving twenty-four hours to all the working classes to obey this order. Bear in mind that these gentlemen of "light hearts" not only had provided no funds to support the strikers during a period whose duration they could not decide, but had not even consulted the Chambers of Labor in other cities as to their willingness to second the movement by subscription; neither did they accede to the suggestion of some of the workers at the Pignone that they should wait until the board of managers of the foundry should arrive and decide whether or not to approve the conduct of the director. Had they really had at heart the assistance of the men on strike at the Pignone foundry, would it not have been more practical to call on all the arts and trades to continue work, and to contribute a fixed portion of their wages towards the maintenance of the families of the strikers?

After brief consultation in all the separate sections of the arts and trades, a mass meeting of the workingmen was held in the ex-barracks of the Carmine. Eighteen thousand at least were present. A general strike was proclaimed, the men being assured that their unanimous decision would compel the managers of the Pignone to accede to the demands of the workmen. The Government had made ample arrangements for the maintenance of order. The instructions to the prefect were not to take sides with masters or men, but to ensure public safety and the liberty of the workmen who should choose not to strike, or to those who should take the place of the strikers. Meanwhile, the board of managers of the Pignone held a meeting and decided that in no case would they dismiss the fifty men taken on to replace the strikers to avoid the closing of the foundry, but that they would take back at once one hundred of the strikers, including some of the twenty-two dismissed at the outset; the choice to be left to themselves. These one hundred would take rank after the newcomers, and so at any rate would lose long years of service time. The directors promised that, if the work should justify it, they would take on all who asked to be reëmployed, giving them progressive numbers; all bygones to be bygones, and the old labor contract to be respected.

These proposals were rejected unanimously, and the general strike began. The working bakers were the first to strike unanimously. The arrangements of the municipality were already made in anticipation, and bread poured in in exuberance from Prato, Pisa, Bologna, and other cities, the only inconvenience being that the breadsellers had to go to the depots to purchase it, and that no fancy bread could be obtained. All the other trades then went on strike, the printers refusing to print any newspaper; but (and this is curious) the *Unità Cattolica* obtained the Chamber of Labor's sanction to come out for one day only (the 29th). On the 30th the strike was really general, and the railway workingmen in the workshops declared their solidarity with their brethren, but many of their number did not see their way clear to break the agreement come to after the last strike, and not a single train was delayed for an instant. The cabmen struck one and all. The tramway men were divided. They were evidently against a strike, but the mass of strikers hindered the departure of the trams for one day only, and the directors, to prevent their being insulted, advised the rest to leave their uniforms at home and to dress in plain clothes.

Here be it noted that the police and the carbineers, considerably reinforced, did yeomen's service in securing the "liberty of work" by arresting any and every person who insulted or threatened another for not "coming out." The most serious affair was the strike of the gasworkers and lighters on the eve of the 30th. The municipality had counted on the firemen, who had promised to serve if protected from molestation. Warned that they were municipal servants and would be protected, their commander, ranging them in line, bid those who refused to serve to step out of the ranks. No one stirred. Here the action of Del Buono, Secretary of the Chamber of Labor, in nowise praiseworthy, seems to me as tactless as it was outrageous. He went in person, accompanied by some of the firemen, to the municipal offices, where the Executive Committee was in permanent session, to protest against the order given to the firemen to replace the gasmen; it not being their business to light and extinguish the city lamps. Asking ironically whether the programme of the workingmen's federation sanctioned the plunging a populous city into total darkness and exposing it to murder, robbery and incendiarism, the assessor, Niccolini, affirmed that the city would be lighted at any cost, and again the firemen signified their willingness and signed individually their pledge to light up. Meanwhile, an order of the prefect prohibited any gathering in the streets or squares of the city. The firemen assembled in their barracks, ready to obey the orders of their commandant, when an immense crowd gathered with threatening cries, only to be instantly dispersed by the troops. The three trumpet calls (corresponding to the reading of the Riot Act) sufficed. But the firemen, either frightened by the threatening cries of the crowd, or otherwise indisposed to fulfil their promise, refused to quit their barracks, despite the peremptory orders of their commander. The municipal guards declared themselves incompetent to light the lamps, but the gasworkers offered their services, and, guarded by the troops and police, the city was lighted more or less, no disorders occurring. Nevertheless, some 200 arrests were made of men who attempted to hinder the lighting of the gas, or who otherwise interfered with pacific workers. The arrests included a goodly number of loafers "known to the police." It should be said that the different sections of the arts and trades had formed a squad-

ron of guards to assist in the maintenance of order.

As the tramway men, the omnibus drivers, and conductors decided on a partial strike, all the office men and inspectors offered their services. Next the cooks and waiters of the hotels and restaurants and cafés struck. Some of the hotels were closed; in the restaurants the owners and their families managed to serve their not numerous customers. Then the carters and porters of the public transport service went out; the street-sweepers, the tailors, hat and cap-makers, and greengrocers joining. Another mass-meeting of about 20,000 strikers was held at the Carmine, the interior of the barracks occupied by the police and municipal guards; two squadrons of cavalry and three companies of infantry being drawn up in the square when the President, Signor Del Buono, announced exultingly that the strike was now general, as the masons and their helpers, the workmen of the military magazines, the peasants, had joined the ranks. A vote of thanks was sent to the firemen and municipal guards who had refused to light the lamps, and a vote of blame to the heads of works or shops who had declared that they would not take back the men on strike. The strikers of the Pignone proposed to withdraw their demand for the dismissal of the new men taken on, if the managers would agree to readmit all the original workers, including the twenty-two dismissed in the first instance; and Signor Rossi gave it as his well-founded belief that the managers, on that very evening, would accept this compromise. In this case the strike would cease, but only after all the arrested had been set at liberty.

During the night some miscreants cut numerous gas-tubes distributing some 6,000 cubic metres of gas, so that the city was only partially illuminated. The prefect, on the first of September, issued an order prohibiting any public meeting to be held in the open or in any building whatsoever. The interview between the workingmen's commission and the Director of the Pignone foundry, after an animated discussion which lasted far into the small hours (four municipal councillors present), ended as it began. Director Benini affirmed that the establishment could not take on more than one hundred of the original workmen, having already fifty new ones, as the work on hand did not justify an increase of hands; but he pledged his word that no new hands should be introduced save in the case of specialists or apprentices, and promised to take into consideration any suggestion for the modification of the new rules. The workmen's commission declined to accept these terms, as out of 210 workmen 110 would be left destitute by it, and it was impossible at this season of the year for them to find work in any other foundries. Many small groups assembled in the Piazza della Signoria (as the discussion was held in the municipal offices in the Palazzo Vecchio), waiting patiently throughout the night, but at two A. M. all hope of an adjustment vanished, as Signor Benini declined to submit the quarrel to arbitrators. The delegates did not feel their courage up to announcing their fiasco to their electors; so glided out of the palace by a side door, and the waiters understood that their hopes were to be disappointed only on seeing the lights extinguished in the Council Chamber.

On the morrow, it was clear to all that the general strike could not be maintained. The workmen of the foundry who decided to remain on strike, saw themselves that they were demanding useless sacrifice from their comrades. The mass of workmen, precluded from the Carmine, assembled at the hall of the Chamber of Labor in Via dei Tintori, but were advised to disperse and to meet and deliberate in their several sections. Even without waiting for this, most of the men returned to their work. The shops which on Sunday and Monday had nearly all been closed, partly through fear, partly from good nature and a desire to avoid collision with the employees, were all opened on Tuesday; the cabmen hastened to their station at the usual hour. In some sections the men voted for continuing the strike, but numbers prevailed for its immediate cessation. The printers all returned to their work, the bakers to the bake-houses, so that some 4,000 kilos of bread imported by the municipality were sold at low prices, or distributed to the poor. I omitted to note that among the strikers were all the female cigar-makers, who, with the men employed, now find themselves in a sorry plight, as only the leaf preparers can have work for some days.

The railway authorities suspend the strikers for three extra days, according to the regulations for punishing any workman who abandons his post without license. The company Ducco & Alessio, at the commencement of the strike, begged the Chamber of Labor to allow sixty of their men to remain, merely to keep the furnaces alight. At first this was conceded, whereupon other companies made the same demand, and the permission was withdrawn, and that company alone has 120 wagons of chemical preparations stagnant at the station. Their furnaces have to be relighted, and this is but one of the examples of the waste of money and of time engendered by this preposterous imposition of the caprice of two or three individuals on the too credulous multitude. The said Chamber of Labor, when the strike had virtually ceased by the good sense of the strikers, issued a ridiculous proclamation, thanking the Florentine proletariat for their "truly extraordinary demonstration, for the sublime example of solidarity and of civic virtue which will prove a severe warning to those who menace the progress and well-being of their class." The members of the Chamber of Labor here are already discredited, and Deputy Pescetti, the Socialist representative of the Third College, who took an active part in promoting the strike, comes in with Del Buono for his merited share of blame and discredit.

The speeches made by two "reforming" Socialists and members of Parliament—Todeschini and Barbato, the philanthropic doctor of Pian dei Greci in Sicily—have made a great impression here. Barbato explained to such of the men as he came in contact with, that a general strike cannot be justified, because it inflicts too much misery on all classes, their own especially; that it can never produce economic progress, strikes being legitimate only when the workers have some real grievance against their respective employers, whereas in this case they had none. Employers also will have learned a lesson. They were assured that, if they kept their works open, they and their men would be protected; but, save in one case, they made no effort to induce their men who had no grievances to be redressed to remain at their posts. The one exception was the porcelain manufactory (the famous Ginori, now Ginori & Richard), which has its works at La Doccia, its magnificent warehouse in the Via Ginori. Richard, the working partner, on hearing that his men were going out as a proof of their "solidarity," called them together, and warned them that they were at liberty to go, but they had better get their wages settled on the spot, as he was resolved to close the works, and that on reopening them he would not take back a single workman who had quitted his post on such an absurd pretext. Not one man left work, and the factory received no molestation. The same may be said of the owners of shops, hotels, and restaurants; but they made not even a show of resistance, let their workers go, and have now taken them all back without remonstrance. They were "afraid," believed the Chamber of Labor to be all-powerful, and the Government too indulgent or too weak to protect them; the populace too valiant to be put down by the police and the soldiery, without, at any rate, violence and bloodshed. How mistaken they were they now see. Not only has the Government "kept order"; with the exception of the cutting of the gas-tubes, whose authors have not yet been discovered, there has not been a single case of violence or damage done to property, not a case of theft or aggression.

The idea of a general strike as a solution of the social question has been anxiously fostered for the last ten years. Florence has made the experiment, the strikers have paid dearly for their whistle. The pledge-breaking firemen are to be proceeded against, though it is not certain whether the articles of the municipal code apply to municipal servants called on, in an emergency, to perform duties not stipulated in their contract; the leaders, the sole instigators of the strike, have covered themselves with ridicule and are blamed by all parties without distinction, and at the coming Socialist Congress at Imola, where the evolutionists and reformers with Turati at their head will be in full force, it is probable that they will be called on to give account of their stewardship. Assuredly they will not be reëlected by the Florentine Chamber of Labor. But many waters will flow into the sea before the workers of a large city will furnish another proof of their "sublime civic virtues," their "solidarity and universal brotherhood," by coming out in a general strike. J. W. M.

---

## BISHOP TALLEYRAND.—II.

PARIS, September 10, 1902.

A dramatic author, justly forgotten, named Arnault, gives the following description of Talleyrand at the time when he entered the States-General. In his 'Souvenirs d'un Sexagénaire' Arnault says that in June, 1789, when he was walking in the Garden of Versailles, he saw a young man lying under a tree with a book in his hand.

"His face, which was not without charm, struck me, however, less by its features than by its expression, by a certain mixture of nonchalance and malignity which

gave it a special character—that of an angel's head animated by the spirit of a devil. It was evidently the face of a man of fashion, more used to occupy others with himself than to occupy himself with them; of a man who, though young, was already sated with the pleasures of the world. I should naturally have assigned that face to a page or to a fashionable colonel, if the hat and the *rabat* had not told me that it belonged to an ecclesiastic, and if the cross on his breast had not proved to me that this ecclesiastic was a prelate."

This prelate was the Bishop of Autun, and we can see the exactness of Arnault's description of him in the numerous portraits which were afterwards made of Talleyrand. M. Bernard de Lacombe makes a just remark when he says that "Talleyrand had this originality, that, alone perhaps of his kind, he met the Revolution without hatred; with his quick intellect and his easy conscience, he had the merit of being astonished by nothing and of feeling no indignation at anything."

On the 4th of May, 1789, the Court and the twelve hundred Deputies assembled at Versailles went in procession to the Church of Notre Dame, and heard the mass of the Holy Spirit. The next day the States-General were opened by the King in the Hôtel des Menus. An important question at once arose: would the powers of the Deputies be verified, as they had heretofore been, separately by each order, by the nobility, by the clergy, by the third estate, or would they be verified by the three orders assembled? As the verification in common would naturally be followed by deliberation in common, the answer to this question was to be of supreme importance. The clerical Deputies were divided on the question; the high dignitaries of the Church took the side of the Deputies of the nobility, who objected to the fusion with the *Tiers;* many curates, men of the people, were inclined to the fusion.

Talleyrand was at first opposed to the union of the orders; he was alarmed by the exaltation of the *Tiers*, and had several secret interviews with the Count d'Artois, advising him to speak to the King, to recommend him to show great firmness, and, if necessary, to pronounce the dissolution of the States-General. The Court was vacillating, and on the 17th of June the *Tiers* took the initiative and converted itself into a National Assembly. When Louis XVI. directed the three orders to retire separately to their respective places of meeting, the *Tiers* withdrew to the Jeu de Paume, and its members took the famous oath which may be considered as the beginning of the Revolution. On the 24th of June a hundred and fifty clerical Deputies, headed by some bishops and an archbishop, took their seats among the members of the *Tiers*. Two days afterwards, only, Talleyrand joined the Commons, without making any speech, and, the day after, Louis XVI. himself ordered the Deputies of the nobility and the dissident members of the clergy to unite with the representatives of the people.

In the National Assembly, Talleyrand played immediately a prominent part, and Malouet says in his Memoirs: "After Mirabeau, I place M. de Talleyrand, Bishop of Autun; not only as a man of distinguished mind, but as the member who, by a single motion, had the greatest influence on all the acts of the Assembly." This was a motion against the imperative mandates given to the Deputies by their electors. In thereupon rejecting the authority of the imperative mandates, the Assembly made itself *de facto* a Constituent Assembly.

On the 14th of July, Talleyrand was named member of a committee charged with making a constitution, together with the Abbé Sieyès, Mounier, Lally-Tollendal. He participated for the first time in a debate respecting the Church, on the 11th of August.

On the historical night of the 4th of August, the nobility spontaneously renounced its privileges, exemption from taxes, and tithes. A few days afterwards, a Deputy proposed that the ecclesiastical tithes should be suppressed as well. Mirabeau supported the proposition; a long debate followed. The Abbé Sieyès maintained that the ecclesiastical tithes were a necessity, and that their suppression would be spoliation. Talleyrand gave his opinion in favor of their suppression. The Archbishop of Paris pronounced the decisive words:

"In the name of my brethren, coadjutors, and all the members of the clergy belonging to this august Assembly, in my personal name, I remit all the ecclesiastical tithes to the hands of a just and generous nation. That the gospel be announced, the divine ceremonies be celebrated with decency and dignity, the churches be in the hands of virtuous and laborious priests, the poor among the people be supported—such is the destination of our tithes, such is the end of our ministry. We confide in the National Assembly, and we have no doubt that it will procure us the means of filling worthily objects so respectable and so sacred."

When the Assembly was preparing the Declaration of the Rights of Man, Talleyrand took a great part in drafting the articles. The definition of the law was his work:

"The law is the expression of the general will. All citizens have a right to assist personally or through their representatives in its formation. All citizens are equal in its eyes, are equally admissible to all dignities and public offices, according to their capacity, and without any other distinction than that of their virtues and their talents."

Gouverneur Morris used to meet Talleyrand almost daily at the house of a common friend, Madame Flahaut. Morris says that he had a hobby, "national education." Talleyrand was much interested in it, as well as in the national finances. Everybody at the time was proposing remedies for the deficit. The science of finance was in its infancy, and we may laugh now at the expedients which were proposed in the National Assembly, such as the melting of the gold and silver ornaments of the churches. What was more serious was a proposition made by a young Girondin, named Buzot, who afterwards became one of the leaders of the Gironde. He proposed that the ecclesiastical properties should revert to the nation. The revolutionary days of the 5th and 6th of October, during which the Tuileries were invaded by the people, gave a stimulus to those who advocated the confiscation of the ecclesiastical property. Talleyrand judged that the time had come, and on the 10th of October he developed from the tribune a complete plan of confiscation.

"He had no illusion," says M. de Lacombe, "about the enormity of his proposition. He invoked, at the outset of his remarks, the embarrassment of the State, the exceptional gravity of the circumstances, the impossibility of establishing new taxes in a country already impoverished, the urgency of taking proper care of those whom the abolition of tithes had left completely without help."

He made a distinction between lay and clerical property. "It seems evident to me," said he, "that the clergy does not own property in the same sense as other proprietors, since the properties of which it has the use, and of which it cannot dispose, were given to it, not in the interest of particular persons, but for the accomplishment of certain functions." He then presented a complete plan for the maintenance of the secular clergy, and the accomplishment of the obligations attaching to the ecclesiastical properties.

This proposition, emanating from the Bishop of Autun, excited great indignation in a large part of the Assembly; but it was adopted with great vehemence by Mirabeau, who even simplified it and made it more sweeping. After a stormy debate, the Assembly voted a law which changed the property of the Church into the property of the nation, and provided a salary for the regular clergy.

By his motion in the Assembly, Talleyrand enrolled himself in the party of the Revolution; he became at the same time an object of suspicion to the clergy, and the clergy of his own diocese remonstrated strongly against his conduct. The canons of Autun's cathedral sent him a protest against the motion which he had made in the National Assembly. From this moment, Talleyrand became, so to speak, a stranger to his diocese; he went no more to Autun. He was one of the founders of the club of the Friends of the Constitution, which afterwards became so famous as the Club of the Jacobins. He took a prominent part in all the festivities and ceremonies which savored of the revolutionary character. One of those great festivities is an historical landmark: the Feast of the Federation given in the Champ de Mars to the deputation of the National Guards sent from all parts of France. The King was present, having on his right side the President of the National Assembly. They were both sitting on chairs near each other. The Queen and the royal family had places prepared for them. Amid the noise of drums and of trumpets, the spectators saw Talleyrand, in his pontifical robe, assisted by two priests, celebrating mass on the "autel de la patrie." Talleyrand gave his benediction to the oriflamme and to the eighty-three banners of the newly created departments. Lafayette swore, in the name of the National Guard, to remain faithful to "the nation, the law, the King." Louis XVI. showed the young Dauphin to the people.

This feast of the 14th of July, 1790, is a curious episode in the drama of the Revolution; and the part played by Talleyrand is perhaps its strangest trait. A few months later Talleyrand adhered to the civil constitution of the clergy which had been voted by the Assembly. His example was followed by only six bishops. Open war was declared between the Revolution and the Catholic clergy. Talleyrand threw in his lot with the Revolution.

## THE CHARACTER OF TIBERIUS.

To the Editor of The Nation:

Sir: It would seem that the controversy about the character of Tiberius is amicably settled by the words of Seneca, *De Clementia*, i., 6. Seneca is flattering his pupil Nero by telling him that he need not think of looking outside himself for examples of good rule—"Sed ingens tibi onus imposuisti; nemo jam divum Augustum nec Tiberii Cæsaris prima tempora loquitur; nemo quod te imitari velit exemplar extra te quæret." The early part of the reign of Tiberius (*prima tempora*) was good, the latter part bad. If we say that the whole reign was good, what are we to make of Sejanus, Capreæ, and the letter from Capreæ to the Senate?

The political attitude of Tacitus was not that of indiscriminate hostility to the Empire. He was content with it so long as the Emperor was a Nerva who "res olim dissociabiles miscuit, principatum et libertatem." Nerva's reign was to him "beatissimi sæculi ortus."—Yours faithfully,

Goldwin Smith.

Toronto, Sept. 15, 1902.

## PROFESSOR SLEDD AND EMORY COLLEGE.

To the Editor of The Nation:

Sir: It was only a few days ago that I learned from the *Nation* that Prof. Andrew Sledd had been practically forced to resign his chair at Emory College, in consequence of his article, "The Negro—Another View," in the July *Atlantic*. I read the article on its first appearance, and thought, "That is plain talk, but it is, certainly in its main contentions, not only true but just, and will be tolerated and do good because the author is evidently a Southerner." Since hearing of the action of Emory College and of the criticism which led to it—none of which I have seen—I have twice reread Professor Sledd's paper, and see no reason to change my first opinion. Not only is the article, in all essential points, just, but it emanates from a proper source. Professor Sledd is a Virginian, an honor graduate of Randolph-Macon College, M. A. of Harvard University, and (till now) Professor of Latin in Emory College. Such a Southerner best knows the facts, can best understand the situation, and can, if necessary, most fittingly and effectively admonish his own people. Such a man had the right to speak his mind, on a grave and serious question, honestly and fearlessly; and if he seemed anywhere unnecessarily severe on Southern people, this might have been attributed to over-zeal in making his main points, and certainly merited no worse penalty than criticism.

But how was he treated? Some one raised a bitter clamor, recommending a coat of tar and feathers, and dismissal from the college; some papers then took up the cry; a few trustees and a timid president got scared; and a bare quorum of the Executive Committee met and accepted a resignation virtually forced from the Professor. The mob's bidding has been done, but unfortunately it is no longer the crowd but the college that stands committed to the policy of suppression of free speech.

I assume that this action does not represent the best sentiment in Georgia. I have too much respect for Georgia, know too many noble Georgians, to believe it does. Such people must realize that this brings reproach on the State and the whole South, and is detrimental to the best interests of education and of civilization. I am a Southerner, sprung from ancestors on both sides who have lived in Virginia and the Carolinas for at least a hundred and fifty years; and I have spent most of my life in the South. Because I love and believe in my native section, I insist that this action puts her to shame; and in the name of justice and fairness and honest conviction and free speech, I protest. I plead for the section rather than the man. A scholar of high character, who has the ability to express himself with such force and clearness, is not likely to suffer seriously in the long run, but he should have been allowed to stay at home and work where he can be most effective and is most needed.

I have naturally had opportunity to consult few Southerners on this matter, but the seven whom I have seen or heard from condemn the action of Emory College as strongly as I do. The most influential Georgian whom I know personally says: "While not agreeing *in toto* with the paper in the *Atlantic*, I hold its main contentions were correct and just. So thinking people here, who are right-minded, all agree. . . . It has grieved and humiliated me beyond measure. It discredits the college and the South." An eminent college president from another State, speaking for himself as well as for a distinguished preacher and a widely known business man—the three representing three different States—writes me: "We all agreed that the article was a strong presentation of an important subject, and that it contained nothing to warrant the criticisms of Mrs. Felton and others." These men represent the States of Georgia, South Carolina, Tennessee, Mississippi, and Missouri, and they all bear names known from one end of the South to the other.

Very respectfully,

Charles Forster Smith.

University of Wisconsin, Sept. 15, 1902.

## A SIGN OF THE TIMES.

To the Editor of The Nation:

Sir: As an instance of the activity with which the education of the young American girl is being carried forward, I have been much struck with the announcement, just made in the Springfield *Republican*, of the additions to be made this year to the faculty of Mount Holyoke College. When it is remembered that this is one of the less important of the women's colleges, and that the additions are among its younger teachers; and when it is also borne in mind that it is only a very few years since, in the men's colleges, a simple graduate was considered good enough to be put in at once as a tutor, it will certainly be admitted that this is a very remarkable sign of the times:

"The college faculty is somewhat changed and increased. Miss Nellie Neilsson, Ph.D., of Bryn Mawr, and reader in the English department there for three years, is to teach in the history department. Miss Mary E. Trueblood, A.M., of the University of Michigan and a student at the University of Göttingen, is to teach mathematics. Miss Bertha Young, A.B., of Vassar, who has taught at Wheaton Seminary, and has studied the past year at the University of Oxford, is the new member of the English Literature department. Mrs. Henrietta Fangel of New York is to be a reader in the English department. Mrs. Fangel has lived in Paris for seven or eight years, during a part of which time she devoted herself to art. . . . Miss Nathalie Wipplenger, Ph.D., of the University of Freiburg, will teach in the German department. Miss Minnie Graham, A.B., Mount Holyoke, 1900, will assist in chemistry. . . . Miss Alice Stevens will take Dr. Hinsdale's place as the head of the German department. Dr. Hinsdale is spending a year abroad. . . . Miss Effie Smith, head of the department of mathematics, and Miss Anne Young, head of the astronomy department, who studied last year at the University of Chicago, have returned to resume their work here."

And it is not forty years since the first well-equipped college for women was founded, and we discussed anxiously the question whether women were capable of taking the ordinary college course at all! Could Mrs. Willard and Mary Lyon—the pioneers in the work of women's education—see what results have followed from their early labors, they might well think that they had builded better than they knew. X.

## AS TO THE PRINTING OF DOCTOR DISSERTATIONS.

To the Editor of The Nation:

Sir: In the official publications of the University of Chicago there has recently appeared a doctor dissertation so utterly devoid of true scientific spirit that one is tempted to take it for an intentional parody on learning. The author professes to discuss "The Treatment of Nature in German Literature from Günther to the Appearance of Goethe's Werther." Instead of studying the causes which account for the well-known fact of a gradual deliverance from artificial conceptions of natural scenery and outdoor life during the period mentioned, he simply strings together, through more than a hundred pages, random excerpts from poems, letters, descriptions of travel, belonging to that period, and, on the strength of such "material," traces a "development" some of whose features are thus stated:

"There is no full appreciation of day and night until after the first half of the century, when the literature (Klopstock, Herder, Hölty), letters (Herder, Mlle. Lucius), and travels (Uffenbach, Forster) show unmistakable signs of the new attitude, of which Goethe was to become the best exponent." . . . "Brockes discovered the charms of autumn and winter, and in due time they became the subject of song (Klopstock, Claudius, Stolberg), despite the Anacreontic poets, who persisted in seeing only their disagreeable features. A similar change occurs in the letters of this period. Frau von Gottsched prefers working at her desk to sleigh-riding (1735), but Klopstock enjoys skating from sunrise to sunset (1768)." . . . "It is quite remarkable that, as early as 1722, Elisabeth von Orléans expresses her delight in seeing the phenomenon of a thunder-storm. Not until many years later do we find an adequate appreciation of its majesty (Lichtenberg)." . . . "As regards some of the men, the Anacreontics and Klopstock, for example, it may be added that, unlike Rousseau, they enjoy country life and nature best in the company of friends—a view of nature characteristic of the transition stage."

Now, there may be a question as to whether this sort of thing should or should not

be accepted as a thesis for the degree of doctor of philosophy. But there can be no question that, if it should become the practice of our universities to *print* such matter, the cause of true learning would seriously be injured. Let us be careful not to imitate the hack work of the ordinary German doctor dissertation. The best safeguard against this danger seems to lie in the principle, now practically adopted at Harvard University, of making the printing of a doctor thesis not an obligation, but a distinction. KUNO FRANCKE.

CAMBRIDGE, MASS., September 21, 1902.

# Notes.

Further announcements from G. P. Putnam's Sons are a "Hampshire Edition" of Jane Austen's Works; a third, revised, edition of Leslie Stephen's 'English Thought in the Eighteenth Century'; 'Songs of England's Glory,' compiled by William Canton and H. P. Robinson; 'A History of German Literature,' by John G. Robertson, Ph.D.; 'Mediæval India under Mohammedan Rule,' by Stanley Lane-Poole; 'The Administration of Dependencies,' by Alpheus H. Snow; 'Rhode Island: Its Making and Meaning,' by Irving Berdine Richman; 'Insurance and Crime,' by Alexander Colin Campbell; and 'The Lost Art of Reading,' by Gerald Stanley Lee.

'The Art of Success,' by J. T. Knowlton, will shortly be published by Frederick Warne & Co.

In John Lane's fall list we observe 'New Letters and Memorials of Jane Welsh Carlyle,' illustrated; 'Early Prose Writings of James Russell Lowell'; 'New Poems,' by Theodore Watts Dunton; 'With Napoleon at St. Helena,' translated from the memoirs of Dr. John Stokoe, as edited by Paul Frémaux; and 'A New Portrait of Shakspere,' by the author of 'The Elizabethan Hamlet.'

Frederick A. Stokes Co. have in hand 'Fairy Tales from the Swedish,' a novel collection, edited by Baron Gabriel Djurklon, and a Life of Mme. du Barry, by James L. Ford.

'The Private Soldier under Washington,' by Charles K. Bolton, and 'The Spirit in Man,' from the literary remains of Horace Bushnell, are to proceed from Messrs. Scribner.

Funk & Wagnalls Co. announce 'Kuloskap, the Master,' Algonkin legends and poems, by Charles Godfrey Leland and John Dyneley Prince; 'The Spirit of the Ghetto,' by Hutchins Hapgood; and 'Raymund Lull,' first missionary to the Moslems, by the Rev. S. M. Zwemer, D.D.

The author of 'Japanese Homes and their Surroundings,' Prof. Edward S. Morse, has composed a corresponding work, 'Glimpses of China and Chinese Homes,' illustrated from his note-books with facile pencil. Little, Brown & Co. will publish it.

An experienced worker in his chosen field, Mr. Archer Butler Hulbert, has prepared a series of fifteen monographs on 'The Historic Highways of America,' from mound-builders to canal-makers, which are now in process of issuance, at the rate of one every two months, by the Arthur H. Clark Co., Cleveland, Ohio.

Houghton, Mifflin & Co.'s new edition of Thoreau's 'Walden' will satisfy lovers of that classic and its author. The second (rubricated) title-page is a well-balanced composition, and there are numerous portraits of the Concord group, photogravure views of Concord River, Walden Woods and Pond, White Pond and other natural features. The letterpress has the customary excellence of the Riverside Press.

It is seldom that a work even on art is deservedly treated to such a sumptuous dress as has been given to the second edition of Mr. Langton Douglass's 'Fra Angelico' (London: George Bell & Sons; New York: Macmillan). We have nothing to add to our high praise of this admirable study rendered two years ago. It is not only the last but the weightiest word on its subject—authoritative and convincing. In its present form it is still not a dear book.

The associations with Fox How evoked by E. P. Arnold-Forster's name on the title-page of his 'Poems of Schiller' (Henry Holt & Co.) prove to connect themselves with the pedestrian side of Matthew Arnold's poetry. "I claim," says this translator, "no more for the following translations than that they are a tolerably faithful rendering of the original poems of Schiller." This is both modest and truthful: we get the content, but without the accuracy or style of a good prose version. The typography of this volume is open and attractive.

E. P. Dutton & Co. of this city are importing the excellent series of "Histories of the Colleges of Oxford" published in London two or three years ago by F. E. Robinson & Co. The volumes already received are 'Merton,' by Bernard W. Henderson; 'Balliol,' by H. W. Carless-Davis; 'Christ Church,' by Rev. Henry L. Thompson; and 'Oriel,' by David Watson Rannie. These books, taken together, exhibit very clearly certain prominent features in the history of English education. They show, for example, how various were the motives which inspired the founders of the different colleges—Merton being intended to counteract the influence of the friars, while Balliol was established as a school for the Franciscans. The important part which the colleges have played in the history of England is also plainly brought out. From the time of the Lollards down through the Renaissance and the Puritan period to the Tractarian movement, we see how closely Oxford has been in touch with the life of the nation. Such studies as those contained in this series are, therefore, of real value to the historian. It is interesting to note how the modern revolution in educational methods and ideals has left untouched many quaint survivals of past centuries. It would be possible to fill several columns with an account of curious usages taken from these four books alone. Another matter of interest to the general reader is the succession of remarkable personalities whom college life seems to have developed. In each of these volumes the sketches of heads of houses form quite a portrait gallery of character miniatures. Many of the particulars of the history of the college fabrics will, of course, appeal only to those who have associations with the buildings concerned, but this section occupies but a small proportion of the whole. The series may be heartily commended not only to the antiquarian and the historical investigator, but to the student of life and the friend of letters.

Mrs. Crawford's 'Raphael' (London: Catholic Truth Society) is the best monograph on that great artist that can be recommended to the general reader. He will find therein all that he need know, and the surest guidance to the appreciation and enjoyment of that sanest and noblest of old masters. We know no other work on the subject so balanced in judgment, so free from error, and so up to date. It sells for sixpence. With twenty illustrations, it would be more welcome at even four times the price.

The great merit of Prof. William C. Lawton's 'Introduction to the Study of American Literature' is its unconventional treatment. It is transfused with an ardent personality interested in its subject, and sure to carry the reader along. Seldom does the maker of such text-books bring himself upon the scene in such a human fashion as when Mr. Lawton speaks, apropos of Judd's 'Margaret,' of "my own vain struggles honestly to read this 'crude, careless, irrelevantly improbable' three-decker of a book." Others have had to struggle to lay it down except in its Utopian portion; but that is not the point. Mr. Lawton does not conclude dogmatically against the book, nor offer an opinion at second hand. It is precisely because his judgments are his own that we recommend his 'Introduction.' We will single out his portrayal of the Concord writers, and one might do worse than begin his reading here. It is odd to say that the fact of the "Threnody" being "actually in rhyme strengthens our belief that Emerson was at heart a poet." This is offset by Mr. Lawton putting side by side the prose germ of "Days" with the poem itself—a juxtaposition such as could be made, from the 'Vita Nuova,' of the sonnet "Tanto gentile" and Dante's introductory argument. Perhaps in either case, for pure effectiveness, one may still prefer the prose to the verse; but the verse was not needed to prove a "poet at heart."

If the way of him who would fit a Græco-Roman theme to modern moods is apt to be hard, the novelist who chooses Babylon as his field might expect his chariot-wheels to drive heavily. Mr. William Stearns Davis has gallantly attempted this feat in 'Belshazzar' (Doubleday, Page & Co.), and his equipment and success are all that could be looked for. If Babylonish manners have to be depicted mainly on general principles, and local color supplied in a measure by invocations of antique deities and large language from princes and prophets, at least buildings and the like are described after the best authorities, and a human element is supplied in the correct but troubled loves of Darius and Atossa, of Isaiah (second) and Daniel's daughter. Daniel himself supports his reputation as wise in counsel and firm in suffering; but in the younger seer, son of Shadrach of the furnace, athlete, conspirator, man eminently of resource and of affairs, one fails to recognize the unworldly idealist hitherto known only as the "Old Testament evangelist" and divinest of Hebrew poets. Darius is another spirited and indomitable figure; and if the exigencies of fiction make this hero twenty-five when by history he was barely ten, who shall blame the author? Jew and Persian are naturally friends, as worshipping the same God under different names. Belshazzar, though liar and scoundrel, can fight and die like a king. Cyrus is a potentate of another color: both these are

drawn from "careful study." The Book of Daniel is the basis of this work, and the famous writing on the wall its professed "background." The monarch's singular lenity in rewarding the old prophet (according to the Biblical narrative) for rating him like a schoolboy and announcing his coming fall, is made more plausible by the skilful interpolations of the romance.

'Rob and his Gun,' by William A. Linn (Scribners), aims to tell a good story and at the same time to give a pretty thorough course of elementary instruction in the use of the gun. Rob is a New York city boy, somewhat deficient in health, and is invited to make a long visit to a country cousin, when he gets his initiation into the ways of the sportsman. With the same cousin, a man of middle age, wide experience, and sportsmanlike tastes, he makes hunting trips to various parts of the country, picking up a bountiful store of information and experience by the way. The only fault to be found is that the supply of useful information is allowed to become somewhat burdensome to the story. The hunting expeditions described, the personal incidents related, etc., are vouched for as parts of the author's own experience.

The *Reader*, "an illustrated monthly magazine of literature," will appear next month in this city, and, as the engaging prospectus reads, "will stand out as the leading literary journal in America." This aim is to be attained by having books criticised, "not, except in special instances, by professional reviewers, but by enthusiastic, unprejudiced readers." Even this department will constitute but a single feature of the promised feast.

The first volume of "Annals of the Royal Observatory, Edinburgh," edited by Ralph Copeland, Astronomer Royal for Scotland, contains three papers, the original observations for which were made at Lord Crawford's observatory at Dun Echt before the outfit of that institution had been transferred to the Edinburgh Observatory. Two of these papers, by Prof. L. Becker, contain the results of an attempt to turn to account the relatively large aperture of the Dun Echt transit circle in determining the positions of nebulæ and certain small stars near the pole which are beyond the reach of smaller meridian instruments. The observations of 217 nebulæ embodied in the first of these articles afford material for a comparison between the personal equations of different observers; and the second, "Positions of stars within one degree from the north pole, and of three fundamental pole-stars," is valuable on account of its accurate determination of the position of the celestial pole at the epoch of the observations. Mr. J. Gerhard Lohse contributes a description of his new double-image micrometer, which consists of a small heliometer with a Barlow lens in front, attached to the eye-end of a refracting telescope. The loss of light in this instrument, in which the object-glass of the heliometer intercepts a broad cylinder of parallel rays, is much less than in Airy's micrometer, where the separation of images takes place near the apex of a cone; and the value of the scale is almost absolutely uniform in all parts of the field. In a fourth paper, "Contributions to the theory of the sun," Dr. J. Halm displays the principal results of his researches into the causes of the periodicity of solar phenomena, and deals with the application of an extremely simple principle to the explanation of some of the exhibitions of dynamical energy on the surface of the luminary.

The colossal fortunes that are now not uncommon inevitably suggest devices for their disintegration, one of which is explained by Mr. E. H. Farrar in an address delivered at the University of Virginia and published by the press of that institution. Residing in Louisiana, Mr. Farrar sees, in the limitations of testamentary disposition imposed by the Civil Law, the means of effecting a more equitable distribution of wealth. "Forced heirship," he is convinced, would ere this have resulted in the dispersion of both the Astor and the Vanderbilt fortunes. He would forbid all settlements, trusts, and life estates, and let every man's property pass on his death in equal shares to his children. It must be said that Mr. Farrar's apprehension that real property in the city of New York is "passing absolutely out of commerce," seems unnecessary, and his complaint that the general welfare is prejudiced by the concentration of wealth is rather indefinite. Mr. Carnegie's fortune is undergoing dispersion, and the same is true of the estates of many rich men. To introduce the French system of entail would certainly check the practice of making gifts for public uses in which our country is preëminent. The introduction of inheritance taxes, or death duties, seems more likely to lead to the results desired by Mr. Farrar than the measure which he proposes.

The need of direct steamship lines to Africa for the purpose of developing our commerce is strongly urged in the Consular Reports for September. New Zealand, Canada, and even Argentina have established, or are about to establish, a monthly service to South Africa, while we send only an occasional freight steamer. There is an interesting account, with diagrams, of the chain system of propelling steamers on the upper Elbe, where there is a rapid and strong current. By means of it "a steamer can tow four to six barges, containing 1,200 to 1,500 tons, at a speed not attainable by powerful side-wheel towboats, with about one-third the power and a corresponding saving in fuel." Our Consul-General at Rio contributes a statement as to what is being projected to provide an uninterrupted water-way from the country about the headwaters of the Amazon to the Atlantic. This is a region so rich in agricultural and mineral resources that Alexander von Humboldt said of it: "Here sooner or later the world's civilization will be concentrated." An unexpected gleam of light, as it were, comes from Turkey in the brief notice of the extensive Government system of agricultural banks to furnish small loans to farmers. At the close of the financial year 1899, for which the report has just been issued, they were 868 in number and had loaned over ten million dollars; 90,536 individuals having received nearly three millions during the year, "an average of $29 each loan." Lace-making as a home industry has had a remarkable development in Paraguay. "In one town of 8,000 or 9,000 inhabitants, almost all the women and children, and many of the men, make lace collarettes, handkerchiefs, and ladies' ties. Another town makes lace embroidery, and others drawn-thread work, such as centrepieces, tray mats, tea cloths, doilies, etc. The designs used in making the lace are taken from the curious webs of the semi-tropical spiders that are so numerous here. On this account it is called 'ñanduti,' an Indian name which means spider-web."

"A laboratory in which educational experiments are being tried on a great scale," is the term applied to this country by Sir Joshua G. Fitch, in his appreciative introduction to volumes x. and xi. of "Special Reports on Educational Subjects," presented by the Board of Education to Parliament (London: Wyman & Sons). And it must be admitted that the twenty-seven articles, covering over eleven hundred pages, may convey to our English cousins a very fair idea of the remarkable educational activity in which we are engaged. Only six or seven of the papers are by American contributors, the remainder being by English men and women especially fitted, by observation and study, to report on their respective subjects. Readers on this side cannot fail to be interested in, and enlightened by, these painstaking studies of intelligent outsiders; and the variety of subjects discussed is so great that every American teacher will find something of special concern to him. In spite of the good judgment and diligent care of the various writers, the "Reports," we are sorry to say, are not reliable in every detail. Among the appendixes to the paper on "The Training of Teachers in the United States," for instance, we notice an extract from the 'Report of the Commissioner of Education for 1898-99,' volume ii., where, unfortunately, the compilation is made from a "Register" of the institution in question of the year 1889-90. From this compilation, by an unhappy chance, the English writer chose a portion which, misleading even in its connection with other matter, becomes doubly so when taken independently. It thus happens that, instead of giving the actual curriculum of the institution, the extract quoted shows about one-third of the work done thirteen years ago. *Habent sua fata libelli.*

—Mr. Charles Francis Adams's 'Lee at Appomattox, and Other Papers' (Houghton, Mifflin & Co.) has been augmented, in a second edition, by his Chicago Phi Beta Kappa address, "Shall Cromwell [*i. e.*, Lee] have a Statue?" The independent issue of this address having been exhausted, resort must now be had to the new volume. In his preface, Mr. Adams reviews the reception which his title paper met with, and avows distinctly its design "to influence, if possible, the course of events then [October, 1901] taking place in South Africa, calling attention to the example of Lee, thirty-six years before, under not dissimilar circumstances." He has reason to think that this parallel had its effect as an argument for capitulation employed with the Boers by "influential members of the British Cabinet," through the medium of Lord Milner officially instructed. The design of the Cromwell address, on the other hand, was to test the abatement of our civil-war passions since Lee's surrender; and Mr. Adams is not discouraged by the result, which was "undeniably instructive," though he found him-

self misunderstood. He would, for himself, make the excuse for a monument to Lee at the Federal capital to be that, unlike Jeff Davis, Lee was "reconstructed," accepted with dignity the verdict of the appeal to arms, took a hand in the rebuilding—"went home; and, thenceforward, silently minded his own business." Statues, like books, have their fates, and there is no saying that the Lee memorial may not arise on Mr. Adams's pedestal. Action, and costume, and spectacular renown, however, besides being undeniably more favorable to the sculptor's art than the passive virtues, always tip the scale with the multitude in favor of the soldier as compared with the philanthropist or the plain good citizen. The chances are a thousand to one that a statue could be subscribed for to honor Bishop Leonidas Polk, fighting for the Christian right to own and wallop niggers, sooner than to commemorate the Rev. John G. Palfrey's demanding his inherited share of a Southern relative's estate in slaves in order that he might emancipate them.

—In May last we noticed No. IX. of 'The Georgian Period,' the excellent publication of the American Architect and Building News Company, of Boston. It was then announced that the work would run to twelve parts; and now, on the cover of No. X., there is a confirmation of that statement, followed by a table or analysis (though without references to pages or to numbers) of the principal contents of the whole work. The New York City Hall; Faneuil Hall and the State House in Boston; three well-known buildings in Philadelphia—with the statement following, "and others"—make up the list of public buildings. Eleven churches are named, seven "important houses" of dates between 1636 and 1743 are listed, though indeed there are many more than this; and, finally, there is mention of the details given with especial care—67 porches and doorways, 21 staircases, and so on. It is, indeed, a valuable work, for the historian, scholar, and reader of American literature as much as for the student of architecture. The present number contains four papers, occupying thirty-five of the small folio pages, but much intermingled with text-illustrations. This text consists of four essays, but all four deal with Charleston, and with "The South Carolina Homestead," or with Southern colonial work. It is a real study of the art of the Southeastern States at a time when there was an art of decoration really at home there—an art derived from Europe, to be sure, but deeply rooted in the Southern lands of the United States. There are, then, 47 plates, giving, perhaps, twice that number of separate illustrations. Of the hundred and twenty pictures, more or less, some are half-tones, as many are from carefully made drawings. Especially attractive are the numerous views, inside and outside, of Charleston houses, verandahs, porches, doorways, and three views of the "Picture Paper Room" of the house called Friendfield, at Georgetown. This is an amusing as well as a seriously meant number, and assuredly the work, changing more or less as it goes on toward the close, does not decline in interest.

—Mr. W. H. Duignan's 'Notes on Staffordshire Place-Names' (H. Frowde) is an excellent piece of work in a difficult field. The study of place-names requires, besides the rare quality of common sense, three special articles of equipment—minute knowledge of the infinitesimal topography of field, hill, farm, and manor; familiarity with the records; acquaintance with philological fact and method. Antiquaries and county historians are usually untamed philologists, and linguistic scholars are seldom well-furnished with local information. Mr. Duignan seems to be a remarkably good antiquarian, and his philological outfit is satisfactory. Besides, he has had the advantage of criticism from Professor Skeat, and from Mr. W. H. Stevenson, of Exeter College, Oxford, the highest authority on English names, whose ardently expected *Onomasticon* is only too long in coming. Modest as the volume is, and limited as is the field of investigation, we do not hesitate to say that it deserves a place among the reference books of every student of our language. Historians also will find it well-nigh indispensable. Of course, there must be errors among so many details, but they in nowise impair the general excellence of the work, and those persons best qualified to detect them will be least inclined to magnify their importance. Incidentally, the 'Notes' abound in curiosities of nomenclature and verbal corruption which will interest anybody in a leisure hour. The book is well-arranged and beautifully printed.

—Not long ago we reviewed the first volume of Mr. Oman's 'History of the Peninsular War.' In close connection with it may be mentioned another recent work, which deals with the campaigns of Wellington in Spain. This is the 'History of the Second Queen's Royal Regiment, now the Queen's (Royal West Surrey) Regiment,' by Colonel John Davis, the Honorary Colonel of the Third Battalion of the said regiment (E. & J. B. Young & Co.). It is a large and expensive book, printed on heavy paper and illustrated with many full-page plates. As belonging to the class of regimental annals (and the regimental annals of another country at that), it can hardly expect to secure a very wide circulation on this side of the water; but as being based on a wide range of state papers, it deserves at least to be known and used by students of the Peninsular War. The period covered by Colonel Davis in the present (fourth) volume is 1800-1837, a time when Great Britain was engaged in no great war save that with Napoleon. The Second Queen's Royal Regiment did not take part in the Waterloo campaign, but, besides helping to capture General Menou's army in Egypt, it saw active service during the whole six years of the Spanish War, and suffered from the horrors of the Walcheren expedition as well. Both by reason of its dimensions and its style, Colonel Davis's narrative belongs to the technical literature of warfare. It is apparently an accurate account of the regiment's movements throughout a period of great difficulty and danger, though one would have no means of checking its most important statements without spending three months at the Record Office. The eulogy of officers and men is not extreme, while the general histories of the struggle with Napoleon have been used to good advantage. The concluding volume of the work is specially planned to cover the reign of Queen Victoria.

—The Japanese in Formosa, and their success as colonizers, are treated with discriminating ability in a paper ("Formosa under the Japanese") read before the Royal Scottish Geographical Society by the Rev. W. Campbell, long resident on the island, and the author of several scholarly works. The contrasts between the old Chinese Administration, under which the author lived two decades, with what is seen to-day, suggest fairy tales rather than actual realities. Instead of "sick and wounded Chinese soldiers left to die like dogs by the roadside," are now public hospitals, schools, prisons, not only "thoroughly up to date" in science and cleanliness, but under "the operation of high intelligence, firmness, and even of mercy in grappling with evils which are found amongst people of every land." The reforms in land tenure, municipal hygiene, and penology are being steadily carried out in the three prefectures, and the resources of the island are so well exploited that the printed Government reports and the monthly and fortnightly and the daily newspapers published in Formosa "make up a far more valuable bibliography than anything which has been produced by Chinese and European writers." One hundred post-offices, 122 schools of all grades, three submarine cables, a railway from Kelung to Takow, and 800 miles of ordinary public roads made in one year, eleven light-houses and four meteorological stations show some of the returns on the 150,000,000 yen already invested. Formosa is now financially independent and supports itself. Despite frequent outbreaks, steady progress is made in reducing the head-hunting savages to obedience and order. Much of the mutinous spirit of the Chinese seems to be associated with the cult of the pirate-chief, Koxinga, who expelled the Dutch in the seventeenth century, and whose temple was erected by Chinese after the Japanese expedition of 1874. Whereas Luchmans were, of old, rarely seen in Formosa, now "their well-stocked shops are to be found in all the more important centres of population." As colonizers in Korea, the Japanese control two-thirds of the shipping, have seven consulates and eighty mercantile houses, besides banks, clubs, hospitals, municipal councils, chambers of commerce, etc. From this and from his long experience in Formosa, the author concludes that "the capabilities of the Japanese in their quest for adventure and wealth across the sea" are very high.

## TWO TRANSLATIONS FROM THE GREEK DRAMATISTS.—II.

*The Prometheus Bound of Aeschylus*, rendered into English verse by Edwyn Robert Bevan. London: David Nutt. 1902.

*The Comedies of Aristophanes.* Edited, translated, and explained by Benjamin Bickley Rogers. (IX., The Frogs. X., The Ecclesiazusae.) London: George Bell & Sons; New York: Macmillan. 1902.

The sense of failure which must beset the best-equipped translator of Aeschylus need not necessarily pursue the attempt to produce some faithful transcript of Aristophanes. Apart from his lofty thought and sovereign style, the diction of Aeschylus is often daring with strange constructions and new-minted words which recall the untranslatable audacities and felicities of Shakspere. But the dialogue of Aristo-

phanes, as must be expected in comedy, has descended to the level of pure prose, a style clear, sparkling, delicious, adequate for every flight of the poet's wit and fancy, but free from the eccentricities and tortuous euphuisms of our Elizabethan period.

Aristophanes, it is true, has the right to coin as many new words as he chooses, and license to let off verbal squibs and rockets to the top of his bent; but this right inheres in the genius of the language, it still inheres in that happy vehicle which Mr. Vikelas employed for his masterly renderings of Shakspere into modern Greek. And as this coinage is perfectly natural and intelligible, it is only in certain extreme and bizarre instances that the English need despair of reproducing the general effect.

In another respect the translator of the Greek comedian has his path made smooth for him. Aristophanes is a poet capable of the most graceful and captivating flights of fancy and imagination. He resembles Shakspere in the immense and unfailing exuberance of his thoughts and ideas, in his infinite jest, in his airy and gracious lyric gift; but all this is expressed in the simplest and most fluid manner, without the slightest tendency to that complex thought and pregnant expression which warns off the translator from "King Lear," for example, even more than from the "Agamemnon" or the "Choephoræ."

There is, therefore, nothing appalling or superhuman in the task which is offered by the range of ideas or of expression of Aristophanes. Among Englishmen, indeed, it has proved seductive to several genuine men of letters possessed of ideal qualifications for the undertaking. The wonder is that, after the extraordinary achievement of Frere, any other should be enticed into rivalry; the wonder is greater that another should, if that be possible, surpass him. But it is quite superfluous to make comparisons. Mr. Rogers's great work, of which this is only a single volume, stands entirely on its own remarkable merits. It is the kind of work which, in its thoroughness, its heartiness, its many-sidedness, could be undertaken only by the leisurely scholar and littérateur, in the most sympathetic spirit and *con amore*. We shall seem to exaggerate if we say roundly that we cannot conceive of its being better done. If the ghost of the great comedian could rise from his grave and speak English, he might well bow his acknowledgments for such a tribute and such an interpreter. The force and function of the translator can, indeed, no further go. It is hazardous to talk, with Mr. Bevan, of the "final and permanent translation"; but until the English tongue changes, and Mr. Rogers's manner becomes old-fashioned and quaint to readers of the next century or the century after, there will be no place for any successor, unless, indeed, he write for his own pleasure and amusement. Fielding's style and vocabulary are still sufficiently modern and new-fangled; and Mr. Rogers has drawn his style and vocabulary from the best patterns and sources. It is, indeed, itself a pattern of the most delicious conversational idiom, free and fluent, but never slangy nor slipshod.

This, of course, sounds like hyperbole. The proof of it must lie with the reader, and that reader should also be a scholar. None but the scholar will understand what difficulties Mr. Rogers has triumphed over, with what go and dash and ease and mastery. He is limited necessarily by the structure of his native language; but the limitations make no appearance. He sticks at nothing. Even the original metres are fairly represented in rhythms so flowing and natural that they seem to the manner born; and those mountainous compounds which Aristophanes piles up in his maddest frolics he jumps at lightly with the courage of a rider who has never met a fall. As a *tour de force* we quote this closing invitation from the Ecclesiazusae:

*Chor.* Then why so long keep lingering here, nor take.
These little ladies down? And as you go,
I'll sing a song, a Lay of Lay-the-dinner.

Now must the spindleshanks, lanky and lean,
Trip to the banquet, for soon will, I ween,
High on the table be smoking a dish
Brimming with game and with fowl and with fish,
All sorts of good things.
Plattero-filleto-mulleto-turboto-
-Cranio-morselo-pickleo-acido-
-Silphio-honeyo-pouredonthe-topothe-
-Ouzelo-throstleo-cushato-culvero-
-Cutleto-roastingo-marrowo-dippero-
-Leveret-syrupo-gibleto-wings.
So now you have heard these tidings true,
Lay hold of a plate and an omelet too,
And scurry away at your topmost speed,
And so you will have whereon to feed.

And, as a specimen of sprightly dialogue more fit for human nature's daily food, we add this gossip between two slaves, Aeacus and Xanthias, carried on behind their masters' backs:

*Aeac.* By Zeus the Saviour, quite the gentleman
Your master is.
*Xan.* Gentleman? I believe you.
He's all for wine and women, is my master.
*Aeac.* But not to have flogged you, when the truth came out
That you, the slave, were passing off as master!
*Xan.* He'd get the worst of that.
*Aeac.* Bravo! That's spoken
Like a true slave; that's what I love myself.
*Xan.* You love it, do you?
*Aeac.* Love it? I'm entranced
When I can curse my lord behind his back.
*Xan.* How about grumbling, when you have felt the stick
And scurry out of doors?
*Aeac.* That's jolly, too.
*Xan.* How about prying?
*Aeac.* That beats everything!
*Xan.* Great Kin-god Zeus! And what of overhearing your master's secrets?
*Aeac.* What? I'm mad with joy.
*Xan.* And blabbing them abroad?
*Aeac.* O heaven and earth!
When I do that, I can't contain myself.
*Xan.* Phœbus Apollo! clap your hand in mine,
Kiss and be kissed; and prithee tell me this,
Tell me by Zeus, our rascaldom's own god,
What's all that noise within? What means this hubbub and row?
*Aeac.* That's Aeschylus and Euripides.

Mr. Rogers's work differs from that of Mr. Bevan in that it furnishes a complete apparatus for the study of his poet, whether to the scholar, or to the man of leisure who still tastes his literary pleasures from the original fountains, and scorns the second-hand uncertainties of translations. Every necessary information and instruction is furnished in leisurely detail, in the introduction, the very full footnotes and the appendices. Questions of text are discussed, as well as questions of date and fact; and a complete furniture is given to elucidate the antiquities and the often hopelessly obscure allusions. No author needs this elucidation more than Aristophanes. Much that he has written is of that human and universal quality which will remain fresh and sparkling, with the perennial hues of genius and the surprises of wit, so long as man lives on the planet; much is now antiquated and dependent on the rush-light of the scholiast. To laugh by the aid of a commentator is a painful and fatiguing exercise. Mr. Rogers makes it as little fatiguing as possible by his learning, his insight, and his discrimination; he is the ideal cicerone through these obscure and forgotten byways. Wherever he presents a novel view it will be found worthy of attention. Two emendations of his own in the text of the "Frogs," τὸν θρῆνον ἀκούσας, l. 1028, and μελοφορεῖ πορνῳδικῶν, l. 1301, have the merit of offering a minimum of departure from the manuscript, and of yielding a perfectly satisfactory sense. There are several passages into which Mr. Rogers brings light and reason while previous editors have certainly multiplied difficulties.

Mr. Rogers has, of course, a word to say in his introduction to the "Frogs" as to the weight and meaning of the attack on Euripides. He quotes Professor Jebb's exposition of this discussion, and he quotes also in a footnote the remarks of Professor Butcher in his 'Aristotle's Theory of Poetry.' We are now happily a long way off from the day when Aristophanes was taken as a scientific guide to the history and social ideas of his time; but it is still possible to take him quite too seriously. It is well to remember that, when he lampoons a character, it will not do to trust him out of our sight; we may take him as a witness just so far as known facts support him, and no further. We know, for example, pretty clearly what sort of a personage Socrates was; we see what sort of a portrait Aristophanes draws of him. Knowing both, we must assume either that the comedian did not understand the philosopher, or did not care to understand him, or did not expect to be taken seriously in his representation. Why, indeed, should he be taken seriously? His primary business was to make fun—to hold up to nature the kind of tricksy mirror that is expressly designed to distort and to amuse by distorting. How much, then, do the attacks on Euripides amount to? Can we imagine that he had seriously weighed the ethical influence of that great poet upon women, for instance? When he inveighs against the Sthenobœas and the Canaces, whom we know only by hearsay, could we gather the slightest hint of that gallery of beautiful and noble portraits, the Macaria, the Alcestis, the Iphigeneia, which enshrined the highest ideal of the sex since the Iliad and the Odyssey? In short, from such a travesty we could never surmise the existence of the author of great plays like the "Medea," the "Alcestis," and the "Bacchantes."

There is one barrier set to an exact transcript of his author which Mr. Rogers himself cannot overcome, and that is the limits prescribed by decency and good manners. Fortunately for us, these prohibit a scientifically accurate reproduction of certain passages and even of whole plays, such as the "Lysistrata" and the "Thesmophoriazusæ." All the more must we admire the delicacy and dexterity with which he glides over slippery places and conveys the equivalent of a *risqué* situation without improper innuendo. Can we draw any inferences as to the real state of society which permitted and enjoyed such representations? In answering this question we must remember the inconsistencies and illogicalities which dwell comfortably side by side in the human breast, and permit its practice often to rise higher than its profession or its religions. In the first place, the license

of Greek comedy was a tradition—a survival of rude festivals at which religious custom sanctioned an indulgence in drunken frolic and a reversion toward the frank indecency of the cave-dweller, or the ape. The Athenians unquestionably liked their tragedy clean, and, as a matter of habit, apparently, they liked their comedy with a spice of dirt. Mr. Rogers thinks that under the régime of the old comedy they even insisted on their pound of dirt; and naturally they got what they demanded. He points out that when Aristophanes gave them the "Clouds," or the "Birds"—delightful and fascinating plays to the modern taste—the prize was withheld. This fact is rather significant, though to insist that it was withheld for this reason would be going too far; we cannot guess satisfactorily, for instance, why the greatest play of Sophocles was defeated by Philocles. At any rate, we find Aristophanes promptly retrieving his error and furnishing his due measure of grossness and buffoonery.

Mr. Rogers is positively of the opinion that women were not present at the representations of the Old Comedy. This conclusion he draws, not from *à priori* probability, but from a dispassionate and searching reëxamination of the evidence afforded by the plays themselves. They *might* have been present, he admits; nothing that shocks our modern notions in such matters should militate against the bald facts. The facts seem to be that while, in all the comedies, the personages on the stage make frequent appeals to the audience, and address many a "gag" to individuals, there is nowhere the slightest indication of the presence of a woman among the spectators. In Shakspere, as Mr. Rogers points out, the case is just the contrary. Seldom as he addresses his audience, he makes it quite clear that women as well as men were among the spectators.

Each of these books, in typography, margin and general makeup, appeals to the aristocratic tastes of the book-collector, and to the old-fashioned scholar who likes to preserve worthy matter in a worthy dress. Mr. Rogers's annotations may never be reproduced in a cheaper form; but his introductions and translation, as well as that of Mr. Bevan, will certainly prove useful to a large circle of readers, and will in time, without doubt, be reprinted in more accessible shape. If we are not mistaken, they will often be reprinted, and will remain a permanent addition to English literature, as well as to the multiplying aids for a better understanding of the ancient classics.

---

*The Mid-Eighteenth Century.* By J. H. Millar. [Periods of European Literature.] Charles Scribner's Sons. 1902.

That portion of the eighteenth century which is the field of this book, from the death of Louis XIV. in 1715 to the death in 1778 of Voltaire, is, at first sight, an unpromising piece of territory for one who, to an enthusiasm for scholarship, unites the velleity, common to authors, of being read. It is a period alien to the sympathies of many, unrelieved by the Augustan survivals which distinguished the first decades of the century, and little stirred as yet by the romantic quickening which made memorable its close. Mr. Millar is to be congratulated upon producing a study of European Literature in those years which is at once sound in substance, genial in tone, and engaging in manner, fulfilling thus the tradition of an admirable series. If a considerable part of the ensuing comment be given up to friendly differing with Mr. Millar, it will be no detraction from the merit of an excellent book, but rather an assertion of the inalienable rights of individual judgment. This method of procedure may serve effectually to resume Mr. Millar's work, while it makes for that generous balance of impression nowhere more important than in the history of literature.

The first chapter is justly given up to the presiding genius of that age of reason and *éclaircissement*, Voltaire, and to his immediate circle of henchmen. Mr. Millar writes of him with unexceptionable discretion, doing full justice to his energy and lucidity of mind, ready to smile at his very obvious inconsistencies, yet prompt with wholesome admiration for his good sense and for that peculiar timeliness of talent which was, after all, the root of Voltaire's prodigious repute, As Mr. Millar says: "Progress for him meant neither anarchy nor a return to the backwoods. . . . So we part from Voltaire, his wise maxim, so well suited to an age of intellectual doubt and distraction, ringing in our ears, 'Il faut cultiver notre jardin.'"

In perusing the chapter upon "The Encyclopædia and the Reaction," some readers will surely be tempted to pause at one point and make play in behalf of a great and much maligned English writer. Mr. Millar remarks, with a fine air of casualness: "If Lord Macaulay's account of the Baconian philosophy happened to be correct, Diderot must be allowed to have caught the spirit as well as the form of his model with great success." Macaulay's famous characterization of Baconianism in opposition to Platonism may indeed be a little over emphatic, but we believe that its substance is strictly true. The core of the passage was in these sentences: "The aim of the Platonic philosophy was to exalt man into a god; the aim of the Baconian philosophy was to provide man with what he requires while he continues to be man. . . . The former aim was noble, but the latter was attainable." It is often in the conception of his near followers that the true and efficient "spirit" of a man's philosophy is most apparent. In the minds of the fervent Baconians of the seventeenth century, who founded the Royal Society in the endeavor to realize their master's Atlantian dream of "Solomon's House," tangible, sublunary service was the aim and ideal, precisely as it was the informing spirit of Diderot's labors.

We may pass the remainder of this chapter, with its deep British antipathy to Rousseau, without remark, and come to the section upon philosophy and theology in England, which is notable for its excellent appreciation of Dr. Johnson. We are among those to whom, as Mr. Millar says, "Johnson's mode of thinking appears infinitely less depressing than the heedless optimism of many of his contemporaries, or the more pretentious optimism of a later age, which professes to make the most cheerful deductions as to the condition of the universe from the circumstance that the lark is on high, or the blade dew-pearled." We are grateful for this defence of the sombre, but sincere and unaffected outlook of the Leviathan upon life, and for the timely exposition of the virtues of his manly prose. We may query in passing whether 'Rasselas' is, as Mr. Millar affirms, "the only really successful experiment in the *conte philosophique* in English." What is 'Dr. Jekyll and Mr. Hyde'? What is 'Vathek'? But the most important and novel point in this appreciation of Johnson is the suggestive notion that he was the father of the best modern belletristic criticism. As our author says pregnantly: "This great moralist committed himself to the proposition that the primary business of poetry is, not to edify, nor to propagate sound moral or political doctrines, but to please."

With Mr. Millar's chapter on Prose Fiction we have no general quarrel. He goes about in that mimic world of boisterous doings, facile tears, and delicious shudders, with very commendable poise and a certain appreciative reserve. In reading the section on Le Sage one wonders if "cruel, callous, and cynical" is quite the most fitting characterization of "the true picaresque strain." A little further along, some readers will surely feel that Mr. Millar has been none too accessible to the merits of Smollett and Sterne. With all his indelicacy and lack of moral sense, Smollett was the best writer, the surest craftsman, among the novelists of his age. More than that, he was, at his best, the most searching and convincing creative artist of them all. In the death of Commodore Trunnion, for example, there is a perfectly fusing heat of imagination, a kind of large rhythm, that make it one of the great death scenes of all literature, unparalleled and unequalled by anything in its age. It seems, therefore, a little unfair to portray Smollett as merely an effective reporter of squalid and unlovely lives. He was that, indeed, but he was something more. As far as Sterne is concerned, it is, perhaps, enough to say that Mr. Millar is no Shandean.

It is true that the mid-eighteenth century was essentially a prosaic age, yet, in view of the great amount of verse that was produced and the excellent market that prevailed for it, one is somewhat surprised to get half-way through the book before he hears any mention of poetry. Although somewhat belated, the chapter, when it does come, is admirable. At a single point it provokes dissent: surely it is uncritical to class that noble English poem, Blair's 'Grave,' with Young's 'Night Thoughts' as "not despicable," but still unsuccessful pieces of sentimentalizing in the *macabre* vein. The judgment is true of Young, but Blair was of different metal. He was no sentimentalist, but an earnest student of nature, blessed with a rich and true poetic faculty which, but for his early death, would have led him far. The 'Grave' seems to us quite apart from the eighteenth-century tradition, which produced the 'Night Thoughts' and the 'Meditations among the Tombs.' It has a solemn reality of tone, a grim, sad-eyed humor, a sweep of imagination, a rude power of style, which sharply distinguish it. In short, it is a *meditatio mortis* of a type perennial in literature, and Blair is to be classed not with Young and Hervey, but

with Jorge Manrique, Sir Thomas Browne, and Leopardi.

We must hurry over the well-considered chapters devoted to the Drama, History, and Political Economy, Memoirs and Correspondence, and Journalism and Criticism, only pausing to concur in Mr. Millar's amiable exhortation: "Instead of vilipending Walpole because his temperament differed in certain important respects from that of the seventh Earl of Shaftsbury or of the late Mr. Gladstone, let us rather take him as he is and be thankful for him."

A brief final chapter upon "The Rest of Europe" is quite adequate to state the inconsiderable additions made to belles-lettres in this period by Germany, Holland, Italy, and Spain. In a Postscript, Mr. Millar writes very intelligently of the general tone of his period, with its acquiescence in the order of things, its cleverness, its circumscribed sanity, disturbed only by the hot earnestness of the few like Rousseau. In conclusion, he wisely advances certain considerations which it is well to keep in mind in studying any temporal section of literature, but which are particularly appropriate to the mid-eighteenth century:

"We are now in all conscience sufficiently far removed in time to take a cool and impartial survey of the age whose proudest distinction it was once thought to have been to herald the advent of the wonderful nineteenth century. The men and women who flourished during its course are interesting, not because of the peculiarity or richness of their costume, but because they were men and women like ourselves. If they were not the perfect and enlightened beings that they sometimes imagined, neither were they the blockheads and the scamps, the humbugs and the *poseurs*, which their descendants have sometimes professed to esteem them."

---

*Ten Thousand Miles in Persia*, or Eight Years in Iran. By Major Percy Molesworth Sykes (Queen's Bays), H.M. Consul, Kerman and Beluchistan. New York: Charles Scribner's Sons. 1902. Pp. xvi., 482; maps and illustrations.

*Persian Children of the Royal Family:* The Narrative of an English Tutor at the Court of H. I. H. Zillu's-Sultan, G.C.S.I. By Wilfrid Sparroy. John Lane. 1902. Pp. xii., 352; illustrations.

There can be little doubt of the substantial truth of Major Sykes's claim to have travelled further and seen more in southern and eastern Persia than any other European of this generation. Looking at his map, crossed and recrossed by route lines, the time limit, to all appearance, might be safely extended. Apart from mere entrances and exits through Resht and Astrabad, Maskat and Karachi, his line has gone out from the Karun River with its concessions and complications (international and fanatical) to the fertile sands of Sistan—land of romance and reality, rich with memories of Rustum and the 'Shah-nama,' and with possibilities as a granary of Persia—and from Yezd, with its silk-looms of Marco Polo's time and earlier, to Makran and the track of Alexander. To and fro through the land Major Sykes has gone, an indefatigable wanderer of the English army type which begins in sport and the desire to go where no one else has been, and is gradually caught by the lures of geography and history and drawn into paths of scholarship. A scholar, in the exact sense, he probably would not profess to be. He quotes his Virgil and Horace and Aeschylus, and in the valley of the Rion remembers the *Argo*, but it is in the self-respecting English fashion which requires of an educated gentleman such signs of the *literæ humaniores*. Yet when once the fascination of tracing the steps of Alexander and of Marco Polo had seized him, it is easy to see how the instincts of research awoke. He took his Greek texts and his Colonel Yule, and worked out his own conception, definite and clear. Now it is laid down in his book, and the scholars who sit at home at ease have to take or leave it.

At such definite topographical questions it would probably have been well if he had stopped. But it is intelligible enough how, from these beginnings, a general interest in the origins of the places which he felt that he knew better than most should have been aroused. So we find scattered through his book a series of little town and tribal histories, interesting and probably accurate enough, but done with insufficient means and better left to the men in libraries. Major Sykes, unfortunately, is still at the stage of the mediæval chroniclers, and must begin at the very beginning of things. It is true that, instead of Moses, he takes Maspero and Rawlinson, and instead of Virgil and Ovid he takes Firdawsi, but these appear to have led him straight into such unhappy equations as Baluch=Belus and Kussun=Cush. Further, when historical times are reached, there are too few references to authorities, and we are left in the dark as to the basis and trustworthiness of much. Blank remarks about having gathered information from some MS. histories of Yezd, for example, do not help. Yet against this, too, is to be balanced that Major Sykes has evidently worked hard and carefully at Persian and its literature, and has not trusted, as do so many travellers, to the second-hand. He entered the country—fortunately, he thinks, and probably rightly—with a very slight knowledge of Persian as taught in India. He discovered at once the gulf which had spread between that survival of mediæval Persian and the Iranian tongue of to-day. Then he set to work to Persianize himself, and has plainly had a full success. Sadi, Hafiz, and Firdawsi have become his companions, and the elaborate language of diplomacy is easy to him. The reproach that so few Englishmen really learn Persian so as to be decently courteous in it is lighter for his labors.

And so, too, in the same queer, casual, sporting, English fashion he fell into his consular work. When shall we be able to find men who will give themselves unpaid to the service of their country, and take it all as being perfectly natural? Cranks, religious and otherwise, we have had, and men with various axes to grind, but public work for the fun of it seems to be a product only of the English upper classes and British imperialism—think what we may of either. As consul his duties again carried him over the country, and again everywhere a white spot on the map was a red rag to him. More of these he has filled in than can be indicated here. Outstanding are the frontier of Beluchistan, the Lake of Helmund in Sistan, the limits and conditions of the Lut, or great Persian desert, and the mountainous country south of Kirman, especially the volcanic district in Sarhad. It is a pity that in this volume he does not give more exact details of these explorations, but contents himself with generalities, presumedly more popular, and a sketch-map. Still more unfortunate it is that his results have not been incorporated in the new "Stieler," although its map of "Iran und Turan" is dated of this year.

On Persian politics and conditions, internal and international, Major Sykes speaks with the caution due to his official position. Yet it is evident that he thinks more highly of the Persian Government, and has more hope of reform under it than do most. Also, that he stands for "the open door" in Persia, and against any "deals" on the part of England with either Germany or Russia. Persia must be given a chance for itself, and it will use that chance rightly. Even now, if the Government is not ideal, it is improving: the odd test of steady immigration into Persia from without is sufficient. And, in spite of everything (and there is very much to which there is and could be no allusion here), the Persian race is the finest and most gifted in western Asia. Courteously and sympathetically treated, without browbeating and mailed fists, it responds with courtesy and hospitality. So, at least, Major Sykes; who evidently had no difficulty in getting along with all classes, from clerics to camelmen. Polo, probably, had much to do with this. The singular honor has fallen to him of restoring this, the game of kings, to its original soil. At Teheran, Shiraz, and Kirman he organized clubs, and one of his breeziest chapters is devoted to its history.

Mr. Sparroy's book is at almost every point the exact opposite of that of Major Sykes. The one makes no pretension to literary art; the other is written in fairly good Blackwoodese, light, striking, picturesque and impudently gentlemanly. The gentlemanliness is very conscious; the impudence is very neat. Again, Major Sykes is careful to excess not to say anything to prejudice his official standing; no indiscretion slips his pen. Mr. Sparroy knows nothing of discretion. Certainly any tutor who wrote so freely of his some-time European employers—whether royalties or not—would be regarded at least strangely. Towards Orientals, apparently, the rules of good breeding lapse. In this case the personalities—appreciative, it is true, but personal often in the most precise sense—will tax even so humorous a prince as the Zillu's-Sultan is reported to be. He will learn to see himself and his children and his court with the most utter nakedness as his tutor saw them. And yet, there precisely is the difficulty. With Major Sykes no question can arise of what he saw, and little that he saw the thing as it was. If we could have any security that Mr. Sparroy, in turning the court of Isfahan into more or less literary copy, has been as faithful a relator, his book, personalities, and all, would rank even 'Hajji-Baba.' But that can hardly be, and Mr. Sparroy must be content as an entertainer. There he does excellently. His reader will learn how he sang "Rule, Britannia!" and his countenance was suffused with patriotic joy; how he and the court physician took upon themselves the shame of wine together, and how the physician held his tongue much better; how he spent fifteen-and-nine-pence in se-

curing the adhesion of the British lion, and what a remarkably good investment that excellent beast was; how, for the glossiness of his silk hat, he almost secured the order of the Lion and the Sun—and many other pleasant tales. Undoubtedly, for one reader of Major Sykes, Mr. Sparroy will have a dozen.

---

*Principles of Sanitary Science and the Public Health.* By William T. Sedgwick, Ph.D. The Macmillan Co.

Nothing is more satisfactory than the increasing range over which particular branches of applied science draw to themselves both instructors and students. It is no longer necessary, for instance, that a sanitarian should be a physician, nor that laymen generally should know no more sanitary science than such special lessons as may be imparted under the exigency of immediate danger. This extension does not imply vulgarization, but that, from wider cultivation, the community gathers more and better fruit. It also means, so far as sanitation is concerned, that through the allied sciences, which really supply the physician with most of his facts, those who are not clinicians may reach conclusions identical with his, and that the routes of sanitary engineering and bacteriology lead to the end which practical medicine desires.

As the conception of disease as a demoniac possession has ceased, so the notion of material possession is passing; and there is great gain when the popular mind appreciates that disease is not an entity which invades the body, in the sense that it may be seized and ejected, but is rather the imperfect working of vital machinery, sometimes due to natural unsoundness or to environment, but oftener to an intruder, not to be expelled as such, which modifies the functions of its involuntary host. We instinctively long for personal vigor, and from selfish as well as benevolent motives we pray for our neighbor's health. The complete reign of hygienic conditions would mean the ultimate disappearance of avoidable disease; and, in its ultimate rendering, "avoidable" covers nearly every form. To imagine a nation in absolute health may seem Utopian. But is the beneficent glory of Utopia to remain always and only a dream? Too much physical discomfort has been abolished, indeed too many moral evils have been abated, not to encourage both hope and progress. To use familiar examples in civilized lands, smallpox has been suppressed except as the penalty of vicious neglect, leprosy has passed away, plague belongs to the past, diphtheria may be warded off from the exposed, and brilliant and latest is to-day's practical control of yellow fever. We know how tuberculosis is propagated, and the work for to-morrow is to eradicate in the world, as has been done in communities, the disease which destroys one-seventh of mankind. However distant its attainment may be, the aim is laudable, nor will anything be accomplished by those who fold their hands in despair at the magnitude of the undertaking.

The volume before us is a happy exposition of some of the underlying principles of sanitary science whose application in detail is practical hygiene. It fairly describes the status of bacteriology in relation to disease; it discusses infection and contagion and their adjectives, preferring "zymotic" as descriptive of effects; it gives a couple of chapters to asepsis, antisepsis, and disinfection; and devotes many pages to the part played by water, liquid and solid, and milk. All this is well done, and the reader has before him an excellent résumé of the dangers to be apprehended from many preventable conditions, and of methods for their control. Ventilation, clothing, food, and allied topics are not discussed, because "not as yet reducible in their relation to human life to simple scientific terms." We think that a New Englander might draw closer attention to the vital relations of the soil, especially to its contained ground-moisture and ground-air, for in Massachusetts was first shown the direct significance of the one in tuberculosis, and Boston affords occasional examples of subterranean poisoning by the other. The volume breathes with peculiar life where it is inspired by the author's experience while serving the Board of Health of the Commonwealth, and it is an incidental testimonial to the high service that Board renders not only to the State, but to the nation, on the admirable lines laid down more than thirty years ago by Henry I. Bowditch and George Derby. A Massachusetts philosopher contends that the seventy-year limit of the Psalmist is to be interpreted as the average, not the extreme, length of normal human life. When sanitary law exerts its legitimate control so that the race is born healthy and remains healthy, man should, accidents excepted, wear out, not break down, and longevity be his natural portion.

---

*Estetica*, come Scienza dell' Espressione e Linguistica generale. I. Teoria. II. Storia. Da Benedetto Croce. Milan: Remo Sandron. 8vo, pp. xx., 550.

Fragments of this important work have already appeared in print, and have from time to time been called to the attention of our readers. In its final form, the book consists of two parts; the first, which occupies about a quarter of the volume, dealing with the author's own system of thought, and the second tracing in a clear and forceful manner the history of æsthetic theory from the Greeks to the present day. To the majority of scholars this second part will make the largest appeal, but the two portions are mutually interpretative, and whatever we may think of Signor Croce's own system, each helps in a certain manner to illuminate the other.

The title itself indicates both the author's theory of æsthetics and the standpoint from which he views its scientific progression of ideas. At the very outset he identifies art with the intuitive as opposed to the intellectual processes of mind, and then identifies intuition with expression. In this sense, æsthetics is the science of expression, and its history is the gradual unfolding of this idea, in opposition to those other forms of thought which are its *eidola*—the hedonistic theory, which regards mere pleasure as the end of art; the moralistic theory, which ascribes to art a didactic aim; and the mystical theory, with its various vague and unscientific deductions. In this evolution of æsthetic history, if we may judge from a passage in the appendix (p. 515), the great landmarks are Aristotle's 'Poetics,' Vico's 'Scienza Nuova,' Kant's third 'Kritik,' and Schleiermacher's 'Vorlesungen über Aesthetik.' Schleiermacher the author may, in a certain sense, be said to have "discovered," and it is part of his thesis that Vico is the real founder of the modern science of æsthetics.

The Greeks understood in part the problem of æsthetics, but failed to solve it. The moralistic theory was the prevailing (or rather the popular) one, but the hedonistic and mystic theories were represented, the latter by the School of Plotinus; and in Aristotle there is some conception of art as a science of expression, though entirely separated in its treatment from the theory of beauty. Poetry is by Aristotle identified with the universal or possible, but its universality is not distinguished from that of science. With the recovery of the 'Poetics' in the Renaissance. Aristotelianism was fused with the mediæval formulæ inherited from the rhetorical schools, and this point of view distinguishes all the theorists of the sixteenth and seventeenth centuries. The great fermentation of thought that followed the close of the Renaissance period resulted in the creation and elaboration of new critical ideals, and the terminology of modern æsthetics came into being with the coinage and reshaping of such terms as imagination, fancy, taste, sentiment, and the like. Of all these Signore Croce gives a detailed history, and this is not the least interesting portion of his work.

It is impossible to follow our author through the intricacies of his presentation of modern thought, but his claims for Vico and Schleiermacher deserve special attention. It was Vico who purged æsthetics of the vague residua of the old rhetorics and poetics, and who, by "distinguishing æsthetics from Homeric civilization," laid the foundations for a new science. It was Schleiermacher, however, who freed the science from the "imperativistic" character given to it by the school of Kant and from the mysticism of Hegel and the romantic idealists. He gave to æsthetics a character not metaphysical but simply anthropological; he distinguished a form of thought diverse from logical thought; he superseded the idea of beauty by that of "artistic perfection." These are the directions which the science has taken since his day, and they indicate in like manner the starting-point of Signor Croce's own system.

The historic portion of the work, then, while naturally colored by the author's own ideas, is a most lucid account of the successive phases of human thought on the subject of art. Its scholarship is exact and broad; its facts are reinforced by the excellent bibliographical material in the appendix; and it is in every way worthy of that wider American audience which would come to it in an English dress. There is everywhere a refreshing contempt for vague abstractions and sham culture. Much of Signor Croce's own theory is fascinating and highly original—at times, perhaps, idiosyncratic. Special attention might be called to the treatment of genres (p. 38 *sq.*, p. 465 *sq.*), in which the distinctions of literary kinds, and their historic evolution as a subject of study, are dismissed as wholly unreal and unscientific. The author's prepossessions, as the title itself implies, are on the side of linguistic expression; his field is, therefore, in a sense limited; and to this,

perhaps, must be ascribed some of the book's deficiencies. Æsthetics is to him a science of expression in which art is made the producer of individual, not universal, forms of knowledge. The universalizing power of art is, therefore, not fully felt, nor is it vitally connected with the highest strivings of the human mind.

---

*Papers from a Viceroy's Yamen.* By Ku Hung-Ming, M. A. Shanghai *Mercury* Office.

The secretary-interpreter to the Viceroy of Hu-kuang has gathered into a comely volume four of the papers which he contributed to the *Japan Mail*, and to these has added a fifth paper and a preface. The most coherent and luminous of the five is the chapter entitled *Moriamur pro rege, regina!* It is "a statement of the true feelings of the Chinese people towards the person and authority of H. I. M. the Empress-Dowager," whom many aliens call "the only man in China." The second chapter, *Defensio populi ad populos*, written in 1891 during the Yangtse riots, considers the modern missionaries in relation to these popular outbreaks. The third paper, entitled "For the Cause of Good Government in China," is a sharp and penetrating exposure of recent foreign diplomacy in China—in-territoriality as well as ex-territoriality. "Latter-day Notes on the Chinese Question" gives a survey of the state of government and civilization in the world at large, and especially in Great Britain, Germany, France, and the United States. The final chapter discusses "Civilization and Anarchy: or, The Moral Problem of the Far Eastern Question."

In tone and spirit this book is the passionate defence of his country and rulers by a scholarly Chinese, who, having studied the civilization of Europe, prefers his own. He believes that the Empress-Dowager of reality and she of the heated imagination of the Shanghai press are two and antipodally different. In his eyes she is the true "mother of the nation," wise, benignant, able; and the masses sincerely reverence her. It was by the "intrigue and charlatanry of progressive ideas" that Kang Yu Wei and his adherents tried to take advantage of the national discontent after the Japanese war to push themselves into power. Her firm and good government made them "newspaper martyrs."

For the missionaries—"the unemployed professional persons from Europe and America with a *comitatus* of the Chinese outcasts, their converts," the author has no use. He considers these "hired converters" responsible for "the only two deep causes of hatred of foreigners among the Chinese."

Defiant as he is in the face of foreign force, and believing as he does that no amount of shot and shell will ever cure the Chinaman of his contempt for the foreign bullies who delight in giving China a "lesson," the author is coldly sarcastic when analyzing "the Jesuit nature of the intellectual man of modern Europe," who laughs in the face of a Chinaman because he attributes rain to a live dragon, even while by the ear of faith he hears Balaam's ass speaking. Nevertheless, he makes a clear distinction between the true Christian, the sneak, and the cad, the last being the "Jesuit," "who does not very much believe in Heaven, angels, or hell-fire, but who wants other people to believe in these things—to be a Christian for his benefit!" The missionary, he thinks, talks "Joss" to some people at home to get subscriptions for his mission, and to others he talks "patriotism and prestige" in order to get the Jingo press to support and not abuse him; but when he gets to China, he talks "Progress and Civilization." With a great show of Chinese wit and learning, the author tries to prove that real anarchy is rampant in Europe and America. In China there is better ground for lasting good government. It was the knowledge and ideas brought to Europe from China by the Roman Catholic missionaries that broke up the mediæval civilization of Europe. The effects of the new modern culture of the Occident will be that which is already characteristic of the Chinese—"self-reliance on the part of the people as regards the State."

In its aim and spirit, this book is a prayer to the nations using force to use right reason, and to try to understand the people they expect to hold down by the cannon's mouth. In its literary character it is a Chinese essay in English. It is stuffed with quotations, allusions, and literary bric-à-brac of all sorts gathered from the French, German, Scotch, Irish, and what-not. The wits and ways of a Chinese aspirant for office, working through the ultra-literary civil-service examinations, are everywhere noticeable, and there is a tremendous amount of that indirect working of the mind which, in place of true logic and direct argument, seeks to accomplish its end by literary embellishment or more or less apposite quotation.

---

*Regeneration.* By Thomas Hunt Morgan, Ph.D., Professor of Biology, Bryn Mawr College. Macmillan Co. Large 8vo, pp. xii., 316. Illustrated.

Regeneration of animal or plant, as defined in this book, means replacement of lost parts, renewal of organs, completion of an organism from a part; and is made to include development of isolated cells or blastomeres. The presentation is thorough and comprehensive; besides original researches of the author, it involves a great deal of recapitulation and verification of experiments performed by others, with analyses and criticisms of the conclusions drawn from the phenomena or of theories advanced in explanation. Dr. Morgan is fortunate in possessing experience, depth of insight, and a judicial habit of mind that give him special fitness for his task. Among the topics for consideration are external and internal factors; the relations between regeneration and liability to injury; the inadequacy of natural selection as a means of accounting for existence of the phenomena of regeneration, hypertrophy, atrophy, autotomy, grafting, origin of new cells and tissues, regeneration in egg and embryo of animals low in the scale of life; the part played by the germ-layers; and the supposed repetition of phylogenetic and ontogenetic processes in regeneration. There is much dissection and weighing of hypotheses propounded in accounting for various phenomena; in the main, the balance is fairly held.

A principal object of the essay is to account for the regenerative process itself. Like most naturalists really possessed of a spirit of investigation and experimentation, the author doubts the efficacy of natural selection. In his mind the question is not so much that organisms are adapted, as that organisms respond adaptively to changes to which they can never have been subjected before. The regenerative changes for the good of the organism (the problem not being one of life and death or even of leaving more descendants) are not built up by accumulation of small advances in useful directions, and cannot be accounted for by the survival of those individuals in which the changes take place better than in their fellows; the selective agency of environment does not explain the regenerative process; and usefulness cannot be made to account for the presence of the process of regeneration in the organism. This process is probably one of the fundamental attributes of living things, a growth phenomenon, and as such characteristic of organisms.

From a course of five lectures the work has expanded into a very creditable volume.

*Quaker Arrivals at Philadelphia*
1682-1750 *Being a List of Certificates of Removal Received at Philadelphia Monthly Meeting of Friends.*

A valuable mine of information for the genealogist and for the historian interested in the early migrations into Pennsylvania. It includes a complete list of hundreds of Quaker emigrants from England, Ireland, Wales, Barbadoes, etc., arriving at Philadelphia Monthly Meeting during the above period, giving also the location whence they came, and usually other items of the condensed information especially valuable to the genealogist and historian. Compiled from the original manuscript records of Philadelphia Monthly Meeting by ALBERT COOK MYERS, M.L. A full alphabetical index of the names is appended. Price, **$1.25,** postpaid. **FERRIS & LEACH, Philadelphia.**

## For Instructors and Students

### A History of German Literature

By JOHN G. ROBERTSON

Lecturer in the University of Strasburg.

*Octavo, pp. xxviii. 635, cloth, $3.50 net.*

A treatise which presents in a convenient form for the work of the student and in a style that will be found attractive by the general reader, a comprehensive survey of the development and of the characteristics of the literature of Germany from its origins to the close of the nineteenth century.

The work comprises five parts, as follows: The Old High German period, from the Migration to 1050; Middle High German literature, 1050-1350; Early New High German literature, 1350-1700; the 18th Century; the 19th Century.

### Anthology of Russian Literature

From the Earliest Period to the Present Time. By LEO WIENER, Assistant Professor of Slavic Languages, Harvard University, author of "History of Yiddish Literature," "Songs from the Ghetto," etc. In Two Parts, each complete in itself, and indexed.

**Part I—From the Tenth Century to the End of the Eighteenth Century**

*8vo. With Photogravure Frontispiece. Net, $3.00. (By mail, $3.25.)*

This is the first adequate anthology of Russian Literature to appear in English Not only is an opportunity given to the reader to become acquainted with Russian letters, but the selections are such that the volumes serve at the same time as a text-book for the more prominent historical events in Russia. There are ample illustrations for the period immediately following the introduction of Christianity, the Tartar invasion, the life of John the Terrible, the activity of Peter the Great and of Catherine. At the same time students of Russian manners will find in these extracts an excellent key to present conditions.

"A work which undertakes to introduce English readers to the whole body of Russian literature. Prof. Wiener has performed noteworthy service for students of international and comparative literature."—*Philadelphia Press.*

"A treatise that is scholarly and complete, and which is noteworthy as marking the increased interest taken by the present generation in the literature of Russia."—*Minneapolis Tribune.*

*Full catalogues and special lists of works relating to literature sent on application.*

## I WILL REPAY

**A Strong Story of New England Life.**

**By GEORGE DYRE ELDRIDGE.**

*12mo, cloth, $1.50.*

"The best book ever written on the Filipinos." President SCHURMAN of Cornell.

## FRIARS and FILIPINOS

A translation of **Dr. Jose Rizal's** patriotic novel **"Noli Me Tangere,"** by Frank Ernest Gannett. A clear exposition of the problems of the religious orders.

*12mo. Cloth. $1.25.*

## THE WHITE WORLD

Personal narratives of the most famous living Arctic explorers. Gives the best description of the hardships, dangers and fascinations of Polar exploration. Written by **Admiral Schley, Walter Wellman, Dr. Frederick A. Cook, Major David L. Brainard** and eighteen others. Magnificently illustrated.

*8vo. Cloth. $2.00 net.*

## OPPORTUNITIES

**in the COLONIES and CUBA.**

By **General Leonard Wood, Gov. William H. Taft, ex-Gov. Charles H. Allen, Senor Perfecto Lacoste,** and **M. E. Beall.** Tells all about the chances for capital, trade and industry in these new insular dependencies.

*12mo. Cloth. $1.00.*

**LEWIS, SCRIBNER & CO.**

**125 E. 23d St., New York.**

*TWO BOOKS OF MERIT BY FAMOUS AUTHORS.*

## SUNSET SONG AND OTHER VERSES

By ELIZABETH AKERS. Autograph Edition. Illuminated title page, fine laid paper, deckel edge, gilt top, cloth, with gold.

Elizabeth Akers, by her literary ability, lately pronounced to be unsurpassed in this country or England, sustains in her new book her own high standard. With the exception of "Rock Me to Sleep," all the poems are hitherto unpublished. While it has a genuine literary value, it will be greatly appreciated as a desirable gift book; each title-page of Japanese paper bearing the author's autograph. Price $1.20 net, postage 13c.

## Chips, Fragments, and Vestiges

By "Gail Hamilton." Collected and arranged by the Editor of "Gail Hamilton's Life in Letters." Illustrated from photographs. Fine laid paper, deckel edge, gilt top.

Although less known as a poet than a writer of prose, "Gail Hamilton" wrote excellent bits of verse from early childhood. These have been tenderly gathered by her sister and are offered for the enjoyment of all who loved this gifted writer. The volume is tastefully presented, and its fine portrait frontispiece and other pictures add greatly to its interest. Price $1.20. Postage 12c.

*The Most Important Whist Book in Many Years*

# THE PRINCIPLES AND PRACTICE OF WHIST

**By LENNARD LEIGH and ERNEST BERGHOLT.**

**With EXAMPLES of ILLUSTRATIVE DEALS, CRITICAL ENDINGS, MATHEMATICAL CALCULATIONS, TABLES OF PROBABILITIES, etc., etc., including an Essay on PROBABILITIES, by WILLIAM H. WHITFIELD, M. A. Cantab.**

"The book is admirably planned for the student. It is a very important and valuable addition to whist literature."—FISHER AMES, author of "A Practical Guide for Whist."

"A better guide for the learner or book of reference for the expert could hardly be devised."—CHARLES E. COFFIN, author of "Gist of Whist."

"I believe it will be of great benefit to whist players and to the game of whist."—The late GEN. A. W. DRAYSON, author of "The Art of Practical Whist," after seeing MS.

"Precisely what was required by the whist world to bring the grand old game into thoroughly healthy grooves."—COLONEL B. LOWSLEY, author of "Whist of the Future."

"You have produced a work on whist which will prove serviceable both to the beginner and to the advanced player."—N. B. TRIST, author of "Whist."

"An exceedingly valuable addition to whist literature."—WILLIAM S. FENOLLOSA.

"It is the best work on the game ever issued in this country, and for completeness in giving everything a whist student could require is the most satisfactory and best gotten up work ever offered to the public."—ELLWOOD T. BAKER.

"I have no hesitation in pronouncing the book the soundest, most thorough and convincing exposition of basic whist principles that has ever been written."—W. A. POTTER, Whist editor of *Providence Journal*.

"No book on the game has ever been praised so generally and so highly. We strongly recommend it to all whist players; the poor players will be instructed, the good ones will profit by it, and the experts will find it a never ending source of enjoyment."—W. H. SAMSON in the Rochester *Post Express*.

**Crown 8vo. Cloth, extra gilt top. Net, $1.50; by mail, $1.68**

*"As dainty, as finished, and as beautiful as a miniature."*

# THE WESTCOTES

**By A. T. QUILLER-COUCH**

**Illustrated by J. L. GEROME-FERRIS**

***12mo. Cloth, $1.00***

THE WESTCOTES has been running as a serial simultaneously in "The Era" in this country and "Blackwood's Magazine" in England. The London "Spectator" and "The Speaker" both give it high praise. It is a charming tale, with all Mr. Quiller-Couch's delicacy of touch and high literary quality.

"It is very rare to come across a book which so fully satisfies the demands of the fastidious reader."—London *Bookman*.

"Admirably written romance."—London *Spectator*.

"There is a charming old-world courtesy about this book, a faint and rare fragrance emanating from it, a mellow, a fine tone sounding through it."—*The Academy*, London.

"A delightful story, told in his usual felicitous style."—Chicago *Journal*.

"A sweet and tranquil idyll, fluttered, but not overwhelmed by genuine passion."—N. Y. *Tribune*.

"Treated with infinite delicacy."—London *Saturday Review*.

"It has quite as much literary distinction of manner as any of its author's books."—*The Outlook*, N. Y.

"The book shows that the author has progressed in his art to a position warranting a belief in his permanence."—N. Y. *Times Saturday Review*.

"A tale of rare delicacy and feeling."—Detroit *Free Press*.

HARVARD HISTORICAL STUDIES. Vol. IX.

### The Anglican Episcopate and the American Colonies.

By ARTHUR LYON CROSS, Ph.D., Instructor in History, University of Michigan. Large 8vo, pp. ix.-368, $2.50 *net*.

(*In a few days.*)

CONTENTS: I. The Beginnings of Episcopal Control over the Colonies—II. The Policy and Work of Bishop Compton—III. The Royal Commission: Gibson to Sherlock—IV. Attempts to Obtain an American Episcopate—V. Expiration of the Bishop of London's Commission: Sherlock's Policy—VI. The Mahew Controversy—VII. The Chandler-Chauncy Controversy—VIII. The Newspaper Controversy—IX. The Conventions and the Episcopal Question—X. The Opposition in Virginia—XI. From Sherlock's Death to the Revolution—XII. After the Revolution: the Establishment of an American Episcopate—APPENDICES—A. Illustrative Documents—B. List of the Archbishops of Canterbury and Bishops of London during the Seventeenth and Eighteenth Centuries—C. List of Special Works—INDEX.

*SECOND EDITION NOW READY*

### The Varieties of Religious Experience.

**Being the Gifford Lectures on Natural Religion delivered in Edinburgh in 1901-1902.**

By WILLIAM JAMES, LL.D., etc., Professor of Philosophy at Harvard University, Corresponding Member of the Institute of France and of the Royal Prussian Academy of Sciences. 8vo, pp. xii.-534, gilt top, $3.20 *net*. By mail $3.40.

CONTENTS: I. Religion and Neurology—II. Circumscription of the Topic—III. The Reality of the Unseen—IV. and V. The Religion of Healthy-Mindedness—VI. and VII The Sick Soul—VIII. The Divided-Self, and the Process of its Unification—IX. Conversion—X. Conversion—*concluded*—XI., XII. and XIII. Saintliness—XIV. and XV. The Value of Saintliness—XVI. and XVII. Mysticism—XVIII. Philosophy—XIX. Other Characteristics—XX. Conclusions—Postscript—Index.

### The Steam Turbine.

By ROBERT M. NEILSON, Associate Member of the Institute of Mechanical Engineers, Lecturer on Steam and the Steam Engine at the Heginbottom Technical School, Ashton-under-Lyne. With Plates and 145 Illustrations in the Text. 8vo, pp. xii.-163, $2.50.

*** The author has endeavored in this book to describe, not only the principal parts of the leading types of steam turbine, but also the small details which, in the case of this motor, have such a preponderating influence in determining success or failure. The theory of the action of the steam turbine is also treated of, and the subject is likewise dealt with historically.

### Higher Mathematics for Students of Chemistry and Physics.

**With Special Reference to Practical Work.**

By J. W. MELLOR, D.Sc., late Senior Scholar, and 1851 Exhibition Scholar, New Zealand University; Honorary Research Fellow, the Owens College, Manchester. With 142 Diagrams. 8vo, pp. xxiv.-543, $4.00.

CONTENTS: Part I. ELEMENTARY. I. The Differential Calculus—II. Coordinate or Analytical Geometry—III. Functions with Singular Properties—IV. The Integral Calculus—V. Infinite Series and Their Uses. Part II. ADVANCED. VI. Hyperbolic Functions—VII. How to Solve Differential Equations—VIII. Fourier's Theorem. Part III. USEFUL RESULTS FROM ALGEBRA AND TRIGONOMETRY. IX. How to Solve Numerical Equations—X. Determinants—XI. Probability and The Theory of Errors—XII. Collection of Formulæ for Reference—XIII. Reference Tables.

### Text-Book of Electro-Chemistry.

By SVANTE ARRHENIUS, Professor of Physics at the University of Stockholm. Translated from the German Edition by JOHN MCCRAE, Ph.D. With 58 illustrations. Crown 8vo, $3.50.

## LONGMANS, GREEN, & CO., 91-93 Fifth Avenue, New York

# The Nation.

NEW YORK, THURSDAY, OCTOBER 2, 1902.

## The Week.

If the civil war in the anthracite coal region continues, schools must close, factories and mills must shut down, gas and electric companies must curtail their output, transportation be impeded —in short, in every direction the activities of the country will be hampered or brought to a cessation. The present situation, in every aspect, is impossible and intolerable. The State of Pennsylvania maintains it. From the very first, Gov. Stone has lacked firmness and force. A Quay henchman of the familiar type, he has, with his master, tried to play politics. The fortunes of Senator Quay and of Senator Quay's party have weighed far more with him than the good name of his State or the country. Not until recently has he shown a proper appreciation of the gravity of the situation. Every soldier in the State of Pennsylvania should be under arms and in the coal regions. If the National Guard does not suffice, the entire regular army is at the Governor's disposal. In none of the other Pennsylvania strikes has the Executive been so slow to act, so disinclined to rouse public sentiment on behalf of law and order. Meanwhile, the moral intervention at least of the President is being earnestly sought.

---

The Secretary of the Treasury has made two new rulings for the purpose of relieving the stringency in Wall Street. One of these is, that the national bank depositories need not keep any cash reserve against Government deposits; the other is, that the Treasury will accept other security for Government deposits than United States bonds. Under the former ruling, about $30,000,000 of cash held (or supposed to be held) as reserve against existing deposits in the banks would become available as active cash, and might ordinarily be used as the basis of loans and discounts to the extent of three or four times that sum. Under the latter ruling, all the money in the Treasury over and above the usual working balance might be deposited in banks against such collateral security as is usually taken by savings banks, trust companies, and by national banks themselves. These rulings have to be looked at in two different aspects, one relating to their legality and the other to their expediency. That they are unwarranted by law seems to be sufficiently plain. The law, which requires a fixed reserve to be held against deposits, makes no exception in respect of Government deposits. It is true that these are secured by sufficient collateral. Originally the banks were required to keep the specified reserve against circulation and deposits, both of these liabilities being secured by United States bonds. Congress saw fit to repeal this law as regards circulation, but did not change it as to deposits. It is said that Secretary Sherman, when engaged in refunding the national debt, relaxed this rule, but if he did so he exceeded his authority. His infraction of law, if he committed one, does not excuse any of his successors.

---

If Government officers are to assume the right to overrule statutes when the occasion, in their view, requires it, where is the policy to end? We know where it ended in the panic of 1873, when a frightened Secretary threw on the market a batch of fiat money legally marked for retirement. The crisis was made rather worse than better by that move of reckless desperation, and the Administration responsible for it incurred the unchanging and unsparing censure of its own and later times. Mr. Richardson's stretching of the powers of his office occurred at a time of genuine panic, helplessness, and depression; this is hardly the case with Secretary Shaw. It is also true that the Secretary's moves are but partly warranted by absorption of currency by the Treasury. The daily surplus revenue is at present moderately large; but the surplus revenue for the fiscal year has been barely $8,000,000. It must be obvious, then, that the Government's powers are being strained, not to correct a situation brought about arbitrarily by the Treasury, but to help the money market out of a difficulty into which it had brought itself. But this is a wholly new function for the United States Treasury, and it is certainly, in our judgment, a step for which our system of government is not prepared. If a Secretary has the right to overstep strict construction of the law to relieve a temporary strain in money, what is to hinder similar action merely to foster speculation? This is a pregnant question, which will be asked in many quarters of the United States to-day.

---

It is hard to believe that President Roosevelt has declined to accede to President Palma's request for the withdrawal of the United States troops from Cuba. Yet the fact is announced, and the solemn pretence is made that the refusal is in Cuba's interest, as she has only a couple of hundred artillerymen to uphold the Government and keep the peace. If the island has not more troops, the fault at first hand is ours, for Gov. Wood raised the existing two companies, and had them drilled, and if 2,000 are needed he certainly should have provided them before turning over the Government. He could have had 20,000 men if he had called for them. But, waiving all this, the dangers which the War Department conjures up are purely imaginary, as the conduct of the Cubans since 1898 clearly shows. If the Administration wishes to increase the friction between the United States and Cuba it is on the right track. The United States uniform will now be more than ever disliked when it appears on the streets of Havana, Cienfuegos, and Santiago.

---

Secretary Root undertook on September 17 a defence of the Philippine army in a stump speech at Peoria, Ill. At the same time there was received at the War Department a careful analysis of Secretary Root's attitude towards the outrages committed by American soldiers. This is from the pen of Mr. Moorfield Storey, the counsel for the Anti-Imperialist Committee, whose standing as a clear-headed and able lawyer is second to none. As a result of his study, Mr. Storey declares that "Secretary Root is the real defendant in this case," and that "the responsibility for what has disgraced the American name lies at his door." Mr. Storey finds Mr. Root "conspicuously the person to be investigated," and demands on behalf of the committee that the records of the War Department be laid bare, for the information of the public. Mr. Root's present duty, therefore, is a defence of himself, not of the army. That Mr. Root never voluntarily made any attempt to stop the barbarous practices in the islands, we firmly believe. Not until President Roosevelt insisted that the guilty men be adequately punished did Mr. Root act in the premises, and there is reason to believe that the President never knew the extent of the wrongdoing until it was forced upon his attention by public-spirited outsiders.

---

The first two volunteer officers to disgrace themselves, for instance, Capt. G. W. Brandle and Second Lieut. A. S. Perkins of the Twenty-seventh Volunteer Infantry, were found guilty, in 1900, of torturing Filipino prisoners by hanging them by the neck for ten seconds each. The sole punishment inflicted was a mild reprimand from the verbose and grandiloquent Gen. MacArthur, who gravely informed these uniformed torturers that they must practise "dignity and decorum" (!) hereafter. "In carrying out this unpleasant duty [of reprimanding the officers]," remarked the Philadelphia

*North American* at the time, "Major-Gen. MacArthur does what he can not to wound unnecessarily the sensibilities of the offending officers." This thoughtfulness is characteristic of Mr. Root's attitude. It is true that Gen. MacArthur was the final reviewing authority, but the Secretary could very readily have served notice to the army by a general order, or otherwise, that such barbarity would not be tolerated anywhere. But the army got the impression that as long as the war was ended somehow, it mattered little what was done in the Philippine jungles, and so we had the long list of offenders, both volunteer and regular officers. To this deliberate blindness of the War Department is also due the failure to try Lieut. Conger, Eighteenth Infantry, and Capt. P. H. Lyon, Assistant Surgeon, who were implicated with Major Glenn, and whose trial was promised by President Roosevelt's order regarding the outrages.

---

Mr. Hay, when he issued the Rumanian circular, must have known that, so far as political fair-dealing was at issue, the United States lay open to a vigorous *tu quoque*. The retort discourteous has in fact been made simultaneously in many quarters. A Berlin and a St. Petersburg paper urge Rumania to intervene in behalf of the Filipinos. Prince Chika of Rumania, writing to the *Tribuna*, asks:

"Supposing that Europe accepts Mr. Hay's interference and consents to act in behalf of the Rumanian Jews, what will Mr. Hay say if Rumania requests the Powers to intervene and stop the persecution of negroes in the United States, and demands explanation in regard to the treatment of Filipino prisoners?"

The Jews of Rumania are deprived of the ordinary civil rights by just such a fiction as the "grandfather clause" which disfranchises so many of our Southern negroes. The Jews are held to be "aliens," and thus the treaty provision which requires civic equality of all religious confessions is evaded. It is as logical to declare a man an alien as it is to disfranchise him because his forebears could not have voted before 1863. Grievous as are the disabilities under which the Jews suffer in Rumania, there has been no such record of real persecution as could be cast up against ourselves in the matter of negro lynchings. As for our actual grievance and sole ground of the circular note—forced emigration of Rumanian Jews—M. Pierre Leroy-Beaulieu, in *L'Économiste Français* for September 13, discusses European emigration from 1882 to 1901, without so much as mentioning Rumania.

---

The platform adopted at Saratoga on Wednesday of last week is very long, mostly insincere, and extremely feeble. It may be fitly styled "a weak, wishy-washy, everlasting flood." The parts to which one naturally turns first are those about which there has been so much stir lately in the conferences of party leaders and in the public prints—those relating to President Roosevelt and his anti-Trust campaign. It was the intention of the leaders at first to ignore the President altogether, lest the promoters and managers of industrial monopolies should cut off the supplies of cash from the campaign fund. But when they perceived that his utterances had made a great impression on the public mind, and that the action of conventions in other States nominating him for the Presidency in 1904 could not be overlooked, they reluctantly changed their plan. Accordingly the platform adopted at Saratoga contains a plank which "recognizes the fidelity" of President Roosevelt in carrying out the policy of his lamented predecessor, and the rare capacity he has shown in meeting his new responsibilities. It "looks forward with confidence" to his reëlection in 1904, and pledges the earnest efforts of the party thereto "so far as this convention has the power." Of course, this convention has no power to pledge the convention of next year. No fault is to be found with this saving clause, yet the reader will notice in the entire phraseology of the plank the same evidence of constraint and reluctance that was shown in the previous manœuvres of Platt and Quigg when they were trying to avoid any committal to Roosevelt. No such reluctance existed among the delegates to the convention. Their endorsement of Roosevelt was altogether enthusiastic, but they were obliged to vote for the tame resolution which the leaders prepared for them.

---

To endorse Roosevelt for nomination in 1904 without any reference to his recent public utterances was also the intention of the party leaders, and this purpose was changed only at the last moment. So the committee gave birth to the following resolution:

"While we would encourage business enterprises which have for their object the extension of trade and the upbuilding of our State, we condemn all combinations and monopolies, in whatever form, having for their purpose the destruction of competition in legitimate enterprise, the limitation of production in any field of labor, or the increase of cost to the consumer of the necessaries of life, and we pledge the party to the support of such legislation as will suppress and prevent the organization of such illegal combinations."

The language employed excludes the method of Constitutional amendment, which the President has proposed for the efficient control of monopolies. This choice of words could not have been due to inadvertence. In the resolution on Cuban reciprocity there is a similar failure to support the President. Effective relief is to be granted to Cuba, so far as it may be done "without harm to any American industry." This enables any New York Congressman who votes against Cuban reciprocity to say that since, in his belief, it would harm some American industry, he could not support it consistently with the platform of his party.

---

While the Connecticut Democrats did well in turning down Bryanism and silver, they were very weak in their attitude on what is the most important issue in the State to-day—that of reform in legislative representation. When the Constitutional Convention last spring failed to do the work for which it was created, and when its makeshift plan of representation was rejected by the indignant voters, it was naturally supposed that the Democrats would push that issue to the front and wage an aggressive campaign on it. No adequate reform is expected from the Republicans. They profit too much from the present injustice, which gives 400 residents in one town as much legislative power as 100,000 in others. No surprise was felt, therefore, when their State Convention declared its "faith in the historic town system," and its belief that the populous towns could be given "reasonable" representation without changing the fundamental features of the town-representation idea. The declaration meant nothing, as its framers well knew that the town-unit idea cannot be retained in any system which even approaches popular representation, without the creation of a legislative body so large that it would overflow the Capitol building. More was expected of the Connecticut Democrats, however, than an aping of their political opponents. In their Constitutional reform plank, placed at the end instead of at the front of the platform, they also declare their "faith in the historic system of town government," and pledge themselves to give the populous communities "adequate representation," while retaining the town-representation plan. Such a cowardly attitude can evoke no enthusiasm, and little will be heard of the chief issue in Connecticut to-day unless the Democratic nominee for Governor, Melbert B. Cary, one of the foremost advocates in the State of representative reform, should force the fighting on that line.

---

The Republican primaries in the Eleventh Congressional District of Massachusetts, which is a part of the city of Boston, have resulted in the selection of delegates a majority of whom are favorable to the nomination of Eugene N. Foss for Congress—a fact sure to cause further disquietude among those who oppose any "meddling" with the schedules of the Dingley tariff. Mr. Foss made his canvass for the nomination squarely on the issue of free iron and free hides, which he favored. He was opposed by all the influences of the State and city Republican machine, which looked

askance at his doctrines and favored the candidacy of another. While a business man of excellent reputation, Mr. Foss was not well enough known to have been nominated in spite of these influences but for his platform. Under these circumstances, it seems fair to assume that the verdict of the Eleventh Congressional District of Massachusetts is in favor of revising the tariff along certain lines. There is nothing surprising in this, but, together with the other signs of the times, it has its significance.

---

Some important hints were thrown out by Mr. A. B. Hepburn in his recent address to the Bankers' Association of Pennsylvania, touching the defects of our currency system. He gave an account of the German system of "emergency circulation," by means of which the banks are allowed to issue notes in excess of ordinary requirements on condition of paying a tax at the rate of 5 per cent. per annum on the excess. Mr. Hepburn thought that it would be safe to allow national banks, in emergencies, of the gravity of which the Secretary of the Treasury should be the judge, to issue notes not exceeding in amount one-half of their capital stock, on condition of paying a tax of 6 per cent. per annum on such circulation. It was his opinion that such issues not only would be safe, but would relieve the banks of the necessity of issuing Clearing-house loan certificates in times of panic. The latter system, although, under our present methods, indispensable at times, tends to weaken confidence in the banks which resort to it. It should, therefore, be superseded by a better method of meeting such emergencies. Mr. Hepburn called attention to the fact that ordinarily banks in Germany are allowed to count the notes of other specie-paying banks as a part of their cash reserve against circulating notes, but he did not recommend that they be used as reserve against deposits here. On the contrary, he said:

> "I cannot persuade myself that a banknote, as that term is generally understood, ought ever to be counted as reserve; but our national banknotes, secured as they are, are as good for reserve or for any other purpose as any obligation in this country can be."

That is quite true, but no "obligation" should ever be counted as a bank reserve, except the demand obligations of the Government, and the latter should be dispensed with as soon as possible. Under an ideal system, the bank reserves would consist only of gold coin and bullion.

---

What constitutes proper supervision of life-insurance companies was ably set forth in the remarks of John A. McCall before the insurance officials of twenty-four different States, in session at Columbus, O., last week. Mr. McCall contended that the motive for most of the restrictions was a legitimate desire on the part of the State to protect the public from irresponsible concerns which wrought such havoc in this country twenty years ago. This point Mr. McCall was peculiarly well qualified to bring out, since the crusade inaugurated against fraudulent insurance companies during his administration as head of the New York Insurance Department was of incalculable advantage to policy-holders of this State. Not satisfied with sending the chief impostors to State prison, Mr. McCall promulgated a series of rules governing the regulation of insurance companies that have since formed the basis for the most intelligent and rigorous supervision in force anywhere. While Massachusetts and New York have usually taken the lead in such reforms, most of the important States have corrected the old abuses which sprang from an improper conception of the real function of such companies. Chief among these reforms has been the abandonment of the movement against corporations of foreign countries doing business in certain Western States. This warfare was waged for years in the form of discriminating taxation, until the business public became aroused by the folly of restricting the supply of available insurance by forcing some of the strongest underwriting corporations out of the field. Mr. McCall's utterances, on the whole, form a valuable contribution to the literature of State insurance supervision. They should exert an important influence in correcting the abuses of a necessarily complicated system.

---

Professor Cattell of Columbia University points out, in *Science*, certain difficulties in the way of administering the funds of the Carnegie Institution, and makes some interesting, practical suggestions. He discerns, in the plan of subsidizing individual investigators or departments of research in the present universities, the danger that the university may reduce correspondingly the funds allotted to these purposes, while private givers will be inclined to withdraw their support. A similar disadvantage accompanies the purchase of existing laboratories or experiment stations. In the case of the Marine Biological Laboratory at Wood's Hole, which the Carnegie Institution is said to have marked for its own, the change of ownership would reduce greatly and perhaps cut off the stated contributions which that admirable institution receives from scores of colleges. It would also nullify whatever prospective benefactions the laboratory may have in store. Accordingly, Professor Cattell lays down the general principle, "Should the Carnegie Institution make an appropriation on condition that it be duplicated locally, its funds would be spent to advantage." This, be it observed, is both good sense and sound Carnegie doctrine.

---

Sir Michael Hicks-Beach's criticism of the Balfour Ministry is worth more to the Liberals than the winning of a handful of by-elections. The late Chancellor of the Exchequer practically accuses the Government of inefficiency in the War Office and recklessness in the Treasury. It is hard to see how the condemnation of a "khaki" Ministry could be more complete. In other directions also the Government has aroused deep discontent. If the Education Bill began a year ago as a colossal bore, it has become a political issue of the first magnitude. By an inconsiderate application of the Crimes Act in Ireland Mr. Balfour has presumably alienated his Nationalist supporters of the bill, while, if he pushes it through by a nominal majority, its passage will be the signal for thousands of Nonconformists and Liberals to refuse to pay the rates. No Ministry could survive in the face of wholesale arrests of usually law-abiding citizens who had chosen to enter so drastic a protest against Episcopal control of the public schools. Mr. Balfour and others have been deploring the lack of a vigorous opposition. It looks as though the Irish question and the school question would quickly supply this need. In spite of his large paper majority, the Premier will reënter the Commons with prestige so greatly diminished that it is hard to see how an appeal to the country can be long deferred.

---

Germany is reaping the full fruits of "protection" in the high price and absolute scarcity of meat. The Government insists on keeping the food tariff—particularly that on animal products—at a point which will permit the negotiation of pending reciprocity treaties. The Agrarians insist upon the original excessive schedules of the new tariff bill. The Government can better afford to be beaten on the bill than to yield, and the Agrarians will not give way; so the deadlock is complete. But it appears that the protest of a country cruelly mulcted for the benefit of the farming class is making itself heard. There are indications that the Agrarians are losing strength, and there is some attempt to unite the Liberal and Social-Democratic parties into a genuine Left. Such a fusion of the liberal forces in Germany is most devoutly to be desired. Once effected, stranger things might happen than that the Government should seek support from the Left, thus repeating more sensationally in an Empire the recent parliamentary history of the Republic of France and the Kingdom of Italy, in both of which the Government has ruled with the aid of the Socialists.

### *COAL-MINING BY RECEIVERS.*

"The Coal Mines and the Public" is the title of a pamphlet of sixty-three pages, in which the writer, Mr. Heman W. Chaplin, seeks to show how the mining of anthracite coal may be resumed by judicial process. A suit has already been instituted in Boston for a receivership of the principal coal-carrying and coal-mining companies, in order to accomplish this end.

Mr. Chaplin sets out with the proposition that real estate is never held by a private owner by an absolute title, but is subject to the right of the public, which may either restrict the use of it or require from the owner affirmative action in respect of it. About one-half of his argument rests upon the rulings of the Supreme Court of the United States in the Munn case, where the owners of a grain elevator in Chicago were required to submit to a law passed by the Legislature of Illinois which required all such elevators to conduct their business in a certain way and to take out licenses which should be revocable for misconduct, and which fixed a maximum sum for the storage and handling of grain. The owners of the elevator, which had been built and put in operation before the passage of the law, refused to comply with it. They were prosecuted, convicted and fined. They took an appeal, but the judgment of the lower court was sustained, both in the Supreme Court of Illinois and in that of the United States. There are probably some lawyers who still think that the decision in the Munn case is unsound, but there are none who expect ever to see it reversed.

Mr. Chaplin seeks to fit this decision upon the corpus of the coal-carrying and coal-mining companies of Pennsylvania. The offence for which Munn was punished was that of disobeying a statute which the State of Illinois was competent to pass. There is no statute of Pennsylvania requiring a railroad to carry coal which has not been offered to it. If there is one which requires a mining company to mine coal at all, we have never heard of it. Nor do we believe that a law will ever be passed requiring an owner of coal property to mine more coal than he can. Certainly no court will ever seek to compel him to do so in the absence of such a statute. The law does not require impossibilities. The decision in the Munn case does not fit the *corpus delicti*. Whether the mine owners are to blame or not, they are not blamable in that way. Therefore, the first half of Mr. Chaplin's argument is wide of the mark.

If the second half has any better foundation than the first, it tells against the striking miners rather than against the mine owners. "Where a trust right in the real estate of another exists," he says, "a court of equity, in the absence of a statute, can enforce that right." No such trust right in coal lands having been established or being fairly inferred from the Munn elevator case, there is nothing for a court of equity to do, adversely to the possessors of the legal title. Then Mr. Chaplin goes on to say:

> "Where a claimant's right is a right to active operations, a court of equity will, where it is necessary, protect him in the exercise of his right by injunction against interference with him, or will, if more convenient, exercise the right in his behalf by appointing a receiver of the property and putting such receiver in charge of the property and having him operate it for the benefit of all concerned."

The first clause above quoted describes the mine owner exactly. He is the claimant who has a right to active operations and to protection in carrying them on. He is the one who may properly ask for an injunction against interference. If a receivership is needed in the anthracite region, it is needed as a shield and guard against lawless individuals and mobs who are stopping trains, dynamiting railroad bridges, and murdering men who are trying to earn an honest living as miners and to relieve society from the terror of a coal famine on the eve of winter. Mr. Chaplin apparently would put the coal carriers and operators in the hands of a receiver in order to coerce them; but if this is a case for coercion it should be applied to the neck of the other party.

An important witness to this purport is Bishop Talbot of the Episcopal Church of central Pennsylvania, whose diocese embraces the entire anthracite region, and who feels moved by the gravity of the situation to issue a signed statement. Although his sympathies are strongly enlisted for the miners and their families, he says that the strikers went out when no real grievances existed which could not have been peaceably adjusted. "It is now well known," he adds, "and is even expressed by their leaders, that the *crux* of the whole matter is the recognition of the organization known as the Miners' Union." This is exactly what Mr. Hewitt said and what Mr. Mitchell denied when, referring to Mr. Hewitt's statement, he said there had been "no formal demand" for recognition; by which he wished the public to understand that that was not one of the issues at stake. Now Bishop Talbot says that it is the *crux* of the whole matter, and we believe him. We agree with him also that to accede to this demand is to pass the ownership of the property over to the miners' organization. The power to dictate who shall work in the mines includes everything else. Bishop Talbot passes judgment upon Mitchell himself in his concluding sentence, where he says that the miner "has been wofully duped and unwittingly sacrificed to the overweening and selfish ambitions of his imaginary friends."

This statement helps us to form an opinion of the value of a receivership of the coal-carrying and coal-mining companies by an order of court. Such an order would put upon the judge granting it the immediate responsibility for conducting a business of infinite detail and complexity, which has crushed and disabled the most experienced men in the world in times past, and has gone more than once through bankruptcy. In the event of a receivership the public would at once look to the judge to supply them with coal "at a reasonable price"—this is one of the demands most strongly insisted upon by Mr. Chaplin. Of course, this could not be done for a long time to come—probably never under that system of management. But the miners would construe the receivership as a decision of all disputed points in their favor, and would strike against the receiver if they were not granted. That way of settling the difficulty is No Thoroughfare. The right way to begin is by restoring the reign of law in the coal region, and this, Bishop Talbot says, should be done in twenty-four hours.

### *THE ALASKA BOUNDARY.*

A process of myth-making by reiteration has for several years been in progress in Canada regarding the question of the Alaskan boundary, and bids fair to produce, sooner or later, serious consequences. The subject is one on which very few persons are well informed; it is difficult to obtain accurate information about it, and partisan spirit may expend itself on it under the mask of patriotism with little fear of discovery. It is unquestionable that the public in Canada, including many of the more intelligent and influential classes, has been for several years assiduously supplied with articles on the boundary which, notwithstanding their essential falsity, have created a body of opinion with which, mistaken as it is, it will be difficult to deal. A somewhat similar state of mind, exhibited by a less well-informed body of Americans, was noticeable in southeastern Alaska in 1899, when the temporary boundaries of the *modus vivendi* were laid out near the head of Lynn Canal. Such subjects offer gold mines for the sensational press in either country, and so the evil grows. On the whole, the press of the United States has been indifferent, occupied with more timely matters, and the reiteration of the Canadian myth across the border has passed unheeded here. Congress, also, in ignoring for session after session the settlement of a question which was bound to produce international irritation as the Alaskan country became better populated, has incurred a grave responsibility. Our Canadian cousins have a just right to complain of this, however wrong they may be in some other matters.

An excellent example of the literature above alluded to is a recent publication,

in the *Canadian Law Review* for September, of an article by Thomas Hodgins, K.C., of Toronto, which is also printed in the *Contemporary Review*. It is well written, gives evidence of much familiarity with international law, and of just enough acquaintance with the facts not to disturb the flow of a grave and apparently weighty argument. Regarded as the effort of counsel to represent the case of his client, it is admirable, and, with the intelligent public who cannot hear the argument for the other side, it will necessarily be influential. Believing that in the interests of truth, of the international relations of the two countries, and of the speedy settlement of this vexed question, it is eminently desirable that both sides should be heard, we propose to point out certain facts which Mr. Hodgins passes without mention; to challenge certain assumptions on which his whole argument rests, and which we believe to be erroneous; and to say a few words on the subject of arbitration, with which the latter part of his article deals.

When the treaty of 1825 was made between Russia and Great Britain (of which our treaty of 1867 is a replica in its essentials) the Russian-American Company maintained a fishery for sea-otters in the archipelago of southeastern Alaska which was the chief source of the Company's revenue. Members of the Imperial family and their court were among the stockholders. The Hudson Bay Company at that time had no posts west of the Rocky Mountains and north of the southern boundary of Alaska. The country was regarded as a worthless wilderness, valuable only for fur animals. The only official maps of the region were those of Vancouver, which represented a non-existent solitary chain of mountains extending continuously in a general parallelism with the continental coast. This was the map-maker's conventional sign for a mountainous country, but the diplomats took it for an actual range, as appears in the British instructions cited by Mr. Hodgins among the preliminaries to the treaty. This hypothetical range was taken to carry the boundary line in the treaty as agreed upon, except that, when its summit proved to be more than ten marine leagues from the coast, the boundary should be formed by a line parallel to the coast and ten marine leagues therefrom.

The Russian Company and the court desired to safeguard their sea-otters from the Hudson Bay Company, which was engaged in extending its trading-posts into the interior; and, while they were willing to permit navigation of the rivers by which the interior could be reached, they determined to make themselves secure against trading-posts on the coast by which the sea-otter trade of Russia might be depleted. This they effected by obtaining a continuous strip of coast *(lisière)* which they held for years, later leased for a time to the Hudson Bay Company, and finally sold to the United States. Great Britain had the free navigation of the rivers *(fleuves*, which Mr. Hodgins mistranslates "waters"), and for *a period of ten years* was also allowed to navigate the inlets. The limitation of time in the latter case disposes at once and for ever of the lengthy arguments about territorial waters to which Mr. Hodgins and other Canadian advocates devote so much space. All the argument about "ocean" and "*mer*," and territorial jurisdiction, and boundary lines skipping across navigable arms of the sea, sinks into ineptitude when confronted with the fact that Great Britain accepted a limitation of the right of navigation of the inlets to ten years, and the Hudson Bay Company afterwards paid an annual rent for many years for the privilege. These facts are sedulously ignored and left unmentioned by Mr. Hodgins and other Canadian writers, who do not even quote the part of the treaty in which the first is set forth.

In the absence of a definite "summit of the mountains," the United States has a right to fall back on the "ten marine-league" line as a boundary. In the geographical uncertainty which obscured the characteristics of the *lisière* until very recent surveys, the line was drawn on our charts at ten marine leagues from the sea. At only one known place in Alaska is there a definite "summit" which may be utilized in the sense of the treaty, and that is at the head of Lynn Canal. Here the summit of the White and other passes clearly should be regarded as so defined, and has been adopted in the line laid down in 1899 as a *modus vivendi*. Mr. Hodgins is therefore mistaken when, in this place, he draws from an old chart the ten marine-league line and states that here it is "claimed by the United States." That expression should be used only when a diplomatic claim to that effect has been made, and none has been made of the sort stated. To charge the United States or Canada with claiming all the absurdities which have appeared on maps in either country, is fair to neither.

Mr. Hodgins makes a strong appeal for arbitration of the question, and it is certain that, if the case should be determined on its merits, as in law courts, this would be best for the interests of both parties. Certain phases of the case are adapted for arbitration, others are not. Unfortunately for international peace, in three very important recent arbitrations the arbitrators have seemed to regard themselves as partisans, and not impartial judges; and absolute failure of the proceedings has been averted only by a decision which was privately, if not publicly, admitted to be not based on the merits of the case, but merely a compromise to avoid war, in which the weaker party was given the least that would shut its mouth. In one case, that of the Delagoa Bay arbitration, it is acknowledged that the result was a scandalous miscarriage of justice, where the outraged plaintiffs submitted on the principle that a crust is better than nothing.

The United States will not submit the Alaskan boundary to such a court. When a little experience has been had of the workings of the Hague Tribunal, it may prove that justice, and not political influence, will be the guide of that body. An international supreme court is sadly needed, and this one, as yet untried in any really momentous question, may fill the rôle. If so, the boundary question may be carried there with general approval. Until then a masterly inactivity may be more prudent. At any rate, some means should be taken of informing the general public of the ascertained facts without exception; a knowledge of which in this, as in many other cases, would do much to abate the bitterness of argument.

## *THE NEW MEDICAL EDUCATION.*

If any department of applied science has in recent years appeared to show rapid and healthy growth, it is the department of medicine. The triumphs of medical experts, particularly in such lines as surgery, bacteriology, and sanitary science, are familiar wonders, while the gifts of large endowments for such institutions as the Harvard Medical School and the Johns Hopkins Hospital have seemed to stamp with approval both the methods and the results of modern medical work. It is somewhat startling, therefore, to find Professor Barker, head of the department of anatomy in the University of Chicago, seriously questioning both the wisdom and the propriety of much of the prevailing course of medical instruction, and urging instead the adoption of methods which will doubtless seem to many members of the profession not only revolutionary, but chimerical. Professor Barker's standing, however, as one of the most eminent American anatomists entitles his opinions to great respect, and his paper on "Medicine and the Universities," reprinted in pamphlet form, with some changes, from a recent issue of *American Medicine*, has already begun to provoke discussion.

The history of medical education in this country shows several types of schools. The first, and the earliest in point of time, is what Professor Barker calls the "proprietary" medical school. This is a school formed, usually, by a group of medical men for the double purpose of educating physicians and improving their own professional standing. The curriculum, limited at first to a single course of lectures, gradually expanded, until now, in most schools, it covers four years. For financial sup-

port, dependence was had on the fees of students, the surplus being divided among the instructors at the end of the term, while professional connection with the school came to have so great financial value that practitioners were glad not only to obtain appointments to which no compensation was attached, but even to pay a large price for the sake of getting them. For clinical opportunities, resort was had to the charity hospitals and such minor clinics as the resources of the school allowed to be held.

The growth of laboratory methods of instruction in science, however, forced the proprietary schools to a change of method. The great cost of laboratory work in physiology, histology, pathology, and bacteriology could not be met from fees, nor could the new instruction itself be given with the comparatively small expenditure of time required under the old system. The larger number of schools, accordingly, have formed connections more or less close with neighboring colleges or universities. Rarely, indeed, has the university assumed any financial responsibility under the new arrangement beyond providing additional facilities for laboratory instruction, but the gain to medical education from the introduction of scientific methods in the early part of the curriculum has been, on the whole, very great.

Useful as has been the work of the proprietary schools, however, their day, in Professor Barker's judgment, is past. What is now demanded is medical training fully on a par, in its methods, aims, and conditions, with the best university work in other lines. The nearest approximation to what is required is found in the six or eight principal medical schools in the United States, to which Professor Barker gives the suggestive name of "semi-university" schools. In these schools the subjects of the first two years are taught under the best scientific conditions by instructors who do not engage in private practice, and whose only aim is to do the best possible scientific work and give the best possible scientific training. But this is as far as the reform has gone. The subjects of the last two years are taught by men in active practice, not always of broad training, and appointed primarily because of their success as practitioners. Further, few universities own or control hospitals, but must rely upon the charity institutions, the majority of which are still, as we all know, subject to political or personal influence.

The weakness of present-day instruction in medicine, in Professor Barker's opinion, is the preponderating combination of teaching and private practice in the personnel of our medical faculties. What he would have is a real university school of medicine, in which the same views of the professor's functions which obtain in other departments shall hold also for the medical faculty. It is generally understood that the professor of mathematics, or chemistry, or political economy shall give his whole time to the business of instruction and research, and not half of it to the university and half to some commercial or manufacturing enterprise.

"Imagine," says Professor Barker, "the condition which would exist if the university said to its professor of economics, 'We shall be glad to have you as our professor of this subject provided you are willing to do the teaching we ask of you without direct remuneration. Your position in the university will make you so well and favorably known that you will be able to secure financial responsibilities in the city which will give you a far larger income than we could afford to pay you,' or, if the President and trustees made a proposition to the professor of chemistry that he be paid $1,500 per year to take charge of the teaching and investigation in the chemical laboratories, it being pointed out to him that the prestige of a university professorship would enable him to secure lucrative positions as commercial chemist to four or five manufacturing concerns in the city in which he lives, or as analyst to baking-powder companies and manufacturers of pure-food preparations; some of the trustees taking the stand that the intimate contact thus gained with chemistry as practically applied in the business world is not only desirable for the professor, but absolutely essential in order that his influence upon his students may not be too academic. . . . What, think you, would be the rate of progress in original work in the sciences of political economy and chemistry in a university so constituted? And yet, there is not a medical faculty in a university anywhere in America where this plan is not followed, at least for some of the chairs."

Professor Barker writes throughout with perfect courtesy and with cordial recognition of the high aims and unselfishness which characterize teaching physicians as a class, but his paper is nevertheless a strong indictment of American medical education as a whole. Whether his contention is sound, or not, is a question which no layman is competent to decide. That the reform for which he contends will not be brought about without much discussion is self-evident, but if the course of scientific instruction in other departments is any criterion, he has pointed the way along which the medical education of the future will proceed. The enormous cost of a true university medical school, with its highly paid staff and series of observational hospitals, is not the least obstacle in the way. Most serious, however, will be the opposition of the medical profession to a surrender of the time-honored notion that the best preparation for teaching is a large private practice.

## *ÉMILE ZOLA.*

A very bitter but a very sincere spirit has passed away. A great and indefatigable talent vanishes, leaving behind it the memory of a discredited theory of literature and the better remembrance of a battle for truth and justice conducted with that same impressive fanaticism which gave the world the sordid epic of the Rougon-Macquart family. It was characteristic that Zola's first book of criticism should have been called 'My Hatreds' *(Mes Haines);* it was not without significance that he who later condemned his country for its cruelty to Alfred Dreyfus, should have been the ardent defender of that great but unappreciated genius, Éduard Manet. No one who has seen the man near at hand, has marked the abruptness of his movements and the settled gloom of his expression, has heard him speak tender words to a body of mourners—as we recall him at the burial of Alphonse Daudet—with the air of berating a hostile audience, could doubt that his heart was torn with the *sæva indignatio* of a Swift—could fail to perceive all the qualities and defects of a temperament essentially fanatical.

Zola's activity may fairly be divided into three periods: first, that of the human document, most signally represented by the Rougon-Macquart series of no less than twenty volumes, written from 1871 to 1893; second, that of growing idealism, exemplified in the three cities, 'Lourdes,' 'Rome,' 'Paris' (1894-1898), and culminating in the colossal idyll, 'Fécondité,' 1899; third, the great episode of 1898, the appeal to the conscience of France, and the agitation which resulted in the retrial of Alfred Dreyfus and the rout of the army cabal.

Zola's theory of the "experimental novel," as set forth in the book of that name and as illustrated by the greater part of his literary work, has had its day and passed into the limbo of suspended doctrines. Zola was never quite consistently faithful to his own theory of naturalism and the human document, and in his later years he repudiated it by his practice. He chose to speak of himself as a "naturalist" rather than a realist, because his plan was larger than that of reproducing with minute fidelity the details of life as observed. He desired rather to make his books "cross-sections of reality," in which the environment, heredity, individual prepossessions, personal, political, and industrial relations of a group, and the deeds which sprung from these causes, should all be contained. "I could wish to imbed all humanity in my page, all beings, all things—to create a work which should be one vast repository." Of the greatness of this enterprise there can be no doubt. Its accomplishment in the Rougon-Macquart series, however, hardly corresponds to the amplitude of the design. To study in a selected group the entire course of modern French society, to lay bare the symptoms of the fever that led from the installation of the Second Empire to Sedan—this was his plan in pursuing to the impurest depths the fortunes of the Rougons and Macquarts. But Émile Zola was no Balzac, to plan a *Comédie Humaine* of which the minutest part should be an unending source of intellectual enjoyment and

of interpretation of life. Zola's single novels rarely sustain the nervous and compelling style of the little masterpiece, "L'Attaque au Moulin." nor did he more than once sum up the agony of a nation at grips with disaster with the continued force and vividness of 'La Débâcle.' His novels, in the main, are human documents which are dull for us and will be dull for posterity. They have had the great misfortune to be read for their incidental filth, and to place M. Zola, who was trying in his own way to vie with Taine and write 'The Origins of Contemporary France,' in the position of a universal purveyor of the impure. To such a misconception his preference for the baser manifestations of human nature lent only too much color.

But since the naturalistic theory went bankrupt long ago, and Zola's disciples, most of whom have gone before the master, all drifted away from him in various directions—the most faithful, Maupassant, into finer reticence and selective art; Daudet into a very personal sentimentalism; the surviving Huysmans into sheer mysticism—we may more fittingly dwell upon the novels written after he had passed fifty, and upon the heroism with which he braved all France in behalf of the forgotten martyr of Devil's Island. These later novels show a new idealism struggling to express itself in the terms of naturalism. 'Lourdes' is a vast allegory of the emotion of piety, 'Rome' of religious authority, 'Paris' of social regeneration. These books are imbued with a finer spirit than the author had previously shown. But they are still inchoate as art and intemperate as thinking. They show, however, a broad humanity, which in the still later volume, 'Fécondité,' treating of the blessing that attends fruitfulness, and the curse that falls upon barrenness, often finds grave and noble expression. It is curious to recall that Zola was working upon this great idyll at the time when his general accusation of the military cabal that condemned Alfred Dreyfus made him the most hated man in Paris. As he shaped his patriarchal dreams of marital felicity, he could hear the cries of *À bas Zola! À bas les Juifs!*

His mind had wrought inquiringly upon the evidence in the Dreyfus case, had detected a great injustice and taken fire, and the whole force of will and ferocity of temperament of the man imbedded itself upon the page that was addressed to the President of the Republic, but fell upon France and the world as the summons to do justice. This human document was conceived in hate—savage indignation at a national injustice, not compassion for Alfred Dreyfus, moved Zola; but his *j'accuse* stung an entire people, as in old days Peter the Hermit's rapt "God wills it" had called them to the holy war. Zola's deed begot hatreds that are hardly diminished to-day, and the entire episode, though it will be his worthiest memorial, shows that his temper was destructive rather than constructive. And yet since Swift there has not been a more notable instance of scorn of human nature accompanied by rare literary talent and complete personal probity. His last great work will bear the title 'Truth.' But it is doubtful if Truth ever fully takes as her own so stormy a spirit as was Émile Zola's.

## PEKIN TWO YEARS AFTER THE SIEGE.

PEKIN, August 14, 1902.

Two years ago to-day, the armies of the allied Powers, hurrying to the rescue, forced their entrance into the capital of China, and relieved the hard-pressed Legations. This city was visited with fire and sword, and the old Pekin can never be itself again. Yet, to the newly arrived stranger there is little at first sight that recalls violent destruction. It is not always easy to distinguish a wall that has been battered by bullets from one that has decayed through age and neglect. The quarters of the town that were burned over have grown up again, as crowded as ever, the British Legation does not necessarily suggest any particular historical interest, and the new Peitang Cathedral seems peaceful enough until one notices the bullet holes in the organ. In the centre of centres, behind the mysterious walls of the Forbidden City, the life of the Court goes on much as of old.

Closer observation, however, aided by a few explanations, reveals many things. The traveller coming by train from Tientsin no longer has to alight outside the town and to ride five miles in a cart or sedan chair before arriving at his destination. To-day, the railway passes calmly through a breach in the wall, it skirts for some time the outer edge of the Chinese city, and then, running along below the great wall of the Tartar city, it ends at the Water Gate. The freight terminus, reached through another breach, is right by the entrance to the "Temple of Heaven." It was through a passage under the Water Gate that the British relief force made their way and thus won the glory of being the first to get to the Legations. At the station, now, order is maintained by Sikhs, while there descend from the train throngs of bustling Chinamen, and officers and soldiers of many distant lands.

Three minutes' walk from the station brings one to the Legation quarter, where one finds a state of things unique in the modern world. After the siege and the restoration of order, the representatives of the Powers had to set to work to provide for the future. In some ways they had a *tabula rasa*, for most of the region had been burned over and it was easy to expropriate land, leaving to the helpless, as well as undeserving, Chinese Government the charge of indemnifying any former owners that happened to be still alive. The ministers were thus fettered only by the instructions of their home Governments, and by the conflicting claims of their various interests. It is evident that the prevailing idea in the work of reconstruction was the likelihood of another outbreak, and the consequent necessity of providing therefor as efficiently as possible. In the reserved territory no Chinese dwellings or establishments could be allowed. All the room is in the hands of the Legations—their barracks, the post-offices, the banks, and a few stores. Each took what he wanted and could get, and those who, like the Portuguese, were too late in obtaining a share, are likely to have to live outside. One plot belongs to a hotel, yet to be built by the energetic Belgian company of the "Wagons-lits."

The limits of the district are clear enough. On one side it is bounded by the Tartar wall between two of the Great Gates, the Chien Men and the Hata Men, a stretch of some half a mile under the control of the Americans and Germans. Along the top of it there is a pleasant if rough walk, from which, especially at the two ends, one can watch the interesting life of the great city beneath. The importance of holding this piece is obvious, as it looks down upon and commands the ground below; if during the siege our soldiers, who clung to it with such obstinate bravery, had lost it, the American Legation would have become untenable immediately. Under these circumstances the Germans have fortified their end with a massive stone tower, an example our Government has not seen fit to follow; and the Germans have shown their opinion of our action or inaction by putting up a strong iron fence between their section and ours, both above and at the foot of the wall. On the other three sides the Legation quarter is marked off by a broad boulevard so that no enemy may find near cover for an attack. The end of the American barracks, however, projects beyond the general line; and the new Catholic hospital and the Methodist buildings, being in the ground that is supposed to be kept open, would probably have to be destroyed at the outbreak of hostilities. The preparations along the outer line vary according to the ideas of the different Powers holding territory. Everywhere we find high brick walls, usually with places for embrasures, and sometimes with a ditch. The German defences are evidently the most formidable, the American the least so. We also do not keep any cannon.

Inside the quarter the great lines of division are made by the broad "Legation Street," running parallel to the Tartar wall, and by the canal at right angles to it. Of all the nations, the English have the most land, as they have added to their former and already spacious grounds until they now hold over thirty acres. It must be remembered, in this connection, that, in Pekin, foreign governments have to provide not only for the offices of their ministers, but also for their homes, as well as those of the secretaries and interpreters, for the barracks of the guards, stables, etc. Thus, for perhaps the first time, an American representative abroad will live in a building belonging to the United States. Unfortunately, as yet, our new Legation is not even begun; and before it can be finished, our representatives are threatened with eviction at the hands of Korea, which has bought our present quarters. Our new barracks, on the other hand, look very satisfactory; indeed, we have land enough, if only it were not broken up into fragments by the intervening possessions of Korea, Holland, and the Russo-Chinese Bank. Our guard is a little less than one hundred and fifty men, with two officers, one of whom is also military attaché. Most of the other

great Powers have from two hundred and fifty to three hundred men; smaller ones, like the Dutch, some half-a-dozen warriors. The Germans have twenty-six officers, in ample quarters, and much occupied with the study of Chinese. English, Americans, and Germans are dressed in khaki; the soldiers of other nationalities usually in white. As may be imagined, it is an interesting occupation to watch and compare the characteristics of the specimens of so many different armies brought here into such curiously close contact.

Both during and before the siege large districts of Pekin were burned by the Chinese themselves. Of this there is little trace to the eye of the casual visitor. The tower with painted cannon over the Chien Men has not been rebuilt, but the quarter below, which was swept by fire, shows no sign of devastation except in the fact that the shops look new and the paint fresh. The large central street running out through it, past the Temples of Heaven and of Agriculture, can hardly have been busier than now; and though we are assured that in general Pekin is cleaner than of yore, this would scarcely occur to the stranger lacking a knowledge of the past for comparison. After all that has happened, it is inconceivable that the people of at least this portion of the empire should feel anything but the deepest hostility to their victorious enemies, yet in the behavior of the inhabitants, if there has been any change, it cannot be for the worse, as there is nothing to complain of at present. Of course it is a commonplace that the Chinese know how to conceal their feelings, and they are not supposed to be a demonstrative people. Still, one cannot help being struck by the absence of open dislike. The children do not, to any extent, cry out after one in the streets, and the general appearance of the crowds is not noticeably sullen. On the contrary, their attitude might rather be taken for indifference. They do not seem to pay any great attention to the foreigner, although they have plenty to remind them of his humiliating presence. For instance, a self-respecting Chinese naturally avoids the Legation quarter, where he is liable to be treated like a coolie by any stray soldier he meets; in fact, the whole existence of this quarter must be intensely galling to the pride of a nation whose contempt for outsiders is proverbial. In the heart of the Tartar city, too, across the street leading from the Hata Men, will stand the great stone arch built by the Chinese in expiation of the murder, at this spot, of the German Minister, Baron von Ketteler. It will take more than the marvellous skill of the Chinese in useful fiction for the Government to save its "face" with the people who look at such a monument.

Of the Ministers besieged in the Legations two years ago, Mr. Conger now alone remains in Pekin. A walk under his guidance along the Tartar wall, or a visit to Mgr. Fabvier and the rebuilt Peitang Cathedral, while one listens to the stories of heroism and suffering, told in both cases without a trace of vainglory or of bitterness, is an experience not soon to be forgotten. The stirring events are still so recent, so real, their lasting effect still so uncertain, that they appeal powerfully to the imagination. The Peitang, miles away from the European quarter, is a wonderful example of an *ecclesia militans*. After standing a siege more terrible than that of the Legations, it still towers proudly aloft as the headquarters of Roman Catholic Christianity and missionary enterprise in this empire of four hundred million heathen. And the short stroll from the Hata Men to the Chien Men, along the wall now in the hands of foreigners, but from which they were fired at for weeks, except from the small bit, the key of the whole, desperately held by the Americans—it seems one of the great walks of the world. Below, on the one side is the Chinese City, with the Temple of Heaven rising in the distance; the railway is at one's feet. On the other are the Legations, where such thrilling history has just been made, now a fortified camp of Europe in Farthest Asia. Soldiers of many nations roam about the streets, and everywhere buildings are going up. A little beyond are the series of roofs covered with the imperial yellow tile, consecutive entrances into the courts of the Forbidden City, which is still closed to the profane, though not so closely since it has been desecrated by the foot of the conquering "barbarians." In every direction the great city stretches out for miles, with its trees and its temples, its countless streets and alleys, reeking with filth and swarming with the busy life of hundreds of thousands of human beings. To the north and west, twenty miles away, rise the mountains; along them the Great Wall runs for hundreds of miles its unequalled course; behind them the sun is now setting on the capital of this, the oldest and most populous, as well as the strangest empire in the world.

ARCHIBALD CARY COOLIDGE.

## FLEMISH PAINTING: PRIMITIVE AND MODERN.

BRUGES, September, 1902.

I consider it a happy chance that delayed my visit to the Exhibition of Flemish Primitives at Bruges until it is on the point of closing. Otherwise, I could not have come to it fresh from the Exhibition of Modern Art at Ghent, which did not open until the very end of August. If, as Fromentin says, all Belgium is a magnificent "art-book," to which the work of the Primitives is the preface, then the work of the men of to-day is the last chapter completed up to the present; and often a preface is best understood after the book has been read to the end.

The Exhibition at Ghent is the one which is held there by a Society of Artists every three years. This autumn, its opening had the further interest of inaugurating the new Museum built for the town by the Government and the Municipality, whose patronage of art in Belgium is something more than an empty form. Artists cannot in reason complain of authorities who appropriate money for the purchase of their pictures and lend them galleries for their exhibitions. The new building is admirably adapted to the purpose: the rooms well-proportioned, well-lighted, and decorated with a sobriety and restraint I scarcely ventured to look for in a country where the encouragement of the now almost worn-out fashion of "L'Art Nouveau" has been most active. The collection is ordered on broad international lines, but, naturally, Belgian artists are in the majority, and there could be no better opportunity for the study of modern Belgian art. For this reason, and also because I have already written of many of the pictures from foreign artists when these were shown at home, I shall say nothing of the foreign sections, except that they illustrate one of the most promising tendencies of the day: the tendency, that is, in international exhibitions, to honor, not work that bears the official hallmark, but work that reveals a distinct personality or character. At Ghent, the preference has been less for the approved Academician than for the various groups of independents—the men who belong to the New Salon in Paris, the Secession in Munich, the International Society in London. The present all but universal revolt against the academical is the more hopeful because it is leading to a general appreciation of individuality rather than to fanatical "movements" and self-conscious "schools."

When it comes to Belgian artists as they are seen at Ghent, I should say that the chief characteristic of their work is its realism. There are men, like M. Claus and M. Buysse, who accept this realism frankly; others, like M. Khnopff, who struggle against it, plunge into depths of mysticism, and—remain realists in spite of themselves. M. Claus is a painter of world-wide reputation, and his methods are well known. He has been influenced by M. Monet and French Impressionism; he seeks instinctively the more brilliant, almost brutal effects in nature, and he evidently thinks that respect for nature demands that the painter should accept her as she is. If the landscape before him compose, well and good; if not, it is not his business to make up for nature's shortcomings. One of his pictures here, "Verger en Flandres," shows at once his strength and his weakness. It is designed on a large scale, adapted to exhibition walls. In a pleasant orchard two peasants are gathering apples; the low sun shines full on their faces, and on the pink wall of a house beyond, seen between the trees. Nothing could be more uncompromising than the fierce glow of the sunlight on the autumn afternoon when the painter sat down resolutely to transfer it to his canvas, except perhaps his own attitude towards it. He has not attempted to supply the emotion which the special effect before him did not provide, nor the grace of line, the harmony of masses that did not happen to exist in this corner of the orchard. He is the impartial reporter, summing up with vigor and ability, but quite dispassionately, the facts as he sees them; and the result is a brilliant record which may astound and dazzle you by its brilliancy, but at which you can look no longer than you would at the orchard itself under the same conditions. And, as a rule, it is in just such effects, which, if the most daring, are the least emotional, that he is interested. But so conscientious is he in his realism that, if he does find himself face to face with nature in her softer moods, he softens in his turn. I have never seen a better picture by him than the much smaller "Canards au Couchant," also here, in which he is all tenderness simply because he chanced upon the tender hour when the last pale gold of evening fades from the sky, and, in all its subtle gradation, reflects itself in the quiet stream where the ducks

are swimming homeward. I had not thought M. Claus could express sentiment so delicately.

It is the same with M. Buysse. He also aims at an accurate report; he also seems to prefer instinctively the more brilliant aspects of the country he loves, though his very accuracy at times forces him into an unlooked-for betrayal of emotion. The contrast is as striking between two of his pictures: one, of a straight stretch of tree-lined canal in a glare of sunlight, a red sail and its reflection filling the centre of the canvas with a sudden violence of color that leaves you cold and indifferent; the other, of apparently the same canal, but now silent and deserted, its waters vague and mysterious in their dim blueness under the twilight sky. To both these men, as to M. Monet, nature is sometimes kind, and lavishes upon them the beauty of composition and tone and feeling they might think it an infidelity to invent. They have many followers, to describe whose work would be but to repeat what I have just said of theirs—painters who are realists, if the word means anything at all, or who, probably, in the art slang of a few years ago, would call themselves naturalists.

M. Khnopff's realism is much less obvious, enveloped as it is in a cloak of symbolism. The subjects of his two pictures here are characteristic. In one, "L'Encens," a lady with pale draperies and paler face that you feel are charged with mysticism, holds in her long gloved hands what seems to be a sacramental vessel. In the other, "L'Isolement" (a triptych), a youth in armor, the flame and lily and bubble (M. Khnopff's favorite symbols) at his feet, stands between two vague, enigmatic figures, which, to so unmystical a person as myself, mean nothing but the more easily understood beauty of drawing and color and detail which M. Khnopff always manages to bring to his most mystical designs. And it is just because M. Khnopff cannot quite repress his joy in the actual—in the draperies, the jewels, the flowers—that his pictures have such charm. One of the most typical examples of this contradiction in him is a picture he was showing in London last spring. There were in it two divisions. The upper and larger was so overladen with symbolism that it has completely faded from my memory; the lower contained an exquisite but literal rendering of architecture and water, a bit of old Bruges, gray and sad, as impossible to forget as the little landscape seen through an open window in a picture by Memlinc. M. Khnopff, as well as M. Claus and M. Buysse, has his followers; but what I have said of him is true, in a lesser degree, of them, so that there is no need just now to examine their work separately. Indeed, the only two other Belgians who seemed to me to have something to express, beside the prevailing formulas of the day, are M. Mersens, who paints peasants and peasant life with an exaggeration of truth that borders on caricature, but with rare keenness of observation, and M. Delaunois, whose landscapes, though he travels to the "Pays Monastique" for a popular peg to hang them on, depend for their beauty on their light and atmosphere. Both of these men will do still better things—or, at least, they ought to.

It may at first seem paradoxical when I say that M. Khnopff and M. Claus, the two most representative modern Belgians conspicuous at Ghent, are in absolute sympathy with Van Eyck and Memlinc, the two most representative Primitive Flemings conspicuous at Bruges, though, because of technical conditions and passing modes, they differ so entirely in their manner of expression. Most people, struck by the difference, overlook the underlying sympathy. Certainly, the opportunity for study has been as ample at Bruges as at Ghent. A collection could not well be more exhaustive. Innumerable public and private galleries, not only in Belgium, but in England, France, Germany, and even so remote a country as Transylvania, have lent their treasures. Bruges itself, for the interval, has stripped the Museum and the old Hospital of St. John of the masterpieces that have made them famous. Perhaps the one notable omission is the "Miraculous Lamb" at Ghent, the picture by both the Van Eycks that Dürer described as "a most precious and important painting." Of it nothing is shown but the Adam and Eve panels that were separated out of prudery from the central design and long since found an asylum at Brussels. Altogether some four hundred examples of primitive art cover the walls.

I must admit that the first effect of all these "cock-eyed Madonnas" and angular saints hanging together is appalling. No pictures gain by being seen in a gallery, but those by the Primitives suffer most acutely. In their days, artists were forced to paint the same subjects, and, what is worse, to paint them in the same way. It has been argued lately by an ingenious critic that this was an advantage to them; that their imagination, instead of spending itself in the search for motives, was concentrated on the interpretation in line and color and form of a limited number of given themes. But at Bruges I was convinced—if I needed conviction—that they were hampered by the conventions imposed upon them. In every picture of genuine, and not merely historical, merit, I found passages that seemed to me so many protests against the limits set by the exacting patron. The most distinguished masters, no less than the most second-rate craftsmen, were made to paint the Virgin enthroned, Christ on the Cross, angels in glory, saints in the agony of martyrdom—in a word, the heaven and hell they had never known—when what they wanted was to paint the people about them and the country they did know. For you cannot look at their pictures and not see that they themselves were as vowed to realism as M. Claus, though they were driven into the struggle against it which M. Khnopff has accepted voluntarily. Take one after the other, beginning with the Van Eycks (though the collection begins with the still more archaic Primitives). Turn to Jan Van Eyck's altar-piece from the Bruges Museum, a Virgin and Child with saints and the donor, Canon van de Paele, grouped on either side in the approved manner of the day; Virgin and saints are but lay models, posed symmetrically, compared to that old man, kneeling piously, who no doubt had given Van Eyck all the sittings he asked for, and who could be portrayed faithfully, without idealization, and yet the painter not be reproached with coarseness and earthliness for his pains. What character in the broad, ugly face, clean-shaven, furrowed and lined, intelligent in its heaviness—a face you still see often in Belgium, even under the cap and above the blue blouse of the discontented Belgian workman! And again, what character, what beauty in the portrait of the painter's wife, with her prim head-dress and demurely folded hands! Van Eyck was most at home, not in the heavenly company to which the Church would have confined him, but with just such men and women as these. Did he ever give to any Madonna the splendor of that little group of man and wife in the London National Gallery?

The Van Eycks are comparatively few, but it will be long, if ever, before such a series by Memlinc is brought together in one gallery again. It makes you marvel the more that so great a master should have been for years forgotten, even if it explains that his greatness depends less upon the sincerity of faith, the earnestness, the mysticism, with which the Primitives are so liberally endowed by their admirers, than upon the honesty of his realism. He never seems happier, never more wholly himself, than when he escapes from the incense-laden church or shrine into the open country, if only for a momentary glimpse, as in the diptych from the Hospital of St. John, where the window beyond the kneeling donor frames a haunting little vision of green fields, winding road, and blue hills; or when he leaves his Virgin and Saints to study a human face like that which looks out at you from the amazingly painted white veil in the "Sibylla Sambetha." Had Memlinc had his way, the world would not have waited for Claude to create the art of landscape painting, or for Velasquez to make the men and women in a portrait stand upon their legs.

From Roger van der Weyden I received much the same impression. The very altar-pieces that have been praised for their emotional quality showed, I thought, something very like lassitude when compared to the alert interest manifested in three or four little portraits, the figures so well placed in the design, the observation so just and sympathetic. And so with Gerard David, a painter whose list of pictures, though hardly his reputation, is fast growing with the present trade in "attributions." Two of his most important are the well-known "Baptism of Christ" from the Bruges, and the "Blessed Virgin Surrounded by Angels" from the Rouen, Museum. It is in the first that he is most satisfactory, with its groups of the donor and the donor's two wives and children, arranged, it is true, according to the usual formula, but the character of each member of the large family so well realized, and the amusing detail of costume rendered with such obvious pleasure, that it would help you to understand, if you did not already, why these old painters were ready to make a prominent place for the donor, any and everywhere, in the very holy of holies if necessary. In the Rouen picture, the Virgin and her attendants, who fill the foreground, are overshadowed by the painter and his wife who stand respectfully behind them, but in whose faces is the breath of life. With Mabuse, also, what charm there is must be sought in his portraits, welcome relief as they are after his mannered Virgins and Saints. And I might go on through the catalogue, until the struggle for realism culminates in Peter Breughel and the picture, painted with something of humor, but something of reverence as well, of a

Flemish Bethlehem, where little Flemish children are sliding on the ice-bound canals, and hustling Flemish villagers are busy about many things, while Mary and Joseph seek their lodgings for the night.

It is this aspect of their work that has most interested me in the exhibition of Primitives. I know there are many other ways of considering the collection. For the historian of Flemish art, it affords a chance that would have gone far to lighten the labors of Crowe and Cavalcaselle. To the scientific critic, it is a challenge which already he has accepted with enthusiasm, and pictures are changing masters with the bewildering rapidity and damaging results that make you wonder the more at the generosity of owners in lending them to exhibitions where they are exposed to such risks. But art does not depend for its value on history or science. True, the collection teaches nothing new of individual works from this standpoint. Indeed, many are not seen to such advantage as in the church or on the walls where the artist meant they should be seen—the reason why not one tells so well as the St. Ursula series on the shrine for which Memlinc designed it. But, on the other hand, certain qualities which all these painters shared, certain points upon which they differed, are emphasized, and early Flemish art, as a whole, is better understood. This is why I, at least, have come away with a heightened sense of their inborn realism, regretting the loss which the restraint put upon them has meant to the world. They would have envied, these old masters, the freedom in the choice of subject allowed to their modern successors. The real triumph of Belgian or Flemish art has been to maintain its independence in spite of the chains and claims of religion and fashion.

## THE ETHICS OF THE WILDERNESS.

To the Editor of The Nation:

Sir: In your issue, No. 1941, is an article entitled "The Law of Forest and Mountain." The theme will no doubt be new to nearly all your readers; still, it is one deserving serious attention, suggesting, as it does, an ethical principle not commonly recognized.

My reason for addressing you is to point out a very interesting example of the same "law" that came to notice in Sweden, where I travelled a good deal previous to 1882, and found that in railway restaurants, on passenger steamers and elsewhere, there were no means of checking customers, who were taken at their word altogether. On the steamers that ply in the Göta Canal, between Gothenburg and Stockholm, there were placed in the cabins books for the use of the passengers, each of whom selected a page and kept his own accounts for food and refreshments. At the end of the journey, which required about three days, the "mam'selle" in charge took this book and settled with the passengers on their own reckoning.

I mention this as one example. There were many more that could be named. I have discussed the subject with different people in Sweden, asking if they did not fear being cheated. The answer was, "Oh, no! Why should they want to cheat?" Here comes the problem: Are people honest by law or honest by nature? And will people in an honest environment lose their propensity to steal and cheat? In Sweden at that day no one thought of being cheated, and the greatest rogue, once there and having caught the spirit of honesty, as it were, never thought of acting otherwise than honestly. I have lived there, know the language and customs, and shall never forget that, in coming away, as soon as I had landed in another country the horrid idea and care of "bargaining" began. It was like Christian assuming anew his load that had fallen away during the Swedish sojourn. This "law of the forest" is a neglected factor in our natures, and indicates a white spot amidst the enveloping black-wash of modern customs. Let us hope you will return to the theme.

J. Richards.

Sansalito, Cal., September 17, 1902.

## ELLSWORTH'S ZOUAVES.

To the Editor of The Nation:

Sir: My memory confirms the statement of Colonel Burt (*Nation*, No. 1942, p. 225) that Ellsworth's Zouaves were known as the Fire Zouaves, while Wilson's Zouaves did not have that designation. I think the contemporary New York papers will show that Ellsworth's regiment was more commonly referred to as the Fire Zouaves than anything else until after Ellsworth's tragic death, when, because of that, his name became more constantly associated with the regiment.

Fox's 'Regimental Losses in the Civil War' twice refers to the Eleventh New York under the alternative designation of Fire Zouaves (pp. 477, 481). Tenney's 'Military and Naval History of the Rebellion' (Appleton, 1865) thus refers to Ellsworth's death: "The only disastrous event occurring was the death of Col. Ellsworth, commander of the Fire Zouave regiment of New York."

A detailed acccunt of the origin of the name is given in Nicolay's 'Outbreak of the Rebellion' (pp. 112, 113):

"Then came Sumter and the call for volunteers, and Ellsworth saw his opportunity. Hastening to the city of New York, he called together and harangued the fire companies of the metropolis; in three days he had 2,200 names inscribed on his recruiting lists. Out of these he carefully selected a regiment of 1,100 men, who chose him their colonel."

Very respectfully yours,

James J. Dow.

Faribault, September 20, 1902.

## QUESTIONING SUSPECTED CRIMINALS.

To the Editor of The Nation:

Sir: In the *Nation* of August 28, Margaret Irving Hamilton condemns the practice of police officers in questioning persons who are suspected of crime, for the reason that the Constitution provides that no person shall be obliged to criminate himself.

It would seem to be more to the purpose to protest against this absurd Constitutional provision, which is a relic of a barbarous age. It is a protection to rogues only. Any honest person will be glad to answer all questions which will be helpful in discovering criminals. There is no good reason why a person suspected of crime should not be required by law to explain all suspicious circumstances. It is only in courts that the failure of an accused person to deny the charge against him raises no presumption against his innocence. It is everywhere else good evidence of guilt.

Respectfully yours,

Frank W. Proctor.

Fairhaven, Mass., September 22, 1902.

## PAULSEN'S MISREPRESENTATIONS OF KANT.

To the Editor of The Nation:

Sir: A reviewer in your issue of September 11 points out certain errors of exegesis in Paulsen's highly readable but occasionally misleading volume on Kant. It is perhaps worth while to improve the occasion, in the interest of historical accuracy, by calling attention to another rather serious misrepresentation in the same volume, upon a point of some consequence.

Professor Paulsen treats the essay 'On the Possibility of Introducing the Notion of Negative Magnitude into Philosophy' as one of the more significant of Kant's so-called "pre-critical" writings; but he contrives, in his exposition of it, to attribute to Kant a doctrine which is pretty precisely the opposite to the doctrine which the essay really sets forth. In this essay, says Paulsen (Tr., p. 83),

"one sees that Kant has abandoned the rationalistic method of equating conceptual and actual reality. No contradiction can obtain between realities, Baumgarten teaches; *ergo omnes realitates sunt in ente compossibiles.* Yes, says Kant, that holds in the realm of concepts. It is different, however, in the world of actual fact. Here it may very well happen that two positive determinations exclude each other, as when they are related as positive and negative magnitudes in mathematics."

From this one would certainly gather that, in the essay in question, Kant had controverted Baumgarten's maxim, and had maintained that "in the world of actual fact" contradictions may obtain between realities. In point of fact, however, the essay nowhere asserts that what is necessarily true in the realm of concepts can be false in the world of facts; it repeatedly declares that nothing that is self-contradictory can be real; and it consistently adheres to the Leibnitzian principle of "compossibility"—*i. e.*, the principle that reality must be free from logical inconsistency.

Kant is endeavoring to introduce, beside the notion of logical opposition (*i. e.*, contradiction), the notion of a sort of "real" or dynamic opposition (*Realentgegensetzung*). A simple concrete instance of the latter is the case where A owes B ten dollars, and B owes A the same. In such a case, the debt of either equals zero; but this zero is not merely negative—it is the result of the existence of two very positive facts, and of a certain relation of reciprocality between them. This sort of *Entgegensetzung*, which strikes Kant as having a peculiar logical interest, is obviously both possible and frequently actual; but, Kant constantly insists, it is possible only because it does not in any sense involve logical contradiction. "Es kann eine der opponirten Bestimmungen bei einer Real-

entgegensetzung nicht das contradictorische Gegentheil der anderen sein; denn alsdann wäre der Widerstreit logisch, und, wie oben gewiesen worden, unmöglich."

The point is worth noting, because it brings out the fact—which Paulsen seems to overlook throughout—that, so far as the principle of contradiction is concerned, Kant never "abandoned the rationalistic method of equating conceptual and actual reality." At the beginning and at the end of his career, he remained sure that we know, in advance of experience, at least one important truth about all real entities, even about things-in-themselves; namely, that they cannot involve contradiction, either of one another or of the facts of sense-experience. It is true that Kant did not very clearly understand just what he meant by the principle of contradiction; and he therefore failed to see that, by admitting its validity as a criterion of the nature of reality, he had left open a door for a vast amount of possible metaphysical construction. But to the principle in the abstract, he remained always loyal. He was here, at least, wholly a man of the eighteenth-century enlightenment; he had no sympathy with the romanticist's love of paradox, and would hardly have subscribed to Goethe's sentiment:

"Wo die Widersprüche schwirren
Ich mag am liebsten wandern."

Least of all would he have sympathized with that modern combination of agnosticism with realism in metaphysics, which declares that we must conceive to be real that which we have previously declared not to be logically conceivable at all. Professor Paulsen's exposition, however, would, I think, lead the unsuspecting reader to suppose just the contrary of all this.—I am,

Yours very truly,

ARTHUR O. LOVEJOY.

WASHINGTON UNIVERSITY, ST. LOUIS,
September 23, 1902.

## HAMLET'S SOLILOQUY.

TO THE EDITOR OF THE NATION:

SIR: What commentators I can find on Hamlet's most notable soliloquy seem to regard suicide as its theme. I would suggest, however, that the speech beginning "To be, or not to be" is not concerned as a whole with a contemplation or consideration of suicide.

When last on the stage, Hamlet had shown impatience with himself as a coward, or at least lacking "gall to make oppression bitter." The pretext of using the play to make sure of his "father's foul and most unnatural murther" has not altogether reconciled Hamlet to his procrastination. And now, in the third act, he comes on still chafing at his own irresolution, rather than in a contemplative mood. "Is my enterprise ever to be, or *not?* Is it nobler to endure this disgraceful situation, or, facing about on the flood-tide of my own and the time's troubles, to be overwhelmed in at any rate opposing it?" The sarcastic "nobler" implies Hamlet's answer to the question. He is for the moment, I think, viewing his death in the attempt to "set right the time" as practically assured, just as drowning would be certain were he to turn and rush upon the rising tide. How can the idea of suicide be made out of "take arms . . . end them"? Is there any point in "by *opposing* end them," unless it implies ending one's life in manfully meeting, not running away from, the swelling flood of evil?

After this opening burst of impatience at his irresolution, Hamlet passes, as frequently (*e. g.*, i. 4, "The King doth . . . take his rouse . . . a custom more honored in the breach than in the observance"), from a present, particular matter to a general reflection. The prospect of his own death in the adventure laid upon him by "cursed spite" suggests a consideration of death in general. His impatient tone dies down into reverie. "Death is only a sleep, and it ends a thousand sufferings. But if that sleep has dreams? Yes; if it were not for that thought, how many men in trouble of love or law or anything would end it even by self-slaughter! But all men shrink from death and the unknown ills of negation. And so, such fearful enterprises as mine, many of great pith and moment, may lose, even in hands of native resolution, the name of effected action." Here suicide, only incidentally and only objectively, does enter momentarily into the course of Hamlet's meditation, not as a recourse for himself, but as a general possibility. "The native hue of resolution" and "enterprises . . . moment" have surely nothing to do with suicide, either for Hamlet or anybody. He comes back at this point to his subject proper, the danger of his enterprise—to what he calls his "craven scruple of thinking too precisely on the event." Hamlet, brave as he really is, has a delicate conscience, which blanches his "native hue." The danger of the event is heightened for him by the sense of his own unworthiness, by uncertainty as to fundamental principles of right and wrong, by conscience that "makes cowards of us all."

Yours very truly,

W. F. TAMBLYN.

WESTERN UNIVERSITY, LONDON, ONT.,
September 20, 1902.

# Notes.

Still further publications by Messrs. Scribner are 'Through Hidden Shensi,' by Francis H. Nichols, and 'Cross Country with Horse and Hound,' by Frank Sherman Peer.

'Pictorial Scotland and Ireland,' illustrated, and 'Lays for Little Chaps,' by Alfred J. Waterhouse, are in the press of the New Amsterdam Co.

William R. Jenkins will publish directly a 'Comprehensive French-English Dictionary.'

The next volume of the "Oxford History of Music" to be issued will be 'The Music of the Seventeenth Century,' by Sir C. Hubert H. Parry, and this may be expected immediately from Henry Frowde.

The season of reprints has set in, and a high standard is raised in Houghton, Mifflin & Co.'s revised and enlarged edition of Mrs. Alice Mabel Bacon's classic 'Japanese Girls and Women.' The additions are considerable, being two chapters or 64 pages. The interest of that entitled "Within the Home" culminates in the account of the burdensome funeral rites. "Ten Years of Progress" deals with the movement for the advancement of women—in education at home, in study and travel abroad; Japan being to-day in this respect "where England and America were in the first half of the nineteenth century." A revolutionary book by the late eminent reformer, Fukuzawa, in refutation of Kaibara's 'Great Learning of Women,' is summarized in this chapter. The illustrations, by a native artist, Keishū Takenouchi, some in color, are a capital adornment to this instructive volume. The frontispiece shows us a "cherry-viewing."

Little, Brown & Co. find in illustrations by Henry Sandham a pretext for reissuing Mrs. Helen Hunt Jackson's 'Glimpses of California and the Missions.' These drawings are of both scenery and people, and certainly enhance the reader's interest in the narrative.

Macmillan's new Thackeray proceeds with the 'Paris Sketch-Book' and 'The Irish Sketch-Book' in one volume, with the writer's own illustrations, including a caricature of O'Connell as Lord Mayor.

Though Helen M. Winslow, in compiling her 'Literary Boston of To-day' (L. C. Page & Co.), takes leave in her dedication to rate herself "a small fraction" of that Boston, she does not actually celebrate herself in the succeeding biographical sketches. Mrs. Julia Ward Howe's portrait serving as frontispiece is a frank reminder that a large and the weightiest part of the "Literary Boston of To-day" is the "Literary Boston of Yesterday." The face of the new editor of the *Atlantic*, Mr. Bliss Perry, fitly closes this portrait gallery, of which the text is written with sobriety if (as a matter of course) "genially" and in the journalistic vein.

Mrs. Lucia Ames Mead's book on 'Milton's England' (Boston: L. C. Page & Co.) shows a pleasant commingling of literary and antiquarian interests, with just a flavor of the summer holiday. It may be commended as a satisfactory pilgrim's guide-book to the places in which Milton lived; and its picture of the life of his time will practically assist the imagination of the tourist who has not made a special study of that period. Mrs. Mead also takes note, in passing, of the local associations connecting some of the towns and buildings she describes with famous Americans, such as Penn, Franklin, and Roger Williams. The illustrations, which are mainly reproduced from old engravings, represent many churches and houses as Milton must have seen them.

When the publishers of Esther Singleton's 'London, as Seen and Described by Famous Writers' (Dodd, Mead & Co.) announce that it "will appeal to the thoughtful reader as well as to the tourist," they draw a distinction which is not flattering to those of our compatriots who crowd the Atlantic steamers every summer. But a book which lays under tribute the work of such a variety of writers as Charles Dickens, G. W. Steevens, Augustus Hare, Charles Lamb, Théophile Gautier, Austin Dobson, and Washington Irving might safely challenge the attention of many more than two classes. It is arranged topographically: after a few chapters on London as a whole, we begin at the docks and work our way westward as far as a charitable bazaar in the Albert Hall. Perhaps this order was better than the chronological, but such transitions as that from Justin McCarthy to Leigh Hunt are somewhat

jerky. Even a flying leap from the Monument to Whitehall would scarcely have put a greater strain upon the imagination. Whatever the arrangement, the extracts should certainly have been dated, for it is important to know, in the case of any particular article, whether it is the London of the Crimean War or of the Diamond Jubilee that one is reading about. Except for this oversight, the compilation has been well made. The photographs with which it is accompanied are excellent.

A reader for school use has been compiled by Katharine Lee Bates and Katharine Coman under the title, 'English History Told by English Poets' (Macmillan). These editors frankly admit that to save the incident—or stage of national evolution and reform—they have had to compromise sometimes on indifferent poetry; but in such cases it is hard to see why there is any gain over the prose item which precedes each piece and fixes the chronology. William Morris's "poet's dream," "The Day is Coming," introduced towards the end, is scarcely in place in an historical selection. James Lincoln's closing sonnet, "England," might well have been supplemented by Professor Woodberry's better yet kindred Gibraltar sonnets.

J. C. L. Clark, Lancaster, Mass., publishes a little book, 'The Alcotts in Harvard,' written by Annie M. L. Clark. It does not contain much in substantial addition to its avowed sources, Sanborn's 'Life of Alcott,' Mrs. Cheney's 'Life of Louisa M. Alcott,' and Miss Alcott's 'Transcendental Wild Oats.' The last-named account of Fruitlands was so delightfully absurd that Mrs. Clark's is bound to suffer in comparison. But to her written sources she adds a modicum of personal recollection touching the Alcotts after they had left Fruitlands for the house called "Brick-Ends" in the village of Still River, one of the several parts into which the township of Harvard is divided. The author's tone is the now hackneyed one of depreciation of Mr. Alcott, and sympathy with his much-enduring wife and children. But that was not all failure which bore such fruit as Alcott's comment on his Harvard experiment: "That is failure when a man's idea ruins him, when he is dwarfed and killed by it; but when he is ever growing by it, ever true to it, and does not lose it by any partial or immediate failures—that is success whatever it seems to the world." Young people who delight in Miss Alcott's stories will be grateful for the facsimile of her rollicking letter of 1844. Several photographs are Mrs. Clark's best excuse for the publication of her brochure. That of the house at Fruitlands shows it to have been bare and ugly to a degree that could not be surpassed.

From the press of Macmillan & Co. we have received a volume of attractive appearance, dealing with the 'Experimental Study of Gases.' The author, Prof. Morris W. Travers, has been associated with Professor Ramsay in the investigation of argon and the other gases of the helium group, and is thus eminently qualified for the task which he has undertaken. As a complete treatment of the subject would demand more than a single volume, Professor Travers has confined himself to descriptions of such methods as may find application in research, and of investigations which involve new principles or lead to important results. The methods developed during the study of the gases of the helium group naturally occupy a considerable portion of the book, and the description of the apparatus employed—sometimes omitted from the original papers—is fully given.

The first part of the chemistry volume in the first annual issue of the International Catalogue of Scientific Literature, published by the Royal Society, contains an author-catalogue of 112 pages, a subject-catalogue of 284 pages, and a 17-page index to organic substances. The scheme of the International Catalogue, we may remind our readers, is the development of three international conferences. It involves the publication of seventeen annual volumes covering the literature of as many branches of science, under the immediate responsibility of an international council, with the coöperation of regional bureaus, twenty-nine of which are already established. The details of classification, cross-references, etc., have been worked out with admirable success. The prompt and complete cataloguing of scientific literature which is thus assured will be of inestimable value to scientific research. At present, financial considerations restrict the number of subject-entries, and forbid the issue of a card catalogue as originally contemplated. This is a pity, and it is to be hoped that the necessary funds may be speedily provided. It would seem to be an object which might properly be cared for by the Carnegie Research Fund. The only criticism of the work we have to make, is the repetition of the schedule of classification, and the index in four languages. In a publication of this character this seems quite unnecessary.

A 'Dictionary of Dyes, Mordants, and other Compounds used in Dyeing and Calico Printing' is published by Griffin of London and Lippincott of Philadelphia. The authors are Christopher Rawson, Walter M. Gardner, and W. F. Laycock, who have prepared it as a companion volume to 'A Manual of Dyeing' issued by the same publishers. The 372 double-column pages of rather small type contain a general description of the many substances employed in dyeing, with their properties and uses and the methods for their examination and assay. Some of the longer articles, with the number of pages given to each, are: Cotton 9, Silk 5, Wool 11, Indigo 30, Logwood 5, Madder 5, Soap 12, Analysis of Textile Fabrics 6, Action of Light on Dyes 10, Water 12, Analysis and Recognition of the Coal-Tar Colors 13. The task which the authors set themselves appears to have been performed carefully and creditably, and the book will be an acceptable reference volume to all engaged or interested in the industry of dyeing.

The Commercial Press, Bombay, has published a curious and interesting volume of 352 pages on 'Reporters and Reporting,' by an Indian admirer of Sir Isaac Pitman, whose portrait faces the titlepage. Mr. D. E. Wacha, the well-known Parsee publicist, at present Chairman of the Bombay municipality, contributes a preface (one-fifth of the volume) on the requirements of effective reporting, and the dignity of the profession. The bulk of the work is made up of extracts—grave and gay—from various authors bearing upon the subject. To those not engaged in reporting, the volume will be found amusing as a collection of anecdotes upon the subject treated.

"The largest and most varied body of Irish Folk Music in existence was gradually got together by George Petrie, the famous Irish antiquary, with whom its collection had been a passion from his seventeenth till after his seventieth year." The entire collection numbered about 1,800 airs. Only about one-tenth part of these had seen the light at the period of Petrie's decease in 1866. The Irish Literary Society of London has undertaken their publication, and Part I., containing 500 airs, edited by C. V. Stanford, has just been issued by Boosey & Co., London and New York. It will be welcomed by all lovers of Irish music.

Lovers of Dante may be glad to have their attention called to a series of reproductions from paintings, bronzes, and masks, accompanying the article by Dr. Ingo Krauss on "Das Dantebildniss vom Beginn des Quattrocento bis Raphael," in *Monatsberichte über Kunstwissenschaft*, Heft 9.

Municipal socialism, according to Mr. H. D. Lloyd's account in the *National Geographic Magazine* for September, has reached its highest development in New Zealand. Its success is, in his opinion, complete. Here is "the most homogeneous, the most compact, the most energetic, and the most manageable democracy in the world." The picture of the economic conditions, however, must be received with caution. Take, for instance, this assertion that, of a loan of fifteen million dollars made in 1893, "not one dollar of principal or interest remains unpaid." This is Mr. Lloyd's only reference to the public debt of the colony, which amounts to the enormous sum of $320 per head of population, or relatively more than twenty times as great as our national and State debts combined, and far greater than the public debt per head of Great Britain, France, or Italy. The debt has increased twenty-five million dollars in the last five years, while the increase of the population has been only 69,359. The fact is, that the growth of municipal socialism, as the experience of England also shows, means an alarming addition to the public indebtedness. Brief abstracts are given of the papers read at the recent meeting of the American Forestry Association at Lansing, Mich.

A letter from Washington to Geo. Wm. Fairfax, dated September 29, 1763, is the most interesting of the historical manuscripts printed in the Boston Public Library Bulletin for September. It is mainly a request that Fairfax would sign certain articles in case he had examined "our Mississipi [*sic*] Scheme," and is "Inclined to be an adventurer." There are also letters from business houses in London to John Hancock, in 1770, which throw light on the foreign trade of that day and the difficulties attending it; and a long letter from the Rev. Isaac Backus, giving some account of the religious conditions of New England in 1764.

—The October *Century* has a few pages of highly interesting recollections of American poets, by Wyatt Eaton, who, after returning from his studies in France, made portraits for the *Century* of Bryant, Longfellow, Whittier, Emerson, Holmes, and Holland. Bryant came to his studio on Monday mornings, walking from there to the *Evening Post* building, forty or fifty blocks away, when the sitting was over. The artist found his presence so overpow-

ering that he was obliged to have a friend present to engage him in conversation. The two were not adapted to sympathetic companionship; as the artist says, "I felt myself as much a stranger to him at the end of the sittings as at the time of my first meeting him." With Longfellow, he felt the necessity of a certain reserve, fearing, for instance, to take off his coat while at work, although the weather was excessively hot. While Bryant seemed old, even two or three hundred years, Longfellow gave him the constant impression of youth. Whittier was rather hard to approach, and wished Eaton to make his portrait from an exceptionally bad photograph, almost unrecognizable. The poet himself seemed to possess at the start "a general look of commonplaceness and lack of character," but he improved on acquaintance, and the sittings became quite enjoyable. Emerson was rather indifferent at first, and hurried the artist along. "You must get through with this work as quickly as possible, for I am very old; I have but a little longer to live, and so much to do." As the work proceeded, however, Emerson became so talkative and interesting that progress was practically impossible without the presence of some third party. A short sketch of the artist and his work, by Charlotte Eaton, precedes the recollections, and his portrait, from one of his own drawings, comes at the close. The notorious Mr. Dowie of Zion City is "analyzed and classified" by Dr. Buckley, who finds him most probably first a sincere Christian, and then a fanatic, making extravagant claims which he himself believed, and driven by failures into sophisticating his reason and conscience in search of explanations for these failures. Lured by self-confidence and ambition into schemes requiring large sums of money, he found it necessary to manipulate men, and his natural shrewdness soon developed into cunning. Intoxicated by prosperity in these schemes he has actually come to regard himself as the special messenger of God. John Swain gives a study of Dowie and his work from another point of view, indicated by the title, "The Prophet and his Profits."

—The almost simultaneous publication of the second and fourth volumes of the "Indo-Iranian Series" draws especial attention to this meritorious undertaking on the part of Columbia University. The general editor of the series, Prof. A. V. W. Jackson, has in preparation volume i., 'A Sanskrit Grammar for Beginners,' and Mr. Montgomery Schuyler, jr., according to the announcement made by the Columbia University Press, will shortly bring out his completed 'Bibliography of the Sanskrit Drama,' some chapters of which, as preparatory studies, have already appeared in the *American Oriental Journal*. The latter scholar has now published, as the fourth volume of the series, an 'Index Verborum of the Fragments of the Avesta' (1901), a complete and useful contribution, which will be appreciated by all specialists in this department of research. Volume ii., which has just appeared (1902), is also a technical work, but more ambitious in design, being an 'Indo-Iranian Phonology' (with special reference to the middle and new Indo-Iranian languages). The author, Dr. Louis H. Gray, has devoted himself for some years to the collection of material, which has been so sifted in the pages of this book as to show at a glance which phonetic changes occurring in Indian dialects have their counterpart in Iran, and which are peculiar to only one of the two groups of languages.

—As will be seen by the Sanskrit and Iranian scholar, the chief contribution made by this book is in the phonology of the middle and the new dialects, which hitherto have not received their due share of attention in this regard. And as this is the chief contribution, so it is the main aim of Dr. Gray "to prove that the later Indo-Iranian dialects are still closely akin, and have had in many cases analogous developments." Previous works have been freely drawn upon, but with due citation of authority. The body of material here presented is of the utmost value to the Indo-Iranian phonologist, but it has also a wider importance. The general student of Aryan phonetics cannot but be impressed with the numerous analogies between the changes here recorded and those in other related fields, some of which, such as the loss of an internal *g* in Indian and Iranian compared with ἐγών = Bœotian ἰών, Latin *regem*, Old French *rei*, are widespread. Under section 360, where the change of *l* to *n* is recorded, it might have been said that, when initial, this change is almost universal. Throughout India to-day every gamin who has heard of Lucknow calls it Nuklo. Dr. Gray's volume certainly augurs well for the scholarly tone of the new series, which will apparently be a worthy rival of the earlier Harvard Oriental Series.

—'Historical Sources in Schools' (Macmillan) is a painstaking and valuable report which has been prepared by a select committee and submitted to the New England History Teachers' Association. The Chairman of the committee, Prof. C. D. Hazen, and his four colleagues have regarded their function seriously, and, like other members of similar committees, deserve warm thanks for labor gladly given to help forward the good cause of teaching. There are two things which this volume shows very clearly, to wit, the widespread acceptance of the view that history should be studied, even at an early stage, from original materials; and, secondly, the existence of a considerable apparatus which has been called into being with the purpose of making sources available. The old way of teaching the beginner from a text-book, and from a text-book exclusively, was doubtless bad. The new gospel, that documents should be brought upon the scene without delay, supplies an admirable stimulus, but may in practice be carried too far. Teachers of history everywhere are trying to hit the golden mean between the desiccated exactness of an epitome and the somewhat desultory attractiveness of sources. A volume like the present report has the merit of showing how things stand. After a general dissertation on the usefulness of sources, a series of annotated bibliographies is furnished. The design is practical, and so the lists cover those fields of history which are most often taken up in American schools. Thus, ancient history, mediæval and modern European history, English history, and American history are singled out from all other departments of the subject. Of course numerous subdivisions are made, and in each case the great movements and periods are accentuated. An account is given of the sources most suitable for the use of beginners, and of the best excerpts from sources which can now be had in English. On the whole, the bibliographies are better than the critical notes. Of the latter, a few are too long according to the scale of the volume, while others are thin. Narrow limits of space deprive some of the bibliographies of their proper value—for instance, that on the Church in the Middle Ages. But the shortcomings of this report are slight when compared with the carefulness of its bibliographies and its judicious division of subject-matter. It is one of the best gifts which have been offered by college professors to teachers in the preparatory schools. Besides the Chairman, the committee consisted of E. G. Bourne, Sarah M. Dean, Max Farrand, and Albert Bushnell Hart.

—Mr. John Phin's 'Shakespeare Cyclopædia and New Glossary' (New York: Industrial Publication Co.) is meant to provide the possessor of any copy of Shakspere's text with a body of comment and exposition, alphabetically arranged, that shall serve the purposes of an annotated edition and something more. It is addressed, we are told, "to the ordinary reader rather than the profound Shakesperean scholar," and the suggestion is made that this fact "will excuse many features which might otherwise appear puerile in a work of this character." The alphabet includes words needing definition, names of *dramatis personæ*, mythological and historical characters, and so on. The explanations are for the most part compiled from accepted sources, with due credit to the authorities utilized. A great deal of valuable material is thus made accessible in moderate compass and at small expense. It is easy to find errors, but to enumerate those that we have observed would give a wrong idea of the book. For, when all deductions have been made, there can be no doubt that Mr. Phin's volume stands the only test that can justly be applied to it. It is a handy compendium of useful knowledge for the kind of "ordinary reader" that he has in mind. We ought to add, however, a word of caution: Mr. Phin must not be regarded as an "authority," either in linguistics or in textual criticism; when he is most original the reader should be least credulous. Finally, we must protest against the extraordinary tone in which he speaks of Schmidt and Steevens, neither of whom he can abide.

—There died in Bremen on August 26, in his eightieth year, Otto Gildemeister, a writer of varied talents and great eminence, esteemed the foremost daily journalist in Germany and the first among poetic translators. His university life had no bread-and-butter aim, and he dropped naturally, on graduation, into the service of a new paper, the *Weser-Zeitung*, of which he quickly became chief editor. His two articles per week amounted in the gross to some 5,700. They were written in a clear hand with few erasures, from a mind that knew its own thought, and in independent advocacy of liberal principles regardless of the opinion of the mob. When his townsman, Dr. Barth, founded the Berlin *Nation*, Gildemeister wrote for it also in friendliest sympathy under the signature of "Giotto" (his anagram for Otto Gl—). Gildemeister was a free-trader before the days of the

Anti-Corn Law League across the sea, and therefore (rightly says his biographer) a German Federalist and Constitutionalist. His political preoccupation consisted further in his having been called to the Bremen Senate, first as secretary, and then as Senator, and by that body he was at forty-eight made burgomaster. His congenial rôle was that of a minister of finance. But public affairs could not absorb him wholly. Though he strayed as seldom from Bremen as Kant from Königsberg, he reached out into foreign literatures, and, suppressing every temptation to become a poet on his own account, he translated with marvellous skill and fidelity Byron, Ariosto's 'Orlando Furioso,' Dante's 'Inferno,' and Shakspere's Sonnets. Of the others we cannot speak, but his version of the Sonnets is masterly. These translations will keep his memory green. His editorial writing must needs undergo the fate of its kind; and his two volumes of Essays will no doubt cease to be read, though Bamberger pronounced him the most eminent of German prose-writers. But it must be long before equal gifts of expression in such opposite lines as journalism and poetry will recur, even in men devoid of the political capacity which ensured to Gildemeister the highest local usefulness and distinction.

## THREE "BACONIAN" BOOKS.

*Francis Bacon our Shake-speare.* By Edwin Reed. Boston: Charles E. Goodspeed.

*Bacon and Shake-speare Parallelisms.* By Edwin Reed. Boston: Charles E. Goodspeed.

*Shakespeare Studies in Baconian Light.* By Robert M. Theobald. London: Sampson Low; New York: Scribners.

It is a pity that the term "Baconian" has come to be used in so limited a sense. "A Baconian," one would think, ought to supnify either a disciple of Bacon, an adept in his inductive method, or, if there are no such adepts, a scholar well versed in Bacon's works, literary and philosophical. Yet nowadays the word designates, in common parlance, a person who holds that the dramas which have always passed as William Shakspere's were actually written by Francis Bacon, and it carries no implication of familiarity with Bacon's acknowledged writings or of skill in expounding his doctrines.

The discussion of the "Baconian hypothesis" appears to us, as facts now stand, a pretty barren debate. Neither party can convince the other, and the world at large takes—and must take—but a languid interest in the dispute, so long as most Shaksperean scholars refuse to engage in it at all. It is not our purpose, then, to thresh out the whole subject of this hypothesis; for we do not agree with Mr. Reed that "determination of authorship is a condition precedent to the comprehension of the Shakespearean dramas." Nor should we find it necessary to do more than chronicle the publication of his two books, and characterize them briefly, were it not for the fourth chapter in 'Francis Bacon our Shake-speare.' This is entitled "The Place of the Shake-speare Dramas in Bacon's System of Philosophy." It exhibits Mr. Reed in the rôle of an expounder of Bacon's acknowledged works, and reaches the startling conclusion (on the basis, mainly, of Bacon's own words) *that the Shaksperean dramas embody Bacon's moral and political philosophy, and constitute the missing Fourth Part of the 'Instauratio Magna.'* Here is a definite proposition, capable of being discussed, and also of being settled, since the evidence is not only abundant, but uncommonly free from the circumstantial and the ambiguous. The question thus raised is also a matter of some consequence, both from the literary and from the philosophical point of view. It is not a mere "determination of authorship"; it involves the whole plan of Bacon's philosophical fabric, as well as his ability or inability to express himself in intelligible language. Incidentally, it gives us a chance to appraise Mr. Reed's knowledge and comprehension of Bacon. This last point is of some interest, since it has often been asserted that most Baconians, however well versed they may be in Shakspere, know no Bacon to speak of.

It is essential to Mr. Reed's contention with regard to Part IV. of the 'Instauratio' to prove that Bacon set forth a great body of philosophy in cryptic or enigmatic form. He sees an avowal of such an intention in the 'De Augmentis' (vi. 2), where Bacon speaks of the "acroamatic" method of delivery. This passage, however, Mr. Reed misinterprets in a surprising way. It is, in fact, simply descriptive and critical, and contains no suggestion of any purpose on Bacon's part to follow the example of acroamatic teachers. Again, what Mr. Reed calls "Bacon's own description in general terms of one of the two methods, the secret one, adopted by him for communicating his philosophy to the public," is contained in a well-known passage of the 'Temporis Partus Masculus,' a tentative, cancelled sketch, superseded by the publication of the 'Instauratio' and not usable as evidence of Bacon's purposes when the latter work was written. Further, the 'Partus Masculus' is not a treatise on moral or political philosophy. It deals almost entirely with natural science. Even if it should appear, then, that the passage in question is an avowal of Bacon's intention to set forth philosophy in enigmas—and we do not think it bears that meaning — such an avowal would not help Mr. Reed's contention, but rather hinder it. For Mr. Reed does not hold that Bacon used a cryptic method in setting forth natural philosophy. His whole argument requires, on the contrary, that this practice should have been confined to moral and political writings. The 'Temporis Partus,' then, is out of the case. We need not dwell further on this particular part of the subject, since, as we shall see in a moment, such discussion is made unnecessary by what follows. We may come then, without longer parley, to the main question: *Was the Fourth Part of Bacon's great Latin philosophical work a collection of English plays?*

Bacon prefixed to the 'Instauratio Magna,' as printed in 1620, a "Plan of the Work" *(Distributio Operis)*, which gives a clear account of the contents. The work, as there laid out, is to consist of six Parts, of which we are here concerned with the Second, Third, and Fourth. To the Second Part (the 'Novum Organum') is consigned "instruction in a better and more perfect use of the reason *in rerum inquisitione*, and in the true aids of the intellect, that by this means (as far as the condition of mortality and humanity allows) the intellect may be made efficient *(exaltetur)* and furnished with ample ability *(facultate amplificetur)* to overcome the difficulties and obscurities of nature." This art, Bacon adds, is "a kind of logic," which he then proceeds to distinguish from syllogistic reasoning and from ordinary induction. The Second Part is unfinished, so that the account of the new induction is incomplete. The important place which *tabular arrangement* occupies in Bacon's method, however, is plain enough. The method is illustrated by an unfinished treatment of Heat, which includes four tables *(tabulæ)*, with an explanation of their use, and mentions others that are to be constructed. These facts are of much significance in the present inquiry.

The Third Part of the 'Instauratio' is to consist in a "Natural and Experimental History"—an account of the "phenomena of the universe," comprising a history of the heavenly bodies and of minerals, plants, and animals, with experiments; as also "experiments of the mechanic arts," etc., and a treatment of such "cardinal virtues" in nature as dense and rare, hot and cold, and several others. No portion of this Part is present in the work as published in 1620, but a considerable body of materials for it was afterwards issued.

The Fourth Part of the 'Instauratio'—and this it is particularly important to mark—is devoted to "setting forth examples of inquiry and discovery *(exempla inquirendi et inveniendi)* according to my method [that is, of course, the new induction], exhibited in some subjects, taking especially the subjects which are both most noteworthy *(nobilissima)* among those which are under inquiry and most various, so that there may be an example in every kind." These examples are to be different from those already used to illustrate the precepts and rules of the new induction in Part II.; they are to be "types and models, which shall, as it were, set before the eye the entire process of the mind and the continuous structure and order of discovery *(inveniendi)* in certain definite subjects, and those various and remarkable." Thus the Fourth Part is, adds Bacon, "nothing else in fact but a particular and fully developed application *(applicatio particularis et explicata)* of Part II." *(i. e.*, of the 'Novum Organum').

The meaning of all this is clear. Part II. is to contain an explanation of Bacon's method of induction; Part III. a complete collection of material derived from a study of Nature in the widest sense of the word, with accompanying experiments; Part IV. a number of examples of the application of the new induction to select subjects, drawn, in all probability, from the materials collected in Part III. The character of Part IV. is further vouched for by a passage in the 'Novum Organum' (i. 102), in which Bacon, still speaking of the investigation of Nature, says that the "particulars" are so numerous and dispersed that little can be accomplished unless such of them "as pertain to the subject of inquiry shall, by means of Tables of Discovery *(tabulæ inveniendi)*, apt, well arranged, and as it were animate, be drawn up and coördinated; and the mind

be set to work upon the duly prepared and digested aids which these tables supply." This significant passage is practically suppressed by Mr. Reed.* It is, in truth, fatal to his theory of Part IV., especially when taken in connection with another passage in the 'Novum Organum' (i. 117), in which these same "tables of discovery" are spoken of as "composing the Fourth Part of the Instauratio," and are mentioned in the same close connection with the investigation of Nature which we have observed in the passage just quoted. This decisive piece of testimony is ignored by Mr. Reed.

Appropriately enough, the Fourth Part was to be known as *Scala Intellectus*, "The Ladder of the Understanding." Only the preface is extant, but this alone suffices to show what the contents were to be, even if that had not already been abundantly explained in the *Distributio Operis* and the 'Novum Organum.' "It is my design," so runs the Preface, "here [*i. e.*, in Part IV.] to set forth and describe examples of true and legitimate inquiry into things for a variety of subjects (as in the Second Book [*i. e.*, the 'Novum Organum'] I have set forth and described the precepts of such investigation)†, and that in the form which I regard as most consistent with the truth and which I teach (*tradimus*) as tested and chosen" (*i. e.*, in the form of the new induction). This passage, which again asserts the close connection between the Second and the Fourth Part of the 'Instauratio,' and which corresponds exactly to the programme laid down in the *Distributio* and partly carried out in the 'Organum,' is also passed over in silence by Mr. Reed, though he actually quotes the next four sentences of the same Preface, which he imagines lend support to his strange thesis.

We have now a clear idea of the *tabulæ inveniendi* that were to constitute Part IV. of the 'Instauratio': they were examples of the application of the new induction to various subjects of "natural history" (including as Bacon does under that term physics, chemistry, and mechanics, as well as those subjects to which the term is now commonly applied). They are called *tabulæ* because they were to be in tabular form, like the extant *tabulæ* in Part II., of which Part, as Bacon himself says, the 'Scala Intellectus' (Part IV.) was to be merely "a particular and fully developed application." We are justified in inferring, from 'Novum Organum,' i., 127, that Part IV. was also to contain "tables of discovery" for logic, ethics, and political science, since Bacon says that his method is equally applicable to those sciences, and that he "constructs a history and tables of discovery concerning anger, fear, shame, and the like; and also concerning examples of civil matters; and not less concerning the mental operations of memory, composition and division, judgment, and the rest, than hot and cold, or light, or vegetation, or the like." Clearly these mental, moral, and political *tabulæ* were to exemplify the new induction, and were to resemble the tables employed for physics and other departments of natural philosophy, though, as appears from the closing sentence of this chapter, the method of inquiry was to vary "in some measure" according to the subject.

In the face of evidence like this, Mr. Reed asserts, with entire confidence, and, we feel sure, with equal honesty, that Part IV. of the 'Instauratio' was designed for an inquiry "into facts of a mental and moral nature exclusively," and that the *tabulæ inveniendi* of which this Part was to consist are the dramas that pass under the name of Shakspere. The reader will draw his own conclusions.

In justice to Mr. Reed, we ought to add that he rests a large part of his case on the 'Cogitata et Visa,' from which he quotes a long extract relating to the *tabulæ inveniendi*. He calls particular attention to certain passages which are found in the Oxford MS. (and therefore in Spedding's edition), but which do not appear in Isaac Gruter's edition of 1653. The substance of the 'Cogitata et Visa,' however, was included in the 'Great Instauration,' and the tract throws no light on the *tabulæ inveniendi* which the passages that we have already considered do not afford. Indeed, the 'Cogitata et Visa' deals with natural philosophy alone, so that the tables contemplated are even less to Mr. Reed's purpose than some of those mentioned in the 'Organum.' As for the omissions in Gruter's text, they are in nowise important. The idea that Gruter suppressed these passages because they tended to reveal Bacon's authorship of the plays has no foundation. They have nothing to do with the drama. They concern tables of discovery in natural philosophy. One of the passages, indeed, recurs in substance in the 'Novum Organum' (i., 130), which was given to the world by Bacon himself, as well as in the Preface to the 'Scala Intellectus,' and in the 'Filum Labyrinthi,' which were published by Gruter in the same volume with the 'Cogitata et Visa.'

As a further specimen of Mr. Reed's method, as well as of the trustworthiness of his statements, we subjoin the following quotation:

"In the *Filum Labyrinthi* he [Bacon] is even more specific [than in the passage concerning *'tabulæ inveniendi* for fear, shame,' etc., already cited from the 'Novum Organum'] in his description of these moral and political *Tabulæ Inveniendi;* for he there gives a list of thirteen classes of them, four of which are entitled as follows: *'tabulæ* concerning animal passions; *tabulæ* concerning sense and the objects of sense; *tabulæ* concerning the affections of the mind; and *tabulæ* concerning the mind itself and its faculties.' "

The truth is, that the 'Filum Labyrinthi,' if one reads it through, furnishes an absolute confutation of Mr. Reed's view that the *tabulæ inveniendi* are plays. It begins with the skeleton of such a table, dealing with Motion. This table is called a "specimen of the Investigation of Nature." By this example, says Bacon, he thinks he has made his meaning perfectly clear (*primum hoc videmur adepti, quod maximum est, ut plane intelligamur*). He has "set forth the matter naked and open" (*rem nudam et apertam exhibuimus*). [This is a sufficient rejoinder to Mr. Reed's utterances about cryptic methods of exposition!] Near the end of the tract we have a statement, intended to give a correct impression of the size and scope of the 'Great Instauration,' as the work lay in Bacon's mind when the 'Filum' was written. This statement takes the form of a summary list (*digestum*) of the tables which he meant to include. These are thirteen in number, as follows: (1) motion, (2) heat and cold, (3) the rays of things and impressions produced at a distance, (4) growth and life, (5) the passions of the animal body, (6) sense and objects, (7) *de affectibus animi*, (8) *de mente et ejus facultatibus*, (9) the architecture of the universe, (10) the great *relativa* or the accidents of being, (11) the consistencies of bodies or the inequality of parts, (12) *de speciebus sive rerum fabricis et societatibus ordinariis*, (13) the little *relativa* or the properties. There are also to be smaller tables as occasion requires. Then "there remains" (and these words conclude the paper) "the other part of the work, . . . that, after I have explained the construction of the machine [*i. e.*, of his method of investigation], I may give light and counsels as to its use."

The reader has but to compare this digest with Mr. Reed's account of it (just quoted) to see how untrustworthy a guide has here undertaken to expound Bacon. We are unable to see how Mr. Reed could work through this passage, and rise from his study of it with the opinion that the fifth, sixth, seventh, and eighth sets of *tabulæ* were *dramas*. We are equally unable to understand how he could imagine that he was dealing fairly with his reader in garbling the passage as he has done. If some of the *tabulæ* were dramas, all were dramas. The *tabulæ* concerning motion were not dramatic. The 'Filum' begins with a skeleton of them, which shows that they were what they profess to be—"tables."

But further argument is really out of place in the presence of such a misrepresentation of known facts as Mr. Reed's chapter contains. We have no doubt that the misrepresentation is unintentional. It exhibits, nevertheless, the character of Mr. Reed's Baconian scholarship, and the equipment with which he operates in his attempt to elucidate the meaning of the great philosopher.

We must remind the reader that what precedes is not a discussion of the "Baconian theory of Shakspere's plays," but merely an examination of Mr. Reed's hypothesis that Bacon refers to these plays as *tabulæ inveniendi*, and that they constituted the Fourth Part of the 'Instauratio Magna.' Mr. Reed does not rest his doctrine of Baconian authorship on this chapter alone. His book includes several other divisions—a chapter of "coincidences," two relating to the dates of the plays, another concerning their "classical element," and so on. These we have no space to discuss. We will only remark that in the chapters on "early authorship" and "late authorship," Bacon is credited with writing not only the Shaksperean dramas, but the old play of "King Leir" (one of Shakspere's sources), "The Famous Victories of Henry V.," and "The Troublesome Reign of King John." Students of literature may confidently be left to deal at their leisure with a critical method like this.

Mr. Reed's "Bacon and Shake-speare Parallelisms" may be briefly characterized. In this book he "rests the argument for Bacon as the sole author of these Poems and Plays on a single point, viz., identity of thought and diction between them and his acknowledged works." Accordingly, we have some four hundred pages of "par-

*His only reference to it is the following (p. 136): "In another tract [a strange designation for the 'Novum Organum'!] Bacon describes these writings as *tanquam vivas*, a phrase which Mr. Spedding translates, 'as it were, animate,' and Mr. Montagu, by the word 'living.' "

†"Itaque consilium nostrum est, veræ et legitimæ de rebus inquisitionis, ut in secundo libro præcepta, ita hic exemplaria proponere et describere pro varietate subjectorum."

allelisms" and comment. A large number of these comparisons are of the most trivial description—not worth citing, even for literary illustration, still less for serious argument. What is to be made out of such "parallelisms" as "misshapen chaos" (*Romeo and Juliet*) and "chaos is without form" (Bacon), or "You hit the white" (*Taming of the Shrew*) and "Except the white be placed, men cannot level" (Bacon)? Others, however, are very interesting from this or that point of view, and students of Shakspere will be glad to have the volume on their shelves, quite irrespective of the "Baconian question."

We have spent so much time with Mr. Reed that we must dismiss Mr. Theobald's portly volume with a word or two. His arguments are of the usual Baconian sort, neither better nor worse. The parallels, like Mr. Reed's, are sometimes interesting, but very often trivial, fanciful, or even mistaken. A highly characteristic chapter is that in which Mr. Theobald succeeds in proving to his own satisfaction that "the objection to the Baconian theory derived from Bacon's treatment of love, is not only not sustained by detailed examination, but the logical bearing of the comparison is exactly the reverse of that which is claimed for it. The Shakesperean view of love, so far from conflicting with the Baconian, is curiously and most significantly identical with it." And so Mr. Theobald actually finds in this comparison a new proof or support for the Baconian theory! Our readers will remember Bacon's frigid Essay "Of Love," and in particular the famous remark, "I know not how, but martial men are given to love. I think it is but as they are given to wine; for perils commonly ask to be paid in pleasures." We must leave it to their curiosity and leisure to discover how Mr. Theobald reconciles this flippant dictum with Shakspere's treatment of the subject. It is this utterance which Tennyson quoted as a sufficient refutation of the Baconian theory. Mr. Reed notes the fact in his book of 'Parallelisms,' but he omits a significant part of the passage, leaving only the comparatively colorless, "I know not how, but martial men are given to love," and, having thus mutilated Tennyson's quotation, and deprived it of a large part of its force and meaning, he triumphantly produces "the identical sentiment" from "Troilus and Cressida":

> "We are soldiers,
> And may that soldier a mere recreant prove
> That means not, hath not, or is not in love."

This procedure speaks for itself.

## RECENT ENGLISH ANTHOLOGIES.

When a man is in his seventy-fourth year of life; when he carries half-a-dozen capital letters, in the English fashion, after his name; when he has been president of several learned societies and under-secretary of several colonies and even Governor of Madras; when he still, according to 'Who's Who?' finds his peaceful recreations in "fencing, botanizing, travelling, and conversation," why should he not at length crown an existence so honorable by publishing 'An Anthology of Victorian Poetry' (London: Swan Sonnenschein & Co.; New York: Dutton)? This book, as prepared by the Right Hon. Sir Mountstuart E. Grant Duff, G.C.S.I., F.R.S., has the merit of professing no especial standard beyond an old man's whims, and of demanding no especial deference from the reader. All that the compiler avers is that he has brought together a number of "Victorian" poems, of "all of which" he can say, "They happen to give me pleasure." "The personal equation," he adds, "is very much to the front," as it should be; much better thus than to have each editor claim that he is himself an infallible tribunal. If Sir Mountstuart Grant Duff really prefers to give but twenty-four out of his five hundred pages to Tennyson, twenty-three to Browning, and then to lavish sixty-one on Matthew Arnold, he has a full right to do so; and no one has reason to complain unless it be the young lady who may happen to receive the book as a birthday present. Himself a Balliol College man, the compiler dwells with pleasure on those works identified with the celebrated Oxford Movement, and gives eighteen pages to Keble, fifteen to Faber, and fourteen to Clough, while only six each are vouchsafed to Swinburne, Morris, and Mrs. Browning; Rossetti has but five, Watson three, Yeats two, Meredith one. There is nothing from Hardy, Symons, or Watts-Dunton. In all this we see the personal equation again.

The book has almost every possible defect of method, having, for instance, no alphabetical index either of authors or first lines; and being inconveniently divided into four quarter-sections, as it were, each having "introductory notes" at its beginning, so that all but the first set of poetic names have to be hunted over laboriously to find any especial statement or criticism. Nor can the reader know in which quarter-section any given author is classed, unless he bears the precise birthday of each in memory; though this may be precisely the knowledge for which he is consulting the book. In many cases the special selections are excellent, and there has been, indeed, long since, a silent balloting which makes each editor of an anthology decide easily on the poems by each author which the public wishes to see; just as an American compiler knows, under similar circumstances, that he must include Holmes's "Chambered Nautilus" and Lowell's "The Courtin'." Sir Grant Duff sometimes misses this, as where he omits to give us Mrs. Browning's "Sonnets from the Portuguese" and Sir Edwin Arnold's "He who died at Azan." In most cases, however, he comes well up to his duty, and includes, almost as a matter of course, Jean Ingelow's "High Tide on the Coast of Lincolnshire," Kingsley's "Sands of Dee," Thackeray's "At the Church Gate," Mahony's "Shandon Bells," Dobson's "Good-night, Babette," Bourdillon's "The Night has a Thousand Eyes," and the like. Mixed with these is a good deal of commonplace or merely didactic rhyme; and the prose commentary is apt to be describable by these same epithets. The editor never hits the point better, perhaps, than when he dismisses Browning and Tennyson with the four terse monosyllables "I need not speak" (p. 84); then going on to devote the whole following page to Faber (p. 85).

Probably the best single service likely to be done to American readers is in revealing the real authorship of that fine poem, "The Ballad of the Boat." We have not Mr. Stedman's 'Victorian Anthology' at hand, but this poem has passed in American books of selections as having been written by an unknown "R. Garrett," this being mainly the consequence of an error in editing the little book called 'Sea and Shore' some twenty years ago. It now, however, appears as the work of a man dear to many Americans, Dr. Richard Garnett, late of the British Museum; and we reprint it because of this long error and its own high quality:

THE BALLAD OF THE BOAT.

The stream was smooth as glass. We said:
"Arise, and let's away";
The Siren sang beside the boat that in the rushes lay,
And, spread the sail and strong the oar, we gaily took our way.
"When shall the sandy bar be crost? When shall we find the bay?"

The broadening flood swells slowly out o'er cattle-dotted plains;
The stream is strong and turbulent, and dark with heavy rains;
The laborer looks up to see our shallop speed away.
When shall the sandy bar be crost? When shall we find the bay?

Now are the clouds like fiery shrouds; the sun, superbly large,
Slow as an oak to woodman's stroke, sinks flaming at their marge;
The waves are bright with mirror'd light as jacinths on our way.
When shall the sandy bar be crost? When shall we find the way?

The moon is high up in the sky, and now no more we see
The spreading river's either bank, and surging distantly
There booms a sullen thunder as of breakers far away;
Now shall the sandy bar be crost, now shall we find the bay!

The sea-gull shrieks high overhead, and dimly to our sight
The moonlit crests of foaming waves gleam towering through the night.
We'll steal upon the mermaid soon, and start her from her lay,
When once the sandy bar is crost and we are in the bay.

What rises white and awful, as a shroud-enfolded ghost?
What roar of rampant tumult bursts in clangor on the coast?
Pull back! pull back! The raging flood sweeps every oar away.
Oh stream, is this thy bar of sand? Oh boat, is this the bay?

A great contrast to the previous rather cumbrous but well-meaning book is a most agreeable volume under the slightly awkward name of 'The Spindle-side of Scotch Song,' devoted to the memory of a marvellous series of women, each of whom appears in literary history dimly yet definitely, contributes to it her little gem of immortal song, and then relapses into obscurity once more. She may be a titled lady or a Border belle, like the Baroness Nairne, or Mrs. Alison Cockburn; she may be Jean Glover, the Kilmarnock weaver's daughter, whom Burns records as "strolling through the country with a sleight-of-hand blackguard"; each furnishes her song and disappears, except as some kindly editress in later days may search out her story, and portray her life in all the wonderful picturesqueness which belonged to that early period of Scottish society—a period that came and went, bequeathing us these ballads and the Waverley Novels. Scott himself knew several of these ladies, gave them hints for ballads, or recorded their memories. The editor of this volume perhaps attempts too much to individualize her sitters by artificial phrases—"the songstress of heather and heath," "the songstress incognita," and so on; it is quite needless, since each individualizes herself and makes herself immortal by her song. No vagabond in the world has ever sung the joys of that profession like Jean Glover, who, as she chanted them, may have been passing with her blackguard companion by "the lonely farmhouse of Lochgoin, where, after his week's work, the author of the 'Scots Worthies' sat writing the biographies of the

martyrs by the light of the peat-fire" (p. 74); while the song rang out:

"Ower the muir amang the heather,
Ower the muir amang the heather,
By sea and sky, she shall be mine,
That bonnie lass amang the heather!"

Or it may have been Susanna Blamire, who sang for village festivals beneath the shadow of Helvellyn, and left behind her the ever-plaintive lay:

"And ye shall walk in silk attire
And siller hae to spare
Gin ye'll consent to be his bride
Nor think on Donald mair."

Then there was Lady Grisell Hume, afterwards Mrs. Baillie, who spent much of her time, during one winter, in carrying food to her father, Sir Patrick, a leader of the Covenanters, when imprisoned in the Tolbooth, or when hiding himself in the family mansion; first beneath the flooring of a cellar from which he was driven by water undermining it, and then in the family vault close by. Suddenly appearing in the dark retreat, where Sir Patrick was beguiling tedious hours by committing Latin psalms to heart, she would regale him not merely with the boiled sheep's head which she bore in her apron, but by imitating the amazed cry of her young brother Sandy at its disappearance, he exclaiming, "Mother! Will you look at Grisell? While we have been eating her broth, she has eaten up the whole sheep's head!" (p. 17). Perhaps it was on her return from one of these visits that she composed that unforgotten Scotch song, which we quote as being here for the first time given in correct rendering:

WERENA MY HEART LICHT, I WAD DEE.

There was ance a may, and she lo'ed na men;
She biggit her bonnie bouir doon in yon glen;
But now she cries, Dule, and a-well-a-day!
Come doon the green gait and come here-away.

When bonnie young Johnie cam ower the sea,
He said he saw naething sae bonnie as me;
He hecht me baith rings and monie braw things;
And werena my heart licht, I wad dee.

. . . . . .

His bonnet stood aye fu' round on his broo,
His auld ane looked better than monie ane's new;
But noo he lets wear ony gait it will hing
And casts himself dowie upon the corn-bing.

And now he gangs daund'ring about the dykes,
And a' he dow do is to hund the tykes;
The live-lang night he ne'er steeks an e'e;
And werena my heart licht, I wad dee.

Were I young for thee as I hae been,
We should hae been galloping doon on yon green,
And linkin' it on the lilie-white lea,
And wow! gin I were but young for thee!

Then there were the two Selkirkshire "Forest" ladies, Alison Rutherford and Jean Elliot, who gave the two separate versions of "The Flowers of the Forest," each so musical and so plaintive that they were both long attributed to periods long gone by. Both referred to the losses of the Forest region at Flodden Field, and they so revived the old popular air that wherever a Scottish soldier is borne to the grave, through all the range of the British empire, to-day, this dirge is his requiem. Miss Eliot's version, long supposed to be much the older, is that beginning:

"I've heard them lilting at our yowe-milking,
Lassies a' lilting before the dawn o' day;
But now they are moaning on ilka green loaning—
The Flowers of the Forest are a' wede away."

The other is in a slightly different poetic rhythm, but it goes to the same air, and has this strong verse in it:

"I've seen the morning
With gold the hills adorning,
And loud tempests storming before the mid-day;
I've seen Tweed's silver streams
Glittering in the sunny beams
Grow drumly and dark as they rolled on their way."

It was of Mrs. Cockburn that Sir Walter Scott wrote one of his vivid personal descriptions, as of an old friend; describing her gay evening entertainments, at which the final *petit souper* was like that of Swift's Stella, the description of which Mrs. Cockburn used herself to quote, by way of preliminary introduction to its frugal viands:

"A supper like her mighty self—
Four nothings on four plates of delf."

Then there is the ever-plaintive "Auld Robin Gray," a ballad whose secret was kept by the authoress, a woman—the best-kept literary secrets, like that of the "Saxe-Holm" stories, are usually kept by women—until within a year of Lady Anne Lindsay's death, at seventy-five. This was when she held the most brilliant drawing-room in London, and entertained it so well that once, when she had a large and distinguished dinner party, and something went wrong in the kitchen, her old servant whispered from behind her chair, "My lady, you must tell another story. The second course won't be ready for ten minutes!" (p. 108). She it was who wrote:

"When the sheep are in the fauld and the kye are a' hame,
And a' the weary warld to rest are gane.
The woes o' my heart fall in showers frae my e'e,
Unkent by my gudeman wha sleeps sound by me."

One is, however, sorry to discover from this book that the repenting Scotch lady wrote a second part to the plaintive poem. In this added canto Auld Robin dies, the heroine marries the returned Jamie, and we hear of "a bonnie wee bairn" in the last line but one.

Then comes the author of perhaps the most profoundly beautiful of all Scotch songs, "The Land o' the Leal." On the lawn at Gask House, where Carolina Oliphant lies buried, there stands her memorial cross with the words, "Carmina Morte Carent" (Her songs are immortal). These songs are varied: there is the rollicking "Laird o' Cockpen"; there is that song of magnificent surprises, "Caller Herrin'," which can never be forgotten by those who have once heard it sung, no matter how long ago, by Antoinette Sterling; and there is, above all, "The Land o' the Leal." Songs like these are the education of a race; it is these which were first created by that ideal quality lying deep in the nature of every Scotchman; they were created by it, and now serve to perpetuate it.

## RECENT FICTION.

*Luck o' Lassendale.* By the Earl of Iddesleigh. John Lane.

*Up the Witch Brook Road.* By Kate Upson Clark. J. F. Taylor & Co.

*The Shadow of the Rope.* By E. W. Hornung. Charles Scribner's Sons.

*A Downrenter's Son.* By Ruth Hall. Houghton, Mifflin & Co.

There is a naïveté amounting to childlikeness in the 'Luck o' Lassendale.' If "Miss had not danced with a lord," as Miss Burney puts it, or rather if a lord's name did not figure as the author, would this novel have seen the light? Yet there are, in spite of its slenderness, several good points about it. To begin with, it is a well-bred book; an air of breeding, almost atoning for lack of sparkle, pervades the work. The contour is hopelessly inartistic, but not all the details are without meaning. There is a definite idea informing each of the leading characters that makes them all real, though very stiffly portrayed. The fatuous speculator and gambler, and the hypochondriac are credited with arguments and complaints that are ingeniously absurd, and that show, if not precisely humor, at least a keen sense of nonsense. And the women are not lay figures by any means, though they present rigid outlines as of little Dutch paintings. The stock-gambling and horse-racing manias are the basis of Sir Francis Lassendale's troubles, and if his experiences are not novel, there is a combination of gentleman and fool in his reasoning that has almost the effect of a creation.

'Up the Witch Brook Road' justifies its name of "a summer idyl" by being light and pastoral, by breathing of New England hills and pastures and orchards, by being flavored with apples and costumed in dimity. It tells of "the late forties of the last century," and tenderly laments the passing of a day innocent of railroads and tramps. Manners have changed, but the description of farm and wood and rocky hills well describes the Massachusetts hill country of to-day. The farm-folk munch their apples still on soft September days, but now women sit in their doorways as they munch, and watch the passing trolleys, and children run out from the school-house and give "a great big one" to a favorite conductor. Yet the September sun shines over all, and the haze lies blue in the hollows of the cliffs as it did in Aunt Apphia's day. A story steps along hand in hand with the picture of New England life—a mystery even, and some black shadows. The tale is told through the always unconvincing medium of a seven or eight-year-old child's recollections of events miraculously overheard, understood, and remembered by her. But it is a little story full of sweet hill breezes.

Mr. Hornung's new book is in his most interesting vein. Of course it has an Australian side. Of course it deals with mysteries and misdemeanors, and, equally of course, even the hardened novel-reader tingles with suspense and wonder over the issue. We say it in no spirit of detraction—sometimes Mr. Hornung's solutions are more mysterious than the mysteries, and this book is a case in point. Rather let us say that it is a feature of his originality. And if we cannot always follow his ways of making his characters happy, why should we? Let us simply give thanks for a clean, clever novel, which will not be put aside till the end is reached. It would be a crime worthy Mr. Hornung's own pen to tell the story here; but we may say that the heroine is wholly loveworthy, and that there is a chance to see how detective work is done by "the literary feller."

In 'A Downrenter's Son' Miss Hall has the advantage of a subject new to fiction, so far as we know. Does any one outside of Rensselaer County know what a Downrenter is, or an Uprenter? How many readers—not dwellers on the banks of the Hudson—know that in times so modern as 1846 something very like a small war was raging in New York State, arising from questions relating to the rights granted to the first patroon? Of the two parties to the quarrel, one held to the rights of the actual tenants to their land because they had occupied it for generations, the other acquiesced in the landlord's title and was willing to pay rent. Of the Downrenters there was a faction that not only would not pay, but would not let their neighbors pay, even in farm produce, and resorted to

violence in their fanaticism. Miss Hall's book gives a picture of this stormy time which is full of interest and significance. "The old Dutch ways and the new American life touch, but will not intermingle." Here is the keynote to the struggle and to old Jacob Hagen's character—the leading exponent of the difficulty. The story accompanying the bit of history is adequate and pleasing, with some good drawing of types eccentric but lifelike. The historic explanations stand rather baldly apart, suggesting as their source old sheepskin bindings and dusty pamphlets. This, however, is but a trifling imperfection in a little book good for old and young.

---

*The Jewish Encyclopedia.* Volume II. Apocrypha-Benash. Funk & Wagnalls Co. 1902. Pp. xxii, 686.

The present volume of this encyclopædia calls for few words, our review of its predecessor applying generally to it. Certain characteristics have become more marked, and the book as a whole seems settling to a definite aim. Thus, the Biblical rubrics are dropping more and more into the background; quite certainly no one need seek light on Old Testament subjects here. On the other hand, post-Biblical and especially rabbinic matters are claiming more space. The Baruchs of the Bible have less than a column; the Baruch of Talmudic legend, of the apocalypses, and the apocryphon, has almost nine pages. If it were possible to carry this tendency to its legitimate conclusion and drop all Old Testament rubrics except in their rabbinic aspects, space would be saved, and the book would have a still more precise character. Again, the treatment of philosophy is most uncertain. Some articles are good; others are inadequate. That upon Averroes, for example, seems to be written in ignorance of the systematic concealment in popular writings which was approved and practised by the Arabic philosophers. That upon Bahya, and still more that upon Avicenna, are better; but the student of philosophy's sources will be elsewhere. It may, of course, be questioned why Averroes and Avicenna should have a place in a "record of the history, religion, literature, and customs of the Jewish people." There are some other rubrics, also, for which it is hard to find a reason except in the shadow of the mighty word Encyclopædia. It cannot have repaid Professor Jackson to put what he knows on 'Avesta' into less than two pages, nor, however high our esteem for the principal Avestan scholar in this country, can we get much satisfaction from such a presentment. On the other hand, the articles on folk-lore, manners, and customs, superstitions—Jewish life and thought on its ordinary levels—are eminently to the point, and promise to form a mass of information nowhere else so accessible. The same holds of the rabbinic and Talmudic articles generally; those on legal questions are often excellent.

Finally, it is evident that the backbone of this encyclopædia is to be Jewish biography and history from post-Biblical times. In that is the reason, and it is an excellent one, for its existence, for that it will be consulted, and of that much will be found here not to be found, except with long labor, in other books. Both for its notices of Jews by countries and towns, and for its still more valuable biographies, it will take a useful place as a book of reference. Of course, it could be better, more exact, fuller—it is certainly not in the same class with the English 'Dictionary of National Biography'; but yet for its purpose it stands alone.

In style and finish the articles are still very unequal, and, while there are brilliant exceptions, the scholarship as a whole would stand levelling up. If the editors can see to this; if they can concentrate their space and strength on some well-defined lines, *e. g.*, biography, literature (rabbinic and later), Jewish folk-lore, customs, and life in the broadest sense, they will accomplish a great and lasting work. For an encyclopædia of things Jewish there is room; there is none for an encyclopædia of things viewed from a Jewish standpoint.

---

*Supplement to Burnet's History of My Own Time.* Edited by H. C. Foxcroft. Oxford: Clarendon Press; New York: H. Frowde.

This is a work of very considerable importance. Its materials have been drawn from Burnet's original memoirs, his autobiography, his letters to Admiral Herbert, and his private meditations. No part of the contents has hitherto been published, and there is enough to fill out a large octavo volume of more than five hundred pages. The Bishop of Sarum's activity is already well known, and few who are familiar with his age can have failed to form a strongly marked impression of his personality, but in this new autobiography we can see him more clearly than ever before. As Mr. Foxcroft says,

"it is singularly characteristic; and while the interest of the Memoirs is dependent on that of the History, to which they are an indispensable complement, this quaint and curious piece of self-revelation—unique, perhaps, in the case of a man high in ecclesiastical office and verging upon his threescore years and ten—should attract on its own merits the attention of the literary world."

By far the greater part of Mr. Foxcroft's volume consists of fragments of Burnet's original memoirs, which still remain. There was a first draught, a recension, a second recension, and then a good deal of doubtful editing. Burnet was a strong party man in days when party feeling involved bitter personal hatred, and everything he wrote was sure to be attacked. His posthumous works were assailed with the same acrimony which had been directed against the publications of his lifetime. Accordingly, the 'History' was garbled and the Autobiography was suppressed, although the latter was made to supply data for the official sketch of his life. The Bishop's family shrank from enmities and controversies, and made by no means the best use of their literary opportunities. Their remissness accounts largely for the retarded publication of the passages that are now brought forward by Mr. Foxcroft from the Harleian MSS. of the British Museum, and from the Burnet papers which the University of Oxford acquired in 1835. Some of the differences between the Memoirs and the 'History of My Own Time' as it was at last given to the world were pointed out by Ranke, but he did not prepare an exhaustive list of them. In Mr. Foxcroft's 'Supplement,' on the contrary, the task of placing the early draughts side by side with the 'History' is faithfully performed, with the result that many grave discrepancies are revealed. One of the most amusing is furnished by Burnet's successive accounts of Marlborough's disgrace:

"Originally," says Mr. Foxcroft, "this was ascribed to detected treachery, of which Burnet had been informed by William himself; next, Burnet concedes that a disaffected man may be unjustly aspersed by the interpretations of political go-betweens; finally, the charge is dismissed as quite unfounded, and the Churchill version of the affair is accepted without demur."

Naturally, the Bishop's reputation as a credible historian does not improve under this process of comparison. As for the Autobiography, it is too garrulous and self-satisfied to produce the impression that Burnet was endowed with true dignity or refinement. Though he professes not to be swayed by any thought of vanity, he is essentially self-centred and too frequently complacent. On finishing this *apologia* of the vigorous and pushful Scot, there is little ground for wonder that he should have been well hated. But he had the energy of his nation, and went through the world with pachydermatous enjoyment of his own success.

---

*Thoughts from the Letters of Petrarch.* By J. Lohse. London: Dent; New York: Dutton.

The compiler, whose sex is effectively concealed by the succinct subscription, furnishes a new proof of the constantly growing interest in the Father of Humanism. To one who is familiar only with the 'Canzoniere' these brief extracts will suggest quite a different Petrarch from the one whom they have known. He was not only a singer, he was an inveterate moralizer as well. The fugacity of life and its opportunities, the imminence of death, the desirable but arduous nature of virtue, and the disappointing results of vice, are themes which appear to have had a sort of stylistic fascination for him. He was fond of the 'Tusculan Disputations,' of Seneca's moral treatises, and of Augustine's 'Confessions.' In them he found encouragement to weave into his letters many an uninspired reflection upon our mortal estate. On one occasion he frankly says: "Strange to say, I often feel a craving to write, without knowing to whom or on what subject." When in doubt he moralized.

Naturally, the editor of the volume in hand wished to have a large number of brief and quite self-explanatory passages. He found himself thrown necessarily to a great extent upon such quotable sentiments as the following: "The whole life of wise men ought to be a constant meditation on death." "How many do you think you can find who do not take anxious thought for the morrow?" "Delay is danger." "A deed cannot be undone by repentance." "How dear is life to all mortals, and at the same time how little count they take of it." It is clear that Petrarch was no epigrammatist, and that what little felicity his reflections may have had in Latin in the fourteenth century, most of them sound singularly dull in English at the opening of the twentieth. The real interest of the letters lies not in their author's highly conventional philosophy of life, but in the precious

hints which they furnish of his literary ambitions and those of his contemporaries. Moreover, as one gets better acquainted with Petrarch, it becomes apparent that his conduct belied the semi-monastic conception of life to which he pays so much respect.

Among the really genuine expressions of feeling which have been included in the present collection, none is nobler than the old scholar's reply to his friend Boccaccio, who was urging him to spare his declining strength: "Constant work and application are the life of my soul. When you see me less eager and longing for rest, you may be sure that I am soon to die. . . . You would like me to give up reading and writing; but, far from trying me, they are a pleasant recreation, and delight me after greater hardships—nay, they even make me forget these." "Nulla calamo," he concludes, "agilior est sarcina, nulla jucundior; voluptates aliæ fugiunt et mulcendo lædunt, calamus et in manus sumptus mulcet et depositus delectat, ac prodest non domino suo tantum sed aliis multis sæpe etiam absentibus, nonnunquam et posteris post annorum millorum."

*The Theory of Optics.* By Paul Drude. Translated from the German by C. Riborg Mann and Robert A. Millikan. Longmans, Green & Co. 1902. 8vo, pp. xxi, 546.

This is a thoroughly modern text-book, not handbook, of its subject. The fact that it carries a preface by Professor Michelson is a sufficient assurance of its scientific character. As any really to-day's treatise on any branch of general physics must do, it supposes an elementary acquaintance with the calculus; and its pages bristle with equations which signify hard work for the reader and full compensation therefor. Descriptions of instruments and statements of experimental results are summary, not to say skeletal.

Still, the essentials are given. As a matter of course, optics is here treated as a branch of the theory of electricity. The work consists of four parts (which nobody can suspect a German professor of simply numbering consecutively) — the first, on geometrical optics; the second, on the phenomena of light treated in the general manner of Fresnel; the third, on the electrical theory and the optical characters of crystals, metals, etc.; the fourth, on radiation. The assignment of one principal part to radiation is a mark of modernity; and the distribution of space among the four parts is significant. Taking the second part, which is a trifle under 150 pages, as a standard of comparison, the geometrical part is three-fourths as long, the electrical part is half as long again as the second, the discussion of radiation one-third of the same unit. The book is not at all overloaded, like so many German books; nor is there any undue partiality to any particular topic. The matter is judiciously selected, and contains nothing more than ought to be familiar to everybody whose business or amusement it is to be acquainted with the theory of optics. The fault, if there be any, is rather in the omission of interesting topics. The student will derive from it all the pleasure that there is in the sense that one's thoughts are guided by a master-mind.

*As Seen from the Ranks.* By Charles E. Benton. Putnams.

Sober narratives of our civil war confined to personal experience are always welcome. Such a one is that named above. The author, a minor, enlisted October, 1862, in Company A, One Hundred and Fiftieth New York Volunteers, and was assigned to the regimental band. In that humble capacity he served until the close of the war, nearly three years later. The regiment guarded Baltimore, took part in Gettysburg, camped on the Rapidan, marched and fought from Chattanooga to Atlanta, Savannah, and Bentonville, and participated in the Grand Review. It was a wide experience for a home-keeping youth. As usual with bandsmen then, he was detailed for duty in the field hospitals when battles were in progress, and he became most humanly interested in the care of the wounded. The little sketch-book records without gasconade the particulars of a soldier's life. It notes without exaggeration the appearance of a fought-over field, the details of an extemporized hospital maintained without premeditation for months, the incidents of life in camp and on the march, the sensation of being under unaccustomed fire, and the indifference to it that is bred of familiarity, the aspects of foraging in Georgia and of building corduroy roads in the Carolinas. The author rarely goes beyond what he has seen; and, with reserve unusual in the irresponsible, expresses few opinions upon generalship, although it is true that he does not approve of McClellan's course after Antietam nor of Meade's at Falling Waters. The only recital not familiar to survivors of the war is, within our reading, so exceptional that, while suspecting it based on misinformation, we quote it entire for authoritative denial or confirmation. On the march from Savannah to Raleigh, Mr. Benton found, among "oases of plantations" in the cypress swamps, one that "had been devoted—so the overseer told us—to raising slave children for market. There were nearly 300 slave women and a dozen or two slave men about the place" (p. 256). A few minor errors catch the eye: A corporal of the guard, not the color sergeant, lowers the flag at retreat (p. 6); Littletown, Pa., should be Littlestown (p. 61); "Jeb" Stuart of cavalry renown was not a member of the Steuart family of Baltimore, whose estate sheltered the hospital first known as the Steuart's Mansion, but later as the Jarvis (p. 12); and the South did not have more West Pointers than the Government (p. 41), but it made better use of those it had. Mr. Benton's reminiscences revive in a most amiable way what the war meant to the rank and file, and teach later generations that its glories had shadows as well as lights, but that those who sustained the Government by arms did so cheerfully and with intelligence, regardless of the hardships of the way.

"HE DELIGHTS US

without recalling any master of the art [parody] whatever. If we think of Thackeray or of Bret Harte in perusing this little volume, it is only to reflect that they would, in all probability, have gladly taken him into their company. . . . Why he could not have written all of the works of the authors he parodies it is difficult to see, for he seems invariably to get inside of them, to write as though with their hands and from their brains," says the *New York Tribune* of Owen Seaman and his BORROWED PLUMES ($1.25), a volume of twenty-two parodies, including the Elizabeths of the *Letters* and the *German Garden*, "John Oliver Hobbes," Ellen Thorneycroft Fowler, Hall Caine, Corelli, "Mr. Dooley," Henry Harland, Hewlett, Meredith, Lubbock, Henry James, Maeterlinck, G. Bernard Shaw, Stephen Phillips, etc., etc. HENRY HOLT & CO.

ALADDIN O'BRIEN
A New Novel by Gouverneur Morris, Author of "Tom Beauling"

Aladdin O'Brien is the lovable, rollicking hero of Mr. Morris's latest romance. Humor and pathos play hide-an'-seek through the pages of this charming love story with its quaint characters and strong, well-conceived situations. It is the old story of two men in love with the same girl, but it is told in the delightfully original style that is distinctive of this promising young writer.

The climax occurs during a famous battle of the Civil War,—an intense, moving, and highly novel situation,—and a good, old-fashioned ending follows the storm and stress of a story of decided human interest.

*12mo, 300 pages, $1.25.*

ABRAHAM LINCOLN
Condensed by John G. Nicolay from Nicolay and Hay's "Abraham Lincoln: A History"

"Abraham Lincoln: A History," written by Mr. Lincoln's secretaries, the late John G. Nicolay and John Hay, is not only the standard life of the great President, but is one of the most famous biographies ever issued in the world. In response to a demand for a condensed edition, Mr. John G. Nicolay made such an edition, bringing into one volume all the essential facts of President Lincoln's life,—a book which is entirely an abridgment of the larger work. *8vo, 600 pages, with frontispiece and index. Price, $2.40 net (postage 18 cents).*

THE EAST OF TO-DAY AND TO-MORROW
By Right Rev. Henry C. Potter, Bishop of New York

Having made his visit to the East just after the close of serious hostilities in the Philippines and the quelling of the Boxer movement in China, neither a more opportune time nor a better qualified man could be found to write of the present conditions and future prospects in Japan, China, India, the Hawaiian Islands and the Philippines, than the versatile and keen observer, Bishop Potter. The chapters are straightforward, concise, and full of prophecy. *12mo, 190 pages. Price, $1.00 net (postage 9 cents).*

CATERPILLARS AND THEIR MOTHS
By Ida Mitchell Eliot and Caroline Gray Soule. Giving The Life Histories and Illustrations (life size) of 43 Species of Moths

This book has been written in response to the request of many teachers and young naturalists. It is the result of more than twenty years spent in studying and rearing moths, and it contains all the facts needed for successful work in this fascinating line, as much structural detail as beginners need to know, an account of the appliances the authors have found most useful, and a list of books on the subject. The life histories of important species are written from actual experience. The illustrations are very striking; they are made from photographs and *show actual size. 8vo, 300 pages of text, 80 insets, with index. Price, $2.00 net (postage 18 cts.).*

*Ex-Speaker Thomas B. Reed's Splendid Library of the Best After-dinner Speeches, Classic and Popular Lectures, Famous Addresses, Stories, etc., in ten elegant volumes, superbly illustrated with fine photogravures and color plates.*

# MODERN ELOQUENCE

*"The greatest spoken thought of the Nineteenth Century."*

THE publication of MODERN ELOQUENCE is an event of premier importance. For the first time the best After-dinner Speeches, Lectures, Addresses, Anecdotes, Reminiscences, and Repartee of America's and England's most brilliant men have been selected, edited, arranged, by an editorial board of men—themselves eloquent with word and pen—who have achieved eminence in varied fields of activity.

**These gems of spoken thought** were fugitive from lack of proper preservative means, until the Hon. Thomas B. Reed, upon voluntarily retiring from the Speakership of the House of Representatives, gathered about him these men of mark and experience in literature, his friends and co-workers in other fields, and began the task of preparing this great work.

North, East, South, and West, and the Mother Country as well, have been searched for gems in every field of eloquence.

**Here was a lecture** that had wrought upon the very souls of great audiences; there an after-dinner speech, which "between the lines" was freighted with the destinies of nations. Here was an eulogy expressing in few but virile words the love, the honor, and the tears of millions, and there an address pregnant with force—itself the fruit of a strenuous life's work. Or, perchance, a reminiscence, keen, scintillant repartee, or a story potent in significance and aflame with human interest. Matter there was in abundance, for English-speaking peoples are eloquent, but **the best—only the best, only the great, the brilliant, the worthy to endure,** has been the guiding rule of Mr. Reed and his colleagues. Their editorial labors have been immense.

While libraries and musty files were being delved into in a hundred places—while famous men were putting into manuscript their brain-children—while reminiscence, repartee, and story were being reduced to type, and speeches, addresses, and lectures, which money could not buy, were in friendship's name being offered, Mr. Reed was preparing for this work his most ambitious contribution to literature,—his *pièce de résistance*—**"The Influence and the History of Oratory."** Prof. Lorenzo Sears, beloved and honored in many lands for his critical and contributory work in literature, was writing **"The History of After-dinner Speaking."** So with Champ Clark, Edward Everett Hale, Senator Dolliver, and Hamilton Wright Mabie—each was producing a special contribution, which, of itself, is a gem of thought, a monument to research, study, and observant experience.

**Whatever the viewpoint,** this work is without precedent. It has no predecessor, no competitor. Speeches that have been flashed across continents, lectures that have been repeated over and over again to never-tiring audiences (but never published), addresses that have made famous the man, the time, and the place—these are brought together for the first time, and with them large numbers of the wittiest sayings of the wittiest men of the nineteenth century.

**For an hour, for a whole evening in the easy chair at home—for the study of style and diction that have electrified brilliant assemblies—for the man ambitious to become a successful or popular public speaker, and for the one who has to prepare a toast or an address—this work is a never-failing source of charm and inspiration.** Nor is this solely "a man's work." "The tenderest tribute to a woman I have ever read," said Senator Dolliver when he read the manuscript of Joseph Choate's after-dinner speech, "The Pilgrim Mothers."

**"MODERN ELOQUENCE" is sumptuously published in octavo volumes, but moderately priced.**

## SPECIAL OFFER TO READERS OF "THE NATION."

**To properly present this eclectic library, Portfolios, comprising Table of Contents, fine Photogravures, chromatic plates, sample pages, and other interesting material have been prepared. One of these portfolios, with full particulars regarding bindings, prices, terms, etc., will be mailed on application.**

[A 63]

# *Some of* Dana Estes & Company's *New Books*

*Illustrated Cabinet Edition of*

## Scott's Poems

The complete poetical works of Sir Walter Scott, uniform with the Cabinet edition of Scott's "Waverley Novels." With introductions, glossaries, and notes for each volume by Andrew Lang. Illustrated with photogravures and etchings. Six volumes, sold in complete sets or as separate works, as follows:

Vol. I., Lay of the Last Minstrel; Ballads. Vol. II., Marmion. Vol. III., Lady of the Lake; Miscellaneous. Vol. IV., Rokeby; Vision of Don Roderick. Vol. V., Lord of the Isles; Occasional Pieces. Vol. VI., Bridal of Triermain; Minor Poems.

**Single volumes, . . . . $1.50**
**Complete sets, 6 volumes, cloth, gilt tops, 9.00**
**Same, Half-calf or morocco, . . 18.00**

*Illustrated Cabinet edition of*

## Tennyson's Poems

The complete poetical works of Alfred, Lord Tennyson, edited and annotated by Prof. William J. Rolfe. In 12 volumes, with about five illustrations to each, including photogravures and etchings from paintings by Edward Lear, and also from landscapes and figure paintings by Doré, Edwin A. Abbey, Frederick Dielman, and others. The text has been edited with scrupulous accuracy, and the variorum readings and other critical memoranda are invaluable to the reader. This edition is in the most literal sense definitive. Sold only in sets.

**Complete sets, 12 vols., cloth, gilt tops, . $18.**
**Same, Half-calf or morocco, . . $36.**

*Fifth Edition*

## Mrs. Tree

**By LAURA E. RICHARDS**

A short novel of irresistible charm and originality. Companion volume to "Geoffrey Strong," Mrs. Richards' great success of last year. The author won international fame by her children's story, "Captain January," and now makes it clear that she is equally at home in the field of adult fiction. The *Detroit Free Press* is not alone in thinking "Mrs. Tree" "the jolliest, merriest, drollest book Mrs. Richards ever wrote."

**Unique binding, illustrated, tall 16mo, $0.75**

## A Treasury of Humorous Poetry

**Edited by FREDERIC LAWRENCE KNOWLES.**

An anthology of humorous masterpieces drawn from English and American sources, and including over 200 poems by such writers as Hood, Calverley, Gilbert, Thackeray, "Lewis Carroll," Holmes, Field, Riley, and Bret Harte. Also many copyright poems by very recent humorists, such as Seaman, Herford, Day, "Ironquill," and Barry Pain. Exhaustive notes and indexes. Sixteen full-page illustrations. The text is printed from new type on a fine deckle-edge paper.

**Cloth, 12mo, gilt top, boxed, net . . . $1.20**
**Same, Half-calf or morocco, net . . $2.40**

*Send for Handsome Illustrated List of All Our New Books*

## FICTION

### Glengarry School Days *Ready in November*

A Tale of Early Days in Glengarry. By RALPH CONNOR. 13mo, cloth, illustrated, $1.25.

This new volume fittingly supplements "The Man from Glengarry" in that it deals with some of the same characters, but in a different period, a period of which we all long to hear more.

### Two Wilderness Voyagers

A True Story of Indian Life. By FRANKLIN WELLES CALKINS. 12mo, cloth, $1.50.

The Author of *The Mississippi Bubble* says:

Mr. Calkins has done something new. He gives us Indians, but they are not merely buck-skinned manikins. He gives us nature, but he does it naturally. He gives us the West, but he does it without pose. Moreover he gives us a story, a white story done in red. I have been waiting for Western men to begin to do big, new Western books.—EMERSON HOUGH.

### Janet Ward

A Daughter of the Manse. By MARGARET E. SANGSTER. Illustrated. 12mo, cloth, $1.50.

A college girl's story written in the interest of the girl of to-day. The charming romance follows the heroine through college life, work among the Mountain Whites of Tennessee and College Settlement Work in New York. "Simple, natural, full of sweet home experience."—*Commercial Advertiser.*

### By Order of the Prophet

A Tale of the Occupation of the Great Salt Lake Basin. By ALFRED H. HENRY. Illustrated, $1.50.

"He writes with conviction and with a commendable reserve power. There is nothing lurid or sensational or overdrawn about his picture—it is simply tragic, pitiful, heartrending—a page torn from the history of a ruined life. None of the previous attempts is worthy of being placed in the same class with this really strong story."—*Commercial Advertiser.*

### Those Black Diamond Men

A Tale of the Anthrax Valley. By WILLIAM F. GIBBONS. Illustrated, 12mo, $1.50.

"It is a series of dramatic human scenes, sometimes with thrilling incidents, sometimes of tragic intensity, sometimes touched with humor. . . . Its characters are typical, and the brisk action of the story holds the attention firmly."—*The Outlook.*

"Rarely has a book been published so opportunely."—*Baltimore Sun.*

### A Chinese Quaker

An Unfictitious Novel of Two Continents. By NELLIE BLESSING-EYSTER. Illustrated, 12mo, cloth, $1.50.

The title of this book is the poet-philanthropist Whittier's own phrase and itself forecasts a most romantic story—a record literally unique. Simply as a novel it is entertaining; but it is more largely interesting as an appeal to all who appreciate its educational, moral, political and humanitarian significances.

### Fool's Gold

A Study of Values. By ANNIE R. STILLMAN. 12mo, cloth, $1.50.

A striking novel introducing the American Gold Fields. A romance of exceptional power in which plot and action yield a large tribute to the strong purpose of the book.

### Aunt Abby's Neighbors

Freely Decorated. By ANNIE TRUMBULL SLOSSON. 16mo, cloth, $1.00.

"Mrs. Slosson's Aunt Abby is a sweet, noble, generous New England woman. Moreover she has a little twinkle of dry humor, even when she thinks deeply."—*The Outlook.*

### The Little Green God

A Satire on American Hinduism. By CAROLINE ATWATER MASON. 16mo, cloth, $0.75.

"There is a world of tragedy in 'The Little Green God.' . . . She has written an exceedingly tart little book which ought to make a stir. It is cleverly done and there is a great big reason just why such a book as this should be written."—*Los Angeles Express.*

## ESSAYS

### The Religion of a Mature Mind

Studies in Modern Problems. By Professor GEORGE A. COE, author of "The Spiritual Life." 12mo, cloth, $1.35 net.

The keynote of this book is its declaration that the heart of modern man is hungry for a fresh, original experience of the divine. The demand is for something more than a mere reconstruction of doctrine; the personal religious life must also be recognized.

### Faith and Character

By NEWELL DWIGHT HILLIS. Uniform with "A Man's Value to Society" and "The Investment of Influence." 12mo, cloth, 75 cents net.

The simple announcement of studies in character building by Dr. Hillis argues one of his best efforts, for his chosen line of study is distinctly in the direction of the development of character.

## GIFT SUGGESTIONS

### This is for You

Love Poems of the Saner Sort. Selected by WILLIAM S. LORD. 12mo, $1.00 net.

An exquisite gift book for every one. The verse selected is of sweetest sentiment and highest literary value. In its make-up it is as dainty and inviting as such a gift book should be. Tastefully bound and boxed, with ribbon for tying. Decorated cover, deckle edges, gilt top. As complete a gift as it is possible to devise.

### The Evolution of a Girl's Ideal

A Little Record of the Ripening of the Affections to the Time of Love's Coming. By CLARA E. LAUGHLIN. 16mo, decorated, 50 cents net.

"It is at once a moral tonic and (in its own peculiar way) a real little literary masterpiece. Miss Laughlin is frank and breezy and spirited and humorous. She is robust, yet with a delicacy essentially unimpaired; she shows herself full of fun. To me personally it comes as one of the delights in the routine of the commentator on authors and their doings."—*Chicago Post.*

## FOR YOUNG FOLK

### The Gift of the Magic Staff

The Story of Paul's Journey in Two Wonderlands. By FANNIE E. OSTRANDER, author of "Baby Goose," illustrated by Will Dwiggins. 4to, finely illustrated, decorated cover, $1.00 net.

An ideal blending of the healthfully fanciful fairy element with the healthful teaching of elementary morals.

### Rollicking Rhymes for Youngsters

By AMOS R. WELLS. Illustrated in colors by L. J. Bridgman. 4to, cloth, illustrated, $1.00 net.

L. J. Bridgman, whose unique illustration in "Guess" last year made him famous, has united with Amos R. Wells to produce this ideal child's book. Mr. Wells is well known already as a versatile author for children.

## MISSIONARY

### Missionary Principles and Practice

A discussion of Christian Missions and Some Criticisms upon Them. By ROBERT E. SPEER. 8vo, cloth, $1.50 net.

No living man is more competent for this than Mr. Speer. He may be said to have created a science of missions. He has shown both the need and the result of the work, and he has pressed the duty and privilege of a systematic evangelization of the world.

### A Maker of the New Orient

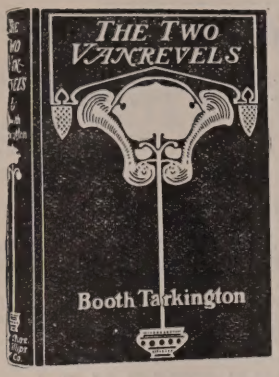
Samuel Robbins Brown, Pioneer Educator in China, America and Japan. The Story of His Life and Work. By WILLIAM ELLIOT GRIFFIN. Illustrated, 12mo, cloth, $1.25 net.

Dr. Griffis' latest work records the life of a man only too little known by the rising generation. As *The Interior* said of his previous work, "We owe Dr. Griffis, too, who spent years in Japan as a teacher in the Imperial University, a debt of gratitude for the able and sympathetic way in which he has treated his theme."

## FLEMING H. REVELL COMPANY, Publishers,

NEW YORK: 158 Fifth Ave. CHICAGO: 63 Washington St. TORONTO: 27 Richmond St. W.

# Booth Tarkington's New Novel



## THE TWO VANREVELS

This story of Indiana life in the late 40's combines the virility of "The Gentleman from Indiana" with the charm of "Monsieur Beaucaire."

ILLUSTRATED IN COLORS BY HENRY HUTT

*On sale at all bookstores. $1.50*

*Note—Special Edition of 500 copies in Full Imperial Japan Vellum with extra illustration drawn by Mr. Tarkington $3.00 net First Edition of 500 copies uncut; bound in boards $1.50 net*

McCLURE, PHILLIPS & CO., New York

NOW READY

# One Thousand American Fungi

(REVISED EDITION)

By CHARLES McILVAINE
Assisted by ROBERT K. MACADAM

Quarto, 729 Pages. 56 Full Color Plates and Hundreds of Etchings. Price, $5 Net

This, the only encyclopedia of edible American fungi, contains descriptions of and notes on all known edible and poisonous species, most of which, as the result of original investigation, thorough research and experiment, are here for the first time set down as edible. Indispensable to any who wish to take up this fascinating study. The total number of species shown in the illustrations is 278.

# DODD, MEAD & COMPANY'S ANNOUNCEMENT *of* NEW BOOKS

## "Temporal Power"

A Study in Supremacy. By **Marie Corelli,** author of "The Master Christian," etc. $1.50.

A singularly striking and powerful novel, dealing with a subject which has never before been treated in fiction.

## Paul Kelver

By **Jerome K. Jerome,** author of "Idle Thoughts of an Idle Fellow," etc., $1.50.

This is Mr. Jerome's first long novel, and in it he has branched out in an entirely new field.

## Moth and Rust

Stories by **Mary Cholmondeley,** author of "Red Pottage," etc. $1.50.

This is the first book from Miss Cholmondeley's pen since the publication of "Red Pottage."

## Fuel of Fire

By **Ellen Thorneycraft Fowler,** author of "Concerning Isabel Carnaby," etc. Illustrated, $1.50.

A story into which Miss Fowler has put much of her best writing.

## No Other Way

By **Sir Walter Besant,** author of "The Orange Girl," etc. Illustrated, $1.50.

The last story by Sir Walter Besant, completed by him just before his death.

## Wanted: A Chaperon

By **Paul Leicester Ford,** author of "Wanted: A Matchmaker," "Janice Meredith," etc. With illustrations in color by H. C. Christy, and decorations in color by Margaret Armstrong. $2.00.

An exceedingly clever story in the same style as "Wanted: A Matchmaker." The illustrations are beautifully printed in color and the decorations and typography of the book are most unique. This is the last completed story from the pen of this gifted author.

## A Christmas Greeting

By **Marie Corelli,** author of "The Master Christian," etc. Net, $1.50.

A volume similar to the old time "Annuals" so popular some years ago. The book is tastefully printed.

## The Homely Virtues

By **Ian Maclaren,** author of "Beside the Bonnie Brier Bush," etc. (probably) *net* $1.20.

A series of practical and pointed articles on such topics as "Thrift," "Thoroughness," "Straightness," etc.

## The American Idea

AS EXPOUNDED BY AMERICAN STATESMEN.

Compiled by **Joseph B. Gilder.** With a long introduction by **Andrew Carnegie.** Net, $1.20.

## The Leaven in a Great City

By **Lillian W. Betts.** Illustrated, net $1.50.

A book devoted to the social life of the working people of New York, by one who is thoroughly familiar with the subject.

## Under the Trees

By **Hamilton Wright Mabie.** With numerous full-page illustrations in photogravure, and with decorations in color by Charles Louis Hinton. Net, $2.00.

A most beautiful and satisfactory holiday edition of this widely read book.

# DODD, MEAD & COMPANY

Publishers 372 FIFTH AVENUE New York

# HARPER'S BOOKS FOR OCTOBER

1. **THE INTRUSIONS OF PEGGY. By Anthony Hope.**

A new novel that combines the brightness of the author's "Dolly Dialogues" with the interest of the "Prisoner of Zenda." It is a story of life to-day in London. Illustrated. $1.50.

2. **THE FLIGHT OF PONY BAKER. By W. D. Howells.**

This is a most delightful story of the adventures, experiences, and feelings of a "real" boy told in a way to interest every one who is interested in boys. Illustrated. $1.25 net.

3. **AN OLD COUNTRY HOUSE. By Richard Le Gallienne.**

The story of the plans and ambitions of two young married people in their country home. It is one of the most charming love stories of recent fiction. The volume is handsomely made with illustrations in tint and color by Elizabeth Shippen Green. (In a box.) $2.40 net.

4. **THROUGH THE LOOKING GLASS. By Lewis Carroll.**

This delightful story, long since a classic for both old and young, is bound uniformly with the Peter Newell "Alice in Wonderland" published last year. There are forty full-page illustrations by Peter Newell, a frontispiece portrait of the artist, decorative borders in colors. (In a box.) $3.00 net.

5. **IN THE MORNING GLOW. By Roy Rolfe Gilson.**

Stories of home life—the relations of the children with father, mother, grandfather, and so on—written in the vein of tenderness, humor and pathos that will make all readers recognize in them a part of their own experience. The stories, with one exception, appeared in Harper's Magazine. $1.25.

6. **AN INTERNATIONAL EPISODE. By Henry James.**

A new edition of what many readers consider the best of Henry James's fiction, daintily bound, uniform with the author's "Daisy Miller." Illustrated by McVickar. $1.25.

7. **THE LOVABLE TALES OF JANEY, JOSEY AND JOE. By Gertrude Smith,** Author of the "Roggie and Reggie Stories."

Delightful stories for children. The subjects are those familiar to all households—tea parties, making cookies, playing circus, stories of the flowers, visits, etc. Fifteen chapters in all, each beautifully illustrated. $1.30 net.

8. **WINSLOW PLAIN. By Sarah P. McLean Greene,** author of "Flood Tide," "Vesty of the Basin," etc.

A story of life in New England, full of the same humor and bright optimism that readers enjoyed in the author's "Flood Tide." No work of the author's will be read with keener interest. $1.50.

(Postage extra on net books.)

9. **THE RED HOUSE. By E. Nesbit.**

A delightful story of the honeymoon and the funny experience of a young married couple who from "love in a cottage" came into an extensive country estate. It is undoubtedly the author's most attractive work of fiction. Illustrated by Keller. $1.50.

10. **THE REIGN OF QUEEN ANNE. By Justin McCarthy,** author of "A History of Our Own Times," etc.

Mr. McCarthy's most recent contribution to his popular histories of England, treating of one of the most brilliant periods in English history—the time of Addison, Swift, Steele, Bolingbroke, and the great Marlborough. The history is in two volumes, uniform with the author's "Reminiscences." 2 vols., cloth. (In a box.) $4.00 net.

11. **HARPER'S COOK BOOK ENCYCLOPAEDIA.**

This is a book that will come as a boon to every housekeeper. It is arranged like a dictionary, so that you can find anything you want simply by opening the book and without hunting through a maze of indexes. Contributions by the most noted authorities on cooking in the world. Edited by the editor of Harper's Bazar. Bound in washable leather cloth. Illustrated, $1 50 net.

12. **THE DESERTED VILLAGE (Abbey Edition). By Oliver Goldsmith.**

The most beautiful edition of this work ever issued. The exquisite illustrations by Edwin A. Abbey, R. A., appeared first in Harper's Magaz ne. Frontispiece portrait; introductions by Goldsmith, Austin Dobson, and copious annotations by Cunningham. Royal octavo, bound in silk cloth. $3.00.

13. **SONGS OF TWO CENTURIES. By Will Carleton,** Author of "Farm Ballads," "City Ballads," etc.

A new book of poems by one of our most popular verse writers. Fully illustrated. $1.50 net.

14. **LITERATURE AND LIFE. By W. D. Howells.**

This volume is another of Mr. Howells's delightful books of reminiscence and criticism of literary things, life and people. Uniform with the author's "Literary Friends and Acquaintance" and "Heroines of Fiction." 32 full-page illustrations. $2.25 net.

15. **THE CONQUEST OF ROME. By Matilde Serao,** author of "The Land of Cockayne."

The author is without doubt the greatest modern Italian novelist. The main theme of this new novel is the conquest made by Rome over a brilliant young statesman who goes there from the provinces. It is a novel of intense and absorbing interest. $1.50.

16. **A DOFFED CORONET. By the author of "Martyrdom of an Empress."**

A most interesting story of the experiences in court life and in America of the titled author of "The Martyrdom of an Empress" and the "Tribulations of a Princess." Illustrated. $2.25 net.

(Postage extra on net books.)

### An Introduction to the History of Western Europe

**Part I. The Middle Ages**

(Special edition for use this fall.)

By James Harvey Robinson, Professor of History in Columbia University.

A NEW HISTORY of Europe, which is thoroughly scholarly and trustworthy, since the writer has relied either upon the most recent treatises of the best European authorities of the day or upon a personal study of the primary sources themselves. By this means a number of commonly received errors and misapprehensions have been avoided. Illustrations and an abundance of maps accompany the text.

Such matters of first-rate importance as Feudalism, the Mediæval Church, the Protestant Revolt, the French Revolution, and the development of the modern European States have received much fuller treatment than has been customary in histories of this compass.

**List price, $1.00; mailing price, $1.10.**

## THROUGH HIDDEN SHENSI

By FRANCIS H. NICHOLS. Profusely illustrated from photographs taken by and for the author, and a map of the route. 8vo, $3.50 *net*. Postage 18 cents.

AN account of a journey, in the autumn of 1901, from Pekin to Sian, in the province of Shensi, China, thence southward down the Han River to Hankow. The route lay through the heart of the "Boxers' Country" and across the oldest two provinces of China. It is essentially a story of untravelled roads over which few white men have ever ventured. Sian is one of the oldest cities in the world, and was the capital of China 2,000 years before the Christian era.

**ITS HISTORY and ROMANCE from 1660 to 1902**

By WINTHROP L. MARVIN, Associate Editor of the Boston *Journal*. 8vo, $2.00 *net*. (Postage 22 cents.)

CONTENTS: The Colony Ships.—Old Rigs and Models.—After the Revolution.—The First Swift Growth.—A Celebrated Voyage.—The Merchant Navigators.—Impressment and Embargo.—The Yankee Whalemen.—Reciprocity on the Sea.—A New-World Venice.—The Incoming of Steam.—Mail Ships and Clippers.—The Deep Sea Fisheries.—War and Its Ruin.—Our Coastwise Carriers.—Nearing Low Water Mark.—The Great Lake Fleet.—A Decade of Gain and Loss.

THE story which Mr. Marvin tells in this volume has the interest of a romance, especially the chapters dealing with the East India trade and with the whaling fishery. The historical narrative is full, and the serious value of the work to the student of the problems which confront American shipbuilders is not easily overestimated.

## The Private Soldier Under Washington

By CHARLES KNOWLES BOLTON, Librarian of the Boston Athenæum. Fully illustrated from original sources. $1.25 *net*. (Postage 18 cents.)

CONTENTS: I. Origin of the Army.—II. Maintaining the Forces.—III. Material Needs.—IV. Firelock and Powder.—V. Officer and Private.—VI. Camp Duties.—VII. Camp Diversions.—VIII. Hospitals and Prison Ships.—IX. The Army in Motion.—X. The Private Himself.

GOING, first of all, to the diaries and journals of the men themselves and then to other contemporary documents, both public and private, Mr. Bolton has constructed a straightforward narrative of the daily life, under the various conditions suggested in the chapter headings, of the private soldier who served in the Revolutionary War.

## New Amsterdam and Its People:

**STUDIES SOCIAL AND TOPOGRAPHICAL OF THE TOWN UNDER DUTCH AND EARLY ENGLISH RULE**

By J. H. INNES. With maps and plans, and with many views, portraits, etc. Large 8vo, $2.50 *net*. (Postage 16 cents.)

AN exhaustive picture, based upon the original records, public and private, of the actual conditions which prevailed in New Amsterdam during the Dutch and English rule. Every phase of the life of the time is described with painstaking care in the author's accounts of the men of that day.

The illustrations, mainly from original sources, consist of rare contemporary views, portraits, old prints, and unfamiliar maps and plans, picturing in an altogether unusual way the city in its infancy and some of the men who laid its foundations.

## Cross Country with Horse and Hound

By FRANK SHERMAN PEER. Fully illustrated in color and black and white by J. Crawford Wood. Large 8vo, $3.00 *net*. (Postage 25 cents.)

CONTENTS: True Sport and Sportsmanship.—Hunting Terms.—The Hunter: His Conformation.—Breeding Hunters.—Schooling Hunters.—Buying a Hunter.—Seat.—Hands.—Jumping Fences, Ditches, and Water.—Spurs.—Dress.—Falls.—Courage vs. Funk.—The Hound.—Hound Breeding.—The Hound Puppy at Walk.—The Fox.—The Fox and His Ways.—Scent.—Farmers and City Men.—The Lady Rider.—Mind-Power Horsemanship.—Driving to Hounds.—Officers and Hunt Assistants.—Horse Companionship.—The Consultation of War.—The Meet.—Riding to Covert.—The Game Itself.—The Hunt Dinner.

A WORK of full scope and authority, the first to be published in America on this fascinating sport. The author is a cross-country rider of unusual experience, and brings to his task a wide knowledge also of breeding, rearing, and schooling hunters, together with extensive observations of packs of hounds at home and abroad.

## Important Scribner Publications

### THROUGH HIDDEN SHENSI

By FRANCIS H. NICHOLS. Profusely illustrated from photographs taken by and for the author, and a map of the route. 8vo, $3.50 *net*. (Postage, 18 cents.)

AN account of a journey, in the autumn of 1901, from Pekin to Sian, in the province of Shensi, China, thence southward down the Han River to Hankow. The route lay through the heart of the "Boxers' Country" and across the oldest two provinces of China. It is essentially a story of untravelled roads over which few white men have ever ventured. Sian is one of the oldest cities in the world, and was the capital of China 2,000 years before the Christian era.

### New Amsterdam and Its People:

**STUDIES SOCIAL AND TOPOGRAPHICAL OF THE TOWN UNDER DUTCH AND EARLY ENGLISH RULE**

By J. H. INNES. With maps and plans, and with many views, portraits, etc. Large 8vo, $2.50 *net*. (Postage 16 cents.)

AN exhaustive picture, based upon the original records, public and private, of the actual conditions which prevailed in New Amsterdam during the Dutch and English rule.

### The Private Soldier Under Washington

By CHARLES KNOWLES BOLTON, Librarian of the Boston Athenæum. Fully illustrated from original sources. $1.25 *net*. (Postage 18 cents.)

CONTENTS: I. Origin of the Army.—II. Maintaining the Forces.—III. Material Needs.—IV. Firelock and Powder.—V. Officer and Private.—VI. Camp Duties.—VII. Camp Diversions.—VIII. Hospitals and Prison Ships.—IX. The Army in Motion.—X. The Private Himself.

GOING, first of all, to the diaries and journals of the men themselves and then to other contemporary documents, both public and private, Mr. Bolton has constructed a straightforward narrative of the daily life, under the various conditions suggested in the chapter headings, of the private soldier who served in the Revolutionary War.

# The Nation.

*NEW YORK, THURSDAY, OCTOBER 9, 1902.*

## The Week.

Whether the entire National Guard of Pennsylvania will be equal to the duty of covering the territory to which it is assigned, is open to question. Its highest officers have had long periods of strike duty at almost regular intervals of two years, but no foreign government, it is safe to say, would rest content with sending a force of this size, however experienced, into so turbulent and lawless a region. The problem, it must be remembered, is not a military one, but purely a matter of police duty of a peculiarly trying kind. It is not merely one of protecting millions of dollars' worth of valuable property, or of overawing strikers of eighteen or nineteen different nationalities, but of protecting men on their way to and from the collieries, and of safeguarding their families. The attitude of the strike leaders will naturally count for much in this matter. In view of Mitchell's repeated assurances at the beginning of the strike that there must be no violence, because violence would ruin the miners' cause, and his promises to discipline any offending local unions, it is distinctly his duty to give more time to denouncing criminal strikers and less to "advising" miners how to reply in mass-meetings to the charges of the operators. We do not think the President's proffer of a commission of inquiry calculated to enforce this duty.

---

If, aside from the doctrine of protection, the Republican party is to blame for the coal strike, its responsibility arose two years ago when Senator Hanna meddled with the strike then going on in the anthracite region. That strike was engineered by Mitchell also. He timed it for the Presidential campaign—wisely, as it turned out, for when the Republican prospects became somewhat overcast by the discontent of the wage-workers, Mr. Hanna came to New York and persuaded Mr. Morgan to make the concession of a 10 per cent. advance in wages as a political move. This may have been a just concession, but since the object of making it was political, it led Mitchell and the United Mine Workers to believe that they could get another advance in the same way. The charge that the Republican party is responsible for the present coal shortage has just this foundation, no more. The strike might have come even if Mr. Hanna had not put his oar into the troubled waters in 1900, but his movement at that time made a new strike almost certain.

Cable advices from England report large orders for coal to be shipped to America, and corresponding engagements for freight room to convey it hither. The announcement is made also that the new steamship combine has ordered 50,000 tons to be brought from England for New York, and perhaps also for Boston. Orders have been sent to Canada for all the coal in sight. In short, we are in the world's market as a buyer of coal, and if we have time we can get a sufficient supply by paying enough for it. Our demand in foreign countries will put up the price in those markets, and make the conditions of living somewhat harder there. But this is only reversing the condition that exists when Europe has a short crop of wheat, and bids up the price of the poor man's flour in our market. One of the London newspapers suggests that the Government might, in an extreme case, prohibit the exportation of coal. The Government could not do so without an act of Parliament, and it is difficult to see how Parliament could prohibit exportation after putting a tax on exported coal for the benefit of the Imperial treasury. The coal owners would have something to say about that.

---

There is one thing that we can do to cheapen the price of fuel, and that is to repeal the duty on coal. This tax is sixty-seven cents per ton, and it applies to anthracite as well as bituminous. Under all tariffs prior to 1897, anthracite had been on the free list, but a change was made in a rather shamefaced way in the Dingley bill, by which anthracite was made dutiable. The phraseology of the McKinley tariff included in the dutiable list only bituminous coal and shale and culm, but the Dingley measure added the words "and all coals containing less than 92 per cent. of fixed carbon." There is no foreign anthracite which contains as much as 92 per cent. of fixed carbon. Thus anthracite became dutiable for the first time in our history. This change was made, not because anthracite was imported to any perceptible extent, but because anthracite mines existed near Banff, on the Canadian Pacific Railway, and it was possible that the product might find a market in the United States. In order to be prepared for an emergency, a duty of sixty-seven cents per ton was clapped on the article in this underhand way. Well, the emergency has now come. Anthracite from Wales is now on shipboard coming to the United States, and it is reported that a contract has been made for Canadian anthracite also. When it arrives, this blessed Government, which is trying in all ways to get rid of its surplus revenue, will demand sixty-seven cents for each ton admitted to our ports, and the classes who can least afford it will have to pay the tax.

---

A convention cannot rise above its source. Ex-Gov. Hill was in full control of the Democratic Convention at Saratoga last week, and his characteristic talent for intrigue, for low cunning, for shifts and turns, together with his inveterate inability to measure or to satisfy the best opinion of his party or the public, was stamped upon all the proceedings. It was all very well to drop Bryanism in silence, but what is to take its place? Tammany played a humble rôle in the Convention. That was in grateful contrast to the Croker domination of two years ago, but what assurance have we that there is any real change of heart? The one great guarantee of a new purpose and honorable methods is lacking—the nomination for Governor of a man whose name should be a synonym for courage and character, intelligence and resolute will. How far Mr. Coler falls short of meriting that description, we have been compelled to point out from time to time, and there is no magic in a nomination for high office to make us read a man's nature and record differently after he has received it. With many others, we had bright hopes of Mr. Coler when he first came to public notice as Comptroller of this city, blocking the path of the indecent Ramapo plotters. But Mr. Coler himself was the one to disabuse the minds of the clear-sighted of the notion that he might be of the stuff of which true reformers are made. In the first place, he immediately developed a most unpleasing eagerness for political reward. He angled for nominations as Mayor, either by Tammany or against, he cared not which, and wondered at the fastidious people who thought it made any difference which; or as Governor, whether by or against a boss, it was all one to him. He has long been, in short, that most undesirable of candidates—the uncommonly anxious one. Mr. Coler, moreover, has shown such instability of judgment and so feeble a personal grasp on either principles or the practical duties of a public servant, that he can arouse no hope of new life for his party. No one, except those who love to be deceived, could imagine him in office anything but a tool of Hill's.

---

The Saratoga platform is a sort of catch-all, but is, on the whole, a much better document than the one which the Republicans adopted at the same place the week before. The demand for the nationalization of the anthracite coal mines is too glaringly a campaign dodge to be taken seriously. It is a kind of

freak plank, of which we shall hear no more (except reproach of its authors) when the strike is over. On the subject of the State canals, the Democrats are far more satisfactory than the Republicans. They are explicit and progressive, where the latter were halting and evasive and meaningless. What is said about the need of instant tariff revision to relieve industry and to right injustice is admirable; and the denunciation of a colonial policy, with a demand for generous treatment of Cuba, has a good ring. These deliverances on national politics are sound doctrine, and should be embodied in law; but that is no reason at all for thinking that anything but harm can come to the affairs of this State from putting them again in the hands of David B. Hill, by means of his proxy, Mr. Coler.

---

The Democrats of Rhode Island did at least two good things in their State Convention last week. The first was that they utterly ignored Bryan and Bryanism and confined themselves mainly to State issues. Rhode Island is a small State, and the Democratic party there cuts a small figure in the national organization, but every convention that casts its clod on Mr. Bryan's coffin does its part towards rehabilitating and strengthening the Democratic party. The Convention also defeated the ambition of John J. Fitzgerald of Pawtucket, who wished to run for Governor. The significance of this act lies in the fact that Mr. Fitzgerald is in his small way as thorough a demagogue as Bryan. Mr. Fitzgerald was Mayor of Pawtucket during the street-car strike in that city a few months ago. In his endeavor to curry favor with the labor vote, he abjectly surrendered to the strikers and allowed them to run riot through the city. Through his incompetence and cowardice he won the contempt of all the decent and law-abiding citizens of his State. He looked for his reward this autumn, but the gang of his backers was unable to force him upon the Convention. He retires, therefore, not only despised, but defeated.

---

They teach logic in the colleges of Massachusetts, but little of it got into the tariff plank of the Massachusetts Republican platform. This recites that "the high wages and constant employment" of the past five years are "due" to the Dingley tariff; but then it immediately proceeds to assert that "the habit of charging to the tariff whatever evils, real or imagined, afflict the country, has become an evil of itself"! Why so, any more than charging blessings to it? Do the Republicans of Massachusetts suppose that Americans are so simple as to believe that every good they enjoy is due to a protective tariff, but that all the concomitant evils are due to the Democrats, or an unkind fate or mysterious Providence, working through obscure "social and industrial causes"? No, the tariff is either all or nothing. Treated as a fetish by the Republicans themselves, it will be so treated by the people —that is, it will have flowers flung on it and rice spread out before it in prosperous times, but will be knocked about and have nails driven into it when the evil days come. If this is, as the Massachusetts Republicans lament, itself an evil, they are primarily responsible for it. They have sedulously cultivated the idea that tariff laws create prosperity and content, and it is not for them to dodge when discontent rises angrily to ask why they do not make a tariff to cure it. Certainly one would search far before finding grosser inconsistency than their tariff plank, said to be the product of the pen of H. C. Lodge, LL.D.

---

The notion that Speaker Henderson's withdrawal was due to mere petulance is much weakened by the letter of acceptance of the candidate who has been nominated in his stead. Judge Birdsall takes his stand squarely on the Iowa platform and with Gov. Cummins and the more progressive element among the Iowa Republicans. The idea that some man who held the same views as Speaker Henderson might be nominated and elected, in spite of the abrupt action of the latter, evidently was not shared to any extent in the district affected. The determination of Gov. Cummins and his associates to force the fighting for tariff revision is again exhibited by this nomination, followed by the plain speaking of the letter of acceptance. Speaker Henderson is thus required to support a candidate who adheres to the views on the tariff issue which he regards as utterly obnoxious, or else to take the responsibility of contributing to the election of ex-Gov. Boies, the Democratic nominee. Evidently the "Iowa idea" will not down, in Iowa at any rate. The nomination of Mr. Foss, at one time doubtful, but now confirmed by the recount, who made his contest in the Eleventh Massachusetts District on the platform of free hides, free coal, and free iron, indicates, moreover, that it will not down in other parts of the country.

---

Why are Crumpacker, Grosvenor, Chandler *et al.* silent over the political ostracism of colored citizens by Republican organizations in the Southern States? When the Democrats in that section were framing election turnstiles that would bar illiterate negroes while admitting ignorant whites, no political penalty was deemed too severe by the Northern champions of negro rights; but when white Republicans in Alabama and North Carolina are denying representation in party conventions to the saving remnant of the colored vote—the educated and property-owning negro electorate, which not even Democratic malice and ingenuity could disfranchise —not a protest is raised by the Republicans of the North. Their silence needs explanation. They have not the selfish motive of their brethren of the South, who are substituting a white Republican organization for the lost negro vote as a basis for Federal patronage; and the only logical conclusion is that they have jettisoned the negro vote in their pursuit of the *ignis fatuus* of a white man's party in the South. To find a Republican virtue in a Democratic sin is evidently no wrench to a certain kind of political conscience.

---

Secretary Shaw has been getting into deeper water from day to day since he made the decision that the banks need not keep any reserve against Government deposits. Several explanations of his true meaning have been put out unofficially, and each one seems to have been misinterpreted. People tried to reconcile the ruling with the law as they read it in the statute-book, and as it was impossible to do so, they became mystified. A rumor gained ground that the Comptroller of the Currency did not agree with the Secretary's ruling, and that he would enforce the law as it stood. Stocks fell two or three points when this divergence of views was announced. So the Secretary made a fresh explanation in a circular dated October 4, to which he affixed his signature. The substance of it is, that while the law requires the national banks to maintain a fixed percentage of reserve against all deposits, it leaves both the Comptroller and the Secretary a discretion as to enforcing the penalty for violating it. The law says that when the bank fails to maintain the reserve the Comptroller *may* notify it to make good such reserve, and that if it fails to do so within thirty days the Comptroller *may*, with the concurrence of the Secretary of the Treasury, appoint a receiver, etc. After reciting these terms of the law, the circular says:

> "You are therefore notified that the rule will not be enforced, so far as it relates to Government deposits secured by Government bonds."

---

The Comptroller prudently refrains from issuing any circular on his own part, but intimates, through the newspapers, that he may continue to send the banks the usual notices when their reserve is less than the required percentage of their total deposits. This course would certainly be prudent, since the sending of such notices does not commit him to any forward movement, while it does protect his rear. The main question, however, is, what effect these notices are likely to have on

the banks. The whole purpose of the new ruling was to open the way for an expansion of loans. This motive, sufficiently obvious in itself, was rather loudly proclaimed in the dispatches from Washington on September 30. It was then said that the new ruling would make possible an expansion of loans and discounts to the amount of $130,000,000. The banks of New York, however, have not availed themselves of the opportunity to expand their loans. The Clearing-house returns of last Saturday are presented in the old way. The reserve is computed on the basis of all the deposits, public and private and a surplus, although not a large one, is shown. Perhaps the depositary banks, realizing that life is short, and the tenure of office uncertain, and the state of public opinion shifting, would not like to have notices from the Comptroller's office piling up against them every thirty days, even though assured by the Secretary that such notices mean nothing. But in point of fact they do mean something, as may at any time appear.

---

The Government's revenue from customs taxes, during August, not only was $5,000,000 greater than the year before, but was much the largest of any month in the country's history. September's customs revenue, complete returns for which are now at hand, is substantially the same as that of August. Both returns show the effect of our enormous merchandise imports, which, in the two past months, have exceeded all precedent. The September customs return also explains the continued Treasury surplus, and the recent resulting drain on the money market. Last April's internal-tax reduction law was expected to strike $72,500,000 from the annual revenue—an average cut of something over $6,000,000 monthly. In the three first months of the fiscal year, internal revenue has been diminished $13,800,000. This is much below the estimate, but it was sufficient, along with a $15,000,000 increase during the period's expenditure, to have caused a $6,000,000 deficit had customs receipts remained unchanged. But the customs revenue, since June, has been $15,000,000 greater than last year's; hence, of course, an enlarged surplus.

---

It must be pointed out again, however, that this surplus revenue is comparatively small. It is true that the excess for September was $11,000,000; but the excess since July 1 has been only $9,000,000, and of that excess $7,400,000 has been deposited with the banks. These figures hardly indicate that the Treasury has been, as is commonly declared, "draining" the money market. What it has actually taken and locked up this season is a bagatelle in the huge cash reserve fund of New York. The real trouble has been that the West drew heavily for harvest needs—it took $10,000,000 net last month; that the settlement of our bankers' large foreign borrowings has prevented movement of gold from Europe; and that the banks, nevertheless, continued, until the rise in money startled them, to increase their loans *ad libitum*. The resultant crisis in the market may have been one which warranted special help from the Treasury; but the facts should be clearly understood.

---

The details of the steamship combination, so far as the articles of incorporation go, have been made public. The companies joined together are the American and Red Star, the Atlantic Transport, the White Star, the Leyland, and the Dominion. The three last named are under the British flag, but at least one of them (the Leyland) is owned by Americans. They are brought together under a New Jersey charter and under the name of the International Mercantile Marine Company. This company has formed an agreement with the two large German companies (the Hamburg-American and the North German Lloyd) by which said German companies agree to contribute a portion of their dividends to the International, and the latter agrees to pay a fixed sum each year to the former. In other words, the International pays from its own funds to the German companies 6 per cent. per annum on at least 20,000,000 marks ($5,000,000) in any event. If the German companies do not earn dividends within the year, they pay nothing to the International, but they get $300,000 as an annual bonus or subsidy from the combine. This, we suppose, is paid to the German companies to prevent rate-cutting.

---

The capitalization of the International is $120,000,000 stock and $75,000,000 in 4½ per cent. bonds, or $195,000,000 in all. One-half of the stock is classed as preferred, one-half as common. The preferred is entitled to a 6 per cent. cumulative dividend, as in the case of the Steel Corporation. If the business should prove less profitable than the promoters expect, and the dividends on the common should be put in jeopardy, a conversion of some part of the preferred into bonds at 4½ per cent., as in the case of the Steel Corporation, would be a natural consequence. What would be a fair valuation of the entire property nobody outside the combination (and probably few inside) knows. It is customary to say that property is worth what it would cost to replace it, but that would be an over-estimate in this case, since an old ship is not worth so much as a new one. Judging by the usual procedure in the promotion of Trusts, the capitalization is probably three or four times what it cost to build the ships. The overplus may represent syndicate profits or the company's estimate of its "good will." The statement has been given out verbally that none of the securities will be offered to the public, but that the owners of the constituent companies will take the whole. No instrument binding them to retain their holdings is shown among the papers. We infer, therefore, that if the public should show a strong desire to buy the securities, the present owners might be induced to part with a portion of them.

---

The refusal of an American naval officer at Panama to allow a Colombian General to proceed over the railway to Colon sustains our *bouffe* method of fulfilling our treaty obligation to "guarantee Colombian sovereignty" on the Isthmus. Of course, it is the other clause of the treaty to which Admiral Casey points—the clause under which it is our right and duty to keep transit open. But the Colombians may be excused for complaining of the progressive applications which we have made of that part of the treaty. First, we would allow no fighting along the line of the railroad. Then we refused to permit troops, Government or insurrectionary, to take passage on the trains. This we afterwards modified so as to allow unarmed soldiers to be carried across, their rifles going by separate train. But now we have held that the presence of a single General in transit would precipitate a conflict, and so we have put a veto on his going. He might have complacently taken this action as a striking tribute to his personal prowess. Yet the strange man is reported to consider himself and his Government insulted.

---

The funeral of Zola at Paris on Sunday is, of course, described in the press dispatches as an impressive ceremony, for it is always true that "man is a noble animal, splendid in ashes, and pompous in the grave." The impressiveness in this case, however, was not in the municipal guards that lined the route, in the company of infantry that added brilliance to the spectacle, or in the oration of M. Hermant, who, on behalf of the Societies of Authors and Dramatists, reviewed Zola's literary work. Such tributes might have been paid to almost any prominent man of letters. The impressive feature of Zola's funeral was the thousands of workingmen, many accompanied by their wives, who marched behind the coffin, and the passionate appeal to these people by Anatole France. M. France did not emphasize Zola's skill as a constructor of plots, a delineator of character, or a master of style. The achievement which the moment of Zola's death bulked large in the eyes of M. France and of his listeners, was that outburst of indignation which roused the country against injustice.

*DEUS EX MACHINA.*

That the coal strikers would lay down their arms on a personal appeal from the President, in a conference with him in the presence of the operators, no sane man could have expected. The very calling of the conference was proof that their premeditated weapon of general distress was doing its deadly work. Their being summoned as high contracting parties gratified their love of distinction and sense of power, while it confirmed them in the belief that Federal interference was not to be feared from President Roosevelt, notwithstanding his emphatic announcement that the existing situation must terminate at once. Moreover, on any supposable agreement that might be reached, the only pledge which they could carry out would be to declare the strike off. In fact, they brought with them only a specious offer to arbitrate the unarbitrable, which the operators rejected, not as operators but as men, defending the rights of man.

Regarded by itself, therefore, the conference was but another of the spectacular performances to which the President has accustomed us. He manifested his concern for the impending national calamity; he brought both sides together as no other intermediary could have done; he had nothing to say about the merits of the strike, still less about the philosophy of trade-unionism; he listened to offer and argument from either hand, and then the meeting dissolved back into its original unsubstantiality. If it had no design of furnishing public ground for taking the decisive step which should give quietus to Mitchell, as on a memorable occasion to Debs, it was worse than useless. It fostered hopes of success which must be disappointed if this country is to be saved from perdition. It intensified by delay the already prevailing suffering and anxiety of mind. It gave grounds for suspecting the same political paralysis at the White House as at the capitol of Pennsylvania; to which Mitchell's proposition to leave the choice of arbitrators to the President decidedly lent color. For it must not be forgotten that the President found himself in Washington, not as the careful watchman at the seat of government, but as the disabled party stump-orator—stumping virtually in his own behalf for a second term.

There was another disqualification, less obvious but not less positive, for his initiating a paper settlement. President Roosevelt is a protectionist—not more profound, not more original, than his predecessor. He was dealing with the perfect flower of protectionism in trade-unionism. For this reason, among others, he was predisposed to view the strike as a legal condition—in other words, to cheat himself with names. What he could not see before him was the rival President that Mitchell is, who says to the Constitutional President chosen by the suffrages of the whole people, whom he is bound to protect against rebellion and civil chaos, "Thus far, and no farther." There appeared but one right in the coal regions, the right to strike, and to terrorize, maim, and murder men ready to work in harmony with the operators and to supply the direst need of the country. Because this right has by tolerance and the decay of manhood become a vested one in the minds of most Americans, its essential destructiveness to our institutions has failed to penetrate the Presidential mind. Hence Mr. Roosevelt was not the man to illumine the situation and electrify the patriotic feeling of the country by the fitting word, calling a spade a spade, and to adopt the only measures demanded by the gravity and urgency of the crisis.

There is, connected with the foregoing, a subordinate deception or fallacy, which confounds the unthinking. What we may call the Strike Power, as of old (when times were better, albeit not so good) we spoke of the Slave Power, is assumed to rest upon the conferences of a body of freemen, whereas its constituency is recruited by press-gang methods and its policy dictated by absolute compulsion, not to speak of other methods known to those who rig conventions for ordinary party purposes. Its sole brake is the chance of failure. The size of the majority required for appearance of free will and deliberation is of no consequence. A majority of one might have precipitated the present pandemonium; and, what is equally to the purpose in the purview of White House conferences, the slightest grievance—the discharge of a single man or mule-boy—would, given a prospect of success, have been made the pretext for the renewal of the struggle for domination never to be allayed till there has been a moral awakening on the part of the American people. Mitchell would have gone with as much effrontery to the White House with a grievance that he could carry in a brown-paper parcel, as with one that required a Saratoga trunk. His cruel contemplation of the misery inflicted upon the remote innocent and helpless by his warfare would have been as steady in the one contingency as in the other. He rests secure in the forced allegiance of some, the deluded allegiance of others, the would-be emancipated thralls of Capital who

> "—— burst their manacles and wear the name
> Of Freedom graven on a heavier chain."

Much silly talk has been heard about the country having got along without anthracite coal in past ages—as if it could readjust itself to substitutes in forty-eight hours and in the bitter season of the year; as if it had not been sought to dragoon the soft-coal miners into line with the anthracite, with a narrow avoidance of that catastrophe. Every one knows that coal ranks with air and water in the life of modern civilization; and we ask, if Nature had concentrated the water supply in one particular tract of this part of the continent, and its custodians had, for a question of wages or other consideration, attempted by force to lock the gates and withhold the supply till their demands were satisfied, how long would the people have looked on complacently at the President and the Governor of the containing State making a football of responsibility for the continuance of the famine? Or we will make another supposition, that the anthracite coal deposits were in a Southern State, and mined by negroes organized in a trade-union, and that they undertook to play Mitchell's anarchistic game; does any one believe their leader would have been invited to confer with the President, or that we should not have heard one cry of "Lynch them!" and seen volunteers spring up on all sides?

We can as well revert to turnpikes and stage-coaches as dispense with coal, and coal is inseparable from the iron of our rails and from the traffic that is carried over the rails. Commerce to-day means nothing if coal be eliminated; they can no longer be thought of apart. The country has justified one courageous President in seeing to it, by prompt and efficacious interposition of Federal troops, that no conspiracy of strike and boycott against railroads should defeat the Constitutional provision for the protection of commerce. Nothing but a legal quibble can establish any difference in the situation created by Debs in 1894 and that initiated by Mitchell to-day. No trains, no commerce; no coal-mining, no commerce. The difference is in the occupant of the White House—in 1894, Cleveland, the civilian; to-day the most bellicose of the long line of Presidents.

President Roosevelt has followed up the abortive conference with a putting of the screws on Governor Stone that ought to have been applied before the President set out on his campaign tour against Trusts, no one of which has inflicted such material and moral damage on this country, so raised the price of a prime necessary of life, or excited such apprehensions regarding the very framework of our Government. Whether the Pennsylvania militia ordered out *en masse* will suffice to restore order and protect willing industry, remains to be seen. We do not ourselves believe that it was necessary to await Governor Stone's tardy and reluctant action, or the ultimate call which he may still have to make for Federal aid. His impotence during the past two months at least has been a trumpet-call. Were there no statute under which he might act, were there no construction of the Constitution broad enough for the emergency, the true saviour of society would still perform the deed. When an arbitrary clerk obstructed on roll-

call the organization of the House in the Twenty-sixth Congress, an ex-President, promoted to that body, offered a resolution to remove the unlawful obstacle. "But who will put the question?" inquired all; and John Quincy Adams responded, "I will put the question myself."

### *A NEW KIND OF TRUST.*

Prof. John B. Clark of Columbia University has been delivering lectures in several Western cities on the subject of Trusts, and he has detected in the mass a new microbe which seems capable of a large development. It consists of an alliance between the Trust and the labor union in particular trades, who join together to fleece the consumer and divide the proceeds between themselves. This kind of microbe has only just become visible, but an example of it is found in the glass industry. "Glass-blowers," says Professor Clark, "are scarce, and for lack of them many glass pots are idle. The public pays a high rate for its window-panes. The men and their employers have still an issue to settle with each other, for it has still to be determined how much of the tax which the public pays shall go to each of them; but in collecting the tax their interests are one, and the issue between the industry as a whole and the purchasing public takes precedence of that between masters and men within the industry."

This throws a new light on the vaunted efficacy of the tariff to raise the wages of the laborer. We create in the home market a monopoly in the production of an indispensable article, avowedly in order to benefit the wage-worker. Of course, somebody must pay the piper. The consumers, who are the whole people, must contribute to that end; but how is the wage-worker to get his share? The employer will not pay more for labor than the market rate if he can help himself. The laborer understands that perfectly. He does not expect anybody to pay more than he is compelled to. So he forms a trade union, and limits, as much as possible, the numbers who shall be admitted to it. He limits the number of apprentices, and he calls all who would like to work at that trade but who are not members of the union "scabs," and pelts them with brickbats when necessary. He boycotts all who buy non-union goods. The employer does not relish that kind of unionizing, because he does not like any monopoly but his own, yet if he can prevent competition among producers he will consent to make an alliance with his employees against the rest of the community; not very cheerfully, perhaps, but he will do it because he does not see any easier way to go on. By and by it becomes a compact between the two that they shall charge as much for their goods as the tariff will allow, and divide the proceeds. Then the political party that enacts the tariff claims great merit for having taxed nine-tenths of the community in order to raise the wages and profits of the small remainder.

The glass industry is an instance very much in point. The duty on common window glass of the smaller sizes is one and three-eighths cents per pound. It ranges from that figure to four and three-eighths cents for the largest sizes. The tariff act does not specify what is the equivalent ad-valorem rate, but since the rate in all unspecified articles is 45 per cent. ad valorem, we assume that the duty on common window glass is not less. If the glass-blowers have secured their rights under the tariff, if they have secured what the politicians said they intended to give them, they have got all that they are entitled to under the most generous interpretation of the doctrine of protection. We recall the fact that some years ago, when those who habitually "tinker with the tariff" procured the passage of a bill adding to the dutiable value of imported goods the cost of boxing, baling, and cartage of the same, the glass-blowers made a computation of the amount that this provision would add to the cost of foreign glass, and then struck for the whole amount as wages, and got it; and we think they were quite right in doing so. The men who tinkered the tariff in this way said that they did so to protect the American laborer, and it was no more than fair that the American laborer should take them at their word.

Evidently protection belongs not to the statics, but to the dynamics of political economy. It is not stationary. It is always on the move. Having exhausted everything that was conceivable under the tariff, it took the form of combination among producers. It is now about to take the labor unions into partnership, or rather the latter are forcing themselves in. Such union is not practicable in all cases, but it is so in trades requiring a high degree of skill. By preventing boys from learning particular trades, and putting up a wall against the immigrant laborer and imported goods, it is possible for the Trust and the labor union jointly to put up the prices of particular goods to the limit of the conscientious scruples of the joint producers. Professor Clark considers the danger serious, but not irremediable. Society may yet protect itself, he says, but "it will take the united effort of classes who have not yet worked together to remedy it." He refers, doubtless, to the consumer and the non-union worker. Eventually these classes will be compelled to organize for self-defence. The ranks of labor are going to be recruited as long as the world lasts. People will continue to be born, and they must find ways to earn a living. If the avenues of employment are monopolized by the new kind of Trust, by means of the boycott or otherwise, the classes thus injured must meet the issue systematically, and not at haphazard as now.

### *"ON PROTECTION LINES."*

Tariff revision thunders are crashing in all parts of the Republican sky. The National League of Republican Clubs meets in Chicago, only to find that tariff reduction and the relation of the tariff to Trusts are the burning questions of the hour. Republican orators and Congressional nominees in all parts of the country are forced to speak on this one topic. They deprecate, they quibble, they evade, but still they talk about it. In some cases they take a bold stand for amending the tariff; in others, they vehemently protest against laying an impious hand upon the sacred Republican ark of the covenant; but in all cases they confess that the question has burst full on the country again. The "closed" tariff is wide open once more. The "settled" protective policy is in a state of wild upheaval. Party leaders are quaking and wondering what will come next; but all of them can see that divisive forces are at work in the Republican ranks. That top-heavy protection which they thought was the very making of the party, now threatens to break it.

In these circumstances, a phrase is needed as a life-preserver in the whelming floods of popular agitation. Senator Lodge grasped for such a form of words in his speech at Boston the other day. Personally, he wants nothing done to the tariff, but said that if the people demand revision, he would waive his individual preferences and allow them to have their way. This was certainly magnanimous of him. He might have insisted stubbornly, and then the people would have had no remedy, except revolution. But Lodge is pure benevolence when it comes to letting the majority rule, and he graciously gave notice that he would not thwart the popular will. But on one point he was very firm, even stern. Any reduction of the tariff that might be made must be "on protection lines." He wanted that understood. Free hides for Massachusetts manufacturers could be had only on condition that the act of Congress making them free should be labelled in capital letters a protective act. If it was a question of making hides free in the name of free trade, why, you would first have to walk over the dead body of Henry Cabot Lodge. "Cut down duties, if you must," he said heroically to the American people, "but do not fail to call it an extension of the protective principle." The fact that protection has hitherto always meant marking duties up has nothing to do with the case.

Almost on the same day, Senator For-

aker was opening the Ohio campaign, and was using the same form of words. He, too, admitted that the tariff might have to be revised, but he also contended that the work must be done "on protection lines." The phrase bids fair to have frequent airings. It may take the place of that venerable joke, "the tariff revised by its friends." The latter has been too frequently defined by actual practice to be any longer eligible. We all know that revision of the tariff by its "friends" means simply a fresh distribution of favors and plunder among those who are lucky enough to write the tariff bill in its final form. The "Constitution between friends" is a feeble jest compared to the side-splitting farce of the tariff revised by its friends. Talk about loving a man for the enemies he has made! We hate the tariff for the friends it has made. But this proposal to revise the tariff "on protection lines" is a new and amusing invention, well worth inspecting with a view to finding out what the phrase really means.

Let it be understood at the outset that men who have tariff reduction at heart do not care two straws what it is called, provided the thing be done. If it will please or relieve protectionists to assert that steps towards free trade are really movements along the line of protection, free-traders will not be cruel enough to deny them that consolation. The protectionists may keep the name if they will give up the substance. We should have no objection whatever if a Republican Congress passed a bill to put on the free list hides, and iron, and coal, and wool (as Massachusetts Republican nominees for Congress are demanding), and to reduce or repeal the duties on steel and glass and other Trust-made articles (as the Iowa Republicans would like to see done), and then solemnly ticketed it the greatest measure of protection to American industry ever enacted. Give us the thing, and we care not for the label. Free wool may be described as carrying out the teachings of Horace Greeley; free iron and coal and hides may be declared to be exactly in line with the principles of Clay, and Carey, and Thompson, and "Pig-iron" Kelley; a sharp cut in the duties on manufactures of steel and of glass may be asserted to be conceived in the very spirit of the Morrill, and McKinley, and Dingley tariffs—all that does not matter. Have it your own way, gentlemen of the alarmed protectionist camp; apply to your hurts the balm of any misleading title you like. All we want is tariff reduction, and it will smell to us just as sweet by any of your fantastic names.

But we really suppose that we have to do, in this new phrase "on protection lines," with a Tale of a Tub. It is something thrown out by the frightened Republican navigators in the hope of diverting the whale that threatens to sink their craft. Who imagines that Lodge and Foraker really wish or hope to see the injustices of the tariff corrected, its monstrosities sheared away? At best they would be reluctant servants of the people, whipped to their task. If there is to be real revision, reductions that will mean something, readjustments that look to the good of the whole people, and not to the advantage of grasping cliques, the work will have to be done by men who can undertake it with untrammelled hands, under some such positive instructions from their constituents as are contained in the tariff plank of the New York Democrats. That declares, without shuffling or mumbling, that the tariff should be levied only for "public objects, never for private purposes," and should be "limited to the necessities of the Government economically administered." Compared with that straightforward declaration, the plea for tariff revision "on protection lines" sounds like the outcry of troubled placemen who fear that they will be driven from office for neglect of duty. Their whimpered protests that they will do the work the people want done, if only allowed to do it in a bungling and half-hearted way, really defeating the popular will if they can, must greatly help the party which is contesting the House on the platform that "immediate tariff revision is the supreme duty of Congress."

---

### *A SOCIALIST EXPERIMENT.*

The London *Times* has been publishing a remarkable series of articles on municipal Socialism in England, with the intention of showing that municipal trading results in all manner of extravagance and demoralization. So marked is this bias that the temper recalls Sir Theodore Martin's observation of the Education Bill—"If free and compulsory education, why not free and compulsory bread and butter?" But no conservative prepossession vitiates the formidable statistics of municipal extravagance which have been presented, article by article. One might choose as characteristic the little city of Cardiff, which conducted various enterprises capitalized at £283,631 (viz., lighting, baths, markets, and cemetery) at a net loss, for the year ending March 31, 1901, of £3,576. But the dangers of municipal Socialism are best studied in the case of the great county borough of West Ham, a manufacturing suburb of London, which includes the Victoria docks, and has a population of more than 275,000.

As an outcome of the great dock strike of 1890, the Socialists came into a gradual control of the Town Council, which became complete at the elections of 1898. The majority of Socialists in the Council took its instructions from the party organization, which had required each of its Councillors to deposit his resignation, for presentation at any time, with the committee. The first move of the Socialist régime was to reëstablish a Works Department to do all borough work by "direct employment." From this time forth economy was thrown to the winds, and the Council set itself vigorously to supplying employment regardless of the cost, starting in with a £100,000 hospital. As a matter of course only union labor was employed, the eight-hour day was universally adopted, and the union scale of wages with a 20 per cent. increase became the borough scale. The shortening of the day meant that, in the case of the steam roller, for example, the city actually got about five hours of work after the time of firing up and of going and returning had been reckoned, while the carters of the stabling department reduced their trips from three to two a day, the department itself being run at an annual loss of £8,000 a year, as compared with contract prices.

Housing schemes were the next in order. The twenty-seven dwellings actually built were occupied largely by corporation employees who paid nominal rents, and, for one instance, got electric lighting at 6d. per week which cost the borough one shilling. The whole venture resulted in a loss on the investment of about £4 per house. Meanwhile the laziness of the employees became a scandal, and it was almost impossible to discipline them because they were protected by the unions. Instead, the Socialist members of the Council passed a law granting pensions to city laborers upon liberal terms and after short service, rejecting a scheme for pensions which required a stated contribution for a term of years from the beneficiaries. When it became difficult to pass the more extravagant measures, the Socialists changed the sittings of the Council to the evening, and debates involving the employment of labor were attended by enthusiastic audiences of employees, who clamorously expressed their desires and upon occasion were even admitted to the floor of the Council chamber.

Apparently it occurred to no one to inquire who was to pay the piper. The annual increase in expenditure grew to £30,000, as against £13,000 in pre-Socialist times, outstanding obligations and the public debt were largely increased, the rates rose from an average of less than 9s. in the pound to 10s. 6d., the proportion of this levied by the Borough Council rising from 2s. 7d. in 1890, to 4s. 8½d. in 1901. But all this expenditure meant more and easier employment, and it was assumed that the money coming out of the capitalist class was in the nature of a compulsory dole to labor. And as a matter of fact the ten thousand rate payers assessed at £20 and more were subject to excessive advances in their assessment, while the great manufacturing enterprises were mulcted for

an undue portion of the borough expenses.

But even spoliation of the capitalist class cannot go on indefinitely, and the Socialist Councillors soon found certain flaws in their financial theories. Rents, for example, were raised by 12½ to 20 per cent. The manufacturers refused to expand their plants proportionately with the expansion of their assessments, but concentrated their efforts upon their other works; the Great Eastern Locomotive Works actually considered abandoning its West Ham establishment. At last even labor began to look askance at a class of employees who worked only eight hours, doing about as much or as little as they pleased, and received 20 per cent. more than the union scale of wages. The glamour of the Socialist experiment was vanishing when the now reduced Socialist majority committed political suicide by advocating a bill for various public works which should expend not less than £2,596,000, including £1,675,000 for municipal dwellings for workmen. It was this proposal which carried a large majority of candidates of the Municipal Alliance—a defensive organization of taxpayers—into the Borough Council of 1901, and after three years made an end of the Socialist régime, which, however, leaves a characteristic legacy of £1,900,000 of prospective obligations.

The experience of the Borough of West Ham illustrates no extreme folly and certainly no especial depravity of Socialist theories. It was in the main an honest government, and it erred merely in supposing that the chief end of a municipality is not to transact all its business with the utmost efficiency and economy, but rather to furnish employment and "pleasurable conditions of life" to its citizens. The Socialist Councillors of West Ham also erred in supposing that in matters of taxation two and two make five. There is, we find, in this Socialist experiment no warning for a city corporation which will conduct such enterprises as lighting, heating, and local transportation upon business lines. There is a signal warning for that city government which professes a vague humanitarianism, and, as certain of our officials have recently done, puts the employment of union labor or the granting of the prevailing rate of wages before the immediate duty of good stewardship of all city interests.

## PERSONAL SOUVENIRS OF ZOLA.

NEW YORK, October 2, 1902.

Zola has often been charged with commercialism. I have always thought this an unfair accusation. Like Victor Hugo in letters and Bartholdi in art, who have been slurred in the same way, Zola felt that his literary labor should be adequately paid. I never heard him or saw him place money above art, but he did believe that art should produce money. He enjoyed embellishing his Paris and Médan homes, which were crowded, overcrowded indeed, with art objects that were not always artistic. He always needed money, and, during the past few years, was more than once financially embarrassed. But I could cite many examples that came under my observation of Émile Zola's total disregard of pounds, shillings, and pence. The tempting offers of various kinds that came to him from America and England, after his infamous trial had made him famous, were not considered for an instant—in which respect, by the way, he differed diametrically from another distinguished Dreyfusard. From beginning to end, he would not make a sou from the celebrated Affair, when he could easily have coined thousands of francs. This disinterestedness was carried so far that he not only refused compensation for the powerful broadsides delivered through the columns of the *Aurore*, but permitted the owner of that impecunious sheet to reap all the benefit of increased sales and simultaneous publication abroad. Nor were these profits insignificant.

Zola used to feel rather bitter towards America, but not wholly because he got none of our dollars. He once wrote me that he had long ago abandoned all hope of "doing business with the United States. For many years I have been promised returns from the other side of the Atlantic, but so far I have not seen even the tail of anything. The only thing that is perfectly clear is, that they rob me *là-bas—voilà tout.*" Nor was his dissatisfaction with America due simply to the pirated editions of his books. He told me on one occasion that tales of which he never wrote a line were foisted upon the American public as his, and, he added, "I fear and tremble lest my enemies here bring them out in French dress. This would indeed be adding insult to injury." So when, in recent years, two respectable New York publishers issued authorized editions of some of his novels, Zola was much pleased, but not so much on account of the money which came to him as because he felt that he was now in a dignified position in America. Consequently he was the more deeply wounded when, this past season, the proofs of his forthcoming story were declined both in New York and in Philadelphia.

Zola was often even generous in money matters. I well remember the very delicate way in which he referred one day to a translator of one of his stories who had "collared" (Zola used the equivalent French slang word) two thousand francs which a too-confiding publisher had left with the translator for transmission to the novelist. "I know he needs the money more than I do," Zola remarked; "but if he is again selected to do the translating, I must ask that moneys intended for me be not sent via that *panier percé.*"

After returning from his exile in England, Zola was sorely in need of funds, and I judged that then was the opportune moment to reinvite him to prepare for a prominent periodical some essays which had been promised for a number of years. But, with the utter disregard for money which I ever found in him, he pleaded, as always, that he was too busy on the novel then under way. However—and this is the real reason I cite the incident—he was finally induced to yield, through curiosity to try a plan which I laid before him in most eloquent terms, namely, dictating to a stenographer. He thought that perhaps he might find here a relief from the mechanical drudgery of composition, but, I must confess, he was not very confident that such would be the case. And the result justified his mistrust. I appeared early one morning at Zola's house accompanied by an excellent stenographer, and found the author awaiting us in his study with several slips of paper in his hand covered with topical notes. I soon left the two men alone, and the next day the stenographer sent me the typewritten result of the morning's dictation. In the same post came a letter from Zola asking to see the copy, though, according to our original plan and in order not to consume more of the author's valuable time, he was willing to forego revision on the ground that, as the article was to appear in a foreign language, the literary style of the original was immaterial. But I, of course, hastened to comply with his request, and, two days later, the manuscript came back to me so black with corrections, additions, and erasures, that a clean copy had to be made before it could be sent to the translator. Zola never again tried dictating.

Let me offer another example of Zola's indefatigableness in giving a high polish to his literary work. I stood directly behind him when he spoke at Alphonse Daudet's grave, one cold winter's day in the Père Lachaise Cemetery. As he read from the manuscript, written in that bold, black chirography which reflected the energy and daring of the man, I read it too, following him line by line and page by page. When the account of the funeral appeared in the *Temps*, I remarked one or two notable differences between the printed and written speech which I had so carefully perused. I knew this could not be attributed to stenography, for the *Temps* was in press almost before we quitted the cemetery, and so had been given in advance a copy of the speech. I asked for an explanation which I had already divined, and this is what Zola wrote me: "Just before starting for Père Lachaise, I could not refrain from touching up my manuscript, which I had thrown off the night before."

At this moment the Dreyfus affair was only beginning, but Zola, as was his normal condition, was under a literary cloud, and engaged in that singular campaign of trying to force the French Academy to elect him to membership. At every vacancy he stood as a candidate, but the number of his supporters could be easily counted on the fingers of one hand. His prominence at the Daudet funeral created considerable comment. As the procession wound its long course from the Rue de l'Université across the whole of Paris to the distant cemetery, Zola, who, with uncovered head, marched directly behind Léon Daudet and Victor Hugo's grandson, received more than one discreet mark of sympathy. It was his first public appearance for many months, and he had been selected to deliver the funeral oration at the bier of the author of 'L'Immortel.' This was significant. In many literary circles it began to be said that opposition to him ought to cease. A day or two after the funeral, I heard an Academician say at the breakfast-table of another Academician: "If Zola were to be walking up the Avenue des Champs-Élysées some fine afternoon, just as the coachman of a superb victoria, with

a beautiful young lady sitting alone on the back seat, lost control of the horses, and if he were then and there to rush out into the street, seize the foaming steeds by the heads, and save the life of the fair damsel at the risk of his own, he would be the hero of Paris for a day, and would be admitted to the Academy without a dissenting voice." The historian of Napoleon who made this remark was then one of the very small band of Academicians who supported Zola. Not so many months afterwards, at the same breakfast-table, this same Academician pitched his idol to the ground in true Napoleonic fashion, because, during the interval, Zola had performed a much more dangerous and braver act than stopping a runaway team.

Zola has also been blamed as a seeker after notoriety. This idea was doubtless uppermost in the mind of the Academician who imagined the scene in the Champs-Élysées. Even some Dreyfusards have said that this was probably the predominant motive that prompted the celebrated arraignment, "J'accuse." When, a few years ago, Zola was knocked down by a cab in the Chaussée d'Antin, he described the accident so minutely to a reporter—as if he were preparing the episode as a page for a future novel—that some of his maligners declared they believed he had got himself run over on purpose to make a sensation. I must confess, however, that I never discovered, in my intercourse with Zola, any of these Barnum-like proclivities. As in the case of Castelar, but to a far, a very far, less extent, there was, perhaps, a touch of naïve vanity in Zola's mental make-up. But, as also with Castelar, there was a something, a sort of personal magnetism, in the man when you were in his presence that removed any appearance of conceit from what he said. Zola had a wonderful flow of language. He was never at a loss for a word. He spoke, as he wrote, with much volubility. So, when he related an incident of which he was the central figure, this turn of mind led him to make a complete picture out of a mere detail. But there was never anything of the Zeus about him as there was in the manner of Victor Hugo, whose cold posing became at times almost laughable.

Zola had a fine opportunity to display self-complacency, if it was in him, when he went back to France after the Dreyfus case. But he did nothing of the kind. Even those most prone to condemn his course in this affair had to admit that his conduct was exemplary in this particular. It was even difficult to get him to receive in public the splendid gold medal struck in his honor and paid for by subscriptions sent in from all parts of the world; and when the ceremony occurred in the contracted editorial rooms of the *Siècle* office, Zola's bearing and language in his little speech of thanks were in the very best of taste. And the plot of the novel which is now appearing serially in a Paris daily, and which will be the last production of this prolific pen, is, though based on the Dreyfus tragedy, presented with such tact and skill that the lamentable Affair which divided all France into two hostile camps, is wholly lost sight of in the interest awakened by the story itself.

THEODORE STANTON.

## ECCLESIASTICISM IN IRELAND.

DUBLIN, September 12, 1902.

When the wars of the Reformation had spent themselves, the Protestant and Catholic peoples in Europe had for the most part come to occupy different districts, states, and countries. They naturally used the religious edifices within their reach, and, unless impelled by increase of population, had no need of new ones. It was different in Ireland. The government of the country had become Protestant. The old faith was proscribed, and the church fabrics were seized. As Protestants were generally in too small numbers to occupy or maintain them, they fell into decay; and at present there is not a district in the country where their ruins may not be seen or their ancient foundations traced. The abrogation of the penal laws one hundred and fifty years ago found the people for the most part worshipping in the open, in private houses, or in buildings of the most modest pretensions. So lately as the first half of the last century, Irish Catholic churches bore outwardly much the same appearance as Presbyterian or Quaker meeting-houses of the period; internally, they were little better than empty barns with clay floors. When the country had somewhat recovered from the famine, clearances, and emigrations of fifty years ago, when Catholicism had perfected its ancient organization and asserted its position, the process of replacing the simpler erections by artificially designed cut-stone churches was commenced, and has since been carried on with increasing vigor. Ireland is divided into thirty dioceses. It is the aim of each of these to possess a fine cathedral. Visitors to Queenstown, Killarney, Letterkenny, Thurles, Armagh, and other towns, may judge of what has already been accomplished in this latter respect. The churches in Wexford, the capital of a county whose population has been diminished by one-half, are samples of what has been accomplished in parochial architecture. The clergy formerly lived for the most part in lodgings, the higher ecclesiastics in houses no better than those occupied by middle-class merchants. Comfortable parochial residences or presbyteries, generally in close proximity to the church, and often the best houses in the parish, are now becoming the rule. The new palace of the Archbishop of Dublin is a specimen of a modern diocesan residence. Into parochial needs have been thrown but a portion of the building energies of Catholic Ireland. Conventual institutions, male and female, have spread, and are rapidly spreading, over the country. These are generally founded by purchased occupation of some one of the seats of absentee gentlemen or noblemen, which abound, especially near the larger towns. After a few years such are generally replaced by larger and more pretentious, solidly-built piles. The Cistercian monastery of Mount Melleray and Kenmare convent are examples.

That which must strike the outside observer is that all this has been considered necessary and accomplished while the population has been diminishing, whilst the masses of the people are still wretchedly housed, and whilst the supposed great political aim of the country is still unattained. The records of wills and proceedings in the probate courts reveal the large share of accumulated capital that is passing to ecclesiastical purposes. Too much of it comes from those connected with the drink trade, and this tends to such trade being leniently considered. The economic strain must be considerable, and one to which it is not likely a Protestant people in a similar stage of development would submit themselves. Upon the surface of Catholic society, there is apparent no murmur of objection to the costly requirements of ecclesiasticism. Each new claim for building or renovation, each new bazaar and collection, is hailed by the press as a work of necessity. We have seen more collected within a few weeks for the improvement of one church in Dublin than was contributed about the same period within six months by the whole of Ireland for political needs. In private interviews Catholics are beginning to be more open upon the subject. I lately asked: "Is this not merely a temporary phase to repair the necessary wants of your church after the misfortunes of the past? Will there not be surcease of this monetary drain when in all your parishes are erected new churches?" "By no means," was the rejoinder; "these demands appear to increase in proportion as they are met. As buildings are erected, there are endless claims for enlargement, renovation, and internal adornment." Another Catholic remarked, speaking of his first visit after many years to a town in which a cathedral had lately been erected at enormous cost: "It made me almost sick to see such a building so adorned internally that has arisen amidst the unchanged wretchedness of the abodes of the people."

It must be apparent that Ireland is heavily weighted in the attainment of material prosperity by the requirements of her religion; all the greater necessity that political stumbling-blocks should be removed. This, however, is no argument against her religion. If eternal happiness for the largest number is best attained by the requirements of her ecclesiastics being unstintedly met, worldly considerations are properly of no account. It is, however, well to realize facts, and, in reviewing the condition and prospects of Ireland, not to throw all the blame upon her political institutions. Even from a material point of view the expenditure is not all loss. The sight of these fine edifices—worshipping in them—cannot but increase the self-respect, cultivate the æsthetic feelings, and raise the tastes of the people. A large proportion of the conventual communities give themselves to education, the care of the poor, the nursing of the sick. At many, technical instruction is imparted, and weaving and others of the industrial arts are practised.

Catholic church government in Ireland is exclusively ecclesiastic. The most important educational functions in the country are being confided to ecclesiastics. Institutions of all kinds more and more come under their influence or direct care. Their doings and management are generally considered above criticism. The positions they occupy afford some of the best fields for the calling out and exercise of executive abilities. The most devoted and spiritual minds tend to be drawn to such service. Male and female, these ecclesiastics are vowed to celibacy. If there is any truth in the doctrines of heredity, the general relegation of such duties and responsibilities to celibates cannot in the long run but tend to lower the

commanding and executive faculties of the nation. No matter to what extent political power may tend to fall into Catholic hands, there is no fear that Protestants will not be able to hold their own in Ireland so long as the Catholic mind gives itself so much to ecclesiasticism.

Catholics alone have the right to judge as to the wisdom of their course. They cannot, however, object to outsiders holding and expressing their opinions. They cannot prevent it being remarked that such a degree of Church interference in the life of the nation is not considered desirable in other Catholic countries. It is unfortunate that such open criticism on these subjects as has yet appeared from Catholics has not been of a kind to carry much weight. A remarkable book has lately been published, 'The Ruin of Education in Ireland'—its ruin, as the writer believes, through ecclesiastical interference. The author is Frank Hugh O'Donnell, once a member of Parliament, a man of ability, but who has forfeited influence through almost invariably being found opposed to the methods and policy of those with whom he would be supposed to agree. A Mr. Michael J. F. McCarthy, who professes himself an ardent Catholic, has lately given to the world two volumes, 'Five Years in Ireland' and 'Priests and People in Ireland.' These have had wide circulation and immense vogue among Protestants.* This acceptance and vogue is discouraging to those who desire that Irish Protestants should hold a place and exercise their share of influence in the country. These books are written in a slipshod style and are embellished with illustrations that often have little relation to the text. They state much that is worthy the serious attention of Irishmen; but the author's thesis as to the degree to which he believes his country is being dwarfed by ecclesiasticism, is supported by such unfair lines of argument, and his estimate of the character and doings of the clergy and of the masses of the people is so ignorantly malevolent, that, in the minds of any whom it would be a real benefit to influence, disgust and amusement will be aroused rather than thought stimulated. His main incentive to authorship is stated to be the degree to which backwardness prevails in Ireland as compared with other Catholic as well as Protestant countries. This backwardness he attributes to the clergy. If undue ecclesiasticism is to be deplored, must it not strike most observers that it is the circumstances of Ireland that have brought this about—her powerlessness to mould her own institutions and deal with this ecclesiasticism if she so desire and as other Catholic nations have dealt with it? The British people, not seeing fit to trust the Irish people with the management of their own affairs, seek to manage them through boards and the delegation of power to individuals and associations. Many of these are ecclesiastical. The Catholic Church is the only institution in Ireland over which England has had no control. It is the one round which the pride and thoughts of the people have naturally centred, to whose service they have lavishly devoted their means and their best powers of mind. Some may consider it their misfortune, it certainly is not their fault, that they have not been encouraged more to divide their interests, and school and exercise their faculties in other lines of corporate and national responsibility.

The freedom now accorded to the development of Catholicism in Ireland, the refuge which dispossessed French and other communities are finding within her shores, has had considerable influence in reconciling the people to British rule. Strange, indeed, are the mutations time has worked in these respects. Some of the most valuable Irish MSS. and records were in the libraries of the Franciscans. To save these from the persecutions of the seventeenth century in Ireland, they were removed to Belgium. The doings of the French Revolution in the eighteenth century caused them to be brought to Rome. The secularization of the monasteries in Rome, after its occupation by the Italians in the nineteenth century, has led to their return to Ireland.

D. B.

*These books have been favorably received by a section of the English press, and have attracted attention on the Continent. The *Allgemeine Zeitung* is stated to have written of the first named: "One of those works which announce a revolution in public opinion, and a new epoch in the history of Ireland. There is no book in the English literature of to-day which has made such an immense sensation as this book."

# Correspondence.

## HAWTHORNE AND EVERETT.

To the Editor of The Nation:

Sir: In my recently published Life of Hawthorne, writing of his anonymous early work, I gave a list of seven tales attributed to him by Mr. F. B. Sanborn, among which are "My Wife's Novel" from the 'Token' of 1832, and "The Modern Job" from the 'Token' of 1834. The first of these is included in the sixteenth volume of the autograph edition of Hawthorne's works. Dr. William Everett informs me that both tales were written by his honored father, Edward Everett. That a story of Edward Everett's should have wandered into an edition of Hawthorne is a striking illustration of the literary breeding and power of our elder Massachusetts statesmen, and also of the danger of attributing authorship by internal evidence. "The Modern Job," it may be added, is much more "Hawthornesque" than "My Wife's Novel." There are a few other tales included in late editions of Hawthorne for his authorship of which I could find no satisfactory proof.

Your obedient servant,

George E. Woodberry.

Beverly, Mass., September 30, 1902.

## ZOLA'S TENDERNESS.

To the Editor of The Nation:

Sir: Is not Zola's beautiful letter to Mme. Dreyfus, after the "pardon," enough to disprove the truth of your suggestion that his crusade for the prisoner "was conceived in hate—savage indignation at national wrongdoing, not compassion for Alfred Dreyfus"? To have penned that letter, by which, perhaps, future generations will measure the man himself, his nature must have had in it a deep well of tenderness, fully set flowing by the piteous tale, and making all the more intense his wrath against the wrongdoers.

At the close of the long and moving letter, he pictures her children, all unconscious of the fearful story:

"Some evening, under the familiar lamplight, in the heartfelt peace of his own fireside, the father will take them on his knees, and will tell them the whole tragic history. They must know it, that they may respect him, that they may adore him, as he deserves. . . . I could have wished that you had led them to that prison in Rennes, that they might for ever recall their father there in his utter heroism; that you had told them all he had suffered unjustly, what moral heroism was his, with what passionate tenderness they were to love him and make him forget the iniquity of men. Their little souls would have been steeled in a bath of manly virtue."

L. K.

## THE TREATMENT OF NATURE.

To the Editor of The Nation:

Sir: As the thesis held up to ridicule by Prof. Kuno Francke in your issue of September 25 was undertaken at my suggestion and under my guidance, it is not my province to attempt to prove its merits. I wish, however, strongly to protest against the method of attack pursued by Professor Francke. A careful review may be as severe as possible without giving offence. But to send to a journal a letter in which a few superficial phrases do duty for carefully considered sentences (for Professor Francke merely quotes a few lines from the epitomes which the author introduces at the end of each discussion, without giving the least idea of the detailed work which leads up to them), is little short of outrageous. Any scholar with reputation in this fashion can throw the most unfavorable light on almost any publication whatever. Such procedure hardly implies a strong grasp of that "true scientific spirit" which Professor Francke so painfully misses in the dissertation under discussion.

In passing, I beg leave to call attention to a review of this treatise by Prof. Alfred Biese. Biese is the greatest authority on the treatment of nature in literature. His works on the subject ('Die Entwicklung des Naturgefühls bei den Griechen,' Kiel, 1882; 'Die Entwicklung des Naturgefühls bei den Römern,' Kiel, 1884; 'Die Entwicklung des Naturgefühls im Mittelalter und in der Neuzeit,' Leipzig, 1892) are classics in their way, and, ever since their appearance, have been regarded as basic in all discussions on the subject. In a review in the *Deutsche Litteraturzeitung* of July 12, 1902, he says:

"Eine recht fleissige und tüchtige Arbeit liegt in dieser Chicagoer Doktor-Dissertatation vor." . . . "Der Verfasser bekundet eine weite Belesenheit in der einschlägigen Litteratur, sowohl der wissenschaftlichen wie der in Betracht kommenden Dicht- und Prosawerke, auf die er seine Ausführungen stützt. Er geht sorgsam und methodisch vor." . . . "Man kann zweifeln, ob eine sachlich-chronologische Anordnung von vornherein nicht angemessner gewesen wäre als die Trennung von Dichtungen und Briefen (oft derselben Personen), jedenfalls aber wird man angesprochen von dem wissenschaftlichen Geist, der das Buch durchzieht, und von der Gründlichkeit, mit der (kleinere Versehen und Einwände abgerechnet) die Frage behandelt ist," etc.

I leave it to those who have read Biese's review and Professor Francke's letter, and who can appreciate Biese's position in the world of scholars, to decide whether the latter's calm discussion or Professor Francke's

extravaganza is more likely to reflect the truth.

CAMILLO VON KLENZE.

UNIVERSITY OF CHICAGO, October 3, 1902.

# Notes.

At last we have the long-desired Index to the 'Publishers' Trade-List Annual,' edited by A. H. Leypoldt and issued from the office of the *Publishers' Weekly*. It is a fairly handsome octavo volume of 1,104 pages, embracing in one alphabet the author's name; the first significant word of the book's title; and, where the latter includes a class designation (Cookery, Dante, Garden, Lexicon, Poetry, Recollections), this for a third set of rubrics, in bold-face letter. This arrangement will probably be found quite sufficient for working use of the Index. Each entry supplies price and publisher's name, and generally requires but a single line. The promptitude of the appearance of this invaluable key to the current 'Trade-List Annual' distinguishes it from the English Index to the corresponding 'Reference Catalogue to Current Literature.' Whether there will be a successor or an annual series will depend on the demand and the remuneration afforded.

Houghton, Mifflin & Co. will market a limited American edition of Robert Southey's 'Journal of a Tour in the Netherlands,' now first printed, though the tour followed close upon the battle of Waterloo. Prof. C. S. Sargent, having put the finishing touches to his 'Silva of North America,' will begin publication through the above firm of 'Trees and Shrubs,' a series of volumes covering the woody plants of the northern hemisphere that would flourish in the gardens of Europe and the United States. Mr. C. E. Faxon will be his draughtsman as heretofore.

Little, Brown & Co. will shortly publish 'American Literature in its Colonial and National Periods,' by Prof. Lorenzo Sears of Brown University.

'Pickett's Charge, and Other Poems,' by Fred Emerson Brooks, is announced by Forbes & Co., Boston, along with 'Myrtle and Oak,' by Sir Rennell Rod, and 'In Merry Mood,' by Nixon Waterman.

Prof. Angelo Heilprin's volume on Mt. Pelée in eruption will bear the title 'In the Heart of a Volcano,' and will have the imprint of J. B. Lippincott Co.

'Sport Indeed,' by Thomas Martindale, is in the press of George W. Jacobs & Co., Philadelphia.

Further issues by Charles Scribner's Sons are 'Unknown Mexico,' by Carl Lumholtz; 'A Fighting Frigate, and Other Essays and Addresses,' by Henry Cabot Lodge; 'Literary Landmarks of Oxford,' by Laurence Hutton; 'Jethro Bacon, and The Weaker Sex,' by J. F. Stimson; and 'The American Merchant Marine,' 1660-1902, by Winthrop L. Marvin.

W. W. Canfield's 'Legends of the Iroquois' will soon be brought out by A. Wessels Co.

Additional announcements by Macmillan Co. are 'The New Empire,' by Brooks Adams; 'The Loyalists in the American Revolution,' by Claude H. Van Tyne; 'Stories in Stone from the Roman Forum,' by Isabel Lovell; and 'How to Sing,' by Lilli Lehmann.

From D. B. Updike's Merrymount Press we have a thin volume of real elegance in print and binding, 'Four Addresses by Henry Lee Higginson,' which Harvard men above all will prize, both for the text and for an early and a late portrait of this great benefactor of the University.

The character of Mr. Lionel Strachey's latest translation is sufficiently indicated in the long title, 'Memoirs of a Contemporary; Being Reminiscences by Ida Saint-Elme, Adventuress, of her Acquaintance with Certain Makers of French History, and of her Opinions concerning Them. From 1790 to 1815.' The book is well made by Doubleday, Page & Co., and fittingly illustrated by portraits from contemporary prints. Ida Saint-Elme was married at twelve, forsook her husband for Gen. Moreau, had a lifelong infatuation for Ney, which did not prevent a multitude of transitory relations with the great personages of the Napoleonic circle, from Bonaparte down. She followed the wars—Italy, Austria, Russia, Waterloo—often in men's costume. Her extraordinary story must probably be accepted with all reserves, as history. Of the dissipation and frivolity of the Directorate and Empire it gives an intimate and probably a veracious portraiture. Mme. Saint-Elme seems to have had the virtues of her class at least. She is good-natured towards everybody, writes with vivacity, which Mr. Strachey has caught in his version, and at times is happy in portraiture. Extremes of worthless gossip and of good sense meet in every chapter.

Max Müller's name is now affixed to Dr. George P. Upton's translation of his 'Memories: A Story of German Love' (Chicago: A. C. McClurg & Co.), which first appeared in 1874. Even at that date the texture of this idyll seemed a century old to any Anglo-Saxon mind, but for the occasional quotation from a contemporary English poet. But part of its charm lay in this, as Blanche Ostertag has felt in designing her full-page illustrations and embellishments. These are quaintly in keeping with the sentiment of the simple narrative, and will support, if they do not justify, this new and pretty edition.

The general admiration for Bishop Whipple's character and humanitarian work doubtless justifies a reprint of his 'Lights and Shadows of a Long Episcopate' (Macmillan). This autobiography, undertaken against his own feeling on the urgency of some of his colleagues and many others, first appeared in 1899. Lengthy as it is, the style is plain and curt, giving facts rather than comments, and the record "most unconventional and incomplete"; yet the two chief traits of the man, decision and devotion, stand out on every page. Incidentally, some wise sayings of older divines are cited, as when a man professed belief in the Apostles' Creed, but was not sure he interpreted it exactly as his questioner did, and was answered: "The Church has not bidden you to accept Bishop Hobart's interpretation"; and when a young preacher, thinking he might "well feel flattered that so great a crowd came to hear" his sermon, was told: "No, for twice as many would have come to see you hanged."

Prof. J. Mark Baldwin's 'Fragments in Philosophy and Science' (Scribners) are some of them decidedly small, and with one exception (a paper on the psychology of religion) all of them reprinted from a variety of reviews and periodicals in which they appeared at dates ranging from 1887 to 1902. The contents of this volume are consequently very various, and, though they testify to the wide range of Professor Baldwin's interests, it is not easy to discover any central topic or doctrine round which they naturally group themselves. Nor does the preface yield any light; it contains only a notable suggestion (which, however, is hardly borne out by anything that follows), that æsthetic appreciation of the universe is the final form of the philosophic impulse, and a dubious use of the term Naturalism, as equivalent to the study of Nature, which one would hardly have expected from the editor of a dictionary of philosophical terminology. The articles themselves are reprinted with practically no alterations, and, as they are not infrequently polemical, the effect on the reader is somewhat disconcerting when he discovers, for instance, in the "postscript" to a vigorous criticism of Professor James's theory of emotion, that the author criticised has since written an article which entirely removed the whole ground for controversy, and that all this happened eight years ago. On the whole, therefore, it may be said that, while Professor Baldwin and his pupils may no doubt find this volume a convenience and be glad to have his minor writings in an accessible form, it is best regarded as a sort of appendix to the more systematic writings which he is producing at no mean rate.

'Walter Crane,' by Otto von Schleinitz, is the latest addition to the "Künstler Monographien" (Leipsic: Velhagen & Klasing; New York: Lemcke & Buechner). The book, like its fellows in this series, is fully illustrated, and its one hundred and forty illustrations give a very good idea of Mr. Crane's various activities as industrial designer, sculptor, mural painter, and book illustrator. Since he is generally known only in the latter capacity, the book is a real addition to our knowledge of his graceful art.

'Famous Paintings as Seen and Described by Famous Writers' (Dodd, Mead & Co.) is another of the compilations which Miss Esther Singleton has put forth under similar titles, and, between its glittering covers, it has most of the faults of which such a compilation is capable. It reminds one of Dr. Johnson's leg of mutton, which was "as bad as bad could be; ill fed, ill killed, ill kept, and ill drest." The selections are poorly made, most of them being of the most gushing and frothy kind, and two of them not even dealing with the pictures which accompany them; those from foreign authors are badly translated and all are badly printed, errors typographical and other abounding; there are no references to the works from which the extracts are made, and only the vague indications "Paris" or "London" to show the whereabouts of the paintings discussed. There are, however, plenty of pretty pictures, and the book will serve its purpose, which is, evidently, to lie upon the parlor table.

A little book which ought to awaken much interest among lovers of poetry is 'Marie Eugenie delle Grazie als Dichterin und Denkerin,' by Bernhard Münz (Vienna: Braumüller). This gifted woman publish-

ed her first volume of poems when she was only seventeen years old—a volume which met with a very cordial reception, and which passed to a third edition; she is still of such an age that much good work may yet be expected from her pen. Moriz Benedict, writing on the subject of the drama in the *Deutsche Revue*, speaks of her 'Schlagende Wetter' as a work of Shaksperean penetration and mastery, and considers that so deep an insight into the nature of the tragic, and so vivid a presentation of it, is not too often to be found in the literature of the world. Delle Grazie is a leader in the school of the "ganz modern" in Germany, in *Weltanschauung* as well as in poetry; at the same time grace and charm are the marked characteristics of all that she writes—*Nomen est omen*, says her present biographer. More detailed criticism of this new poet may be found, among other places, in Volkelt's 'Aesthetik des Tragischen' (1897), Breitner-Rabenlechner's "Literaturbilder fin de siècle' (1898), and Leimbach's 'Die deutschen Dichter der Neuzeit und Gegenwart' (1899).

The magnificently illustrated edition of Dante, planned by the house of the Brothers Alinari, of Florence, under the editorship of Vittorio Alinari, is proving a disappointment to many. Only the "Inferno" has as yet appeared, in a folio volume of 140 pages, with 137 mostly full-page illustrations, at a very reasonable price. These illustrations are the prize contributions of thirty-one Italian artists, and differ vastly in artistic value. The work accordingly lacks unity of character, and for this and other reasons the German artist Ludwig Volkmann, in the Munich *Allgemeine Zeitung* (*Beilage* 184), declares the edition is really love's labor lost, and the ideal illustration of Dante still a thing of the future.

In the twenty-fourth annual report of the Providence Public Library, by Mr. W. E. Foster, special interest attaches to what is said of the collection known as the Industrial Library, of which large use is made in the evening, and which will certainly tend in time to increase the value of the industrial products of the city through the growing intelligence of the workmen. There are also seven collections of books for the foreign residents of the city, including Yiddish and Armenian. The whole number of volumes is nearly 100,000, of which 6,819 were added during the year. An indication of the prevailing trend of thought at the present time is to be found in the fact that the growth of the collection of books on Social and Political Science was greater than that of any other subject.

The *International Monthly*, with the change of a word and the assumption of a more dignified form, becomes the *International Quarterly*. With a considerable increase in bulk and the extension of its period, the present number betrays no change in policy. "Cicero: An Interview," by Professor Tyrrell of Dublin, is a thoroughly delightful apology for the great egotist, and perhaps the most striking article of the number. Space does not permit of further enumeration, but attention may be called to the prefixed biographical notes on the contributors, and to the apparently justifiable claim that "the change . . . to quarterly form broadens the scope of this journal, and increases its value and attractiveness."

The intimate relation of geography to history and religion is admirably shown in the article on Asia Minor by Prof. W. M. Ramsay in the *Geographical Journal* for September. The great central plateau, with its northern and southern mountain barriers, was a bridge across which practically all the traffic between the two continents of Europe and Asia for countless ages passed. Here, on this meeting-ground of great peoples, coinage was invented and trade was organized through caravans and bazaars. The Arab tried many times unsuccessfully to overcome the natural defence of the Taurus, and the Turk finally established himself only by the nomadization of the people, by the destruction of the bonds which held society together. In the same number of the *Journal* Dr. Sven Hedin sketches his three years' exploration in Central Asia, which has yielded results, to use his own words, "three times as rich as those of the former journey, and in the course of it I have been enabled to lift the veil which for a thousand years had hidden vast stretches of the mountainous and desert regions of the heart of Asia. My cartographical material extends to no less than 1,149 sheets," to construct a map from which "will require at least three years. . . . I took also over 2,000 photographs."

The principal contents of *Petermann's Mitteilungen*, number six, are an account of Martinique and a description of the physical formation of a region in Upper Austria. Information is given of the work of the Swedish Antarctic expedition from letters of Dr. O. Nordenskjöld, and there is a report of P. K. Koslow's explorations in Central Asia. The location, equipment, and work of the nearly fifty stations in Germany for observing earthquakes is the principal feature of number seven, which besides contains Dr. S. Hedin's summary of his work and an account of the distribution and amount of the annual rainfall in Bulgaria. Numerous facts and statistics, drawn mainly from Russian sources and the reports of the United States Weather Bureau, are given in number eight, confirmatory of a 35-year weather cycle, but not of a 55-year period. The veteran African traveller Dr. G. Schweinfurth contributes an appreciative notice of the English irrigation works on the Nile.

The Museum of Gizeh (henceforth to be called the Museum of Cairo, as these archæological treasures have recently been transferred from the Gizeh palace to the beautiful structure erected to receive them on the right bank of the Nile) is now issuing a comprehensive 'Catalogue des Antiquités Égyptiennes,' which will report on the complete contents of this collection. The fourth volume of the series has recently appeared, and others are to follow.

—An association of colleges and individuals interested in the movement by which women are entering upon the field of scientific activity, has found itself in a position to offer a second prize for the best piece of investigation carried out by a woman, although the first prize will not be definitely awarded until April, 1903. The amount of this prize, as of the former one, is $1,000; each thesis offered is to be accompanied by a sealed envelope enclosing the author's name and address, and superscribed with a title corresponding to the one borne by the manuscript, and applications are to be in the hands of the Chairman of the Committee, Mrs. Ellen H. Richards, Institute of Technology, Boston, before December 31, 1904. The theses presented will be examined and passed upon by some of the most distinguished scientists of the country—among them Professor Chittenden of Yale, Professor Howell of Johns Hopkins, Professor Michelson of Chicago, Professor Wilson of Columbia, Professor Webster of Clark, and the new President of Johns Hopkins, Professor Remsen. A promising number of theses is already in the hands of the Committee for the first prize, and the second will no doubt awaken equal interest among the women who are occupying themselves with the subjects covered. When one thinks of the immense inducement in the way of professorships, docentships, and travelling scholarships which are offered to young men to put their learning to use in original investigation, one may well be glad that young women are to have, for the moment, this modest spur to continued activity.

—One would hardly have suspected the "Easy Chair" of concealing a masked battery, but its military character is emphatically developed in the October *Harper's*. It is the present-day popular novelist, of course, upon whom its guns are trained. The novel of to-day is not merely worthless—not the patent nostrum which may not cure, but at least does not kill. Rather it is the drug which will dye the hair a beautiful color and leave a twitching palsy, or drive out the neuralgia and implant a potential insanity in its place. Our English friends, kindlier now towards American literature than ever before, cannot be too earnestly warned that our novels are almost wholly worthless, and utterly un-American in spirit. While they are turning to us for Democratic examples and incentives, we are occupying ourselves with feudalistic ideals and aristocratic prejudices. Is it not just possible that the reading public takes its historical novel less seriously than Mr. Howells seems to suppose? The enjoyment of an exciting story, with its lords and ladies, its unrealities and impossibilities, is hardly enough to prove that the reader is at heart enamored of the undemocratic and unnatural life therein portrayed. The historical novelist may be as crude and unreal and un-American as you please, but as a relief from the here and the now he may have a valuable function to perform, after all. Mary Stuart Boyd contributes to the same issue some extracts from private letters and conversations of Bret Harte, illustrating, among other things, his retention of his patriotism, notwithstanding his long residence in England. Dr. Ely gives a very favorable account of the body of religious communists living at Amana, Iowa, but doubts whether their organization can stand the tremendous disintegrating effect of American democracy, which is bearing in upon them more and more with the increase of surrounding population and the growing facility of communication with outsiders.

—Professor Wyckoff, in the October *Scribner's*, again insists upon the prosperity of Great Britain—a prosperity perhaps

never before equalled in her history, regardless of pessimistic utterances about her decline by persons who have an axe to grind. Though the United States has gained more rapidly, for some years past, the prosperity of Great Britain is real and is well attested by the most substantial proofs, such as the growth of the income-tax assessment, the Clearing-house reports, the paid-up capital of stock companies, the tonnage of shipping, the volume of business done in cotton, coal, and iron, the deposits of savings-banks, the capital of co-operative societies, the funds of trades-unions, etc. The most interesting part of Mr. Wyckoff's article, however, is his description of the overcrowding of the London poor, and of the successful, though limited, attempts at relief by such self-supporting institutions as the Rowton Houses and Guinness Houses. With the proof that healthful and comfortable lodging can be provided for laborers at sixpence per night, and other necessaries of life in proportion, with an annual dividend of 5 per cent. on the capital invested, it would seem that the work of amelioration must make rapid progress. Mr. Sturgis contributes a paper on the work of J. Q. A. Ward, whom he presents as the first of American sculptors in "constructional, expressional, and harmonized design in the placing and grouping of human figures." In the "Point of View" we have some very pertinent suggestions as to the danger which lurks in the growing habit of depending upon the gifts of men of great wealth for our city parks, fountains, libraries, and similar conveniences. A town or city may become a chronic beggar, just as an individual, and the moral deterioration which we admit to be the result of beggary in the unit, we must expect to find under similar conditions in the mass.

—Prof. Ira N. Hollis, in the *Atlantic*, effectively clears away some of the fog which interested parties have conjured up over the field of intercollegiate athletics. It does not stand to reason, he says, that a student participating in these sports can do as much work as one who devotes his whole time to study. The six weeks of the football season are practically thrown away, so far as class-room work is concerned. The members of the team may be obliged to attend lectures, but their minds are upon the signals and plays of the coming games. In answer to the question whether the athletes gain anything that compensates for this loss of time, Professor Hollis can only say that *many* do. He asserts roundly that winning is put above everything else at present, but hopes that this may prove a temporary evil, and that the games may finally be made to build up character, and teach patience, grit, and courage. Under present rules, he expresses serious doubt whether football ought to have any place on college grounds. He recognizes the tendency of intercollegiate games to confine athletic sport to the few, and considers it difficult to make out a clear case for them as a stimulus to outdoor sports. There can be no healthful condition without more competition in each individual college. Edward Atkinson contributes a vigorous defence of "commercialism," as against militarism, and denounces rather vigorously the assaults of the pulpit and the press upon the former. The reader may question, however, whether he is not fighting men of straw. It is not commerce itself that is denounced. No one of any consequence denies that the world's needs must be supplied in this way, or criticises the man whom he supposes to be trying honestly to supply these needs, and to reap a legitimate profit in the process. It is the greed which is unwilling to be bound down to honorable methods, which will create artificial means of extorting enormous profits, which sinks every other consideration in favor of the one desire for gain, that meets with denunciation. As this is not the commercialism which Mr. Atkinson defines and upholds, the issue does not seem to have been fairly joined. Harriet Waters Preston studies from an interesting point of view what she calls the great trilogy of George Meredith, 'One of Our Conquerors,' 'Lord Ormont and his Aminta,' and 'The Amazing Marriage.' The point is that in these three novels the author reveals himself as the gallant champion of what he regards as the sacred and inviolable rights of woman.

—The great 'Thesaurus Linguæ Latinæ' is making progress, though but slowly. Four parts of the first and three of the second volume have now reached this country, where each fascicle is received by the Latin scholar with the welcome that his English brother accords to a fresh section of the Oxford Dictionary. We wonder how many are profiting by the opportunity to secure this work at a comparatively slight expenditure while it is coming out in parts. The merest glance over one of them is enough to suggest how indispensable the whole will be, but a brief comparison between the fourth fascicle of the first volume (*adiunctor to Aegeus*) and the corresponding portion of the best Latin-English lexicon now in use will set the point beyond doubt. There are about 250 lemmata (omitting mere cross-references) in this part of Lewis and Short's work; in the Thesaurus there are about 450 (allowing for a few differences of arrangement). Of the two hundred additional lemmata in the latter, over a hundred are proper nouns, about thirty are drawn from the glossographers alone, and the remaining sixty or so come chiefly from such writers as Diomede, Firmicus, St. Jerome, Irenæus, Fulgentius, Cassiodorus, Boethius, and others of similar periods and character. We have observed only four newly booked words which are drawn from the authors more familiar to the classical student. These are *adolescere* (from *adolere*) occurring in the Georgics, in a passage cited in our Lexicon under the other *adolescere*; *adnarrare*, from Statius; *adunco*, from Paulus's epitome of Festus; and the doubtful *adversabilis*, used perhaps by Accius.

—But if anybody thinks that the gains are to be only or mainly in the field of late Latin, let him examine the treatment of some familiar word and he will soon find out how mistaken such a view would be. Take, for instance, *aedes;* in the Lexicon the treatment of it occupies eighty-two lines; in the Thesaurus, 724 lines. In the former its usage is illustrated quite insufficiently and from only fifteen authors. It is true that these are well chosen, but even such writers as Lucretius, Ovid, Tacitus, Martial, and the younger Pliny do not figure among them. In the Thesaurus the state of things is very different; it is not easy to think of an author who is not cited, from the first occurrence of the word in Livius Andronicus down to the latest times. The article begins with the usual brief etymological note, by Thalheim, in which he adopts the view of Georg Curtius (not approved by our Lexicon) that *aedes* originally meant 'hearth.' A rich collection of passages follows, illustrating the usage of the two forms of the nominative singular *aedes* or *aedis*, and the nominative plural *aedis*, with a warning against the confusion of *aedes* and *sedes*, so common in manuscripts. Then comes the main body of the article, divided into two chief parts. The first illustrates the meaning 'house,' 'room.' For the singular number in either sense only Curtius, Ammianus, and Paulus can be cited, the Plautine passage in our Lexicon being now taken as a nominative plural. Many examples are given of the plural in this sense, but there is no subhead to indicate that it may mean 'houses' as well as 'house,' though this may be gathered after considerable groping through solid lines of all too similar type. It is strange that Vitruvius 6, 5, 2, is not cited, for this is the only passage in which that author, who is extremely careful in distinguishing *templum* and *aedes*, employs the latter, either as singular or plural, of any but a sacred building, except in the phrase *cava aedium*. The first part of the article closes with the citation of a few passages from poetry in which the word is used of metaphorical houses, as, for example, of the dwellings of the dead. The second part, on *aedes* denoting a 'sacred building,' opens with an excellent note of some forty lines on the topic, with an explanation of the difference between *aedes* and *templum*, and remarks on the adjectives which are used with *aedes* in this sense. Both here and throughout the whole article, useful references are given to modern books, including even Wissowa's recent work on the Roman religion. This last reference shows how truly up to date the Thesaurus is.

—The English-German part of Schröer's Grieb's Dictionary (H. Frowde) has already been noticed by us. The German-English volume is now to hand. Its arrangement is on the ordinary German method, but the umlaut is not allowed to disturb the alphabetic vowel order. Pretence to "completeness" is expressly disavowed, and a reasonable fulness and freshness alone aimed at. In orthography, silent *h* in *th* is ignored, in accordance with recent changes towards simplification (as, *Rat* for *Rath*, *Not* for *Noth*, *atmen* for *athmen*), but it would have been useful to couple the old form with the new for the sake of foreigners reading in the old orthography. On the subject of phonetics, the editor envies the English their standard pronunciation, through the gradual supersession by London of provincial and dialectal peculiarities. Berlin, he declares, is now approaching the same domination, but its authority will long be disputed. Some hope of a provincial propaganda he sees in the movement to erect a uniform stage standard of pronunciation. Amid the prevailing differences, the pronunciation is generally left unmarked in this work, reference being made to an exposition of values in the preface. In the case of interlopers like *Interview*, indication becomes necessary. Here, as also with *interviewen* and *Interviewer*, the English pronunciation has been adopted; whereas with *Tramway* the *w* sound is replaced by *v*. Both this substantive and *Tram* form their plural in *s*; and compounds, *Trambahn*,

*Tramwagen*, have been readily formed. The Teutonic revolt against *Telephon* has produced *Fernsprecher*, with four associate terms, one of which, *Fernsprechanschluss* ('telephonic connection'), compares most unfavorably with the glib *Telephonleitung*, its synonym. There appears to be no verb *fernsprechen* to displace *telephonieren*, and no adjective to compete with *telephonisch*. The same poverty of development is observable in *Fernschreiber* as compared with *Telegraph*. We have *Fernschrift* only, and again no *fernschreiben*. This dictionary is a very desirable addition to the resources of English-speaking students.

THE MASTER-PAINTER OF HAARLEM.

*Frans Hals*. By Gerard S. Davies, M.A., of Charterhouse. London: George Bell & Sons; New York: Macmillan. 1902.

Messrs. George Bell & Sons seem to have almost a monopoly of the publication of serious works, in English, on the fine arts, and it is therefore quite natural that from their house should come the latest important book, and, so far as we know, the only such in our language, on Frans Hals. To mention material things first, the volume measures about 11½ by 8¼ inches and contains 157 pages, besides 18 pages of preliminaries, and 55 illustrations, of which 12 are photogravure plates and the others well-executed half-tones. The half-tone plates, like the photogravures, are inserted, there being no text illustrations, and the heavily glazed paper necessary for their proper effect is confined strictly to this purpose, the text being handsomely printed by the Chiswick Press, on good stout paper with a slight rib. Besides a table of contents and a list of illustrations, there are an "approximate chronology of the chief known events of the life of Frans Hals," an "approximate chronological list of the most important pictures" of the artist, a bibliography, a list of works arranged according to the galleries in which they are hung, a list of pictures attributed to Hals which have appeared at the Burlington House exhibitions since 1871, a list of prices obtained at various sales in the last century and a half, and an index. These various lists and tables can hardly be without some errors and omissions (the two good pictures in the Metropolitan Museum, for instance, are not noticed), but they have evidently been compiled with care and are of great value. Finally, the book is well and simply bound in dull green buckram with vellum back, and lies flat when opened. In almost all particulars it is a model of how to do it.

After all this it may seem like saying a good deal to affirm that the text proper is as good as everything else, but it is not saying too much. Clear, careful, thoughtful, critical, and sound; intelligent in method, cautious in conjecture, incredulous of legend; hearty in admiration of its hero's qualities, yet clearly conscious of his limitations; above all, devoid of padding and of "eloquence"—this is as nearly exemplary writing on art as one often sees. The judicious reader will find himself almost always in accord with Mr. Davies's conclusions, and, if he is obliged to differ with him, will do so with great caution and with profound respect.

If we limit the meaning of the word strictly enough, there can be no doubt that Frans Hals of Haarlem was one of the greatest *painters* that ever lived. For sheer accuracy of vision and brilliancy of execution, he has had no superior, and perhaps no equal but Velazquez; yet his fame is singularly modern. He seems to have had a pretty high local reputation at one period of his career, but he died a pauper and was rapidly forgotten. In 1786 one of his pictures sold for five shillings, and, as late as 1852, the life-size, full-length portrait of himself and his wife, now in the Rijks Museum at Amsterdam, fetched no more than £50. Thirteen years afterward, "The Laughing Cavalier" was sold for £2,040, and in this present year a "Portrait of a Gentleman" has reached the sum of £3,780. What one of the great Doclen pictures, which in the eighteenth century were rolled up and stored in garret and cellar, would be worth to-day, if it came upon the market, it is difficult to guess. Of course it was the painters who rediscovered Hals. Reynolds seems to have owned one of his portraits, and Northcote, Reynolds's pupil, speaks of it in words that might have been written yesterday. About the middle of the nineteenth century Hals became a living influence among the painters, and upon his art and that of Velazquez the schools of Manet and Whistler, with their divers issues, were largely based. Then came Fromentin's "Maîtres d'Autrefois," and another painter, in some pages of brilliant writing, revealed to the world what his fellows already knew. The long eclipse of a reputation was over, and the name of Frans Hals shone forth with a glory which is not likely again to be dimmed. To-day it is more necessary to distinguish than to praise; more important to show what the painter of Haarlem was not, than to demonstrate what he was; more difficult to guard against the possible evils of an overwhelming influence than to recognize the good it has accomplished.

Unfortunately for us, during the long neglect of Hals and his works, most of the facts of his life and a great part of his production were allowed to disappear. There are great gaps in the chronology of his pictures, some of which have been partially filled of late years, but which still remain puzzling in the extreme. His astonishing technical facility shows that his work was produced with great rapidity, while this same facility could have been maintained only by constant practice. There should be scores of canvases, big and little, for every year of his working life, yet there is more than one period of five or six years to which no known work can with probability be assigned. Above all, there is nothing known to exist that can with propriety be called an early work. He is now supposed, on slender enough evidence, to have been born in 1580, though the date long accepted, on no discoverable evidence at all, is 1584. He was therefore either twenty-nine or thirty-three years old when his earliest known picture was painted, in 1613, and three years older when the next extant work was produced, the first of the great series of Doclen pictures at Haarlem. That he should have been given such a commission at all shows that he was already a master of considerable local reputation; the picture itself shows even more clearly that mastery had been attained. He is to do better work, but technical difficulties have already ceased to exist for him, and he can draw and paint anything he chooses. How did he learn? Who was his first master? What sort of partial successes and full successes put him in a position to be chosen for important work? We can only guess. Mr. Davies's conjecture that, during his young days in Antwerp, where he was born, Hals is likely to have studied with Rubens's master, Van Noort, seems plausible enough; but we know so little of Van Noort that, even if accepted, the conjecture does not greatly help us. It is put forth tentatively, and it is to be hoped that it will not, with the curious facility of such conjectures, get itself taken for fact by the next writer on the subject. Whoever was his first teacher, Hals must have done a deal of work between the ages of twenty and thirty, and it is a pity that some of it has not survived for the edification of the student of to-day, who is inclined to begin where the master left off. We have the early paintings of Velazquez, and know through what hard, precise, "tight" work he trained the eye and hand that are later so surprising in their sureness and facility. Mastery has never been otherwise attained, and it is a safe prediction that if any of the work of Hals during this first decade shall be recovered and identified, it will be found admirable, no doubt, but otherwise admirable than the things we know.

The work that Frans Hals did between his thirty-fifth and fifty-fifth years—the period of full maturity — is pretty well known to us. A good deal of it must, indeed, have disappeared, but what is left is so all of a piece—the development is so normal and regular and the visible change so slight—that it is not probable that the lost works would, if recoverable, materially alter our conception of the painter. Such as he was at the beginning of this period, he was at the end of it. There is to be noted only a gradual increase of power, a slight broadening of vision, a growing looseness and lightness of touch. One of the notable things about this output is its limitation of subject. Mr. Davies gives a curious list of the things Hals did not paint; what it comes to is just this: he painted nothing but portraits. He only occasionally introduced a landscape background, and then in a thoroughly conventional and perfunctory manner. He never painted a horse and hardly ever a dog. He painted no "subject pictures." We can think of no other painter in the whole history of art whose effort was so strictly limited in its direction, and this narrowness grew upon him and is even more marked after 1640 than before that date. In his later years his figures rarely have any visible surroundings of any sort. In artistic qualities, also, he was as limited as in range of subject. He had only a rudimentary sense of composition: light and shade is, for the most part, interesting to him only as a means of drawing. His color is sometimes pleasing and surprisingly well harmonized, considering the particolored costumes he painted and the directness of his method, but he was hardly a colorist. His growing tendency to the use of black shadows in flesh would, alone, show an indifference to color. He was a painter of likenesses—a portraitist, pure and simple.

But if Hals was only a portrait painter, was he not one of the greatest of portrait painters? Yes and no. Northcote, in the passage already referred to, says, "For truth of character . . . he was the greatest painter that ever existed"; and adds, "If I had wanted *an exact likeness* I should have preferred Frans Hals" to Titian. The exact likeness was what he was after. He had little sense of beauty. He was capable of some gravity and dignity, but beside Velazquez he is common. He was a great student of expression, but, compared with Rembrandt's intensity of life, his figures grimace. There is rarely anything subtle about him, and never anything poetic; he saw with admirable clearness and rendered with wonderful accuracy just what every one may see. He was, as nearly as possible, the absolute realist.

No artist ever lived, however, who had not an ideal. With Hals, as with many a literary realist, that ideal is to be found in his style—his personal manner of expression. What he says is obvious enough, but the way in which he says it is inimitable. He is an almost unapproachable master of the language of painting. Pure art is always an arrangement of something, notes or forms or colors or words; what Hals arranged was brush-strokes, and his mere handling becomes a contribution to the æsthetic pleasures of the world. He was a master stylist, and the greatest virtues of style, in painting as in writing, are, after all, clarity and precision. We are apt to be carried away by his ease, his rapidity, his brilliancy and crispness of touch, and to imagine that these are his great qualities; but any one can be rapid and easy—what is truly amazing with Hals, in his prime, is his certainty. What astounds is not that the touch is instantaneous and slashing, but that each of these instantaneous slashes is infallibly in exactly the right place, and of exactly the right shape to express the form and texture of the thing he would render. What we call painting, in the narrower sense, is, after all, the expression of form with the brush, and Hals was an almost impeccable draughtsman. His sense of form is not delicate, but, except for an occasional tendency to elongate the forearm, it is unerring. Whoever would imitate him must begin with acquiring his mastery of drawing. His characteristic combination of rather commonplace vision with extraordinary powers of execution finds, perhaps, its highest exemplification in the "St. Adriaen's Shooting Guild" of 1633, though there are many examples of it nearly as wonderful.

Somewhere about 1635 a new element seems to enter into Hals's work. His tone becomes graver, his color somewhat warmer, his light and shade more suffused, his interest in the rendering of objects more subordinated to the study of atmosphere. In a word, his art becomes more Rembrandtesque, and it has long been thought that, during this period, he came under the influence of the master, more than twenty years his junior, who was painting, only thirteen miles away, at Amsterdam. Mr. Davies is somewhat skeptical as to the existence of this influence, and the question is worth examination. Fromentin first called attention to the resemblance of Hals's picture of "The Regents of St. Elisabeth's Hospital" (1641) to Rembrandt's "Syndics." Mr. Davies points out that this resemblance is purely superficial, consisting mainly of the likeness in number of figures, arrangement, costume, etc., and that, as Rembrandt's picture was painted twenty years later than Hals's, these things, if they prove anything, prove rather that the younger master was indebted to the elder than the reverse. He points out, also, that during the years from 1635 to (say) 1643, during which the Rembrandt influence is supposed to have existed, Hals produced many pictures which show no trace of this influence. This is undeniably true, but is not surprising. Many of the accepted dates of Hals's pictures are conjectural, but the "St. Joris's Shooting Company" is certainly of 1639, and shows no Rembrandtesque qualities. On the other hand, it is one of the poorest of the series of corporation pictures, and might be thought to show that Hals, even when not experimenting in his new manner, was losing interest in his old. Other work of this time, like "The Merry Toper," is of the nature of brilliant sketching, and may be supposed to have been done as a relaxation—a playing with that of which he was sure between serious efforts at that which was harder for him. Two portraits at Frankfort (said to be of 1638) are dismissed by Mr. Davies as too much restored to be fair tests. The "Maria Voogt" of 1639 he considers to be like Rembrandt mainly in externals of costume and so forth. The "Old Lady" of the Bridgewater Gallery (1640), of which he gives no reproduction, he admits to be very like Rembrandt, saying that, if it be indisputably genuine, "I can see no escape from the admission that we have here Hals experimenting in the style of Rembrandt, and carrying his experiment to the length of scarcely disguised imitation." In all the other pictures he sees no more than a growth of Hals's sense of atmosphere, which he thinks requires to be accounted for by no outside influence. He does not mention at all a portrait of "Feyntje van Steenkiste" in the Rijks Museum (undated in the list of illustrations, but labelled 1635 under the plate itself), which, judging from the reproduction alone, is the most Rembrandtesque thing included in the volume.

It is evident, from the dates alone, that we must leave Rembrandt's later work out of the count in considering his possible influence upon Hals. Indeed, after 1640, Rembrandt ceased to influence anybody, even his own pupils. It is not the Rembrandt of the "Syndics," but rather the Rembrandt of the "Anatomy Lesson" that must be reckoned with; the relatively grayer, smoother painter, then at the height of popularity. Hals was, as a mere technician, the superior, and would not be likely to change his handling; the influence that Rembrandt would have would be precisely in that "growth of the sense of atmosphere" which was his gift to the whole Dutch school. It is incredible that such a genius as Rembrandt should not have influenced any painter living within thirteen miles of him. The wonder is—and it is a proof of Hals's powerful individuality—that the influence was not more marked and more dominant than it appears to have been. In our view, it began about 1634 or 1635, reached its height, perhaps, with the Bridgewater portrait, and was already declining when the "Regents" was painted in 1641. In that picture there are sharp, pure blacks in the flesh-shadows which are unlike anything in Rembrandt, and which become characteristic of Hals in his later works.

During this Rembrandtesque period, Hals produced his noblest pictures—those which are nearest to being great works of art as well as great pieces of painting. After that period his technical powers begin to decline. He was more than sixty years old, and, if he had in reality been the drunkard he has been called, it is incredible that he should have held them so long. After 1641 his works become few and far between, but a picture here and there helps to bridge the gap that formerly existed between the great canvas of that year and the last efforts of his genius, the two Regent pictures of 1664. In these rare works positive color tends more and more to disappear, the palette is reduced to its lowest terms, blackness invades everything. The handling is still free—freer than ever—but it gradually ceases to be precise. What we call tone is taking the place of color, and form is giving way to suggestion. From failure of eye, the heads tend to grow larger than life; from failure of hand, the touch becomes loose and fumbling. He is no longer capable of the marvels of rendering of his younger days, but the acquired knowledge of a lifetime is still there. The language stumbles, but it is a master who speaks. In the last picture of all, painted by an old man dependent upon poor-rates, who was at least eighty and may have been eighty-four years of age, there is a certain largeness of vision, a certain way of seeing things by their great relations, which marks him, more than ever, the artist. In the male group, especially, the drawing has gone all to pieces, and even the sense of resemblance is no longer convincing; but the feeling of tone and of unity of effect has become so great that there are not wanting artists to proclaim it, everything considered, his finest work. Two years later he died in the "old man's home" of which these, his latest sitters, were governors.

From all that has gone before, it is not difficult to divine where, in the hierarchy of painters, Frans Hals belongs. His range is too limited, his sense of beauty too restricted, his intellectual value too slight, to allow us to place him among the great ones of the earth. Not only can he not be placed, with Michelangelo and Rembrandt, among the poets, but his prose is far less various and elevated than that of Velazquez. For clearness and vigor of statement, for "truth of character" and "exact likeness," he has no superior, and the language of painting, as applied to the enunciation of fairly obvious truths, has no greater master. Somewhere below the baker's dozen of the very greatest, but on a pedestal of his own, he will stand for ever in the temple of fame.

## RECENT POETRY.

The alleged enthusiasm in the United States regarding the English King's coronation was visibly checked by two circumstances—its postponement, and the pithy remark attributed to ex-Speaker Reed, that the event did not quite seem like a piece of real life. The same drawback attaches to the poetry called forth by it, of which the

two most interesting memorials, no doubt, are the two odes respectively of William Watson, a British subject, and Bliss Carman, who may be classed as a semi-subject of the same great empire; he being a native of New Brunswick, and by choice and long habit a resident of the American Union. In reading Mr. Watson's 'Ode' (Lane) one feels at first rather apprehensive of that merely conventional glorification of the British Empire to which the rest of the globe is rather forgetting to respond. As, however, the reader dwells for a space upon this thought, he is caught in admiration by the rise of tone and appeal in the last canto. There the true quality, never wanting in Watson, shows itself in a strain of stately warning such as we must go back to Gray's "Bard" to parallel; and yet it is not a shriek of passion, but a warning given in caution and in surpassing love. Thus it proceeds (p. 31):

"O doom of overlordships! to decay
First at the heart, the eye scarce dimmed at all;
Or perish of much cumber and array,
The burdening robe of empire, and its pall;
Or, of voluptuous hours the wanton prey,
Die of the poisons that most sweetly slay;
Or, from insensate height,
With prodigies, with light
Of trailing angers on the monstrous night
Magnificently fall.
Far off from her that bore us be such fate!

. . . . . .

For now the day is unto them that know,
And not henceforth she stumbles on the prize;
And yonder march the nations full of eyes.
Already is doom a-spinning, if unstirred
In leisure of ancient pathways she lose touch
Of the hour, and overmuch
Recline upon achievement, and be slow
To take the world arriving, and forget
How perilous are the stature and port that so
Invite the arrows, how unslumbering all
The hates that watch and crawl.
Nor must she, like the others, yield up yet
The generous dreams! but rather live to be
Saluted in the hearts of men as she
Of high and singular election, set
Benignant on the mitigated sea;
That, greatly loving freedom, loved to free,
And was herself the bridal and embrace
Of strength and conquering grace."

Those who feared in Mr. Carman's coronation 'Ode' (Boston: Page) anything petty or apologetic in behalf of those of British birth who have cast in their lot with the United States of America, will be agreeably disappointed. The ode itself is too long, but nowhere ignoble; it has the ring and swing which we have learned to expect from Mr. Carman, but has neither the complexity nor the brag which Kipling might have taught him. The King to whom he does honor is the people's king, and the vast congeries of nations and semi-nations whose chant he brings is made up of loyal citizens, not subjects; who shall recognize England, filially, but not in any serfdom, as their "Little Mother" (p. 32):

"And slowly, very slowly, the gorgeous dream
grows bright,
Where rise the four Democracies of Anglo-Saxon
might;
The Republic, fair, alone;
The Commonwealth, new-grown,
The proud, reserved Dominion, with a story of her
own;
And One that shall emerge at length from travail,
war and blight."

These are, as we understand it, the American republic, or United States of America, the Commonwealth of Australia, the Dominion of Canada, and the reformed and reorganized Great Britain, not yet a democracy. Many have tried their hands at forecasting the great English-speaking world of the future, but no one seems to have hit it nearer than Mr. Carman, and he goes on nobly, thus (p. 29):

"Oh, doubt not, wrong, oppression and violence and
tears,
The ignorance and anguish and folly of the years,
Must pass and leave a mind
More sane, a soul more kind,
As the slow ages shall evolve a loftier mankind,
When over lust and carnage the great white peace
appears.

For surely, very surely, will come the Prince of
Peace
To still the shrieking shrapnel and bid the Maxims
cease;
Not as invaders come
With gun-wheel and with drum,
But with the tranquil joyance of lovers going home
Through the scented summer twilight, when the
spirit has release.

. . . . . .

O England, little mother by the sleepless Northern
tide,
Having bred so many nations to devotion, trust,
and pride,
Very tenderly we turn
With welling hearts that yearn
Still to love you and defend you—let the sons of
men discern
Wherein your right and title, might and majesty,
reside."

It is a pleasure to see the comely volume in which the friends of the late Edward Rowland Sill have brought together his Poems (Cambridge: Riverside Press). It will still remain doubtful, however, how far this continued reproduction of his works—as originally published in 1868, and then in 1883, 1887, and 1899—is the result of a wide demand or a scarcely less honorable tribute from a picked class of appreciative readers. It is to some extent the critic's duty to disregard both forms of recognition; he must rather seek to estimate anew the poet's real contributions to higher literature. On reading Sill's poems more carefully, he must certainly feel marked deficiencies in certain directions, as, for instance, in the dramatic and the lyrical. One title given to a poem is "Three Songs" (p. 200), but it must be admitted that there are not so many songs, properly so-called, in the whole three hundred pages of the book—that is, not so many as three pieces of verse which can be said to sing themselves. Again, there is an absence of the quality of humor, a defect which would not have suggested itself, perhaps, but for the presence of one or two poems, such as "Five Lives" (p. 49), and "Eve's Daughter" (p. 79), which obviously have aimed at that quality and failed. But when we ask for the serious, Wordsworthian style, we certainly have an abundance of it, and that very genuine, simple, and even profound. In a few cases this is so concentrated, and so musical in utterance as to have an unusual and delicate quality, as in the following (p. 298):

NIGHT AND PEACE.

Night in the woods—night:
Peace, peace on the plain.
The last red sunset beam
Belts the tall beech with gold;
The quiet kine are in the fold,
And stilly flows the stream.
Soon shall we see the stars again,
For one more day down to its rest has lain,
And all its cares have taken flight,
And all its doubt and pain.
Night in the woods—night:
Peace, peace on the plain.

There is, of course, much of those descriptions of California scenery and atmosphere, once so new and fascinating, but now grown more familiar. Of the two poems selected by the editors to show Sill's "fine strenuousness" and "noble temper" (p. xvii)—namely, "Opportunity" (p. 40) and "The Fool's Prayer" (p. 67)—we should agree with them as to the former, but not as to the latter. Though fine in its quality, it inevitably suggests a poem somewhat kindred in aim, "At the King's Gate," by Helen Jackson, which is so much finer and more suggestive that it blocks the way to fame of any other. The poem which we should select as really the most remarkable in the book, and showing the greatest combination both of imagination and of skill in measured words, is the following (p. 246):

THE DEAD LETTER.

The letter came at last. I carried it
To the deep woods unopened. All the trees
Were hushed, as if they waited what was writ,
And feared for me. Silent they let me sit
Among them; leaning breathless while I read.
And bending down above me where they stood.
A long way off I heard the delicate tread
Of the light-footed loiterer, the breeze,
Come walking toward me in the leafy wood.
I burned the page that brought me love and woe.
At first it writhed to feel the spires of flame.
Then lay quite still; and o'er each word there came
Its white ghost of the ash, and burning slow
Each said: "You cannot kill the spirit; know
That we shall haunt you, even till heart and brain
Lie as we lie in ashes—all in vain."

Two volumes lie before us, filled with verse that is worth more in essential value than a dozen average volumes of the merely introspective and sentimental. These books contain the raw material of poetry, or perhaps one might go farther, and describe it as poetic material in the first stage of fermentation. They describe in local dialect the two types of manhood most vigorous and vernacular in all the Atlantic States of this Union: the lumbermen of Maine and the fishermen of Gloucester. They are both recorded on the spot by hands which have had a certain amount of practice, even though the names of the rhymers be new to the cyclopædias of authors. The better of the two, because the more wholly straightforward and the remoter from Kipling, is 'Pine-Tree Ballads, Rhymed Stories of Unplaned Human Natur' Up in Maine,' by Holman F. Day (Small, Maynard & Co.). No one who has not watched, at least as a spectator, the rush and whirl of logging-time on a Maine river, can fully appreciate the courage that shows itself even in making the attempt to describe it in verse (p. 102):

WHEN THE ALLEGASH DRIVE GOES THROUGH.

We're spurred with the spikes in our soles;
There is water a-swash in our boots;
Our hands are hard-calloused by peavies and poles,
And we're drenched with the spume of the chutes.
We gather our herds at the head
Where the axes have toppled them loose,
And down from the hills where the rivers are fed
We harry the hemlock and spruce.

We hurroop them with the peavies from their sullen
beds of snow;
With the pickpole for a goadstick, down the brimming streams we go.
They are hitching, they are halting, and they lurk
and hide and dodge,
They sneak for skulking eddies, they bunt the
bank and lodge.
And we almost can imagine that they hear the yell
of saws
And the grunting of the grinders of the paper-mills
because
They loiter in the shallows and they cob-pile at
the falls,
And they buck like ugly cattle where the broad
deadwater crawls.
But we wallow in and welt 'em with the water to
our waist,
For the driving pitch is dropping and the Drouth
is gasping "Haste!"
Here a dam and there a jam, that is grabbed by
grinning rocks,
Gnawed by the teeth of the ravening ledge that
slavers at our flocks;
Twenty a month for daring Death; for fighting
from dawn to dark—
Twenty and grub and a place to sleep in God's
great public park;
We roofless go, with the cook's bateau to follow
our hungry crew—
A billion of spruce and hell turned loose when
the Allegash drive goes through.

. . . . . .

The glory of the tumult where the tumbling torrent rolls
With half a hundred drivers riding through
with lunging poles.
Here's huzza for reckless chances! Here's hurrah
for those who ride
Through the jaws of boiling sluices, yeasty white
from side to side!
Our brawny fists are calloused, and we're mostly
holes and hair,
But if grit were golden bullion we'd have coin to
spend, and spare!

Here some rips and there the lips of a whirlpool's
bellowing mouth,
Death we clinch and Time we fight, for behind us
gasps the Drouth.
Twenty a month, bateau for a home, and only a
peep at town,
For our money is gone in a brace of nights after
the drive is down;
But with peavies and poles and care-free souls our
ragged and roofless crew
Swarms gayly along with whoop and song when
the Allegash drive goes through.

In 'Wharf and Fleet, Ballads of the Fishermen of Gloucester,' by Clarence Manning Felt (Boston: Little, Brown & Co.), the au-

thor attempts a little more, and, like Lowell in the 'Biglow Papers,' rather overspells his dialect. Yet perhaps this brings us nearer to the full stress of the game; and at any rate he puts on record lives of direct and simple courage, which steam and electricity may yet be destined to reduce to smaller proportions. The types of manhood in both these volumes are, moreover, shown in admirable illustrations, taken from original photographs. In this world of obscure heroism even the rigger becomes a hero—the man, namely, who puts the rigging of the mackerel fleet into complete order before the spring sailing; who hangs the sails, scrapes and slushes the masts, and so on, while his own life hangs literally by a thread. This is the way in which our poet views him (page 8):

TH' RIGGER.

"Yer may blow erbout th' cirkis, th' man on th' trapeeze,
Ye may pant yer breath erbout th' 'Humin Fly.'
But if yer want th' dizzy that will infant-like yer knees,
Let yer opticks quizz th' rigger, flyin' high.

"Oh, he's nuthin' in pertickler, er brave heart out on pay,
Oh, er feller that goes hus'lin' roun' with Time,
Jest er nervy that goes soarin' w'are th' gulls play tag all day,
An' th' shrouds ring all th' wind-bells chime on chime.

"With his kit erpon his back
An' er plenty give an' slack,
An' his fists er huggin' tight th' tackle's loop,
Ter th' gray blocks' creak an' crack
He will swing up lof' an' tack,
Oh, th' dizziest ole chickin in th' coop.

"On th' spring-stay, up th' ball,
Down th' jib-stay, roun' th' fall,
He will do each turn or ever miss'n ac',
Wile th' winds an' gulls will call
Like as if they hollered, 'Gall!
Jest look out, ole man, some day yer'll git th' sac!'

"But he'll anti all th' more,
An' will swing his legs galore,
An' go friskin' with th' winds as limp as eels,
W'ile th' gulls will farther soar,
Though maddened ter th' core
That er humin should so dare ter tag th' heels.

"But th' sight is sad ter me,
Oh, this darin' by th' sea,
This primpin' uv th' lingerie uv th' fleets,
Oh, this dev'lin wild an' free
In th' vast infinitee,
This tight'nin' uv th' black shroud's laddery cleats.

"Fer it w'ispers all th' more
Th' goin' ter leave th' shore,
Goin' ter deserlate th' h'arth an' cry th' home.—
Some ter come back laughin'-eyed
Ter th' kind ole harber tide;
Some ter be jest g'osts ferever in th' foam."

Book after book has shown that California nurtures more than its share of the poets of the future. The utter change of climate, scenery, poetic material may be at the foundation of the difference, but the fact is unquestionable. The latest poet to exhibit this is Christian Binkley, who prints 'Sonnets and Songs for a House of Days' (San Francisco: A. M. Robertson), and, like his townsman, Dr. Edward R. Taylor, tries his hand quite successfully at translating Heredia. It may perhaps be this charming Cuban poet who tempts California rhymers to become sonneteers on so unreasonably large a scale—Mr. Binkley, for instance, allows himself nearly a hundred; and his extreme reverence for Joaquin Miller hints at rather a dangerous guide and friend. But there is certainly a genuine feeling for nature made manifest in this book, and no one else has so delicately handled that curious and tempting theme for romance, the Closed Gentian. The verses are especially appropriate for this season (p. 129):

THE CLOSED GENTIAN.

"Awake, awake," the west-wind blew,
"The morning sun has smiled on you."

The autumn flowers heard the call
And laughed to see the dead leaves fall.

The aster's purple crown expands,
The daisies clap their little hands;

And all look up to greet the sun,
And all are fair and glad save one.

To her the west-wind comes in vain
With whisperings of sky and plain.

He sings, "Oh open, lids of blue,—
Open and bathe in light and dew.

"Thy regal sister's azure cup
Untwines to drink the sunshine up;

"Her wealth of calyx, fringe, and stem
She wears like queen her diadem.

"Like her unfold, and feel the breeze;
Oh wake, and hear the hum of bees,

"And with thy robe of blue unfurled,
Behold the sky and beauteous world."

She faintly hears, she longs and thrills
To see the wondrous sky and hills;

But fate is stern: the breeze is gone. . . .
She opened not and still dreamed on,

And all day long the butterfly
Beheld her closed and flitted by.

The tendency to exuberance and cheap tragical utterance which has been so long charged upon the poets of our Southern States—a more prolonged prevalence of the Byronic fever—finds full expression in the thin volume, 'The Freeman, and Other Poems,' by Ellen [Anderson Gholson] Glasgow. Some of the prose writings of this young author, especially some with a philanthropic aim, have shown so much more maturity of judgment as to make it a pity that her fifty pages of verse, full of flashes of power, should be almost wholly painful, even to ghastliness, and should seem to be mainly based on the theory attributed to the Deity at the close of one of the most tragic of them, "The Earth is Hell." For this reason we prefer to choose one of the briefest and certainly the calmest among them (p. 18):

COWARD MEMORY.

A street half flecked with shade and sun,
A last year's leaf along it blown,
A gray wall where green lichens run;
Like water falling on dry stone,
A robin's ripe notes dropping one by one.

Sad sun and shade and sadness over all
The distance blended into solemn hues,
On the warm air suspended as a pall
The sweetness dying violets diffuse,
While from a single tree the ashen elm-flowers fall.

At the street's sudden end a shining square,
The sunny threshold of an open door,
Thick with the dust of an untrodden stair
That leads beyond me to the upper floor—
Then memory halts—it dares not enter there.

If one were asked to name the American poet of this time who can be relied on for an even excellence of execution—the kind of evenness for which one looked to Longfellow—the choice would be likely to fall on Mr. Robert U. Johnson, co-editor of the *Century Magazine*. The volume before us called 'Poems' (Century Co.) is really the combination of three books, published within ten years—'Songs of Liberty,' 'The Winter Hour,' and a third part, appearing now for the first time, 'A Song of Liberty, and Other Poems.' Among these we should rank the old favorite, "A Winter Hour," as still the best; we should class it with Whittier's "Snow-Bound," limited only by being addressed more especially to a more cultivated audience and just missing the universal heart. For this fine poem we have no room, and, stopping short of winter, may well substitute, as yet more appropriate, a more timely song (p. 38):

OCTOBER.

Soft days whose silver moments keep
The constant promise of the morn,
When tired equinoctials sleep
And wintry winds are yet unborn:
What one of all the twelve more dear—
Thou truce and Sabbath of the year?

More restful art thou than the May,
And if less hope be in thy hand,
Some cares 't were grief to understand
Thou hid'st, as is the mother's way,
With mists and lights of fairyland
Set on the borders of the day.

And best of all thou dost beguile
With color—friendliest thought of God!
Than thine hath Heaven itself a smile
More rich? Are feet of angels shod
With peace more fair? O month divine!
Stay, till thy tranquil soul be mine.

*The Standard Light Operas.* By George P. Upton. Chicago: A. C. McClurg & Co.

*Musical Pastels.* By George P. Upton. Chicago: A. C. McClurg & Co.

A new volume in Mr. Upton's musical hand-book series will be welcomed by many who have been aided by his four books describing the text and the music of the most important grand operas, oratorios, cantatas, and symphonies. 'Light Operas' is not, strictly speaking, an accurate title, although it tallies with popular parlance in this country, which makes no distinction between operettas, real comic operas, "musical comedies," and other forms of entertainment ranging somewhere between grand opera and vaudeville. If he had chosen the word "operettas" for his title, the author would no doubt have given mortal offence to not a few composers, who, especially in America, seem to be as shy of that word as "sales-ladies" are of being called shop-girls. The inclusion of such genuine light operas as "Fra Diavolo," "The Daughter of the Regiment," "The Barber of Seville," "Hänsel and Gretel" would, moreover, have made that title inappropriate. Of Sullivan's charming operettas the entire list of ten is included; although some are not sung any more, a revival is sure to come, as it has already come in the case of Strauss, who is represented by four works. It is somewhat difficult to understand on what principle of selection the author included one of Sousa's operettas and four of De Koven's while entirely ignoring Victor Herbert, whose operettas are, both musically and in the matter of plot and fun, among the best of our time; they have enjoyed a great vogue here and in Germany. Nor is it obvious why "La Dame Blanche," "Stradella," "The Crown Diamonds," and "The Trumpeter of Säkkingen" are represented; all are well known, and the first named is a gem, but none of them are likely to be heard in our cities. As a matter of course less is said here about the music than in the volume on grand operas, as light music requires no analysis or commentary. The plots are what is chiefly wanted, and these are summed up concisely and clearly. We have noticed a few slips of the pen: Lortzing is disguised as Lörtzing, both in the table of contents and in the text, while Arthur Sullivan masquerades in the preface as Alexander Sullivan.

Mr. Upton has not confined his literary activity to the writing of handbooks. There is also a short monograph of his on 'Woman in Music,' which is doubtless a favorite in women's clubs; and now we have to add the 'Musical Pastels,' a collection of ten short essays, charmingly written and on subjects concerning which many music-lovers know just enough to make them anxious to know more. Mr. Upton discusses Nero, as an artist solely. Though a monster of vice and vanity, he had the courage and merit of seeking to popularize and secure honor for an art which the Romans considered fit for slaves only. In our day, not a few monarchs are lovers of music, or musicians themselves, and all the more liked therefor. But Nero "was execrated

by the Romans, not so much for his vices as because he disgraced his sovereignty by practising the art of the actor and of the singer." Though his chief motive was personal vanity, he established a precedent and got his reward, for no fewer than ten modern composers, including Handel and Rubinstein, have paid him the highest musical tribute by celebrating his life in their operas.

Perhaps the oddest character in musical history is Thomas Britton, whom Hawkins refers to as having first begun to entertain the public in 1678. There had been musical entertainments in London before him, but they were mere tavern concerts, "in which the beer was bad and the music worse." He was the first who arranged high-class entertainments, and the odd thing about it was the fact that he should have been the man to do this. He was most emphatically what we call a "crank." Every day, from early manhood to his death, he walked the streets of London with a sack of coal on his back, soliciting customers. But in the evening his Grub Street garret, accessible only by means of a ladder-like staircase from the outside, was visited by the greatest poets, painters, and musicians of his time, as well as by many exalted members of the nobility. Handel was among those who climbed these stairs and played the harpsichord and organ for the guests. Mr. Upton has made good use of this quaint topic.

Another of his chapters is concerned with the same period in English history. The story of the astounding success of that dreadful musical hodge-podge, the "Beggars' Opera," which drove Handel's operas from the stage, shows that "fads" are not peculiar to our time. "Its songs were printed upon fans, and scenes from it were painted on screens, furniture, and bric-à-brac." It is hardly correct to say that the "Beggars' Opera," because it drove out Italian music for a time, "revolutionized the popular musical taste of England." Rather was it, as Dr. Arbuthnot said, "a touchstone to try British taste on." It proved effective in revealing the true national inclination; and ballad operas were for a long time not only the lowest but, unfortunately, also the highest specimens of operatic art in England. All ballads, except those set to music by such masters as Schubert and Loewe, are more interesting poetically than musically. Their melodies are usually stale and flat (though not unprofitable); but as poems they give most interesting glimpses of manners, tastes, and fashions. Mr. Upton's chapter headed "The Bullfinch and the Nightingale" illustrates this fact. It relates to two books of ballads and songs, one English, the other American, which he has in his library. His explanation of the difference between a song and a ballad is worth quoting: "The ballad always tells a story, and is sometimes sung; the song sometimes tells a story and is always sung." The remaining chapters in this entertaining volume are concerned with Music and Religion, The First Opera, The First American Opera, Some Musical Controversies, A Musical Royal Family, The Man Beethoven.

---

*Immigration of Irish Quakers into Pennsylvania*, 1682-1750. With their Early History in Ireland. By Albert C. Myers, M. L. Swarthmore, Pennsylvania: The Author. Pp. xxii, 477; 28 full-page and 32 minor illustrations, bibliography and index.

The doctrines of Quakerism found ready acceptance among the Cromwellian settlers and their descendants in Ireland. It has been calculated that at one period there were upwards of 40,000 members of the sect—chiefly belonging to the yeomen or trading class—in the country. They occupied farms in the best parts of the country. At a later period, Arthur Young reports its being said of them, "The Quakers be very cunning, and the devil a bad acre of land will they hire." The suppression of Irish manufactures, landlord extortion, the prospects held out in this country, caused many of these Quakers to seek new homes on our side of the Atlantic. Between 1682 and 1750, from 1,500 to 2,000 Irish "Friends," as they have ever preferred to call themselves, settled in Pennsylvania. There many of them rose to eminence. It is the story of these Friends, of their migrations, and of their settlement that is told in the interesting volume before us. The records of the Society were from the first singularly exact—not only births, deaths, and marriages being noted, but also removals of members and their acceptance by new meetings. Of such materials our author has well availed himself, not only on this side of the Atlantic, but in Ireland. He throws a flood of life upon the manners and customs, ways of living, and modes of voyaging of the time. The passage occupied from six to twelve weeks. The cost was some $45. Many voyaged upon credit. Some were lent money by their meetings. Others sold themselves into temporary servitude, usually for four years, to defray the cost of their transportation. Many brought out bond servants and disposed of the labor of some of them. An intending emigrant is thus advised:

"I wod have him Procure 3 or 4 Lusty Servants & agree to pay their passage at this side he might sell 2 & pay the others passage with the money."

Considering the desire, both of the Government and of the landlords, to expedite emigration in our time, it is interesting to read of the obstacles then thrown in the way of those who desired to leave Ireland. In May, 1736, John Stewart writes from Dublin a remonstranee to "the proprietor of pensylvania" on this subject. Emigrants had been delayed weeks at port of embarkation by "Hellish contrivance";

"many of which are in most deplorable circumstances not so much as able to pay thire passage and all of them destitute of howses to put thire heads into or of means wherewith to support themselves maney of which has depended on their Friends in America from home they yearly have Accts. . . . But our Landlords here affirms that these Accts are all of them Forgerys & Lyes."

We have here tables showing the meetings in Ireland from which the immigrants came, and the districts where they settled. We are given portraits of leading Friends, views of meeting-houses, illustrations of costume, photographs of documents and autographs. Especially through extracts from wills we glean much information as to ways of living. The rougher life in Ireland made the immigrants better prepared settlers than those from Great Britain. Most families spun, and many wove their own linen and other fabrics. Among the most interesting documents quoted are letters from Robert Parke, near Chester, to his sister Mary, wife of Thomas Valentine of Ballybrumhill, in Carlow, Ireland. He was enthusiastic concerning his new home—

"for there is not one of the family but what likes the country very well, and wod If we were in Ireland again come here Directly it being the best country for working folk & tradesmen of any in the world, but for Drunkards and Idlers, they cannot live well anywhere, it is likewise an Extradin healthy country. . . . so that it is as Plentifull a Country as any can be if people will be Industrious."

He winds up a description of what is to be had at the fairs and markets with "Ribonds & all Sorts of necessarys fit for our wooden [? wooded] country & here all young men and women that wants wives and husbands may be Supplyed."

It would be difficult to give a full impression of the interests of this admirable book, especially to Friends or their descendants, without an extent of extracts for which we have no space. The 40,000 Irish Friends of those days have shrunk to 3,000. Mr. Myers should be capable of interestingly tracing the fortunes of the Society that remained in Ireland and of investigating the causes of their decline in numbers and influence. The present volume is well printed, in clear type, on excellent paper.

---

*History of Ancient Greek Literature.* By Harold N. Fowler. D. Appleton & Co. 1902.

This is one of the Series of "Twentieth-Century Text-books," and it deserves its title, inasmuch as it includes notice of discoveries such as the poems of Bacchylides and of Herondas, the long fragment of Menander's 'Georgos,' and the Pæan of Isyllus, which fell to the later years of the nineteenth century. The volume covers the whole range of literature from the Homeric poems to Chrysostom and Eusebius within the space of 501 pages, of which about 40 are devoted to bibliography, an index, and a chronological table; and this restricted space is made to contain brief mention of many slight figures (the letter S, for example, offering the names Simmias, Sosylus, Syrianus, and two Sotions). With this scale and scope, it is almost impossible to avoid an occasional dryness of treatment, and, as a matter of fact, the work is, perhaps necessarily, on the whole a handbook of reference rather than a readable history of literature; it is safe, careful, and trustworthy rather than illuminating and inspiring. Professor Murray, in his somewhat shorter history, is both illuminating and inspiring, because he has limited his view to the important figures, and he makes these figures emerge with distinctness, connecting each writer rationally with his work and his epoch. The result is a remarkably readable piece of literature. On the other hand, Dr. Fowler's plain statement of facts, biographical and literary, may answer well the needs of the student who keeps it at his elbow for reference.

The author, in his preface, speaks of "class-room use of the book for the secondary school and the college student," and expects the latter "to use it all, spending

more study on the more important authors." The secondary schools have, indeed, many burdens on their shoulders, and one of these may be the teaching of an unknown literature by recitations from a text-book. This is like teaching botany from a manual, without access to plants or flowers; and some teachers may possibly like this method; but the pupils will not like it, and will carry away from it nothing but a few dry facts—not even so much as a *hortus siccus*. The college student will in time make the acquaintance of the flowers, and may then use his manual to advantage; but the boy or girl at school has never even smelt the flowers, unless he has been adventurous enough to peep over the hedge by the aid of Charles Lamb and Church and similar friends of youth. These, indeed, are real benefactors, and the maturer pupil, once allured by their guidance, may fill out the framework of a primer by reading translations, or such leisurely dissertations as he may find in Symonds's or Mahaffy's histories. He will carry off far more from this extensive reading than from slowly and painfully memorizing a much briefer manual.

We notice here and there a phrase which Dr. Fowler may wish to reconsider, or a characterization which is either bald, or vague, or inadequate, or questionable. We italicize the doubtful expressions: Bion "was a pleasing poet, chiefly of love-poems"; "The poems of Bion and Moschus are pleasing, *but by no means great*"; "In his description of human passion, Apollonius *rises to heights which few poets have reached*"; "Polybius, *the greatest of Greek historians with the possible exception of Thucydides*"; and again, "Pindar was a religious man with a religion rather of *good works and outward observance than of faith*, though his good taste would have kept him from any disrespectful remarks about the gods, even if he had had no religious reverence for them." This last is a hard saying, which will surprise the scholar and mislead the tyro; for Pindar unquestionably had faith as well as good taste, and it is idle to measure him by the standards and ideals of a relígion which he never dreamed of. On page 213, the first paragraph is awkward and needs recasting; the last line of page 230 contains a misspelling; the date of Socrates on page 481 should be 399; and it seems a pity to omit mention of Lang's translation of the Homeric Hymns. However, these are merely *obiter* suggestions for a future edition.

---

*Algazel:* Dogmática, Moral, Ascética. Par Miguel Asín, Palacios Presbitero, con Prólogo de Menéndez y Pelayo. Zaragoza. 1901. Pp. xl, 912.

For the last twenty years there has been in progress in Spain a renaissance of Arabic studies. Its development has been singularly free from outside influences; even the school of Fleischer appears to have affected it but little. The unfortunate side of this has been undoubtedly seen in a certain provinciality of tone and slackness in scholarship which showed themselves in its earlier results, but which are now amply counterbalanced by the originality and vigorous individuality of the younger writers. As a consequence, the reproach sometimes brought against Fleischer and his followers that they paid more attention to the scrupulous editing of texts than to the study of Muslim life and thought, does not hold here. It is true that the movement began with the publication by Codera, Ribera, Zaydin, and Tarrago of a most valuable series—the "Bibliotheca Arabico-Hispana"—of original texts, but that was only the necessary foundation for the more constructive work now being done. In this last the geographical advantages of the Spanish scholars show themselves. Arabic literature, thought, and history are not locally foreign for them: they are actually part of the life of the Spanish people, and can be studied as such a part. The Spaniard who takes them up has not turned his back on his country and gone far away for his objects of interest; he is still a student of things Spanish. He is safe, too, of his audience: his books will appeal directly to all educated Spain. Hence have come two very mingled results. On the one hand, the Spanish Arabist must have in view those educated, interested, but non-Arabist readers. He may not write for scholars only. This, while it humanizes and broadens his work, undoubtedly blunts its precision. But, on the other hand, Spanish writers who are not Arabists often deal luminously and well with Arabic subjects. Through them a breadth of literary and historical perception is brought to bear which such studies at the hands of specialists too often lack. In this way even the mass of the people is reached. Not long ago there appeared a tiny volume, evidently intended for the most popular use, on the Arabic literature of Spain.

The same is well seen in the present book, the latest and most important of the series called "Colección de Estudios Árabes," and the first volume of several to deal at length with al-Ghazzali. Its author is a young Arabist of Zaragoza and a pupil of Julián Ribera, but to it is prefixed a very valuable and suggestive preface by the veteran littérateur and publicist, Menéndez y Pelayo, in which he draws out the threads of connection, bringing the influence of al-Ghazzali down into modern thought. One of these, the shortest, has long been traced and recognized. When the schoolmen, from Alexander Hales to Thomas Aquinas, quote Algazel, it is as a writer of Aristotelian compends; yet this was the least important and most mechanical side of his work. But when, in the thirteenth century, Raimund Martini, the Catalan Dominican and controversalist, came to study al-Ghazzali, he took over from him into the 'Pugio Fidei' the sceptical side of his system, using it against the Averroists to establish the necessity of a revelation. From the 'Pugio Fidei' that system passed, namelessly, into the 'Summa contra Gentes' of Thomas Aquinas, and, long after, into the 'Pensées' of Pascal. From Aquinas it came to Campanella and Leibnitz. Finally as a mystic, al-Ghazzali influenced most powerfully the eccentric ascetic, Raymond Lully. Thus, as scholastic, as sceptic, and as mystic he has worked upon European thought.

The most of this has as yet made little impression on our students of philosophy. The "Arabian philosophy," as all speculative thought written in Arabic is absurdly called, is generally passed by as either dead or unintelligible and negligible. But if Señor Asín carries out his plan and follows this stout little volume with three others, a monument will have been set to al-Ghazzali which no student of philosophy will be able to neglect. His work so far is excellently done, better perhaps upon al-Ghazzali himself than in the introductory chapters. In these there is some uncertainty of touch, and the earlier history, theological and otherwise, is not always rightly rendered. Nor can his telling of the external life of al-Ghazzali always be defended. But his spiritual development and the growth of his system have been studied with an assiduity and in a detail never before applied; and the result as a whole cannot be too highly commended. Through the labor of Señor Asín it is at last possible for the non-Arabist to learn to know the one lovable Muslim writer, the one Muslim theologian who is of the rank of Augustine, and a thinker who, though dying in the early twelfth century, is yet in the closest touch with modern Europe.

Señor Asín is in the orders, and evidently a faithful son of the Church of Rome. His training in its scholastic philosophy has, in the present work, stood him in good stead. But the following words of his, to which Menéndez y Pelayo also subscribes, will show that the independent and dignified obedience which Spain has always professed towards the Roman See is still the Spanish spirit:

"Para cumplir con el espíritu y la letra de la encíclica *Æterni Patris*, en que Su Santidad abogaba, años hace, por la restauración de la Escolástica, es preciso seguir las huellas de los más insignes doctores escolásticos. Así como Alberto Magno, Raimundo Martín, Lulio y otros muchos no se avergonzaban de tomar de la filosofía arábiga todo lo que en ella encontraban de utilizable para adaptarlo á la dogmática cristiana, no de otro modo debemos en nuestros días aprovechar todo legítimo progreso que aparezca en la literatura filosófica contemporánea, seguros de que así haremos avanzar á la filosofía cristiana más y mejor, que permaneciendo petrificados en los textos que ya pasaron, atentos exclusivamente á repetirlos y comentarlos."

To these words we can all well subscribe, and see in them the true hope for the Spanish future.

---

*L'Habitation Byzantine.* Recherches sur l'Architecture Civile des Byzantins et son Influence in Europe. Par le Général L. de Beylié. Grenoble: Falque & F. Perrin; Paris: E. Leroux. 1902. Small folio, pp. xvi., 220. Many separate plates and text illustrations.

This book, issued in portfolio and not sewed, contains 400 illustrations, some of which have been drawn from manuscripts, early maps and the like, some from frescoes and mosaics, some from existing buildings (generally in ruin), and some direct from trustworthy books, such as Vogüé's 'La Syrie Centrale.' These illustrations are closely connected with the text in a careful way, and their character is not at all that of mere decorations. Some of the little drawings found in rare manuscripts in the Vatican and elsewhere have been made, as the author thinks, more intelligible; but we have his word for it that notice is given in every case, by the words "dessin rectifié."

The text is divided into five parts of from two to four chapters each. The first part deals with the Roman dwelling before the

fourth century A. D.; the second with the Byzantine dwelling in the fourth and fifth centuries; the third with the Byzantine dwelling down to the fifteenth century, with special reference to Constantinople; the fourth with Byzantine palaces outside of Greece (by which geographical term is to be understood here the whole region of the long-continuing Byzantine Empire, since Venice and Ravenna come into this part, with the palaces of the Kremlin); and the fifth with decoration and movable objects of fine art. There is a conclusion, which is little more than a conversational summing-up of the demonstrations and the opinions contained in the body of the work.

The book is very handsomely printed, on paper of attractive surface, giving a clear, black impression of type and cuts alike; and the same paper is used for the separate plates—a seemly and even artistical procedure much too rare in our bookmaking. The proofreading has been negligently done, and there are obvious faults of gender, and omitted or wrongly set accents and omissions of the diæresis, and the like, very odd to see. And, indeed, we take the book to be the work of one not practised in the art of description and demonstration. He writes, however, with a straightforward simplicity natural to the man who is strongly interested in one very attractive and very little studied subject. Plainly he tells us, in the first page of the preface, how very few are the available materials—the houses of central Syria; some few ruins in Constantinople; a scrap of Theodorus's palace at Ravenna; a newly explored large house at Melnic near Salonika; together with manuscripts, mosaics, and such-like documents and a few sculptured reliefs. The comparisons he draws from Byzantine palaces in Venice and vaulted halls in Moscow are not urged in advance; they are left for the careful reader. The preface merely goes on to state that as yet nothing has been done in the way of study of the remains in the south of Italy, and in Istria, Dalmatia, and Constantinople itself.

The trouble is that there must be, for this study, much use of the spade and pick, much tearing out and digging up, much uncovering of Byzantine masonry now concealed either by more recent partitions, floors, roofs, and walls, or by accumulations of rubbish. If some millionaire would buy the old houses of Venice, to begin with; then buy up real estate in and near Ravenna; then, making use of simple legal dodges, acquire practical control of property in towns of the Balkan peninsula, especially Salonika and Constantinople—thereafter research might really begin. Our author seems to feel the necessity of such original work, and to have put forward the book now in hand as a plea for further and more complete study.

---

*The Story of a Strange Career:* Being the Autobiography of a Convict. Edited by Stanley Waterloo. D. Appleton & Co.

In a speech delivered at Lorain, O., on September 6, Mr. Bigelow, Democratic candidate for Secretary of State, is reported to have said: "It makes all the difference whether a man steals a little or a great deal; whether he violates a law in stealing or steals with the assistance of the law. We want to know how much a man steals before we decide to send him to the penitentiary or to the Senate." As the author of 'The Story of a Strange Career' gives no details of a total of thirty years of penal servitude, we are unable to learn whether he stole a little or a great deal; presumably enough to make him eligible for the penitentiary, but not sufficient to enable him to select the alternative.

His story is commonplace, and not worthy of much attention. On the maternal side he came of "an old New York family." On the paternal he claims Irish descent. At an early age, through choice, he sailed before the mast as an apprentice on a ship bound from New York to Canton. Before the voyage had proceeded very far, the captain of the vessel was found murdered in his cabin, and the author was arrested for the crime. The ship put back to Charleston, S. C., where he was placed upon trial. He was acquitted for lack of evidence. He devotes considerable space to this episode, confirming in the narration of it what his editor says of him, that "a cheerful reminiscent vein runs through all he tells. His sense of humor is ever present." This incident retarded, but did not cut short his career as a sailor. He followed the usual routine of life before the mast—semi-tragic or grotesque, with its hardships and questionable adventures. Twice he enlisted in the British navy, and as many times deserted that service.

There is one incident of his seafaring career which we give as he relates it, because it may reveal, perhaps, what is meant by the "literature of conscience" to which his editor assigns this narrative:

"This was the toughest crew I ever sailed with—nearly all old acquaintances in Mobile. The amount of money in our possession was over a thousand dollars in gold coin. Usually, sailors on a ship's leaving port are all dead broke. An Irishman, for security, had bound a rag around his ankle containing sixty dollars. One morning his rag was missing. He bewailed his loss at a terrible rate. Somebody had quietly shaved his original money-belt with a razor while he was taking his sleep on deck during a night watch. I was the next victim; twenty dollars in gold was taken from my sea chest. I said very little about my loss, as I had a strong suspicion that a certain man had taken it. He had shown me how safe his money was. It was rolled up in a rag in his trousers' pocket with a string tied around the outside of the pocket, so that the money could not be reached unless the string was untied, and that could not be done without removing his trousers, as he explained to me. His custom was to get into bed all a-stand—that is, without undressing. The first stormy night we had plenty of work to do, reefing topsails, and all of us were tired and sleepy when our watch went below. All were soon asleep but myself, for my hour of revenge had arrived. With a sharp penknife I cut a slit in the trousers of my dishonest friend, the end of the pocket containing the gold slipped out; then I cut off the whole business. *The money was all I wanted*, and the *string, rag, and remnants of the pocket* I left as a *souvenir*" (the italics are ours).

It is needless to add that the narrator "'planted' the money in a secure place."

At the opening of the civil war he was appointed an acting volunteer ensign in the navy. In this capacity he showed ability and courage. He was taken prisoner by the Confederates, and remained in captivity for a considerable period. He was honorably discharged at the close of the conflict. Once more out of employment, he went West, and lately died in Joliet prison, Illinois, while serving a sentence for burglary.

---

*Recollections of a Long Life:* An Autobiography. By Theodore Ledyard Cuyler, D.D., LL.D. New York: The Baker & Taylor Co.

The arrangement of Dr. Cuyler's book is more topical than chronological, but one is able to extract from it a pretty good idea of the succession of his busy years. It is evident that he has always loved his work and that he has been genial in his personal relations; and these particulars furnish us with the explanation of his good fortune in the pursuit of his clerical calling. Moreover, he has had little disposition to overhaul his traditional orthodoxy, and his ideas of the Bible have remained as simple as if no modern critic, from Strauss to Cheyne, had ever written a word. Yet the man's human sympathies are much wider than his criticism or his creed. He has been unable to resist the charm of personal distinction, whatever its ecclesiastical associations. He tells us that he went abroad on his first visit "keen for lion-hunting," and, whether abroad or at home, this sport has always had for him a powerful fascination. The major part of his book is devoted to his acquaintance with famous people, ecclesiastical, literary, and political. On his first visit to Europe, and again thirty years later, he visited Carlyle, and his success with the perfervid Scot was quite equal to that achieved by any casual American visitor. At one time and another, Dr. Cuyler saw Gladstone at considerable advantage, and other personages of great reputation. It is possible that we should not too implicitly rely upon the accuracy of his report of things said and done by his famous people. Lincoln, passing through New York on his way to his inauguration, he describes as "the most august and majestic figure that he ever beheld." Another observer describes him, with more apparent verisimilitude, as looking miserably unimpressive and forlorn.

As with things seen, so with things heard; the rhetorical habit seems to have been a perverting medium. But Dr. Cuyler does not endorse the good temperance character given to Webster recently by Edward Everett Hale. He "once saw him when his brain was raked with the chain-shot of alcohol." Dr. Cuyler's rhetoric tends to this vivid hue. It degenerates into a kind of slang when he writes of his essays in revivalism. "From the start in Brooklyn," he says, "I struck for souls." There is a good ring in a passage that denounces the absolutism of our government of the Filipinos. There are some misprints—"Waverly" novels, "Henry Wordsworth Longfellow." Dr. Channing is called "Ellery Channing." But so much cheerful godliness would atone for much more serious defects. The succession of portraits from youth to old age is interesting for its diverse identity.

# The Nation

VOL. LXXV—NO. 1946. THURSDAY, OCTOBER 16, 1902. PRICE TEN CENTS.

Branch Public Library
Rockland St., 1902

GEORGE FRANCIS TRAIN has written his autobiography. To the present generation his name is associated chiefly with the children and birds in Madison Square. Indeed, his book is pathetically dedicated "To the children and the children's children in this and in all lands who love and believe in me because they know I love and believe in them." Yet he was once the best known American on the face of the globe. He organized the clipper-ship line that sailed around Cape Horn to San Francisco, and made American shipping lead the world; he organized the Credit Mobilier and the Union Pacific Railroad; he was one of the organizers of the French Commune; he built the first street railway in England; he has been the business partner of queens, emperors, and grand dukes, the familiar friend of the greatest people on earth. He has been in jail fifteen times, from the Tombs to the Bastile, and never committed a crime. He has made more than seventy ocean voyages and has broken the around-the-world record three times. He formerly lived in a villa and spent $2,000 a week maintaining it. Now he lives in the Mills Hotel and spends $3 a week. He was the king of finance of a generation ago. "MY LIFE IN MANY STATES AND IN FOREIGN LANDS" is the story of this wonderful career, and the New York *World* declares there is not a dull page in it. Illustrated. 12mo, Cloth, $1.25 net. Postage 12 cents additional.

SINKING his identity under the guise of an educated Hindu gentleman, Mr. Anstey has given us in "A BAYARD FROM BENGAL" another of his comical books. Mr. Hurry Bungsho Jabberjee is the supposed author, who attempts to tell in "Baboo," or Indian-English, of the efforts of Chunder Bindabun Bhosh, Esq., to adopt English Manners and Customs. Mr. Jabberjee's use of the last synonym, his at least approximate remembrance of idioms and phrases, and the seriousness with which he takes himself, are droll beyond degree. Mr. Bhosh's adventures are ludicrous in the extreme, while crowning all—caricaturing caricature—are the illustrations of Bernard Partridge, who, however, is paid back in his own coin by the notes of the "author." It can be said without doubt that this book is the cleverest combination of wit and humor that has been presented in many a day. 12mo, Cloth, $1.25.

ANOTHER clever book of humorous character-drawing is presented under the title of "THE HOUSEWIVES OF EDENRISE," by Florence Popham. The author is a real humorist, and her delicious wisps of satire as she pokes fun at the society of a respectable suburb are decidedly apart from the conventional order. Although the scene is laid just outside of London, our entertainer proves there is "one touch of nature that makes the whole world kin," for with just a little alteration of local color the story might be made to fit a suburb of New York or any other large city. 12mo, Cloth, $1.50.

*NOW READY—NO. 1 OF*

# THE HIBBERT JOURNAL

## A QUARTERLY REVIEW OF RELIGION, THEOLOGY, AND PHILOSOPHY.

THE HIBBERT JOURNAL will be devoted to the discussion of Religious, Theological, and Philosophical subjects, and will be opened to Writers of every School of Thought. The Editorial Board, which will assist Messrs. L. P. Jacks and G. Dawes Hicks, the Editors, in their work, will include such representative men as the Deans of Ely and Durham, Dr. J. S. Black, Dr. John Watson, Professor Cheyne, Dr. Drummond, Mr. Montefiore, Sir Oliver Lodge, Professor Gardner, and Professor Muirhead.

*THE PRINCIPAL ARTICLES IN THE FIRST NUMBER WILL BE—*

*EDITORIAL.—THE BASIS OF CHRISTIAN DOCTRINE.*—By Professor PERCY GARDNER, Litt.D. of Oxford.—*THE CONCEPT OF THE INFINITE.* By Professor JOSIAH ROYCE, of Harvard University.—*THE OUTSTANDING CONTROVERSY BETWEEN SCIENCE AND FAITH.* By Sir OLIVER LODGE, D.Sc., F.R.S.—*"RIGHTEOUSNESS OF GOD" IN ST. PAUL'S THEOLOGY.* Principal JAMES DRUMMOND, LL.D., Litt.D.—*CATASTROPHES AND THE MORAL ORDER* I. Professor G. H. HOWISON, II. Rev. R. A. ARMSTRONG. III. Rev. R. F. HORTON, D.D.—*MATTHEW ARNOLD.* By Rev. STOPFORD A. BROOKE, LL.D.—*EARLY DOCTRINAL MODIFICATIONS OF THE GOSPELS.* F. C. CONYBEARE, M.A. *And a Number of Signed Reviews.*

WILLIAMS & NORGATE, 14 Henrietta Street, London, W.C.; and 7 Broad Street, Oxford.

*The St. Louis Globe-Democrat:* "Over 100 pages of beautiful sentiment, will be welcomed by those who have grown tired of mediocrity and affectation. A quality as rare as it is delicate. There is a great deal of exquisite and sometimes eerie imagery in the volume."

**John A. Sherlock, Proprietor.**

Facing on Berkeley, Boylston, and Providence Streets; but one block from the far-famed Public Gardens and the same distance from Copley Square; is but two minutes' walk from the Art Museum and Trinity Church; is directly opposite the Institute of Technology, and but five minutes to all theatres, shops, and the business section.

Restaurant à la Carte. Dining-Room. Table d'hôte, Café and Billiard-Room for Gentlemen.

THOMAS B. REED,
EDITOR-IN-CHIEF.

*"Eloquence is logic on fire."*

## MODERN ELOQUENCE

is a library of famous After-Dinner Speeches, Classical and Popular Lectures, Great Addresses, Reminiscence, Anecdote, and Repartee, in the preparation of which Ex-Speaker Reed had as a board of associate editors such men as JUSTIN MCCARTHY, M.P.; ROSSITER JOHNSON, ALBERT ELLERY BERGH, JONATHAN P. DOLLIVER, EDWARD EVERETT HALE, NATHAN HASKELL DOLE, GEORGE MACLEAN HARPER, JOHN B. GORDON, JAMES B. POND, LORENZO SEARS, TRUMAN A. DEWEESE, EDWIN M. BACON, CHAMP CLARK, CLARK HOWELL.

Not all that glitters is gold—the cold types of the next morning's newspapers have caused many an enraptured listener of the previous night to wonder at the art of the spell-binder. There is eloquence though that stands the strongest fires of scrutiny—eloquence that reads as well in the mellow lamplight of home as it sounds in the glaring calcium of the rostrum. Such eloquence is "logic on fire." It is truth which, like the eternal hills, will endure. English-speaking peoples have been prolific of that true and burning eloquence which does endure. For a Cicero we have a Webster, a Clay, a Choate. For a Demosthenes a Beecher, a Huxley, a Tyndall, a Lowell—and so on down the gamut, grave or gay, Nineteenth Century Anglo-Saxon thinkers have shaken the very foundation of things with their eloquence. Many who have "dared and done" have in the full flush of achievement adorned with eloquent speech the dear-bought laurels of science, literature, art, exploration, invention, or commerce. By their sides have arisen men whose masterful souls, stirred by the achievements of their fellows, have in the trumpet tones of the lecture platform, or perchance in the softer notes of the eulogy, the address, or the after-dinner speech, given to us thought and analysis redolent of true greatness. We get something of the aroma of violets from stinking coal tar—a trace of the early strawberry from the matted roots of the poison ivy—both are but subterfuge.

**Eloquence has but one source—inspired genius.** Like the word "Amen"—the same in every known tongue under heaven—eloquence compels instant recognition wherever found. It cannot be counterfeited. The listener or the reader is the arbiter. It is "logic on fire." The heart strings are touched, the senses swayed, and the whole soul ennobled. It is the same ever, in speech or type. Upon voluntarily retiring from the Speakership of the House of Representatives, Hon. Thomas Brackett Reed began the greatest library of eloquent thought and speech the world has ever seen—all of it Anglo Saxon. Gathering about him, for the immense editorial labor involved, associates from among his co-workers in other fields of activity, he began the preparation of the library—**MODERN ELOQUENCE.**

MODERN ELOQUENCE is issued in 10 volumes, divided into four departments. **Three of these are done for the first time, and the fourth eminently better and on a broader plan than ever before.** The purpose of this Library has been to collect and publish, in enduring form, the ablest and most representative oratory of modern times; but nothing has been included which is not possessed both of real literary value and of wide and popular interest:

**VOLUMES I., II., III.—After-Dinner Speeches** delivered by the foremost men of the English-speaking world in this century.
**VOLUMES IV., V., VI.—Famous Lectures** delivered to large audiences by great thinkers and leading writers.
**VOLUMES VII., VIII., IX.—Addresses** made upon special occasions which called for the height of effort and ability.
**VOLUME X.—Stories, Anecdotes, Reminiscences and Repartee** of banquet-hall, legislative forum, and congressional cloak-room, followed by indices to the complete work.

**Only the best, the great, the brilliant, the worthy to endure** has been selected from among thousands of speeches, lectures and addresses. No excerpts—no mutilation, no half-way measures. Either the speech was worthy of admittance in its entirety or not at all. **In its conception and execution, as well as in the standing of the men engaged in the work, MODERN ELOQUENCE is without precedent.**

**In keeping with the exceptional literary value of MODERN ELOQUENCE are the details of paper, press-work, illustrations, and binding. THE TYPE** was cast especially for the work, and is clear and legible so as to make continuous and evening reading a pleasure. **THE PAPER** is also especially made, is ultra durable, and will not fade or crack. On every page is the private water-mark of the Publishers. **THE PRINTING** is done with scrupulous care. In order to insure perfect register, the presses are run at half speed, and only half the usual number of pages are printed in each "form." The illustrations are printed by hand from the engravers' original plates on Imperial Japanese vellum, obtained from the mills of the Japanese Government—the best known fabric upon which to print portraits and other fine photogravures. Great attention has been paid to the selection and reproduction of the **ILLUSTRATIONS.** They are executed in photogravure full-page size. There are seventy-five of them, each being a direct "positive" reproduction from the original source, without the usual intermediate steps of one to three "negatives," in each of which some details would be lost.

**There are three styles of binding. All three, though sumptuous, are by special insistence of Mr. Reed moderately priced; and the convenient terms of payment will not strain the most modest purse strings. To properly present the library, portfolios containing Table of Contents, fine photogravures, chromatic plates and other interesting material have been prepared. One of these, with full particulars regarding binding, prices and terms, will be mailed upon receipt of annexed inquiry coupon containing name and address.**

CUT OUT AND MAIL TO-DAY TO

JOHN D. MORRIS & CO.,
Philadelphia.

CUT OFF HERE

GENTLEMEN: Referring to your advertisement of Hon. Thos. B. Reed's library of Modern Eloquence in THE NATION, I will be pleased to receive portfolio of sample pages, photogravures and chromatic plates; also full particulars regarding bindings, prices, etc.

# The Nation.

*NEW YORK, THURSDAY, OCTOBER* 16, 1902.

## The Week.

As we go to press, the strike leaders are considering an offer from the operators to submit "all questions at issue between the respective companies and their own employees" to a commission of five disinterested experts to be appointed by the President; this upon condition of immediate resumption of work without objection to, or further molestation of, non-union workers. This offer has the advantage over Mitchell's, of seemingly like tenor, in that it prescriptively excludes politics from the commission. It has the moral virtue of conceding nothing to the dominating spirit of trade-unionism. Its fate will be known by the time these lines are read. While we wish it success, we have no desire to qualify what we have written elsewhere on the general aspects of the strike up to the present attempt at settlement. The President's intervention from first to last will forever stand as a sign of *national* concern with the chronic disturbance of American industry and commerce by unscrupulous and tyrannical labor organizations. The present contest, we may be sure, is not the last, even if the operators' offer be accepted. But it is something to have stood for the principle of free labor and free contract like men, and to have averted a

"dishonest victory
At Chæronea, fatal to liberty."

---

Mr. Goldwin Smith, of whom it may still be said, as Cobden said of him forty years ago, that "his pen is a power in the state," had a brief but weighty letter on the coal strike in Sunday's *Sun*. The sum of it is, that the crisis calls for a new assertion of the national authority. He points out that anthracite mining has clearly become a national interest, and maintains that the national Government ought to have power, when local government fails, to "declare the imperilled interest national and take the matter into its own hands." By this Mr. Smith does not mean to countenance any scheme of "nationalizing" the mining business. He desires, rather, to see it simply rationalized. That is, he would have it and all parties to it made subject to Federal law, so that when the comfort and well-being and almost the very life of the people are threatened, we shall not have to present to the world the spectacle of a great nation unable to protect itself from internal enemies. Mr. Smith's letter closes with these words:

"The political verdict of the civil war was that you were no longer a federation of sovereign States, but a nation. Confirmation of this verdict may be a useful and redeeming consequence of the strike."

This acute and friendly observer has put his finger on the sore spot. All reflecting Americans have felt, within the past few weeks, a sort of baffled and angry sense of national impotence and humiliation.

---

Is there not a solemn warning for the Republican party in the way in which its campaign has been shattered to fragments by the coal strike? Here we see its managers in two great States, with critical elections on their hands, dropping everything in unconcealed alarm, and practically confessing that they are beaten in advance unless they are able to settle a labor difficulty. What a pitiable state of panic for a great party to fall into! And the worst of it is that it is the direct result of its own boasted claims and favorite teachings. It has posed as the guardian angel of every laboring man, the universal provider of prosperity, fatuously failing to perceive how this attitude puts it at the mercy of every industrial disturbance or crop failure that comes along. In 1892 it was the rueful confession of Republicans that it was the Homestead strike that lost them the Presidency. Yet since then, with redoubled folly, the party leaders have gone on delivering themselves into the hands of strikers and agitators, until now they are aghast at the political precipice up to which they have walked so light-heartedly. It is in vain for them to point to good administration at Washington and Albany, at better appointments, at economy, at far-sighted plans of tax reform—all is swept away in the angry demand that a party which undertakes to make every citizen happy and prosperous, end the coal strike at once or be dashed from power. This perilous situation should awaken thoughtful Republicans to the frightful mistake their party has been making all these years.

---

If Secretary Shaw's direction to collectors, to "facilitate" in every way the importation of coal, means, as is broadly hinted, that the legal duties will be waived, we have a still more alarming example than was his suspension of the bank-reserve rule, of nullifying the law by executive interpretation. No one can hold a lower opinion of the tariff on coal than we do. It is unnecessary, vexing, foolish. It is one of the most hateful instances of protectionist greed. But there it stands in the law, and, until repealed, must be enforced. Winking at an evasion of it would bring both the law and the Secretary into contempt. We were going to say that it would bring the whole protective policy into contempt; but that work is, at present, one of the purest supererogation. We do not remember the time when protection was in such disgrace, even in the house of its friends. Its very devotees and apologists have such gentle words to apply to it as blood-sucking and piracy. But there must be no attempts to punish the protectionist blood-suckers and pirates. Oh, no; to do that, the President says, would "unsettle confidence."

---

Now we have Secretary Moody proposing to rip open the tariff and paralyze business. In his speech at Madison, Wis., he asserted of his own knowledge that the duty on coal of 67 cents a ton was "covertly and in a cowardly manner smuggled into the Dingley bill." He urged, and Washington dispatches say that the President will recommend, that Congress promptly remove that tax on a necesssary of life. But how can the thing be done? Has not President Roosevelt himself protested against tariff-tinkering? Did he not find out, in the case of the protective duty on beet-sugar, that it is impossible to strike at one greedy interest without arousing all the other greedy interests to come to its rescue? The President has much to learn about the way protective tariffs are made and maintained if he imagines that what Secretary Moody calls "blood-money" can be taken out of them without exsanguinating the whole system. What if selfish and cowardly duties were smuggled into the law, no one but wicked Democrats will talk about forcing them out. If the President and Secretary Moody go on talking about the monstrously unjust tariff taxes that Congress should repeal, the protected interests will send Lodge to the White House and the Navy Department to repeat his great speech on the impossibility of any patriot uttering the words tariff revision except in a whisper and in a dark closet.

---

In the midst of the coal crisis and of much other internal disorder, we are asked to give attention to our duties as guardian of the island of Cuba, and to see that she fulfils her duties to us. She has not signed the treaty which is required under the Platt Amendment. She has not turned over to us any coaling stations or forts. She has not completed the treaty of reciprocity which we have offered to her. The worst of it is, however, that, after all we have done for Cuba, she does not love us. How sharper than a serpent's tooth! But this is only a beginning of our outside perplexities. Congress will soon be requested to assume responsibility for the Danish West Indies and to pay $5,000,-

000 cash for that privilege, plus a considerable stipend each year to meet the deficit which has been a charge on the Danish treasury. Confronting us also is the much greater problem of getting rid of the friars in the Philippines, paying them off, disposing of their lands, and bringing in their successors. Added to this is the task of preparing the Filipinos for "ultimate self-government"—except the Moros. The duty of killing the latter is still upon us. They are unconscionable Mohammedans, polygamists, and slaveholders. We must put them down anyhow. There has been an earthquake and tidal wave at Guam, and the officer in charge there has sent a pressing appeal for money and material to rebuild the piers and barracks. From Hawaii comes an urgent request for permission to introduce Chinese labor, and also a counter petition which tells of intolerable cruelty practised upon natives of Porto Rico who had been induced to migrate to Hawaii to take the places of Chinese coolies hitherto working there. The foolish may now ask whether the problems which face Uncle Sam in his own territory are not sufficient to engage his energies and tax his ingenuity without seeking new ones on the other side of the globe, or even in the neighboring waters of the Caribbees.

---

The refusal of the Sultan of Bacolod to accept the blessings of American civilization is one of the most singular happenings of the hour. This wretch actually prefers death to the kind of Americanization which has been going on in Luzon, and Samar, and elsewhere these last four years. With inconceivable stupidity and shortsightedness he would rather be ruler of his own lands than accept the sovereignty of the United States as enforced by Gov. Taft and Gen. Sumner. Instead of being ready to have Christianity forced down his throat at the same time, he wishes to die for Mohammedanism from bullets fired in the name of the Prince of Peace. Anybody, we insist, who is such a blockhead as to decline all these advantages, including the enforced learning of English, particularly when they are offered by the Republican party, ought to be done away with, and very promptly, too. If anybody insinuates that this killing of hundreds of Mohammedans in an equatorial island 8,000 miles away is despicable and unworthy business for a great nation, why, tell him he is unpatriotic, set him, as Secretary Shaw would suggest, to singing "America," and talk about the coal strike.

---

The paralysis of law, in a community over-afflicted with petty politics and labor-union tyranny, had sharp illustration in New Orleans last week. For days the riotous striking motormen dominated the city and defied its police force. Men were ready to take the places of the strikers, but not a car was run. With policemen enough on Canal Street, according to the local papers, to have swept the thoroughfare clear of rioters as fast as the route could be traversed, barricades were built on the tracks, the cars were stopped almost as soon as they left the barns, and their motormen were beaten and dragged away. "Please give way there, gentlemen," said the polite policemen on the cars, "we don't want trouble"; and not a police club met the bludgeons of the mob. To club a brick-throwing striker might be to club a political worker of one of the Police Commissioners. Besides, unionists have votes, and election day is only three weeks distant. Nor could reliance be placed on the local militiamen, who forgot their oaths to the State in their sympathy for unionism, or their fear of its boycott; and the strikers modified their terms only when confronted by militia brought from the rural districts, where there is less of corrupt politics and of union domination.

---

The Grand Army treated the new Pension Commissioner rather badly on Thursday, in that it failed to rebuke him for standing in the way of the veterans who wish to coin their patriotism. We must confess that Mr. Ware has thus got a good deal to live down, for every watchful and efficient Commissioner has hitherto been so savagely attacked by the Grand Army that this treatment had come to be regarded as a certificate of merit, and its absence as a ground for suspicion. We doubt whether President Roosevelt will like the outgoing Commander-in-chief's assertion that the Grand Army compelled the retirement of Commissioner Evans. The President gave other reasons, and it should cause him considerable food for reflection, now that he finds the pension-grabbers rejoicing over it, and saying, "We did it." Mr. Ware having removed the Chief Pension Examiner, who was a foe to dishonesty and fraudulent pensions, the Grand Army has moved on to attack a third of the safeguards supposed to protect the Treasury from unwarranted rifflers. Its Pension Committee assailed the whole medical division of the Pension Bureau, declaring it "a dead line where are executed the claims of veterans seeking pensions." By all means let us get rid of this protection, and turn the Treasury wide open to the swindlers and the shirks as well as the deserving. There are 200,000 veterans without pensions, Gen. Torrance declared. At any cost let us give them everything they want, and demonstrate the fact that true patriotism consists in mulcting your Government as much as possible because you did your duty honorably, or dishonorably, forty years ago.

---

Earnings of the Steel Corporation for the September quarter add their testimony to the remarkable prosperity of the iron trade. The company's earnings during the past three months, in excess of operating expenses, have surpassed last year's by eight million dollars, or 28 per cent. Part of this increase results, no doubt, from the fact that last year's strike of steel workers came in the summer quarter. One curious part of last year's showing, however, was that the company's net earnings increased in each successive month of the strike until September; July, 1901, showing $185,000 more net receipts than June, and August $230,000 more than July. The higher price of the company's products counts for much this year. Prices now range, in fact, from 10 to 50 per cent. above those of this date a year ago. Not only has pig-iron risen since last October from $14.90 to $22 per ton, but steel billets, a staple product of the trade, sell at Pittsburgh now for $29.50, as against $26.50 a year ago, and $16.50 in 1900; the other forms of steel having advanced correspondingly. This great advance may fairly be said to have occurred in the face of the company's efforts to maintain a steady market. It is, in fact, an index to the enormous continuing demand for iron, chiefly for building purposes. Our import, during the eight first months in the present year, of 160,000 tons more foreign steel than we took in 1901, is one evidence of this American demand. The situation suggests two comments. The first should be, on the utter absurdity and wrongfulness of the 30 per cent. duty on these steel imports at a time when the public revenue is too large already and the home steel-maker unable to meet the home demand. The second is, on the singularity of the demand, by a company in the Steel Corporation's present situation, that there be saddled on the enterprise a debt of $200,000,000, through which not a dollar of new assets is obtained.

---

After a censored war, a censored inquiry into it. That was the case with our Philippine war, and now it is to be the course with the South African war also. The Royal Commission of investigation begins its labors by excluding the press. This is as if in humble imitation of Lodge's committee at Washington. And the reasons alleged in either instance are curiously alike, and curiously fallacious. As long as the war is in progress, no questions must be asked. It would be unpatriotic to ask any; it would only encourage the enemy; it is well known that the bravest and purest soldiers cannot fight so well when their peculations and violations of the laws of war are exposed. Wait till the war is over, and then thrust in the probe as deeply as you please. Well, the end of the war comes at last, and the promise of thorough investigation the Government finds it highly inconvenient to

fulfil. A Royal Commission is named, but certain subjects of inquiry are carefully withdrawn from it. The old excuses, supposed to be good only for war-time, are alleged again—we must not betray our military weakness; we dare not give aid and comfort to a possible enemy in the future. And, to crown all, the Commission is to sit in secret. If anything disagreeable should be put in evidence, you know! Besides, the Commission will publish all that the public really ought to have. We Americans can see how absurd this is in the English.

---

Mr. Balfour convenes Parliament today, and will renew the discussion of the Education Bill, the essential clauses of which have already been passed. He has before him the alternatives of jamming the bill through in its original form—a policy which would threaten a prompt dissolution—or of withdrawing it ignominiously and continuing the present makeshifts, or of accepting a compromise which would give all religious denominations equal privileges in the schools. During the prorogation of Parliament the matter of public primary education has been vigorously debated in both the Unionist and the Liberal press, and it may fairly be said that the whole question has passed beyond Mr. Balfour's control. Many of his own supporters look longingly towards the non-sectarian schools of America, and even those who insist upon denominational control of the schools desire freedom of voluntary religious instruction, under some form of the Faribault plan. Undoubtedly a small but influential part of the majority will insist that the Church schools offer in their buildings, valued at $20,000,000, an equivalent for the support they are to receive from the rate-payers. But the rate-payers are not of this opinion, and if Mr. Balfour persists in saddling upon the people schools maintained from the rates, but managed by denominational committees, he will force a political crisis.

---

Mr. Chamberlain has told the Liberal Unionists that on the Education Bill the Ministerial programme is battle, not compromise. He adds that the bill is not to his taste—he would personally prefer secular to denominational education; but he promises the measure his loyal support; and, since the Ministry is irretrievably committed to the Bishops' plan, he bids Liberal Unionists pocket their prejudices and swallow the bill. Unless the dispatches misrepresent the tone of his address, he assumes that the dose will be a bitter one. Mr. Chamberlain is a fighter, and his loyalty in this matter is unquestioned, but one cannot help remembering that if Mr. Balfour should perish politically while leading this forlorn hope, Mr. Chamberlain would certainly survive, and would almost inevitably assume the vacated command of the baffled Unionist forces. This obvious consideration does not detract from the sincerity of that counsel which bids Mr. Balfour take the chances of attack rather than abide the perils of retreat, but it explains why Mr. Chamberlain is able to urge desperate courses with a certain cheerfulness.

---

The celebration of the tercentenary of the Bodleian Library at Oxford, which took place last week, is an event of more than local importance. Scholars from the entire civilized world have enjoyed the hospitality of its shadowy alcoves, and have received the courteous assistance of its accomplished staff. A great storehouse of books thus administered deserves Professor Dixon's appellation—"An International University." Sir Thomas Bodley, when he founded a library as an ultra-British and ultra-Stuart university, could not have imagined that he was endowing an essentially cosmopolitan institution, and it was two generations before the German-born Hollander and pioneer English philologer Francis Junius gave his Anglo-Saxon collection to his neighbor, Bodley's librarian, for the use of all students in perpetuity. This was perhaps the first hint of the international character that the Bodleian Library was to assume. No one who has read in the halls that Duke Humphrey of Gloucester built and Sir Thomas Bodley rebuilt and filled with books, could fail to attend in spirit the recent ceremonies. And hundreds of students who have not had that good fortune have yet had occasion, by correspondence, to test the fidelity and good will of the administrators of Sir Thomas Bodley's trust. There are great libraries which are veritable cemeteries of books, and in which a reader is almost an intruder. This the Bodleian emphatically is not, and the attendance of representatives of many lands and institutions of learning of the Bodleian tercentenary, is, perhaps, quite as much a tribute to the enlightened management of Sir E. Maunde Thompson, Mr. Nicholson, and their assistants, as it is to the revered memory of Sir Thomas Bodley.

---

The riotous demonstrations at the opening of the Hungarian Parliament may merely represent the permanently unhappy conditions of Parliamentary debate in the Dual Monarchy, or they may portend a bitter opposition to the renewal of the fiscal apportionment *(Ausgleich)* between Austria and Hungary. It is to be feared that the graver interpretation is the truer one. Since December, 1897, this battle of the *Ausgleich* has been fought, and while the minor controversies that disturbed the parliaments of the Empire and its constituent kingdoms have been thoroughly threshed out, the apportioning of the burdens of empire has resisted solution. The continuation of the old treaty as a *modus vivendi* was probably the only possible course, but it has worked against Austria, and has given the Hungarians every reason for wilful obstruction. Under this temporary arrangement, Hungary pays a little less than one-third of the imperial expenses. The Austrians, who wish to make the apportionment upon the basis of population, not of taxable property, contended that the share of Hungary should be 43.14 per cent.—an extreme claim, which they have subsequently reduced to 36 per cent. If it were purely a fiscal matter, arbitration would be easy. But the whole debate is complicated by a racial incompatibility between the German-Austrians and the Magyars which strikingly recalls the Anglo-Irish imbroglio, and by the dread of the growing Pan-Germanic propaganda. The Emperor, who was bitterly attacked, has maintained an admirable impartiality, and has made gradual progress towards conciliation. He can, however, hardly live to see his work completed, and will leave no successor of equal ability. It is in view of this great uncertainty that the chronic disorder and obstruction in the legislative bodies of Austria is doubly ominous.

---

Much of the Macedonian news is from suspect sources, and it is always possible that, the same minor affray being simultaneously reported from several news centres, may assume the aspect of a general uprising. But the disorders on the northern border of Macedonia are already serious enough to warrant the outgiving of a circular note of protest by the Porte, and to elicit a somewhat cynical *non possumus* from the Bulgarian Government. So far the revolutionary bands which operate near the Bulgarian line seem to have it all their own way. Their hope is either to produce a state of chronic irritation which would require the carving out of another independent principality, or to provoke the Turkish troops to atrocities which would arouse the Christian Powers to the point of armed intervention. As to this latter aspiration, it is certain that Turkish nature has not greatly changed since the Armenian massacres, to go no further back, but Turkish policy has somewhat changed. During the brief Grecian campaign the Turkish troops were admirably kept in hand, and repeated none of the horrors of the Russian war. It will be difficult for Zontcheff's or for Sarafof's bands to create a cause for intervention. The circular note of the Porte is probably a kind of notice that the revolt is to be put down with the military arm, and an expression of willingness that any other Power should undertake the duty of keeping the peace in the Balkans.

### THE STATE OF SIEGE.

We are now entering on the sixth month of the investment of the Atlantic seaboard by the forces under Commander-in-chief Mitchell, and a fortnight has elapsed since Commander-in-chief Roosevelt declared the situation extremely annoying, and said it must really terminate at once. In the meantime, the naval manœuvres on the same coast have demonstrated—who knows what? Either our complete immunity from foreign invasion, or the pressing necessity for more ships and more fortifications. To complete the picture, while every political means has been exhausted to effect a surrender of the besiegers, the Grand Army of the Republic has been holding its annual picnic in Washington. Great show of activity by sea in warding off attack from the quarter where attack is not contemplated or entertainable; great show of what we may call Button Patriotism on shore, with blissful ignoring of the new half-year-old rebellion.

The march of the seasons has not been stayed. Winter is upon us, and our Eastern population is preparing to practise those economies and face those hardships which were the lot of the first settlers. This means a turning back of civilization. For lack of fuel, our schools must be closed; hospitals must turn out their inmates; full-pursed charity cannot by any gift of money supply the one universal need. The besiegers without have what is vital to those within. The blockhouse is surrounded by a wily and savage foe, lying in wait for whoever dares issue to fetch water from the spring. Worse than this, some of the besieged are paying tribute to their tormentors, supplying them with ammunition and encouraging them to persevere in reducing the fort. This is the new federation of labor, with its sympathetic strikes and its Peter's pence.

The pauperization of the community goes on apace. The strikers and their poorer victims alike are supported by money that they have not earned. As industries are paralyzed for want of supplies or from the general uncertainty, the idlers are increased, their numbers being swelled by the school-children thrown upon the streets. This means the rapid expansion of the dangerous classes, a hotbed forcing of youthful ruffianism, the most terrible of all. Along with this goes a closer huddling in the congested districts, diminished ventilation, diminished personal cleanliness, lowered vitality from insufficient food and clothing—a premium on contagion and infant mortality which boards of health can no longer cope with. These bodies, charged with powers almost tyrannical to abate nuisances and danger to the public health in ordinary times, are now rendered impotent by the timidity of the State and national authorities, who palter with a social condition worse than the plague.

Let us do the authorities justice; they have no support from the patriotism of the classes or the masses. In the great cities which boast their Union Leagues, we see no meetings to assure the President that courageous action on his part in freeing and protecting labor in the coal region will be sustained by the virtue, intelligence, and philanthropy of the country. Everywhere we see a confusion of the issue, a belittling of the crisis, a happy-go-lucky optimism, or a monstrous demand on the assaulted to cease from resistance. The party press, with the elections close at hand, strives to make the public ear attentive to campaign platitudes about the Trusts. Anything but the question of the hour, clearly regarded, honestly stated, boldly solved as it should be solved. The President at the capital, with his ear to the ground, hears only inarticulate murmurs, not the one voice which marks a nation conscious of its peril and clamorous to be led.

Among the well-meaning there are two sorts of reasoners who combine to darken counsel and to unnerve the will of the Executive. One consists of those who view the coal strike as a thing apart from the every-day manifestations of trade-unionism; and the other, of those who confound it with ordinary strikes. All trade-unionism that embraces strikes among its measures relies for its ultimate success upon intimidation and violence—that is, upon brutality and lawlessness. Whenever this stage is reached, no matter what the average membership of a union for intelligence, sobriety, and self-respect, it touches hands with the mob, whose support it instinctively has and does not decline. It is, even when quiescent, still a potential mob, and one highly organized, with affiliations which now literally go out to the ends of the earth, drawing subsidies from unions of diverse and non-related crafts without reference to the merits of the strike. It has the very stamp of the mob (as seen in the negro lynchings at the South) in its assumption of right without examination or trial. The strike is on—call in the tithes of all the union band; they will be paid without question. The strike exists, therefore it is just. Until this aspect of trade-unionism is seen in its true light of anarchy, it will never cease to devastate the land with unrest and crime, while eating out the manhood of those who passively submit.

The second grave mistake is to think that public policy must disregard the *magnitude* of a disturbance not differing in principle from those commonly endured. Were the coal strike localized in its effects to Pennsylvania, that State might well be left to stew in its own juice of corruption and work out its own salvation. Not only is it not so localized, it has been incited and engineered from without by a foreign combination, while its baleful consequences permeate every part of the country in some degree. No opposition or remedy will, in the nature of the case, avail from the action of other States. The supply of coal is circumscribed; approach to it is denied with bludgeon, torch, and dynamite. The original United States is cut off from a supreme necessary of life without resource unless it be in the Federal Executive. It is as if a scission of that part of the Union had been effected, so far as a right to protection under the national ægis is concerned. New England and the Middle States may truly declare that they have no President at this moment.

The cry is repeated from Washington: Show us the law and we will act. Show us, on the other hand, the law which obliges the Executive to see the independent laborer cheated of his right to life, liberty, and the pursuit of happiness through the instrumentality of general distress and famine exerted against innocent millions. A poor sort of nation, we were told in our first imperial days, that cannot burn its Declaration and hold colonies in subjection, though no one has ever pointed out the warrant of law. What is now demanded of the President, sole representative in our system of the whole people, is to *maintain* the Declaration as regards labor at least, giving no justification to despotism because it is organized, withholding no safeguard from manhood standing aloof from or kept out of the organization. If the laborer A must be free to be idle, laborer B must be free to work. This is the doctrine for all occasions; its enforcement now with a will and with the whole power of the Federal Government is the duty which the President may continue to evade, but cannot disown.

### GOVERNMENT COAL MINES.

In a speech at Brooklyn on Saturday evening, ex-Gov. Hill essayed a defence of the clause of the Democratic State platform which demands that the Government shall take possession of the anthracite coal mines under the law of eminent domain. This proposal is no doubt attractive to many persons who look forward to the coming winter with grave apprehensions of a coal famine. As the plan contemplates fair and just compensation to the owners, we need not consider its legal bearings except to remark that the application of the law of eminent domain is not an instantaneous operation. Appraisal of the numerous properties would be a tedious and protracted task, and would involve a hot dispute. The owners would expect a price based upon past earnings; but since a mine becomes less valuable

every day that it is worked, and is doomed to exhaustion sooner or later, and since the coal-carrying railroads will not be worth much after the coal is gone, a fair price would be much less than a capitalization of the usual income. Therefore the "due process of law" which the Constitution requires could not be carried into effect for a long time, in any event. The present crisis in the coal trade would have passed away long before.

Would it be conducive to the public interest that the Government should undertake the business of coal mining? People who attempt to decide this question off-hand assume that there is some mysterious power in a government, enabling it to take hold of a new and vast business of the most technical and complex nature, and make it a success, where private enterprise and skill of the highest type, backed by unlimited capital, have resulted in a deadlock. The least reflection should convince us that if the Government owned the mines and machinery to-day, it would inevitably break down in an attempt to supply 50,000,000 tons of anthracite coal in twelve months and deliver it to the buyers at the average price heretofore charged for it. The only way it could accomplish any effective work would be to hire the present owners and employees, at suitable salaries, to carry it on. This would be the first thing to do. Increased cost of output would follow directly. Government seldom gets any work done as cheaply or as well as private persons do. The spur of self-interest that devises economies which make up the whole difference between success and failure, would be wanting. Moreover, miners would expect higher wages from the Government than from private operators, and would have considerable influence as voters in deciding what the wages should be. Unless coal mining is to become in part a charge upon the taxpayers, the price of coal would have to be increased largely and permanently.

We have assumed that the Government might secure the services of the men who are now the heads of the mining industry, but this is by no means certain. Very few men possessing the requisite skill and experience could be obtained for the salaries which the Government usually pays to its highest public servants, such as Cabinet Ministers, Justices of the Supreme Court, etc. It is quite certain, however, that the politicians would very soon be scheming for these places, both high and low. If "the Government" which is to own the coal mines means the Government of Pennsylvania, Senator Quay would soon be the boss of all the mines and carrying companies, and every man who entered the service, either as a certificated miner or as a mule-driver, would eventually be an office-holder whose place would be at the disposal of the party machine. All these things would happen unless the Government of Pennsylvania should have means for operating coal mines and railroads superior to those which it has for administering municipal affairs in Philadelphia and Pittsburgh. But it would probably have less, since there would be fewer persons to keep an eye on the office-holders in the mines than on those in the City Hall.

Gov. Hill favors the policy of the national Government instead of State Governments taking charge of the coal mines, because he says it is a national question. In that event the transfer of ownership would not be restricted to anthracite mines. It would embrace bituminous mines and lignite beds, and probably oil wells and natural gas. Mr. Hill seems to favor the working of gold and silver mines by the Government also. Iron, lead, copper, zinc, and borax mines would naturally come next. All the political meddling that we might expect from separate State action would be repeated on a larger scale. Quay would not lose his influence over Pennsylvania mines by their transfer to the national Government. The people would demand all the products of Government mines at as low a price as they were previously supplied for, and, if there were a failure of the supply, or a material advance in price, would "arraign" the party in power, and, in any extreme case like the present deficiency of coal, would hurl it from power.

The public interest lies in having coal supplied in sufficient quantity at the lowest possible price. There is no reason to believe that the Government could do this work nearly as well as it has been done in the past by private enterprise. No doubt there have been grave abuses in the private mining and transportation of anthracite coal which a wise Government might properly take cognizance of and chastise, without assuming ownership of the mines; but those abuses have been fewer and less heinous than would have been committed under Government mining, while the supply of coal has been more regular and the price lower to the consumer than it would have been under such a system.

The only solution of the coal question that seems possible, or is likely to be permanent, is the economic one. In other words, the party which can hold out longest will win the present fight, but winning the present fight does not insure us against another one. The operators tell us that the competition of bituminous coal prevents them from raising wages. Of course this competition is not going to cease with the ending of the present strike. It may be even more severe than before. Therefore, the economic forces must have their way. Not even the Government can prevent them. This is a hard saying, perhaps, but we can see no easier one. Government ownership would be stepping from the frying-pan into the fire.

### *AN OLD SUPERSTITION.*

The platform of the Republicans of Massachusetts revives an old myth appertaining to the tariff question, in the terms following:

> "Changes which the world's progress and the interests of the American people may suggest, should and will be made by the Republican party whenever they are of sufficient importance to justify the check to business which inevitably attends any revision of the tariff."

The authorship of this plank in the Massachusetts platform is plausibly assigned to Senator Lodge. It is really immaterial by whom it was prepared, and we allude to the authorship merely to note the fact that the Senator seems not to apprehend any serious check to business if either coal or beef from Canada should be admitted to the United States free of duty. This suggestion, made by Mr. Lodge in a recent speech, leads the discriminating reader to ask what is meant by a "check to business." Nobody would anticipate a check to business from the importation of Canadian coal, but the Beef Trust might justly say that the introduction of Canadian beef would be a check to their business. A check is a very vague term. It may mean anything, from a financial panic like that of 1893 to a mere slackening of the demand for a single article of domestic production. It was evidently used in the Massachusetts platform as a bogy to affect the public imagination more or less. It is not true that revisions of the tariff check business either inevitably or generally, but if it were true, then the blame for such checking during the last forty years, with one single exception, would be upon the Republican party. A glance at our tariff history will prove this statement.

There were three tariff revisions during the rebellion, those of 1861, 1862, and 1864. All were made by the Republican party, and were, or were supposed to be, necessary for procuring revenue for carrying on the war. Nobody ever said at that time, and nobody ever imagined since, that any check to business was produced by those revisions. Yet we are now gravely reminded by the Massachusetts platform makers that such revisions "inevitably" check business.

The next tariff revision was made in 1870. Mr. Morrill, the father of the Morrill tariff of the war period, tried vainly to get those duties reduced which had been raised during the war as a compensation for the internal taxes on manufactures, which were now repealed. "Whatever percentage of duties," he said, "was imposed on foreign goods to cover internal taxation on home manufactures, should not now be claimed *as the lawful prize of protection* where such taxes have been repealed." The

privateers thought otherwise. They prevented Father Morrill from carrying out his purpose, although Senator Sherman lent him a helping hand. The tariff was, however, revised by lowering some duties and raising others, but without any check to business.

Another tariff revision, and one on a much larger scale, was made in 1872. This was a Republican measure introduced by Mr. Dawes of Massachusetts, then Chairman of the Committee on Ways and Means. It repealed entirely the duties on tea and coffee, and made a "horizontal reduction" of 10 per cent. on other goods. No check to business was felt in consequence of this revision. but in September of the following year there was a financial panic due to gigantic speculation in railways and Western lands. Nobody at the time fancied that this crisis was caused by the petty reduction of the tariff on dutiable goods or by the repeal of the duties on tea and coffee; but whatever effect was produced was caused by the Republican party. This 10 per cent. reduction was itself repealed in 1875, the duties being restored to the old scale.

The Republicans initiated and carried through the famous tariff revision of 1883. All that need be said now is that it produced great political commotion, but did not give any check to business. In the following year there was a Wall Street flurry that has since been known as the Grant & Ward panic. The failure of Grant & Ward did not cause this trouble. It was most probably due to the operation of the Bland Silver Act, which had been pouring fiat money into the channels of business for six years at the rate of $30,000,000 per year.

The next tariff revision was the McKinley Bill of 1890. This was accompanied by the Sherman Silver Bill, and the two things together did produce disastrous results in 1893, but it will not be affirmed by any orthodox Republican that the McKinley tariff caused the check to business in that year. The orthodox belief is that the panic of June, 1893, was caused by the Wilson tariff of August, 1894. It is sufficient to say that it never caused any check to business at all. The check to business the preceding year was so disastrous that nothing could have made it worse.

This brings us down to the Dingley revision of 1897. We presume that not even Senator Lodge will contend that that revision caused a check to business. We are so near to it in point of time that we might remember such a check if it took place, but nobody recalls anything of the sort.

It is true that tariff changes cause an acceleration or retardation of the demand for particular kinds of goods. If the importers see that the duties are likely to be raised, they will bring in as large a stock as possible beforehand. If they think that the duties are to be reduced or repealed, they will suspend importation till the change takes effect. Changes in the internal-revenue taxes produce like effects, yet nobody has ever adduced that fact as a reason for refusing to make such changes. Nor has anybody ever affirmed that such changes inevitably check business.

We now repeat that there is no foundation for the statement that tariff revision either inevitably or generally causes a check to business. The theory that it does so is a myth born of the political exigencies of the past, and repeated so often that the myth-makers themselves have come to believe it.

## *SECRETARY SHAW'S CONSOLATIONS.*

Out in Iowa the Republicans are having troubled dreams about Trusts and monopolies; but that favorite son of Iowa, Secretary Shaw, dining comfortably in Boston, laughs at their fears. His after-dinner speech last week, before the Republican Club of Massachusetts, was principally taken up with the consolation which he, Leslie M. Shaw, had found in the contemplation of the Trust problem. He did not deny that he himself had been a mourner in need of comfort. When he first heard of the Steel Corporation, for example, he was, he confessed, "staggered." Such a giant combination, a threatened monopoly sheltered by the tariff, he at first thought, as Senator Dolliver admits that he thought, would wipe out all that the Republican party had taught on the subject of protection. But "since then," he said, "I have investigated somewhat, and I have discovered a few facts which are quite a consolation, at least to me."

The first "consolation to be drawn from the enormous business of the Steel Corporation" is, according to Secretary Shaw, the fact that it "pays out for labor every dollar except what it pays in interest and dividends." By this ingenuous process of reasoning he arrives at the conclusion that "this one concern paid during the year ending June 30 over $400,000,000 for labor." That neatly places all royalties, salaries, rentals, sinking funds, and syndicate profits under the head of "labor." It is a new application of the copybook motto, *labor omnia vincit*. It is commonly reported that Mr. Schwab's salary is several times that of the President of the United States. But it is so much paid for "labor," of course, and it must have been to Mr. Schwab's $3,000,000 house that the Secretary referred when he said that part of the millions paid out for labor was employed to "build homes."

But Mr. Shaw's chief comfort is that "competition is in sight." If there are any evils in such combinations as the Steel Corporation, competition will cure them, and will, in time, arise to do it. As to this, we have but two things to say. The first is that Secretary Shaw and his fellow-Republicans reject a form of competition which is immediately available. They cannot deny that the removal of the tariff duties on iron and steel would at once subject the Steel Corporation to a certain amount of foreign competition. The custom-house statistics show clearly what the American consumer is forced to pay to-day to protect the manufacturers of iron and steel, who need no protection. If Secretary Shaw really wants competition, here is a way to get it. But he declares that method impossible. His heart yearns over the "small manufacturer," who can endure the overwhelming competition of the Trust, but would wither and perish if the tariff duties were abolished. Of him we shall speak presently. He is far too "small" for Republican hypocrisy to hide behind him in the matter of desiring "competition" for monopolies. If it were really desired, the path to it lies blazed through tariff revision.

We must also remind Mr. Shaw that he ignores utterly the facts in respect to the formation of the Steel Corporation. It was organized expressly to prevent competition. It was, in fact, only the fear of one great subsidiary company that it would be wiped out by competition which gave birth to the huge combination. Now it is obviously on the cards to repeat that operation whenever domestic competition becomes really effective. As soon as Mr. Shaw gets it "in sight," the combination will be ready to put it out of sight in its own capacious maw. It would be only a matter of a few millions more of watered stock, another underwriting syndicate, and, presto! the thing would be done.

Secretary Shaw renewed his profession of faith that the Republican party was the only one that could settle the Trust question. For the Democrats he had a deep respect. He would concede them integrity and good motives—everything, in short, "except ability to cope with great problems." This reminds us of what Disraeli says of the Ministers who, just before the fall of Sir Robert Peel, held the conviction that they were "the only body of men competent to carry on affairs." Such a conviction, observes Disraeli, is "*often current on the eve of great changes.*" Certainly the people could not be blamed for at least putting Democratic ability to the test, after their disappointing experience with Republican ability.

An excellent measure of their determined hostility to Trusts was furnished by a comic incident in connection with the Republican meeting at Carnegie Hall on October 8. Congressman Southwick worked himself up to a great pitch of oratorical fervor as he described the efforts of the Republican Administration to curb the Trusts, and called upon the audience to gaze upon the President "defying Wall Street, defying Mr. Morgan,

if you please." This sent cold chills down the backs of the officers of the meeting, and they flew around to suppress that passage of the speech. In fact, the orthodox Republican report of the meeting notes Mr. Southwick merely among those who "also spoke." The innocent Albany Congressman had quite mistaken Platt's plan of campaign against the Trusts. But the attempted suppression of his dangerous words ought to show the country what to think of Secretary Shaw's plea that the Republicans alone mean business in dealing with the Trusts. The "business" they do mean is obvious—to ostentatiously threaten the Trusts with one hand, and to hold out the other for political contributions. Could Mr. Shaw's incompetent Democrats do worse than that?

### *THE SMALL PRODUCER.*

During recent years a new class of political economists has made its appearance in the United States. It consists of persons who think that the tariff duties ought never to be lowered on any article if anybody engaged in producing it objects. These new-fledged economists never had their counterparts in any other age of the world—certainly not in our own history. If we search the writings of the fathers and founders of the system of protection, we find that they always looked forward to a time when our industries would be able to compete on equal terms with foreigners, and to stand without artificial support. Nobody in those primitive days had conceived the idea that the protective features of the tariff should last forever. They all said that domestic competition would bring prices down to the level of the world's markets, and then protection would be no longer necessary and would be repealed.

But times change, and we change with them. Henry Clay, Horace Greely, Justin S. Morrill, and John Sherman have passed away, and a school of philosophers has appeared who tell us that there is *one* condition under which the tariff ought never to be lowered. That condition is where a monopoly has been formed in a certain industry, and all but a small fraction of the producers have been taken into it. In that case we must keep the tariff up to concert pitch in order to protect the Small Producer. Since it must be a very cold day when a small producer cannot be found, it follows that the way to insure permanence of the tariff on a given article is to have nearly all the producers of it form themselves into a Trust. While they are going on separately and competing with each other, it is an open question whether public interests are or are not best promoted by the existing duties, but when 95 per cent. of them form a combination under a New Jersey charter and the other 5 per cent. are left out, then we should abandon all ideas of tariff reform. Henry Clay might say as he did in 1838:

> "No one, Mr. President, in the commencement of the protective policy, ever supposed that it was to be perpetual. We hoped and believed that temporary protection extended to our infant manufactures would bring them up and enable them to withstand competition with those of Europe. If the protective policy were entirely to cease in 1842, it would have existed twenty-six years from 1816, or eighteen from 1824, quite as long as, at either of those periods, its friends supposed might be necessary."

But such words would fall upon deaf ears now.

More than sixty years have passed away since those words were spoken by the father of the American system, and now we are told that the fact that an industry is well established is not a reason for lowering or repealing duties, provided there are both a large producer of the article and a small one working simultaneously. It is immaterial whether they are competing with each other or not. In point of fact the Small Producer generally does not compete with the large one. That is as far as possible from his intention. He knows that the Trust could and would crush him if his competition should prove an annoyance. So he "tails on" and becomes a silent partner in the combine. The Trusts are well pleased to know that the tariff is not to be touched as long as the Small Producer exists. So they will see to it that the Small Producer is in evidence, and that his production shall be sufficiently small to satisfy the demand of the politicians who are so deeply concerned for his interests.

The observed *modus operandi* by which the Small Producer becomes a factor in the case is this. The Trusts bring in all the producers that can do any harm as competitors. If they bring in 95 per cent. of the preëxisting companies, the remaining 5 per cent. take advantage of the fact that the market is steadied by the combination, and they avoid the cutting of rates more sedulously than ever. This is both natural and proper, and it may be in some cases an advantage to society, but it is to be observed that society has nothing to say about it. When competition is stopped, society must take what comes. The interest of the Small Producer is the same as that of the combine. In any case, where the Trust brings in all the existing producers, it is very easy to start some small ones to supply the semblance of competition, and this would be done, if necessary, in order to furnish an argument against changes in the tariff. But such bogus support is usually not needed. The Small Producer will enter the field voluntarily and take his chances of being bought up by the Trust or of doing a successful business by "tailing on." He knows that he will not be molested by the big concern so long as a few small ones are indispensable to keep the tariff intact.

The new-born concern of the Republican party for the Small Producer is the last resort of needy politicians who have exhausted every other means of preventing or postponing tariff changes. How not to do it, is their chief aim and never-ending task. The withdrawal of Speaker Henderson the other day made them more anxious than ever to find means for stopping the crevasse in their own embankment. The Small Producer is their last resource, but he cannot stop the gap—certainly not in Iowa, if we may take Gov. Cummins for a witness. In a speech at Chicago on Thursday he uttered words which may well be printed in conjunction with those spoken by Henry Clay sixty-four years ago, viz.:

> "No intelligent observer can doubt that upon some of the most important products of the United States the duties are too high; and it is the mission of the Republican party to reduce them so that they will again be in harmony with the principle out of which they spring. I speak but the sober truth when I say that now, with a full demand at home, the producer can, and does, use excessive duties as a weapon to enforce more than a reasonable price for the thing he produces. Protection will stand as a shield for honest labor and a mine for lawful profit, but it shall not be used as a sword for industrial piracy or as a mint for illegal gain."

### *A BISECTED COLLEGE COURSE.*

The President of Columbia University, in his annual report, proposes a plan by which undergraduates may enter the professional schools upon the completion of two years of collegiate study, receiving at that time the degree of bachelor of arts. Students who remain for the full four years are to receive the degree of master of arts, and only such students are to be eligible for the courses leading to the Doctorate in Philosophy. The suggestion is full of interest, and will doubtless provoke long discussion. Certain features of the plan immediately commend themselves as practical and useful. It would undoubtedly be advantageous to the average young man to begin his professional course at twenty instead of twenty-two. Such a shortening of the college course would enable the young physician, or lawyer, to undertake the independent practice of his profession by his twenty-sixth year, which is surely none too early.

It is probably true that the college student at the end of his sophomore year has sufficient material training to enter upon the course in law or medicine. He knows, or should know, Latin well, and Greek tolerably; he has some slight acquaintance with French and German—if Greek has been omitted, he may even have considerable knowledge of modern languages; he has carried mathematics some distance into trigonometry, and has mastered the rudiments of the physical sciences. It would be absurd to call such a student liberally educated,

He has gained no comprehensive view of history, has had only perfunctory instruction in the great literatures, lacks entirely the studies which especially develop the reasoning faculty, such as economics, psychology, and philosophy; and has missed, in short, both the subjects and the quality of instruction that do most to make a cultured man out of a college boy. Nevertheless, since he has no formal deficiency of preparation, it is logical to admit such a student to the professional schools. This should be done, however, with full appreciation of the fact that his studies have fallen far short of the traditional ideal of a liberal education. The Dean of Columbia College believes that the contemplated two years' course "could readily be made to include all of the studies now prescribed at Columbia for candidates for the degree of bachelor of arts." But it could be done only upon paper. Such a course would be as much of a sham as the "finishing" year at an old-school female academy. Whatever rags and tatters of senior and junior studies might be cast about the new-style bachelor of arts, would be provided at the sacrifice of his solid panoply of languages and mathematics. We believe it is desirable in many cases to shorten the undergraduate course to two years, but it is unworthy of a great university to present the new course as "definitive" or to give it the look of an equivalent for the old A.B. course.

President Butler frankly admits that this project takes issue not only with the practice of Harvard and Johns Hopkins, but also with recent tendencies at Columbia. These universities have been steadily working towards the coördination of all the graduate departments, requiring the completion of a college course as the indispensable minimum for admission to the departments of Law, Medicine, Philosophy, and Theology. Each and all of these departments were assumed to be pursuing the same ideals of pure science and original research. President Hadley of Yale, in his report for 1901-02, declared that this ideal was impracticably high for the average Law or Medical School. With him President Butler now takes position, tacitly allowing complete university status only to the School of Philosophy, which will maintain the old requirement for entrance, and accepting for law and medicine the less disinterested and more practical purpose of turning out not legists and medical discoverers, but practising lawyers and physicians. This is a defensible attitude, and if President Butler seems ready to sacrifice that academic prestige which will accrue to universities holding the contrary way, he doubtless has adequate practical reasons for so doing.

A curious implication of the plan is fully divined, but very cursorily discussed, in the Columbia report, namely, the competition of the preparatory schools. President Butler says that under no circumstances will the professional schools accept boys without collegiate training. This stand could not justly be taken. A dozen preparatory schools in the East give the studies of the collegiate freshman year in a fashion acceptable to Columbia and to every college in the land. These schools could, with no great revolution of their present organization, add the sophomore studies. The next step would be to apply for a charter to give whatever two-years' degree President Butler finally hits upon. No fair-minded legislature could refuse the application. The schools, too, in the interest of their own pupils, would be bound to assume collegiate standing, for it is probable that an added two years in schools of the highest character would be quite as useful to the average boy as the bisected college course, nearly a year of which must be used in getting adjusted to new conditions. It is clear that the tendency of the change would be to multiply greatly the degree-giving institutions, to reduce proportionately the undergraduate students at the universities, to subject the American small college to a very formidable competition, and, in short, to scatter far and wide through the country institutions fairly comparable to the French Lycée and German Gymnasium, which prepare their students for the university by their nineteenth or twentieth year.

If this be a fair statement of the implications of President Butler's plan, so revolutionary a movement should be carefully deliberated before it is launched. In justice to the hundreds of American colleges which give the A.B. for four years' work, the bisected course should bear a different designation. It should also be perceived that the students who take the old four years' course will immediately become an academic élite. They alone will have what Americans have for a generation regarded as a liberal education, and it is fit that they should bear the traditional degree of that education—the Baccalaureate Degree in Arts. In general, it must be said of President Butler's report that while it is admirably cogent and obviously adjusted to latter-day conditions as they are, its underlying philosophy compares ill with that of President Eliot, who seeks to shorten the college course by forcing the schools to a quicker and more efficient preparation, and by facilitating the progress of able and ambitious students through the present collegiate studies.

## THE REBUILDING OF THE CAMPANILE.

VENICE, September 20, 1902.

"Venizia la ze noster,
L'avemo fato nu,"

—Venice is ours, We made her—says an old Venetian song. So say the people still, and to the *forestieri* who venture to suggest that the *Campaniel* can never be rebuilt, that it will cost too many millions, that it will be impossible to excavate the old piles and build new foundations without endangering those of St. Mark's and the royal palace, they make answer that their *veci* (forbears) dug and drove down their piles, found money, built and rebuilt their tower, defying thunderbolts, earthquakes, and fires, and that they to-day are not so poor and mean as to let their children and grandchildren grow up without the *Campaniel*. Nine weeks have passed since the weary Titan bent his knee and fell prostrate in the Piazzetta, the golden angel on its summit flying to lay its mutilated remains on the threshold of the central porch of St. Mark's, yet the people think and talk of nothing else. All their spare minutes are passed in the Piazza and Piazzetta, where a wooden enclosure some two metres high surrounds the still wide and lofty mass of ruins of the mighty tower. Workmen, superintended by vigilant engineers, carry off in wheelbarrows the bricks and stucco to the canal, where barges transport the bricks and solid bits of masonry to the Island of Grace, the rubbish to the north of the Lido, where it is thrown into the sea. As the workmen are paid by weight, each barrow passes over the scales. "Poor dear! now that they have killed thee, they weigh thy bones," say the people. For half a lire, "the fee to serve for the reconstruction of the belfry tower," you can enter the enclosure, but the people content themselves with the "spyglasses" which they made for themselves by knocking in the knots in the deal planks; and the occupant of each of these reports progress to the bystanders.

During the first days that followed on the catastrophe the excitement was intense; troops and police occupied the enclosure, scrutinizing the barrows, the workmen's clothes and persons, to prevent the theft of the fragments of bronze and marble statues, or fragments of the famous Loggetta of Sansovino (which, but for the blind incredulity of the "guardians" of the tower, might have been removed intact at the eleventh hour), or fragments of the four bronze bells (the fifth and biggest, the Marangona, is whole), of the gilt bronze angel, and other artistic relics. But, now that the mountain mass of ruin has descended to the level of the custodian's house, now that the two upper steps of the basement are visible, no other treasures can be hoped for, and the surveillance is relaxed. Of the four bronze statues, Minerva, Apollo, Mercury, and Peace, two are only bruised; Minerva and Peace are decapitated, but the heads have been recovered; of all four, only two fingers are missing. The bronze gates, one torn and twisted, still exist; some of the marble tablets even are intact. By the end of the month it is believed that all the ruins will be removed; but there is one touching obstacle which will render the last works difficult and delicate. "Anca morendo, el ze sta galantomo," said a sobbing gondoliere on the day of the death, thinking of the miraculous fact that not only no single human victim had been sacrificed by the "honest man" in dying, but to the golden basilica, "his widow," he left her beauty unimpaired. The one single harm inflicted by his fall was on the angle of the Royal Palace, where the Sansovino Library sustained partial damage. Two pictures of Andrea

Schiavone and of Antonio Molinari are ruined, but Titian's "Transport of the Body of St. Mark from Alexandria" and "St. Mark saving a Saracen from Drowning" are uninjured; and, as though to show his grief for hurt inflicted, the "dying one" left sufficient of his "bones" to fill up the breach and sustain the broken arch. Before these can be removed, strong props and stays must replace them; this done, it will be seen whether the arch can be saved, or if it must be demolished and reconstructed. Reconstruction and all repairs of the Palace belong to the royal house, which will not grudge the expense. It is the reconstruction of the *Campaniel* that preoccupies the people and their "conscript fathers." Nothing but the solemn promise given and the half million voted by the municipal council on the day after the catastrophe could have restrained cries for vengeance on its authors, from this populace ordinarily so pacific and long-suffering.

The names of the real authors of the disaster are Ignorance and Presumption, set on high when the office of the "Superintendents of Fine Arts and Antiquities" was abolished, and regional offices were substituted in 1890. The former office was filled by artists, architects, and intelligent lovers of the monuments of their native cities; the latter are filled with bureaucratic employees appointed by favor rather than by merit. That imminent danger threatened the tower was asserted in the early nineties by an intelligent practical stonemason, Luigi Vendrasco. He maintained that the foundations were sound, that the apparently diminished height (70 centimetres) of the tower was due, not to the depression of those foundations, but to the successive heightening of the pavement of St. Mark's Piazza—a fact ascertained in 1887 by Comm. Boni, now the intelligent and active director of the reparations of the basilica, and, it is hoped, the future rebuilder of the Campanile. The damage done by the lightning in 1745, insisted Vedrasco, had never been properly repaired; the crack in the walls, though temporarily adjusted by Bernardino Zendrini (who built the famous Murazzi to protect the lagoon from the inroads of the sea), was gradually and surely enlarging; the swinging of the bells, the continual crashing of artillery, were widening and lengthening the aperture; unless the walls were secured by internal and external clamping-irons and supports, the tower would fall, and at no distant date. His "superiors" laughed and chaffed; then, growing weary of his jeremiads, induced the then Minister of Public Instruction, the famous Baccelli, to transfer the importunate subordinate. He was ordered to Milan, but declined the honor. Then, as a punishment, he was "commanded" to leave Venice for the island of Sardinia; but "ca i Veniziani no vede il campaniel di Marco i ze morti" (when Venetians don't see the belfry tower of St. Mark's, they die), and Luigi preferred to lose his post, Baccelli leaving him no alternative, and to live within the sound of the Marangona, poor but able to keep himself and his family by hard work. Seven years passed. Jeremiah's lamentations continued; not only the belfry tower, but the Ducal Palace and vast portions of the Basilica were hastening to ruin. Fortunately for the former, other sentinels were "all' erta," and the necessary reparations of the columns of the sea angle have been successfully carried out. That many portions of St. Mark's Church are undermined is now an accepted fact, and it is hoped that the precautions taken by Comm. Boni are not too late. But, so far from giving any credit to Vedrasco's warnings anent the enlarging "rift" in the Campanile, the regional guardians seemed bent on its destruction.

Why the custodian of the tower should ever have been allowed a habitation within the walls instead of in an adjoining house is not known, but this custodian, "a saintly person," it is said, and the Benjamin of the pious guardians, was indulged in every whim; a commodious kitchen involved the dislocation of several large stones in the wall. There the rain water dribbled into the Loggetta, and the guardian of the tower actually removed a large stone in the corner of the base, substituting others, "inflicting a wound of several metres in the foot of the Colossus." The old rift widened and deepened, the new wound festered and swelled. All this became visible to the naked eye. Venetian citizens of note clamored; the grand guardian was "interviewed," and, deriding the fears of the profane, he scornfully rejected the warnings of experts. Suffice it to remember that the drawing of the weekly lottery was held as usual in the Loggetta on Saturday afternoon, the 12th of July—only forty-two hours before the fall. The prefect of Venice, however, on his own authority, though assured by the "lawful guardians" that the tower was in "no danger," forbade the Sunday evening concert in the square of St. Mark's, which prohibition alarmed the populace, especially as stones were falling from the tower. Yet many who saw the custodian remove his bed from the ground floor had been assured by him that there was no danger; that he was only doing it to stop his wife's silly fears. Some anxious lovers watched all night on the Square, angry with their own anxiety, for had not every mother's son transferred Byron's lines from Rome to Venice?

> "When falls the Campanile, Venice falls;
> When Venice falls, the world."

When the Library in construction by the beloved Sansovino fell, the *repubrica* imprisoned the architect and kept him in durance vile till Titian and his other friends proved that the disaster was no fault of his, but was caused by the violent cannonading of galleys just arrived from Beirut. Sansovino, liberated, went on with his Library, whose first instalment of books came from Messer Petrarca, enriched later by Cardinal Bessarione. The republic forbade any cannon to be fired off in the lagoons. The Austrians, to give them their due, were extremely careful of Venetian monuments, and received just meed of praise from Ruskin, who considered that the Venetians had "no single definite ground of complaint against the Government." During the bombardment of 1848, nearly all the palaces were injured, and Tintoret's pictures in the Scuola di San Rocco suffered badly; but the capitulation came in time to save St. Mark's Square, though the shells had reached to within a hundred yards of the Church itself. Since the entrance of the Italians, every birthday or death - day of the royal house, every festival, national or local, has been celebrated by the cannon's mouth; now, not even the midday or sunset gun is allowed to be fired, and you miss them as you miss in far greater degree the familiar call of the Marangona, the bell so named because it summoned the carpenters and other workmen of the Arsenal to their daily toil. Venetians, too, miss the *mezzana* at 9 A. M., the midday bell and the bell at 2 P. M. This, too, was the signal for the pigeons to their "dinner" in the Piazza. When the belfry fell, they all fled in alarm; then towards two o'clock many ventured back, but, hearing no summons, very few descended; even now they seem very uncertain and unhappy, though the people assemble and encourage them by scattering bread and maize besides the regular supply. "You see," said a woman who was encouraging them, "we *must* have our bell-tower; we are like the doves—we never know the time now." "And who is to warn us when a fire breaks out at night?" asked another. Truly, they *must* have their tower, but how and when?

"The same tower on the same spot; only with broader foundations, can be erected in five years," Comm. Boni said yesterday, in a notable interview. "Is it so?" I asked his *alter ego*, Ing. Rosso, who lives, moves, and has his being among the ruins or in his office on the first floor of the Ducal Palace, and whom you would scarcely distinguish from the workmen themselves, as he passes from barrow to barrow, taking a specimen here and there of bricks made at different periods—Roman and Venetian, some curiously colored by the action of fire—or bits of marble from the cells of the different bells.

"It may be so, can be so, ought to be so," he answered. "As far as we can yet ascertain, there is no subsidence in the foundations, but the whole basement will be removed, and the deepest depth fathomed, and new piles driven down, but by hydraulic pressure, so that no harm will result to the surrounding monuments. The steps forming the basement will all be seen above the pavement, and will probably be broader than the old ones."

"Then you do not consider them sufficient to sustain the weight and height of the tower?"

"Not so; the basement sustained the tower for over a thousand years; as far as we can yet see, it had no share in the causes of its fall, but we do not know what weight it has sustained, for the 80,000 tons of material said to have fallen is a mere guess; nor can we know what will be the weight of the material of the future tower."

"Will it have to be all new; will modern bricks be equal to these old, strong, tough, compact specimens?"

"We hope so. Comm. Boni is reported to have said that a great portion of the brickwork was old Roman of the first and second centuries, with the impress of Nero, Claudius, Pius Antoninus. The Roman cement was very strong. The Venetians, during the Middle Ages, used a new cement —Istrian lime, mixed with sand—not nearly so secure. Now we must find material to match in strength the strongest of the Roman material, and Boni thinks that he has discovered it. As for cement, it suffices to mix Roman pozzolana with Istrian chalk. There will be no difficulty about the materials."

"When is it possible that the actual rebuilding may begin?"

"Not till the spring. Assuredly months will be occupied in the researches among the old foundations, in ascertaining the nature of the various sediments. This, if ever, is a case for going surely, no matter how slowly."

"And the cost?" I ventured to ask.

"He must be a wise man who could make a true estimate beforehand."

"They say two millions will suffice."

"When a contractor pledges himself to rebuild the tower on such a model, of such a height, using certain prescribed materials, and gives guarantees for the fulfilment of his pledge, then one may begin to examine his estimates; at present, all is the talk of irresponsible individuals. Meanwhile, it would be well to have even the two millions safe and put out at interest."

Minister Nasi, who arrived on the day after the disaster and promptly discharged the faithless guardians, naming Comm. Boni in their stead, is pledged to bring in a bill for a subsidy. But will it pass in the present Parliament, which will be occupied with projects for the relief of the unutterable misery of the Basilicata and the sister provinces which brave old Zanardelli is now visiting? The refusal of the wealthy and usually generous city of Milan to contribute 10,000 lire for the reconstruction of the tower, as proposed by the venerable Senator Massorenti, came as a surprise and disappointment; but the fact is accounted for by the refusal of the Venetian municipality to abstain from holding its international artistic exhibition in order to ensure greater success to Milan's proposed exhibition. At the present moment, the sum subscribed does not yet reach a million and a half.

All that is decided on is the excavations, to be made as soon as all the materials of the fallen tower are removed. Comm. Boni is the man best fitted for this work, not only because of his successful excavations of the Roman Forum, but because in 1885 he assisted Mr. C. H. Blackall, a Boston architect, to ascertain how and of what material the foundations of Venetian monuments were composed; Mr. Blackall paying a portion of the expenses, and the publisher of the grand illustrations of the Basilica and the belfry tower defraying the remainder. By demolishing a bit of the pavement they found that the tower, which was nearly 100 metres high (far higher than its original founders intended), rests on the solid, compact white clay covering the alluvial soil of the Venetian estuary, into which piles are driven very close to each other. The raft is of oak, whereas that of the Basilica is of pine (*pinus larix*), both foundations laid in the ninth century, before the Venetians had become masters of the terra-firma provinces. J. W. M.

## LAST YEARS OF CHATEAUBRIAND.

PARIS, September 27, 1902.

M. Edmond Biré, well known already by several works of literary criticism, has given us very recently a valuable volume, under the title of 'The Last Years of Chateaubriand (1830-1848).' We are familiar with the young Chateaubriand and the Chateaubriand of the Restoration. There is nothing to be compared, as a literary as well as an historical document, to the famous 'Mémoires d'Outre-Tombe.' Chateaubriand may be called the father of Romanticism. His Celtic genius broke away from all the ties of the classical school, which was still in the ascendant during the first years of the eighteenth century. A *romantique* in literature, Chateaubriand was a *romantique* even in politics; he differed from the school which always accommodates action to circumstances, a school of which Talleyrand may be considered the most remarkable type. Chateaubriand treated monarchy and liberty like two goddesses, to whom he was devoted like a knight of the feudal ages. He served the cause of the Bourbons with the spirit which is well described in his own verse—

"Sombre fidélité pour les causes tombées."

But his fidelity to their cause was never separated in his mind from his fidelity to the cause of liberty. He remains, on the whole, in literature as well as in politics, a solitary genius, representative of his native province, Brittany; and he will always deserve to be studied by those who prize originality and poetry.

Chateaubriand's correspondence has never been published as a whole. We know it only in fragments. In the 'Complete Works,' published by Ladvocat, there is a 'Journey in Italy' in 1827, which opens with three letters written by Chateaubriand to his friend Joubert. In the two volumes of the 'Congress of Verona' there are several letters of his addressed to Villèle, De Serre, Canning, La Ferronays, M. de Montmorency, Hyde de Neuville, Polignac, Gen. Bourmont. Many letters appear in the 'Mémoires d'Outre-Tombe.' Out of a hundred, thirty-one are addressed to Madame Récamier. We find many letters also in the biography of Chênedollé, published in 1849 by Sainte-Beuve. In them revives the little society which met in the salon of Madame de Beaumont, and in which everybody had a nickname. Chauteaubriand was the cat, his wife the *chatte;* Madame de Beaumont was the swallow, Madame Joubert the wolf, Fontanes the boar, Joubert the stag. As Sainte-Beuve remarks, one had never seen so many beasts with so much *esprit* together.

Madame de Beaumont became consumptive, and died in Rome in 1803; Chateaubriand gives an account of her last moments in a letter addressed to M. de la Luzerne. Joubert, who shared the reading of it, says: "Nothing is more capable of drawing tears than this account. It is, however, consoling. . . . One feels, when one has known her, that she would have given ten years of her life to die so calmly and to be so regretted." Chateaubriand's relations with Madame de Custine have been the subject of much discussion. The documents concerning them are to be found in a volume by M. Paul de Raynal, 'The Correspondents of M. Joubert'; in the volume by M. Bardoux, 'La Comtesse Pauline de Beaumont'; in a volume published in 1893 by M. de Robethon, under the title, 'Chateaubriand et Madame de Custine: Épisode et Correspondance Inédites.' (Madame de Custine died in 1826.) These two episodes of Madame de Beaumont and Madame de Custine show us Chateaubriand as a young man, in a select and small coterie. He had not yet risen quite to fame. "When out of my woods and out of the obscurity of my life," he says in his Memoirs, "I was still truly savage; I hardly dared to lift my eyes to a lady surrounded by admirers."

Chateaubriand made the acquaintance of Madame Récamier, who was to become the great passion of his life, in 1801, at the time when he had just published 'Atala, or the Love of Two Savages in the Desert.' He was presented to her by a friend, but saw her again only twelve years afterwards, at the house of Madame de Staël.

Their correspondence, beginning with a short note on the 28th of November, 1820, ends twenty-seven years afterwards on the 28th of July, 1847. It never was interrupted during Chateaubriand's embassies, his tenure of office as Minister of the Foreign Office, his long stay in Rome.

"In Rome," says M. E. Biré, "amidst these illustrious memories, the sepulchre of Scipio and the charming tomb of Cecilia Metella, on the spot where the dust of heroes is mingled with the dust of martyrs; in this city, unique in the world, an unrivalled medley of architecture and of ruins, of glory and solitude, of sadness and greatness, Chateaubriand finds himself in his true country, where his imagination discovers all its power and brilliancy."

It was at Rome that he wrote his "Letter to M. de Fontanes," the finest pages of the 'Martyrs,' and the most eloquent of his many letters to Madame Récamier. These last were published by Madame Lenormant, the niece of Madame Récamier, in their integrity.

We possess now nearly all the letters written by Chateaubriand. Of the many different publications in which they are scattered I will cite the 'Souvenirs d'Enfance et de Jeunesse de Chateaubriand,' manuscript of 1826, followed by inedited letters by Charles Lenormant (one volume, 1874); the 'Débuts Diplomatiques de Chateaubriand,' by Count Édouard Frémy, a collection of articles published in the *Correspondant* in 1893; the 'Politique de la Restauration en 1822 et 1823,' by M. de Marcellus, published in 1853; a volume of Villemain's, published in 1858 under the title 'La Tribune Moderne: Étude sur M. de Chateaubriand, sa Vie, ses Écrits et son Influence'; the 'Mémoires pour servir à l'Histoire de Mon Temps,' by Guizot; the 'Mémoires et Correspondance du Comte de Villèle'; the 'Mémoires et Souvenirs' of Baron Hyde de Neuville. To this list, which is already very long, must be added the 'Correspondence of the Count de Serre'; the 'Souvenirs of the Baron de Barante,' published by his grandson, Claude de Barante; the 'Correspondence of the elder Ampère, and his son, Jean-Jacques Ampère,' published by Madame Cheuvreux. I will not cite the numberless articles published in reviews and magazines, in which here and there are found some lines by the great writer.

M. Edmond Biré's volume is very rich in letters of the last period of Chateaubriand's life, beginning after the Revolution of 1830. On the 7th of August, 1830, the throne was proclaimed vacant in the House of Peers and the crown conferred on the Duke d'Orléans; at the same time several modifications were introduced into the Constitution. A vote took place on the motion proposing these fundamental changes. Chateaubriand attacked it in words which have remained famous, beginning with "Useless Cassandra, I sufficient-

ly fatigued the crown and the country with my disdained warnings," and ending with his refusal to renounce the Bourbons "at the moment when, for the third and last time, they take the road into exile." The next day he wrote to his friend, M. Fraser Frisell, a letter, reproduced by M. Biré, in which he repeats less eloquently the same sentiments. M. Fraser Frisell belonged to an old Scotch family; he travelled in France during the Revolution, and was for a time thrown in prison. He made the acquaintance of M. and Madame de Chateaubriand under the Empire, and remained their friend till he died at Torquay in 1846. Chateaubriand, on the 10th of August, sent in his resignation as a Peer and a minister of state. He renounced the pension of 12,000 francs which had been allotted him to maintain the dignity of his office.

Among the letters published in 1832, and printed anew by M. Edmond Biré, I notice those exchanged with Prince Louis Napoleon, the future Napoleon III. The Prince writes from Arenenberg, May 4, 1832:

"I have just read your last pamphlet. How fortunate are the Bourbons to have for their supporter a genius like yours! You renovate a cause with the arms which have helped to strike it down; you find words which will go to all French hearts. Whatever is national finds an echo in your soul; when you speak of the great man who made France illustrious for twenty years, the elevation of the subject inspires you. Your genius embraces it in its entirety, and your soul, flowing naturally, surrounds the greatest glory with the greatest thoughts. . . ."

To these high-sounding phrases Chateaubriand answers in the same vein:

"We, meet, sir, in a common sympathy. Your youth, like my old age, wishes the honor of France. . . . Where is your uncle, sir? To others, I would say: Where is the tutor of kings and the master of kings? In defending the cause of Legitimacy, I have no illusions; but I believe that a man who wishes for public esteem must be faithful to his oath. Lord Falkland, friend of liberty and hostile to the court, was killed at Newbury in the army of Charles I. You will live, sir, to see your country free and happy; you will go through ruins, among which I shall remain, since I am myself one of those ruins."

What would Chateaubriand have said, or not said, had he seen the Prince to whom he wrote these lines Emperor of the French, and afterwards discrowned and exiled?

M. Biré's volume deserves to be read. In all of Chateaubriand's letters will be found those flashes of imagination which characterize his genius; as well, I may add, as the proofs of his unfitness for the concrete duties of the ordinary politician or statesman. He had a certain sort of unpracticality in him; he was a *romantique* in politics, as he had been in literature.

# Correspondence.

## OBFUSCATION.

To the Editor of The Nation:

Sir: Is it not about time to ask the Bishop Potters and the Dr. Lyman Abbotts to say precisely what they mean by their term "justice," which unionistic literature, under their tutelage, has adopted in the form "fairness"? One supposed the sole purpose of the law was to formulate, as well as men can, that tentative, unsatisfactory working rule of justice which is all that is possible in such a world as ours. Evidently the obstacles which have hitherto barred the way to the establishment of criteria of absolute justice have, in recent years, been removed. Seemingly, the excellent gentlemen who teach credulous men that there is somehow a measure of fairness superior to, and outside of, the law of the land, to which appeal may somehow be had, have light which some of us lack. If they really mean anything determinate when they speak of justice, what is that meaning? If they have no new meaning, let them say why they lead men to suppose that they have.

The confusion of the "ought to be" and the "it is," to which most preachers and moral enthusiasts are so prone, is accountable enough; but when the confusion is embodied in the practice of unionistic sympathizers, and a pandering, temporizing, politics-playing journalism tacitly encourages this confusion for partisan ends, the time seems to have come when the least a man can do is to say what he thinks, even though it involves a serious charge against well-meaning men.

Yours truly, S. D. Merton.

St. Louis, October 8, 1902.

## LODGE-IC IS LOGIC.

To the Editor of The Nation:

Sir: You have it that although logic is taught in Massachusetts universities, little of it got into the Republican platform. Those nearer the scene beg to differ, as it is apparent there was a great deal of Lodge-ic there.—Yours truly,

Edward Brooks.

Andover, Mass., October 11, 1902.

## ETHICS OF THE WILDERNESS.

To the Editor of The Nation:

Sir: I was very much interested by your recent article on "The Law of Forest and Mountain," and also by the letter of J. Richards touching on a phase of the same law observed in Sweden. It may be of interest to your readers to know that a similar high degree of honesty and confidence prevails among natives in various parts of the Far East. I remember once, when making an excursion in central Java from Buitenzorg out to Gunong-Salak, to have seen along the path in several places little tables with fruit on them exposed for sale. The owners had come out to the path in the early morning, put the fruit in its place with a box for money near it, and then returned to their work. Any traveller who wanted to refresh himself took what he desired, dropped the recognized price in the box, and went his way. So far as I could learn, the thought never occurred to any one to plunder these fruit-stands, or defraud the owners in any way.

Very truly, R. Clyde Ford.

Marquette, Mich., October 10, 1902.

## DOCTOR DISSERTATIONS ONCE MORE.

To the Editor of The Nation:

Sir: Professor von Klenze's protest against certain strictures of mine upon a doctor dissertation prepared under his guidance convinces me that it was, after all, worth while to perform the unpleasant task which I felt bound regretfully to take upon myself; for his remarks clearly show that it is not so much the author of the dissertation in question as certain tendencies of our graduate instruction which must be held responsible for the lamentable shortcomings of a treatise deemed worthy of the official imprint of one of our foremost universities.

I confined myself in my letter to quoting some of the conclusions which the author, in the "Summary" at the end of his dissertation, formulates as the outcome of his whole investigation. A summary of a scientific discussion may rightfully be expected to contain either some new principle or at least some new fact. Neither of these is to be found in the "Summary" of this dissertation; as a matter of fact, it is made up wholly of reiterations of some of the miscellaneous statements found in the body of the dissertation itself.

As to this main body of the dissertation, I characterized it as a "stringing together, through more than a hundred pages, of random excerpts from poems, letters, and descriptions of travel." This characterization, which I fully maintain, I feel now compelled to supplement by the statement that nowhere in the whole dissertation is there to be seen an attempt at entering into the spirit of the writers from whom the excerpts are made, and that the author throughout shows no evidence in himself of that "sense of nature," the absence or presence of which in these writers he undertakes to discuss. As a single instance of this fundamental defect, I mention one of his quotations from Opitz:

"Ihr Birken und ihr hohen Linden,
Ihr Wüsten und du stiller Wald,
Lebt wohl mit euren tiefen Gründen
Und grünen Wiesen mannigfalt."

These deep-felt and graphic lines, alive with genuine and instinctive joy in forest and field, figure among the author's quotations intended to prove that "the treatment of nature in the works of Opitz is almost altogether conventional"!

I am not surprised that this dissertation should have met with the approval of Professor Biese, for it clearly shows the influence of this voluminous compiler. Indeed, what I said of the "hackwork of the ordinary German doctor dissertation" was meant, in part, as a warning against the importation and blind imitation at American universities of the methods of literary study employed by him and his like. In closing my part of this controversy, I wish to add that I should not have called public attention to this dissertation had it not seemed to me a typical indication of a danger besetting all our graduate study—the danger of training plodders rather than thinkers. Kuno Francke.

Cambridge, Mass., October 8, 1902.

## ORIGIN OF MARINE INSURANCE.

To the Editor of The Nation:

Sir: Being a lawyer and law-writer, and having, moreover, some acquaintance with the Talmud, I was chosen by the editors of the 'Jewish Encyclopædia' (Funk & Wagnalls Company, publishers) to write most of the articles on Jewish jurisprudence. Among these, Commercial Law was allotted to me. I started with the idea that the Israel-

ites of Bible and Talmud times were thoroughly uncommercial and knew very little about mercantile contracts, least of all about insurance. But I set out investigating, and, to my surprise, found a *Baraïtha* in the Babylonian Talmud, Baba Kamma, 116 b, to this purport:

"Our Sages have taught: When a ship goes upon the sea and a squall strikes her, and, in order to lighten her, they throw some of the cargo overboard, they make their calculation not according to the money value, but according to the weight of the different goods, and they should not depart from the custom of skippers; *and skippers have the right to contract*, that whosesoever vessel is lost, they will find him a new vessel; but if it be lost through his fault, they do not find another vessel for him, nor if he deviates into a course on which it is not customary for vessels to go."

Here are all the elements of mutual marine insurance; and the same page gives another *Baraïtha* on similar mutual insurance among the muleteers travelling in the same caravan.

The Babylonian Talmud was published about 500 A. D. It is a current discussion about the Mishnah, a compilation made by the Patriarch Rabbi Jehudah in North Palestine about 210 or 220, of the traditional or "Oral Law" as taught in Palestine down to his time. But a great many of the traditions or authoritative sayings remained outside of his compilation, and were known as *Baraïtha*, that is, "outside." They are quoted in the Talmud under "It was taught," or "Our Sages have taught," and are, moreover, distinguishable from the current of the Talmud by being written in the same language as the Mishnah. They are of the same age, and must often, in tradition, have come down from a much earlier age. It is thus very clear that, at or before 200 A. D., mutual insurance among ship-owners was in use along the eastern shores of the Mediterranean; that these had their customs, and that the judges regarded these customs as binding. None of the law-text writers on insurance trace it back within even 500 years of this time.

Hoping this will interest both lawyers and antiquarians, I remain, yours truly,

L. N. D.

Louisville, Ky., October 5, 1902.

# Notes.

The current issue of the *American Historical Review* announces the practically complete arrangement with Messrs. Harper for a twenty-six-volume coöperative survey of "The American Nation," of which Prof. A. B. Hart of Harvard will be the general editor. "A History, from Original Material, by Associated Scholars," is the sub-title, and these scholars, beginning with Prof. E. P. Cheyney for the European Background of American History, end with Professor Hart for Ideals of American Government—a theme for the hour if there ever was one. The work is distributed into five groups. Three Southerners, at least, are among the writers.

D. Appleton & Co. have nearly ready 'My Life in Many States and in Foreign Lands,' by George Francis Train, and 'Animals before Man in North America,' by Dr. F. A. Lucas of the United States National Museum at Washington.

The anonymous romance in prose and verse, 'Nova Solyma,' or Jerusalem Regained, attributed to Milton by the Rev. Walter Begley; 'Henry VIII.,' by A. F. Pollard, sumptuously brought out; 'Raleigh in Guiana,' by Prof. Barrett Wendell; 'New York Sketches,' by Jesse Lynch Williams, illustrated by various hands; and 'Hegel's Logic: An Essay in Interpretation,' by Prof. John Grier Hibben of Princeton, are shortly to be published by Messrs. Scribner.

E. P. Dutton & Co. announce 'Kentucky Poems,' by Madison Cawein, and 'The Primrose and Darwinism,' by a field naturalist.

The 'Confessions of a Wife,' which has been running in the *Century Magazine*, is set down for publication as a book on October 22.

A. S. Barnes & Co. announce 'Two on their Travels,' by Mrs. Archibald R. Colquhoun.

The "Arnheim Edition" of Poe's works in five octavo volumes, tastefully bound (Putnams), falls short of the highest excellence typographically. The letter is, to our thinking, too full-faced, as may be tested in the italic; and in other respects we think the pains bestowed on the page have not been rewarded. Professor Richardson's critical introduction, too, betrays no master hand, though it is not without interest and information. There remain Mr. Frederick Simpson Coburn's numerous full-page illustrations, which together constitute a remarkably even body of drawings, evincing sympathy with his author, imagination, and a power not always gloomy. This part of the enterprise we find entirely adequate. We may cite the plate "Eleonora" in volume iv. (p. 312); and especially "The Shadow," in volume ii. (p. 178). In the frontispiece to this latter volume Mr. Coburn is perhaps at his worst, when attempting to depict a horse "leaping with impetuosity." But on the whole he carries off the honors of the Arnheim Edition.

The remainder of the "Swastika Edition" of Kipling's works, in fifteen volumes, plainly bound in green cloth, emerges upon the market in a curious manner. It was bought back into the regular trade from the dry-goods firm of H. B. Claflin & Co. by Doubleday, Page & Co., and is now procurable only in sets bearing the diverse names of houses involved in Mr. Kipling's complicated experiments in copyright, among which the present publishers (or marketers) do not figure. Thus, we have Doubleday & McClure Co., Appletons, and the Century Company. The letterpress within varies correspondingly, and the edition is in other respects a "popular" one; but it will go upon one shelf or (as it comes to us) in one box, and will satisfy all the intellectual need of readers.

There is a pathetic strain in the preface to the new (third) edition of Sir Leslie Stephen's 'English Thought in the Eighteenth Century' (Putnams). Some errors he has remedied, but strength fails him to make such a general retouching as the artist or the lover of truth sees possible in a work laid aside for a period and then scrutinized afresh. One particular instance of unwitting injustice Sir Leslie confesses respecting Thomas Paine, and this he discovered through Mr. Conway's Life, which he cannot follow entirely in its estimate of Paine. He does not name the page on which this rectification will be found, and the curious will have a fine exercise in agility who make use of the index, where reference is by chapter and section, not by volume and page, and unitemized. For the benefit of such we will say that it is embodied in a footnote at page 261 of volume two.

Carlyle's 'French Revolution' for the pocket is well contrived in the Edinburgh Edition of Messrs. Scribner. Three volumes are combined into one by means of thin paper (but not too thin) and small, yet legible, type. There is an index and a portrait. The binding is pretty and flexible.

The same firm send us the fourth edition of Baedeker's 'Southern France, including Corsica.' The generous guide-maker's definition, by route and map, of Southern France reminds us of the dog whose tail was cut off just behind the ears; it embraces the country from Tours and Bourges and Dijon to the Mediterranean.

Mrs. R. L. Devonshire's translation of the 'Life and Letters of H. Taine' (E. P. Dutton & Co.) is a faithful, literal rendering of the original already discussed in these columns. Indeed, there is little attempt, if any, at giving a truly English dress to the version. *En passant* is good French; is "in passing" the only possible English equivalent? The transcription of Greek and Latin quotations is here and there faulty. But as, in this earlier correspondence of the great critic, style counts for little, the present rendering may do good service in spreading the knowledge that, although Taine's political and social ideas underwent some change in later years, his principles of conduct proclaiming the gospel of work were formulated before he had reached twenty-five.

Volumes xv.-xviii of Professor de Sumichrast's translation of Gautier are as remarkable as their predecessors for the extreme precision of mere verbal rendering without serious sacrifice of spirit or style. A careful examination of 'Avatar,' for instance, reveals hardly more than the slip (p. 129) which, by omitting the final *r* in *oreiller*, substitutes "the ear" for "the pillow." In the 'History of Romanticism' we should suggest that "en tira une *chevelure*" (p. 58) finds more graphic representation in "drew out a *wisp*" than in "drew out *some*." In the same volume (p. 151), the equivalent of *cheville* produces a singular incongruity: "a splendid bit of *padding*, wrought by powerful hands out of the cedar of the celestial abodes." It is in the descriptive and narrative passages of 'Le Capitaine Fracasse' that the translator's finest skill appears. The introductory critical notices are in every respect excellent.

A finely illustrated work in two volumes, entitled 'The Guardian of Marie Antoinette,' by Lillian C. Smythe (Dodd, Mead & Co.), tends, in spite of its professed purpose, to reduce the part played by one of the ablest diplomats and administrators of those troubled times to that of a reporter and supernumerary. Florimond Claude, Comte de Mercy-Argenteau, ambassador of the Holy Roman Empire at Versailles from 1766-1780, is obscured by over-elaboration of

"The little great, the infinite small thing,
That ruled the hour when Louis Quinze was King."

Marie Antoinette's character and conduct are exalted at the expense of her surroundings and her husband, "a waddling, blinking, corpulent, bungling, incapable imbecile," etc. (i., 229). The writer had command of excellent matter, comparatively

new, which the work presents in imperfectly unified form. Still, the spirit with which some of the historical portraits are touched off may commend the book to popular taste.

One of the most extensive essays that have appeared on the economic topics now prominent, is entitled 'The Plain Facts as to the Trusts and the Tariff,' by George L. Bolen (Macmillan). The author has labored patiently to collect a quantity of statements of the kind which pass for facts, and of opinions delivered by wiseacres of various degree. He declares his aim to be to impart sound knowledge to the ignorant; but they will be only bewildered by this confused mass of information and misinformation. Nevertheless, the book has value as showing with much completeness the state of public opinion on the topics of current discussion.

The views of the early Christians concerning property are considered by the Rev. Orello Cone in a book entitled 'Rich and Poor in the New Testament' (Macmillan). Jesus and his followers apparently thought that the world was soon to come to an end, and, consistently with this expectation, despised the accumulation of wealth. To a generation inclined to believe that there is no world but this, the ethics of the New Testament are visionary. They can, of course, be modified and adapted to changed conditions, a process here illustrated; and there are always many readers interested in Biblical exegesis for itself, to whom this book may appeal.

The pick of Mr. Peter Newell's comical 'Topsys and Turvys' of 1893-94 has been reissued in the familiar form by the Century Co., and will give pleasure from the nursery up.

The *Mayflower Descendant* for October publishes the appeal of the Cape Cod Pilgrim Memorial Association which aims to set up a monument at Provincetown, Mass., the scene of the first landing. The Treasurer is Howard F. Hopkins of Provincetown. This magazine, just closing its fourth volume, offers numerous attractions for volume five. "Stephen Hopkins and his Descendants" will be begun in the January number. Sundry facsimiles promised include autographs of the *Mayflower* passengers at scale. Governor Bradford's Letter-Book is to be reprinted.

The instalment of John Brown letters in the October number of the *Virginia Magazine of History and Biography* contains nothing more curious than a request for the autograph of the prisoner at Charlestown from a Connecticut Yankee. There are numerous epistles from sympathizers, enemies, cranks, detectives, with anonymous warnings of rescue, etc.; one from Frederick Brown of Pecatonica, Ill., to his uncle; one from A. D. Stevens to his uncle James (withheld from transmission); and one from Copeland to A. W. Halbert (endorsed "Shouldn't go"), which furnishes some details of the catastrophe to the detachment under Capt. Kaga. Both Copeland's and Stevens's letters are manly and courageous in the face of their approaching execution.

The success of the commercial bureaus of Philadelphia and San Francisco has been so marked, according to the London *Times*, as to have impressed Lord Curzon with the desirability of doing something in the same direction for India. Accordingly, a scheme has been outlined, in a letter addressed to the Bengal Chamber of Commerce requesting suggestions, for the establishment of a Bureau of Commercial Intelligence. Its object will be to "procure and publish all information likely to be of use to commercial men, including matters relating to foreign and internal trade, the industrial and mineral resources of India, the competition of foreign staples with local Indian products and of Indian staples with foreign commodities abroad, the development of existing markets and the discovery of new ones." This information will be communicated through three principal channels, a public library of books, reports, etc.; an inquiry office; and a periodical journal containing statistics, analyses of consular reports, etc. The success of the scheme, the Viceroy recognizes, will depend largely on the spirit with which the Director-General approaches his task, and the active coöperation of the commercial public.

The manner in which the Anglo-Japanese alliance was received in Japan shows most strikingly the change that has come over that people. In the inland town of Sapporo, on the northernmost island, Yezo, the alliance was celebrated by a public meeting and a banquet. At the appointed time some 500 people gathered, and the exercises began with "God Save the King," played by the band, which was followed immediately by the Japanese national anthem. On the invitation of the Mayor an English missionary lady, the only representative of Great Britain in the town, made a short address, which was interpreted by a Japanese lady. Other speeches of a political nature followed, and the meeting closed and the banquet commenced with three cheers for England and the "great Empire of Japan."

Konrad von Maurer, the leading authority on early Scandinavian jurisprudence, died September 18, at Munich. He was born April 29, 1823, son of the historian and statesman, George Ludwig von Maurer. In 1847 he became professor extraordinarius of history at the University of Munich, and in 1852 professor ordinarius in Northern jurisprudence, in which position he remained until a few years before his death. Maurer published weighty monographs on the early Icelandic and Norwegian laws, edited several of the sagas, and made other important contributions to the literature of the North. His 'Conversion of the Norwegian Race to Christianity,' in two volumes (1855-56), and 'The Origin and Constitution of the Icelandic State' (1852), are still recognized authorities on those subjects. In celebration of the Icelandic millenary in 1874, he wrote an exhaustive history of Iceland down to 1262. Maurer's interest in Iceland, however, was not limited to the period treated in his history. He visited the island several times, and took an active part in the Icelandic Constitutional struggle. On his seventieth birthday, he was honored by the publication of a *Festschrift*, containing contributions from German and Scandinavian friends and former pupils.

Miss Foxcroft, who conceals her sex behind initials on the title-page of her 'Supplement to Burnet's History of My Own Time,' recently reviewed by us, will be the last to blame us for falling into the trap, as a correspondent kindly points out that we did. With their extended educational privileges and growing recognition for individual scholarly and scientific worth and attainments, women have a corresponding duty to declare themselves when going into print, *pour encourager les autres* as well as for the enlightenment of reviewers.

—The eighth of the contemplated ten volumes of the Oxford English Dictionary (H. Frowde) is begun this month with Q, under the immediate direction of W. A. Craigie, M.A., who takes his place beside Dr. Murray and Mr. Henry Bradley. The quarterly instalment contains the whole of the above letter, whose personal history is extremely interesting. Its invariable coupling with *u* in ordinary English words is more and more departed from by scholars in transliterating the Semitic *kōph*, as in Quabbala, Qurán. We remark that out of 80 pages given to this letter, qua- fills 37, qui- 26, que- 13, quo- but 4. Both Tennyson and Swift rhyme *quay* with a long *a*. *Quandary*, for which there is no derivation, is here stressed by preference on the penult; *quinine* on the ultimate, with first and second choice of long *e* or long *i* sound, the American usage being to stress the penult, with long *i* in both syllables. The *k* sound often heard among us in the word is not noticed. Etymology is baffled in the case of *queer*, *quirk*, *quiz*, *quod*, and *quoit*. While George Fox was very likely the first of his sect to be stigmatized as *Quaker*, according to his own account, there is some doubt whether Justice Bennet so dubbed him "because I bid them tremble at the Word of the Lord." The name appears three years earlier (1647), applied to the members of some foreign religious sect, from whom it was perhaps taken over. Roger Williams in 1643 first described the round clam *quahaug*, which he spelt "poquauhock." *Quassia*, curiously enough, was "named by Linnæus, about 1761, after a Surinam negro, Graman (= grand man) Quassi or Quacy (= Quashee), who discovered the virtues of the root in 1730." The verb *quail*, very common in literary use from 1520 to 1650, practically disappeared till revived by Scott, apparently, in the early part of the last century. *Quaint* fell out of sight in the course of the eighteenth century, and after 1800 came into vogue in the present, previously unusual, sense.

—The British School at Rome was opened in the spring of 1901, with scope and purposes similar to those of the American School in the same city founded six years earlier, but with an annual expenditure only about one-sixth of the amount at present required by its American forerunner. Its first volume of papers is at hand (Macmillan). The general style of publication is like that of the British School at Athens, in large octavo bound in boards, with open pages of print and ample margins, making a volume most dignified and pleasant to the eyes. Contrary to the custom of our American School in Rome, which publishes in the *American Journal of Archæology* papers by its youthful and previously untrained students, the British School prints in this volume but two papers, both of monographic length and character, and both by men of training and experience. The first is by the Director of the school, Mr. G. McN. Rushforth, on the Church of S. Maria Antiqua, recently disclosed under the

northwest corner of the Palatine Hill behind the Fountain of Juturna. "From the ruins of the abandoned church, which never knew the hand of a restorer, the religious interests and tendencies of the Romans of [the 7th and 8th centuries], their standards of art and the kind of pictures they were accustomed to see, their dress and personal appearance, their manner of burial, have been brought home to us more vividly" than has before been possible. Mr. Rushforth's article covers 119 pages, with illustrations, and pays especial attention to the accurate description of the decoration of the church, being "chiefly a contribution to our knowledge of Byzantine iconography as it was understood and practised at Rome in the eighth century." The second article is from the pen of Mr. Thomas Ashby, jr., whose studies in the topography of ancient Rome and its neighborhood have been well known through the pages of the *Classical Review* and other periodicals, and who has shown much kindness to American students. His present article is of the highest interest to the classical topographer, presenting in somewhat more than 150 pages of printed text the first instalment of his minute and thorough investigations into the Classical Topography of the Roman Campagna, a field of study which has up to this time been but fragmentarily treated. The districts discussed in this first part of his publication are those lying along the routes of the Via Collatina, Via Prænestina, and Via Labicana from Rome to Segni. Eight detailed maps of the region on the large scale of 1:25000 accompany the article, and the whole furnishes a most welcome and intensely interesting contribution to topographical knowledge. The School deserves the congratulation and thanks of the world of classical archæologists for its initial volume.

—The convention of German jurists recently held in Berlin passed a resolution recommending, among other reforms, a revision and radical change of the law concerning lese-majesty, which is declared to be injurious to the sovereign, whom it is intended to protect, prejudicial to the monarchical principle, and wholly incompatible with the spirit of the age. The German Staatsanwalt or prosecuting attorney discovers insults in the most harmless expressions of disapprobation, and exhibits a ludicrous excess of zeal in the indictment of the supposed offenders, hoping thereby to win royal favor. The imprisonment of the editor of *Simplicissimus*, a Munich comic journal, for lese-majesty, added at once several hundred names to the list of his subscribers, and the prosecution of the Bavarian poet Friedrich Benz for criticising the Emperor's public utterances on art and artists, although resulting in his acquittal, greatly increased the sale of his works. Indeed, this method of protesting against such judicial proceedings is quite common in Germany, and very gratifying to the accused. Still more antiquated and absurd, if possible, is the paragraph of the German criminal code punishing offences against religious bodies which are recognized by the state. About a year ago a journalist was sent to jail for speaking with disrespect of the holy coat at Treves; and in September of the present year Julius Bruhns, editor of the Breslau *Volkswacht*, was condemned to fourteen days' imprisonment for denouncing as pious frauds the relics worshipped at Aix-la-Chapelle, the most important of which are the shift worn by the Virgin Mary as she gave birth to Jesus, the swaddling-clout of the new-born child, the sponge with which the crucified Saviour was given vinegar to drink, the winding-sheet of the decapitated John the Baptist, the linen waistband of Mary, the cord with which Christ was bound when scourged, his leathern girdle, the forearm of the aged Simeon, and two teeth of the doubting Thomas. These things and the adoration of them belong in legal phraseology to "the institutions and usages" of the Catholic Church, and any attack upon them is a penal offence, according to paragraph 166 of the German criminal code. Whoever asserts that they are spurious, insults a religious society under the protection of the Imperial Government, and thus renders himself liable to severe punishment. On the other hand, religious sects and associations not recognized by the state may be abused even in the grossest terms with impunity. Professor Kaufmann of the University of Breslau publicly protests against this injustice, and urges men of all confessions and all parties to unite in a petition to the Imperial Diet for the abolition of a law so inconsistent with the principles and tendencies of modern civilization.

—The friends of Theodor von Heldreich in this country will learn with sincere regret of the loss which science has sustained in his death on September 8, at the advanced age of eighty years. Born in Dresden in 1822, he gave himself from his early youth with ardor to the study of botany, at first at the University of Freiburg, later at Montpellier, where he studied under Duval, and later still at Geneva, where he continued his studies under the famous brother-botanists De Candolle. After travelling extensively in Italy, he came to Greece in 1843, to begin his lifework in the study of the Greek flora. Here, with the exception of a few years passed in Crete, he spent the remaining fifty-nine years of his life, making scientific journeys throughout Greece proper, the coasts of Asia Minor, Macedonia, and the islands of the archipelago; the results of which are embodied not only in his writings, but above all in his magnificent Herbarium of Greek Plants, which is absolutely unique in its completeness and scientific accuracy. More than 700 new species of plants in Greece and the Levant were discovered by him, as well as seven new genera; and, of the above, more than seventy species bear his name. In entomology also his researches were fruitful, and several species of Greek insects bear his name as their discoverer. His published writings were chiefly in the form of monographs on special subjects, contributed to the periodicals of the numerous learned societies of which he was a distinguished member. Some of the titles of the longer of these treatises are as follows: 'Flora of Crete,' 'Flora of Cephalonia and Aegina,' 'Flora of the Attic Plain,' 'Homeric Flora,' 'The Useful Plants of Greece' (Die Nutzpflanzen Griechenlands), etc., etc. Also, with Edmond Boissier, he compiled the 'Diagnoses Plantarum Orientalium.' In 1851 he was made Director of the Botanical Gardens at Athens, and this position he continued to hold until his death. From 1858 to 1883 he was Curator of the Natural History Museum at Athens.

—The literary as well as the botanical side of the Greek flora found in Heldreich an able expositor. The identification of the numerous plants mentioned by classical writers, from Homer down to Theocritus, is a branch of research which must always appeal strongly to the lovers of Greek literature. The discussions as to the botanical identification of such famous flowers as the Homeric ἴον, the lotus, hyacinth, etc., have been endless, involving as they do the greatest variety of opinion on philological as well as botanical questions. One of Heldreich's most recent identifications, which has found general acceptance, was that of 'Parietaria Judaïca L.' with the much-disputed *Parthenium* mentioned by Plutarch in the well-known passage in the Life of Pericles, relating to the building of the Propylæa; so that now the visitor to the Acropolis may recognize growing in profusion among the ruins the famous herb whose medicinal virtues were recommended by the Goddess of Healing herself, and it gives an additional touch of reality to Plutarch's anecdote to find the plant growing at the base of Hygieia's statue. This is but an isolated instance of the services which have been rendered to all lovers of the classics by Heldreich and his predecessors in this field. It is rumored that negotiations for the Herbarium have for some years past been pending, with regard to its acquisition by the Berlin Museum. At all events, there is no doubt that it will ere long find a permanent place in some one of the greater scientific collections of the world, where it will be more generally accessible than it has been hitherto.

—We venture to call that a "masterly inactivity" which has resulted, after a long interval, in such a stupendous success as Gustav Kruell's new portrait of Beethoven. Already it seemed as if this engraver had exhausted the possibilities of the wood block, but no one familiar with his unapproachable series of portraits of great Americans can fail to be impressed by the technique of his latest and certainly grandest production. So free, so fresh, so different—it is the old story, but how incredibly free and fresh and different! From the lawn of the master's bosom kerchief to his dusky wreath of hair, his chin as of hammered metal, the aerial background—all is playfully and caressingly light. It is well known that no satisfactory likeness of Beethoven has heretofore existed. Mr. Kruell's task was both creation and interpretation, in which latter respect he has no equal among living portraitists in black and white. He has conceived Beethoven in the prime and vigor of manhood, with all the energy of his genius speaking in every lineament. Imagination and art can hardly further go than in this instance, and, once seen, this veritable "symphony" will be coveted until it can be owned. The block is about nine inches by eleven, and the prints on Japan paper. Mr. Kruell's address is East Orange, N. J.

## HIGGINSON'S LONGFELLOW.

*Henry Wadsworth Longfellow.* By Thomas Wentworth Higginson. [American Men of Letters.] Boston: Houghton, Mifflin & Co. 1902.

The elusiveness of Longfellow's personality is hardly less than that of Tennyson's. That personality was made more rather than less bodiless for us by the Life

written by his brother Samuel, of which the dominant aim was apparently to achieve an impersonal biography. Mr. Higginson, on the contrary, would gladly help us to visualize the man, and prizes every scrap of information that is contributory to this consummation, while at the same time he is rich in personal recollections and in knowledge of Longfellow's Cambridge environment. He warns us in his preface of three special characteristics of his book. The first of these is his use of a considerable amount of fresh material drawn from the manuscript letters of the first Mrs. Longfellow; the second, his use of material obtained from the "Harvard College Papers," manuscript accounts of college business preserved in the College Library; the third, his use of some of Longfellow's undergraduate and other early writings to enforce the moral of his predilection for a distinctly American type of literature. The value which Mr. Higginson assigns to these sources is a reflection of his modesty, as if he were required to justify a new life of Longfellow by the discovery of fresh material; as if we did not care much more for the writer's judgment of the man and his works than for a few additional details. Not but that these are welcome, especially those drawn from the letters of the young wife whose death was such a tragic incident of the poet's European journey preparatory for his Harvard professorship. Longfellow's correspondence touching his professorship is less interesting, but it is significant of the slight degree to which the poet qualified the business of the professor. The entire story of the professorship suggests that if Longfellow, like a much greater poet, laid upon himself "the lowliest duties," he grudged the time they took from more congenial tasks. Pegasus in the pedagogical harness chafed more than a little, and the day he broke loose from it finally was one of the happiest of his life.

Mr. Higginson's third novel source is possibly more eloquent of his own doughty Americanism in letters than indicative of any early predilection of Longfellow for a form of literature shaped on the peculiarities of our American life. He returns so often to Longfellow's Americanism that his plea for it must be regarded as fundamental to the structure of his book, and he has little difficulty in supporting it by the main pillars of Longfellow's literary production, 'Evangeline,' 'Hiawatha,' 'The Courtship of Miles Standish.' He is, of course, contending with the critics who have charged Longfellow with a foreign accent in his verse. But have not these been more concerned with the manner of the poet, his literary allusiveness, than with the material of his poems? We have imagined so, and also that Longfellow's choice of American subjects for his leading poems was significant of his wise economy of the criticism of Margaret Fuller and others on his early work as parasitic. It is certainly interesting that Longfellow's first published poem had an Indian subject, but there was less here of idiosyncrasy and prophecy than of conformity to popular standards. Indian tales and poems were the staple of popular domestic literature in 1820 and thereabout, many of them passing round in manuscript, and one, at least, of these a favorite in the family into which Theodore Parker was born. The Maine border had suffered so much and so recently from Indian warfare that some echoes of it must have lingered in the common air and found easy entrance to the mind of an imaginative boy. Longfellow's Commencement oration, "Our Native Authors," lends itself more cordially to Mr. Higginson's argument, while still its character is representative of ideas common to many heralds of the American literature that was to be. Of similar import is a list of American subjects for sketches made up in Europe, on his first visit, and sent to an American publisher. That the sketches were not written, but 'Outre-Mer' instead, was only natural. In the "Defence of Poetry," which appeared in the *North American Review* in January, 1832, Mr. Higginson finds a prediction of Emerson's "American Scholar" of 1836. There was in it one exact prediction of Mr. Higginson's persistent demand for a sincere poetical botany and ornithology. "Let us have," said Longfellow, "no more skylarks and nightingales." What remains true is that Longfellow was preëminently a closet poet, that he shaped his words and thoughts more upon books than upon natural objects and appearances. And, in his eagerness to prove him dominantly American, Mr. Higginson has done less than perfect justice to his service in bringing to the relief of our American poverty the wealth of European associations with things venerable and beautiful.

In an introductory chapter, Mr. Higginson brings statistics to confirm his confidence in the permanence of Longfellow's vogue. In the catalogue of the British Museum he has 357 titles to Tennyson's 487, Poe's 103, and Swinburne's 99. The list of translations of his works given in an appendix is even more strikingly to the same effect. Of the whole body of his verse and parts of it we have 100 different versions in eighteen languages. This, too, without any such assistance as Poe has had from a defective character. Wordsworth's admirers, we are told, were able to take courage from a report that he had once been intoxicated at Cambridge. Longfellow's have not had even so much of doubtful consolation. How little honor the poet had in his own country in the middle forties is indicated by a list of fifty-four authors, eligible for an American anthology, sent to Dr. Furness by Mr. Andrews Norton, in which Longfellow was not included. But twenty-four minor authors were also given, Longfellow at their head.

There is a careful study of Longfellow's "First Flights in Authorship." Particularly interesting are his poems running parallel with Bryant's in the *United States Literary Gazette*, in 1824 and after. Although Longfellow paid to Bryant the tribute of a sincere imitation, it would appear that he did not much impress Bryant with his rival powers. In 1841 Bryant edited 'Selections from the American Poets,' and gave Longfellow only four pages, though his 'Voices of the Night' had appeared in 1839, and had met with much favor. He allowed himself eight pages, Pierpont nine, Percival and Carlos Wilcox (!) eleven each. Stedman, in his 'Poets of America,' refers to Wilcox as a mild celebrant of our natural scenery, but gives no example of his manner in his 'American Anthology.' There was certainly something remarkable in Longfellow's devotion of himself from his college days to a purely literary career. His teaching at Bowdoin and Harvard was merely a device to enable him to pursue this without the money-stamp upon his work. In 1834 there was some talk of his going to Northampton to take the famous Round Hill School. Longfellow was very sanguine about it, his wife in gentle opposition: "I do not think Henry calculated for such a situation. If he dislikes so much the care of such a little family as ours, how can he expect to like the multifarious cares of such a large one!" Before the year was out, he had been offered and had accepted the Harvard professorship, and in the spring of 1838 was off to Europe for a year of preparatory study.

Every lover of Longfellow will be grateful to Mr. Higginson for the pathetic story of Mary Potter Longfellow's short married life, which began in 1831, and ended with her death in 1835. Mr. Higginson writes with the books of her girlish library before him, marked by her hand. In one of them, Bryant's "Death of the Flowers" is marked with special emphasis, as if she feared a prophecy in it of her own early death. She went abroad with her husband on his second visit to Europe, and several of her letters home are given. They are characterized by extreme simplicity, and the last was written only a few days before the beginning of the end. The poor child was nearly frozen to death in Sweden, and when she writes of "a long and tedious mile and a quarter" (Swedish), we know how tired she was, and how great her need of rest. The various emotions of this journey Longfellow eventually recollected in tranquillity, and 'Hyperion' was the outcome. Mr. Higginson treats the book as tenderly as possible, while noticing that the ardor which created it had begun to cool before it saw the light, and a cis-Atlantic current had set in. The style of the book was formed on that of Richter, whom Longfellow at this time preferred to Goethe, though less foolishly than George Bancroft, who wrote of Goethe, "His chances at popularity are diminishing. Twaddle will not pass long for wisdom."

There is acute and interesting comment on Longfellow's major poems and his different collections in the order of their appearance. An apology is offered for the omission of the anti-slavery poems from the Philadelphia collection of 1845, and no one could offer such an apology with better grace than Mr. Higginson. It is, that the Philadelphia edition was an illustrated one, not aiming at completeness, as did Harpers' edition of the next year, in which the anti-slavery poems appeared despite the Harpers' sighs. The Union apostrophe in "The Building of the Ship" was denounced by Garrison as "a eulogy dripping in the blood of imbruted humanity." The writer of this review remembers the use of it by Wendell Phillips as the climax of one of his great Music Hall speeches after the war had actually begun, and when even Hawthorne could say, "I rejoice that the old Union is smashed." 'Evangeline' has due honor, but Mr. Higginson thinks that Longfellow never nodded worse than over 'Kavanagh,' Hawthorne and Howells notwithstanding. Slight emphasis is laid on 'Hiawatha,' and there is an appearance of hiding an unfavorable opinion under the shadow of great names. But our space does not permit us to follow Mr. Higginson through the entire length of his genial com-

mentary. He gives a chapter to the translation of Dante, expressing a preference for the early translations made by Longfellow, unassisted, to those made in conference with the Dante Club. "It is also to be observed that Professor Norton, in the original preface of his version, does not so much as mention the name of Longfellow." The trilogy that was no trilogy, "Christus," is exhibited as a painful evidence of Longfellow's unconsciousness of his waning power. The best of its three parts was the earliest, 'The Golden Legend.' What we most miss is some comparative criticism of the minor poems, of which Longfellow and Bayard Taylor are said to have thought "Chrysaor" the most admirable, perhaps because of its subtle and exquisite rhythm. The chapter entitled "Westminster Abbey," giving the account of the installation there of Longfellow's bust, anticipates by two chapters that on "Longfellow the Man," which contains an account of his death. Yet we would not have the book end on a different note from that which sounds the praise of Longfellow's life as an antidote of incalculable value to the materialism of the present time.

## BALLAGH'S SLAVERY IN VIRGINIA.

*A History of Slavery in Virginia.* By James Curtis Ballagh. Baltimore: The Johns Hopkins Press. 1902. Pp. viii., 160.

Mr. Ballagh's work, awarded the John Marshall prize at Johns Hopkins University, and published as an extra volume in the "Studies in Historical and Political Science," is the first thoroughgoing attempt to trace the development of slavery, as a legal institution, in one of the States of the Union. It is not a little to be wondered at that, with all the contemporary activity in the study and writing of American history, work of just this character should so long have remained undone; yet it is obvious that only after every slave-holding State has been thus dealt with, will it be possible to write with adequate information the history of our most distinctive American institution.

Mr. Ballagh's history falls into three parts, the first of which deals with the slave trade and the slave population, the second with the development of slavery in colony and State, and the third with manumission, emancipation, and the status of free negroes. Noting the distinction between slavery and servitude, and the presence in Virginia of both servants and slaves, the author traces with much detail the growth of slavery in the colony under the stimulus of the slave trade, and the persistent efforts of the Assembly from an early time to regulate or prevent the importation of negroes. That slavery in Virginia was not so much a natural growth as an institution forced on the colony by England, and, even so, taking many years for its establishment, can no longer be doubted.

"From 1664 to 1671, several shiploads of negroes were brought in, but servants continued to be imported at the greater rate of 1,500 a year, and in 1671 there were 6,000 servants to 2,000 slaves in Virginia. By 1683 the number of servants had doubled, while that of the slaves had increased by only one-third. From this time forth servitude gave way before slavery, which was forced on the colony in the large importation of negroes by the Royal African Company under its exclusive charter. It was the policy of the King and of the Duke of York, who stood at the head of the Company, to hasten the adoption of slavery by enactments cutting off the supply of indented servants, at the same time that large importations of slaves were made by their agents. The laws of 1676 and 1682 which legalized Indian slavery co-operated still further to increase the slave population. In 1698 the African trade was thrown open to separate traders. An active competition at once sprang up with the African Company, the separate traders importing large numbers of negroes and attempting to undersell the Company" (pp. 10, 11).

Beginning in 1699, accordingly, the Assembly sought to guard against the dangers of negro slavery by subjecting negroes and alien servants to discriminating duties. The attempt was only partially successful, however, and the influence of the slave traders was sufficient to secure "the withholding of the King's assent to as many as thirty-three different acts passed . . . prior to 1772 to discourage the slave trade." During the eighteenth century, the negro population rapidly increased, by 1756 outnumbering the whites in four-fifths of the counties, and causing general fear of insurrection. By this time it was the independent traders who were bringing in far the larger number of slaves, but Virginia was powerless to control its economic development where the interests of the colony conflicted with the colonial policy of England. Jefferson's arraignment of the King, in the first draft of the Declaration of Independence, for inciting the negroes to arms while forbidding the colony to prevent their importation, is well known, and the feeling thus expressed doubtless had much to do with the change of sentiment in Virginia towards the mother country. In 1778, when English control had been thrown off, Virginia promptly prohibited the slave trade, being the first organized political community in modern times to do so; and from this date the slave population, with some fluctuations, on the whole declined.

The long chapter on the development of slavery, comprising about two-thirds of the volume, is, perhaps, the one in which Mr. Ballagh makes his most important contribution to knowledge. The steps by which the legal status of the slave was settled are followed in great detail. The earlier ownership seems to have been regarded as a right to services rather than to persons —in Roman law, a right of *possessio* rather than of *dominium*. In Virginia, as in the other colonies, however, servitude of negroes and Indians passed historically into slavery.

"The first essential element in the change of status consisted merely in the modification of an incident, the extension of the term of service from a period of years to that of natural life. What is termed perpetual was substituted for limited service, while all the predetermined incidents of servitude, except such as referred to ultimate freedom, continued intact. . . . Apparently there was no marked change of condition either practically or legally as regarded the individual" (p. 37).

From this the step was short to the conceptions of the slave status as attaching to the issue of the slave, and of property in the person of the slave. Mr. Ballagh's account of the legal status of the slave as property—at first real, then personal—is particularly valuable.

When to the sanction of slavery based upon racial differences was added the sanction based upon religion, the difficulty occasioned by Christian baptism early presented itself. One of the ostensible reasons for the enslavement of the negroes was the pious pretence of thereby bringing them to a knowledge of the true God; but when baptism had certified to the accomplishment of this high purpose, it would seem that the slave should be thereby freed. The Virginia Assembly, equal to the occasion, voted in 1667 the naïve declaration that "Baptisme doth not alter the condition of the person as to his bondage or freedom; in order that diverse masters freed from this doubt may more carefully endeavor the propagation of Christianity"; and "in 1670, when slaves were for the first time legally designated in Virginia, the benefits of Christianity as to freedom were limited to servants imported from Christian lands" (p. 47).

The legal disabilities incident to slavery are considered under the heads of property status, with the consequent separation of families, civil restrictions, denial of marriage and trade, exemption from militia service, etc. On the other hand, the slave had by custom a limited property right, and a restricted right of contract with the consent of his master. A certain degree of personal agency attached to him, as shown particularly by penal legislation; and he had limited capacity as a witness. By an act of 1732, the slave was entitled to notification of his disabilities, the legal notice being given by the public reading of the act at stated times by the church wardens and sheriffs. Personal freedom of movement on Sundays and holidays was not restricted until 1680. The personal security of the slave was safeguarded by the provision of severe penalties for masters and others who maimed or injured him without cause, or who were guilty of cruelty in the infliction of the recognized punishment of whipping. "Prior to 1692, slaves guilty of capital crimes were entitled to the same procedure, including jury trials, as free whites" (p. 82), but the unsatisfactoriness of this method led to the substitution of a special tribunal. The harsher features of the criminal code were largely done away with by the end of the eighteenth century, and even while they lasted were the result, in the opinion of Jefferson and St.-George Tucker, not of inhumanity, but of "those political considerations indispensably necessary where slavery prevails to any great extent" (p. 89). The danger of slave insurrection, though widespread, was, in Mr. Ballagh's opinion, more imaginary than actual. After the Nat Turner insurrection, however, there was added to the disabilities of the slave the denial of instruction in the elements of secular education, though religious instruction was not greatly interfered with.

Finally, the slave was entitled to support and protection, laws being passed to secure this right, especially to the old, sick, or infirm, and to prevent it from being shifted onto the county. That the treatment of the slaves under average conditions was considerate, and that relations of affection and regard were often established between master and slave, is abundantly proved, while the lack of absentee landlordism and the generally small holdings of slaves were distinctly advantageous influences. "More

than 55 per cent. of Virginia slaves in 1860 were held by owners of 1 to 20, and half of these by owners of 1 to 9. . . . Twenty slaves were considered the minimum under an overseer for a successful tobacco plantation. . . . The very small planters had a minimum of at least 200 acres, requiring but four or five slaves, and even the holders of 5,000 or 6,000 acres had often only sufficient slaves to clear and cultivate but a small proportion of their holdings" (pp. 104, 105).

We have space for little more than a mention of the chapter which Mr. Ballagh devotes to the legal development of manumission and the status of the free negro. Virginia seems to have had free negroes as early as 1668, and there came to be in time a considerable body of legislation and legal decision regarding the way in which manumission might take place, and the rights and duties of both master and slave in connection therewith. In 1795 the slave was allowed to sue *in forma pauperis* for his freedom, while the incidents of the suit were at the same time much modified. Further, a strong feeling in favor of general emancipation several times showed itself, and, "but for the unfortunate reaction produced by outside interference, the cause of freedom might possibly have triumphed in the Assembly of 1831-32" (p. 127). We remark that the acute "outside interference," at that date, consisted of two factors—the colored Bostonian Walker's two-year-old pamphlet 'Appeal,' and the white Bostonian Garrison's one-year-old *Liberator*, which were foolishly connected with Nat Turner's contemporaneous rising. The "cause of freedom," as presented in the Assembly, was inseparably identified with expatriation of the emancipated. It had no philanthropic basis whatever.

Mr. Ballagh's book is confined almost wholly to the legal aspects of slavery, economic and political considerations being comparatively little referred to. Within its field, however, it is to be cordially praised as a first-rate piece of work, and a good illustration of the wealth which still, for the most part, lies buried in the mine of American institutional history. The style, though at times involved and inelegant, is on the whole more than ordinarily readable, but it is a pity that the punctuation should so often have been left to shift for itself.

---

*George Eliot.* By Leslie Stephen. (English Men of Letters Series.) Edited by John Morley. The Macmillan Co. 1902.

To speak as an authority about George Eliot's work would be to lay down the law about many vexed questions of life and art—would be, indeed, to bring up the whole terrible question of the proper place and the importance of the novel as a form of literature. Mr. Leslie Stephen, from whom a sort of judicial decision might reasonably have been expected, cleverly escapes responsibility. In the course of his review, he does not ignore agitating topics met upon the way, but shirks them, by assuming to be a plain man with no pretension to esoteric knowledge. His book is an expression of personal opinion, and his manner that of one genially inviting correction.

His method is a little old-fashioned, for he applies himself to consideration of what his author did and the way she did it, instead of depreciating her at length because she did not do something else in an entirely different way. His opinions are, of course, informed with knowledge and critical discrimination, and expressed with clearness, moderation, and some grace; yet the tone of appreciation throughout is that of one who has always "highly considered," not of one who has ever been "quite devoted." In the narrative of his author's private life running along with review of her work, no new facts are presented, and those old facts which used to excite heated discussion are referred to with decent reserve. Her uncommon distinction is taken for granted, and tribute ungrudgingly paid to the range and power of her intellect and its high cultivation, to her talent for searching analysis, especially as regards her own sex, to her wit and humor, and her very rare power of reflection. The only personal opinion that Mr. Stephen urges eagerly, as if it had been or might be open to contention, relates to the intensely feminine quality of work which all the world except Dickens took to have been done by a man. "She was intimately feminine, though more philosophical than most women"—a recognition of her philosophical baggage that one hesitates to call "handsome." "In spite of her learning, she is always preëminently feminine," and then, almost immediately, as if by way of removing any doubt, Mr. Stephen points out that, in describing Adam Bede's passion for Hetty, she conspicuously shows "the kind of resentment with which a true woman contemplates a man unduly attracted by female beauty." A woman might wonder why he does not support this particular contention by his statement that "she always wrote with assent of mind, heart, and conscience, so that she might feel that she was doing something, however small, which wanted to be done in the world." What man ever so deliberately increased his share of the burden of sorrow that all must bear?

Mr. Stephen's general criticism may be fairly stated as an impression that, in spite of all her remarkable resources, George Eliot was weak on the creative side—a weakness particularly evident in that portion of her work which is not directly drawn from the scenes of her childhood and youth and the persons who then engaged her deep interest and everlasting affection. Ideas, he thinks, often presented themselves to her mind as abstractions, not concrete visions, and she then proceeded to construct character out of philosophical formulæ—which is obviously the wrong way about for a poet or a novelist. Undoubtedly she sometimes fell into an error very damaging to literature that pretends first of all to represent life. Her technically poetical works, parts of 'Romola' and of 'Daniel Deronda,' are much more certainly the offspring of reflection and knowledge acquired from books than of imaginative intuition, and knowledge derived at first hand from life. Yet, more than to frequency of this mental process, an apparent weakness of creative force may be due to the concentration of her vision on a few very impressive aspects of life, and the passionate intensity of their presentation. Her vision was profoundly tragic, embracing the tragedy of the soul at war with conditions, and the more awful spectacle of human character, capable of good, defeated by its own baser instincts and wholly abandoned to evil. For one of these tragic aspects she was always demanding sympathetic partisanship, and for the other she often exacted detestation. On the whole, she carried her own generation with the strong tide of her emotion, but there were always those who denied the truth of her vision, and who rejected the stern counsel she offered for the amelioration of a state of being in which happiness could not—indeed, should not—be hoped for. To be of the number that can get too much of solicitude for human destiny (especially in novels) is not a matter of just reproach. It is a disturbing solicitude, and unless one can heartily share it, one resents it, ends by being bored with it. In real life, we suspect that Dorotheas and Romolas, and, above all, Derondas, would bore Mr. Stephen to extinction, and that has perhaps more to do with his lack of enthusiasm than has a perception of a faulty process of literary construction.

At all events, he likes best an amusing imaginary world, rejoicing therefore in the whole proud family of Dodson, and in Mrs. Poyser, who "at once became immortal." Of the serious characters, Maggie Tulliver is his favorite, while Tito seems to him infamous, and Grandcourt detestable in a feminine rather than a masculine way. Perhaps he has not very deeply searched for a basis of character from which, as distinctive of sex, conduct could be inferred with greatest probability. Tito was a complex person with a simple scheme of life tenaciously adhered to. He never wanted existence to be an unhappy affair for any one; he only meant that it should be, no matter who paid, a very pleasant affair for himself. It seems to us that he tried for what he wanted in ways far more subtle and delicate than are the ways of any woman similarly constituted, and also with an agreeable unconsciousness of their sinfulness very masculine indeed. He incarnated, it is true, much of both men and women that George Eliot hated, and his characterization is a wonderful example of the illuminative power of the passion of hate. Rosamond Viney and (in a less degree) Gwendolen Harleth also illustrate the usefulness of hatred (under literary control) for exposing rather hateful characters. Grandcourt can be regarded most charitably as an indiscretion. George Eliot was not very familiar with the world from which he is drawn, and she shows her unfamiliarity and an undue desire to castigate. With him, and more still with Deronda, her sense of humor deserted her. There were moments when she was not saved from being tedious and absurd by being great.

In conclusion, Mr. Stephen remarks: "George Eliot's works, as I have read, have not at the present day quite so high a position as was assigned them by contemporary enthusiasm; this is a common phenomenon, and, in her case, I take it to be due to the partial misdirection of her powers in the later period." It is true that her popularity has waned, but that for novelists is an inevitable, not a phenomenal, destiny. Her eminence, however, has not been seriously challenged. More and more her preeminence among the Victorian group of novelists is beginning to appear, for, while she described as vividly as the best of them phases of the external life of their era, she added a record of prevailing

thought and interpreted the time-spirit. In this power of inward vision she had and has no rival. It is, indeed, not improbable that the literary historian who shall in the future sum up the Victorians and deliver a verdict, may award her one of the seats of the mighty in the classical Valhalla, one below Shakspere only for wit and wisdom, and above all for expression of passionate sympathy with the woes and aspirations of the lonely human spirit.

---

*Homeric Society.* By Albert Galloway Keller, Ph.D. Longmans, Green & Co.

This study of the Iliad and Odyssey is a thorough piece of work which will be consulted by serious readers in general, and especially by students of social science and economics. It is an elaborate and technical analysis of the evidence afforded by the poems as to the society of the Homeric age, based more especially on a system and classification, as yet unpublished, devised by Professor Sumner of Yale. The author assumes that the Homeric evidence is direct and accurate, and that it has to do, in the main, with a single people and a single "culture epoch." Hence, the almost unique value of the poems as a social document. The Phœnicians are the chief influences with which this social sphere came in contact, and the Phœnicians had no intentional mission of either culture or religion, but were simply bent on cold self-interest. This sole motive, as Dr. Keller rather strikingly points out, "working through trade upon the material basis of less developed societies, has produced a maximum of result, with a minimum of pain, fruitless effort, and retrogression." The Phœnicians, then, were the agents through whom the Greeks first became acquainted with the culture of Chaldæa and Egypt. Of Chaldæa directly they seemed to know nothing. The Phœnicians they knew "from the standpoint of the lower civilization," as our author puts it. Homer's Phæacian episode is an imaginative sketch of an Oriental and maritime people; mirrored mainly from the Phœnicians, but far from being authentic and consistent in minor details. Nausicaa is a genuine Greek damsel; and, curiously enough, it is a Phæacian, Euryalus, who reproaches Odysseus with having the air of a mercenary supercargo. If there is a conflict of Phæacian and Greek ideals, Odysseus holds his own and a little more. His admiration for the accomplishments of his competitors is not unmixed; and there is certainly a slight undercurrent of contempt for their want of prowess in the more manly and warlike sports.

In connection with the Phæacian episode, it is a serious question whether the song of Demodocus on the amour of Ares and Aphrodite should be taken as testimony of the attitude of Homeric society towards adultery. That curious anticipation of the tone of opéra bouffe chimes better with the morals of the Court of Louis XIV. than with the total impression made by the portraits of Helen and Clytemnestra and Penelope and Andromache. At any rate, for linguistic and other reasons, the lay is unhesitatingly ruled out by many scholars as a later interpolation.

To most readers of the tale of Nausicaa it will seem a strange affirmation that "in the majority of instances modesty was formal and traditional, founded upon patriarchal restrictions, and not yet instinctive. Freedom of expression between the sexes points the same way; there was little or nothing to conceal." In reaching this conclusion, Dr. Keller probably begins with the Homeric bath, presided over by young women or maid-servants—no one knows just how—instead of taking the natural straightforward testimony of the narrative of the sixth book. A troop of handmaidens run away from the sight of a naked vagrant, while Nausicaa stands her ground, with a mixture of dignity, good sense, and right feeling which understands when to break conventions as well as when to preserve them; and this surely is the acme and the essence of the proprieties. As to the Homeric bath, the prevailing Japanese custom might throw some light on its decency; and the Japanese are long past the stage of patriarchal tabus. But nothing is so elusive and indefinable as the sentiment of modesty and the limits and conventions by which it is guarded.

The author's plan is a sound one, namely, to draw his evidence direct from the poems, and, as far as possible, from no other source. There are a good many points as to which it is hard to say any final word. He calls the Homeric knowledge of exterior geography *vague;* and yet, just now, M. Bérard is endeavoring to prove, in the most interesting manner, that the descriptions of Scheria and of Calypso's Isle are founded on a Phœnician periplus, and display a knowledge of localities so intimate and accurate that it can be illustrated only by the Admiralty charts. Dr. Keller thinks *chalkos* was copper, with possibly a natural alloy; and this proviso will serve to meet part way those who insist that it was bronze. The beads of the necklace in Od. Bk. xv., 460, he asserts, were made of *electros*, the metal, while Mr. Munro decided that they were of *electron* or amber. As to writing, Dr. Keller concludes that while the Phœnician settlers in Greece probably used an alphabet, the Greeks themselves were ignorant of it; "for them the art of writing was yet to come." In all these matters we may strongly hope for additional light, and that light will come from the investigations which are multiplying in the various centres of Mycenæan or Aegean civilization. Granted that the Phœnicians were the immediate conveyers of culture to the Homeric Greeks, these earlier factors must inevitably have left their traces. The researches at Crete and elsewhere will fill many a gap and reveal many secrets.

There is one riddle which our author does not pretend to solve, one unique social product which he confesses his inability to account for, and that is the Homeric Poems themselves. These, at least, owed nothing to Assyria or to Egypt, or to the trading ships of the Phœnicians. "Before the contrast between these consummate products and the civilization whence they sprang, however relatively advanced, the mind stands amazed." Their root may have been the national impulse created by a successful war. But there is one negatively favorable condition which must have contributed to the development of this superlative work of genius. "It was not dwarfed and deformed by a restrictive and despotic cult; Greek art was freed from a domineering and all-conventionalizing priesthood."

In general, Dr. Keller's work is not a mere collection of bundles of dry economic facts. His analysis is keen and penetrating, and his generalizations are often full of pith and insight. As to religions he remarks: "The Homeric Greek was not a 'primitive man'; like all other men, he came under the domination of a cult whose conservatism registered the past with strokes so deep that when the reason for usages was long forgotten, the usages themselves remained." The Homeric religious ceremonial and sacrifice was a bargain with the gods, and "an insurance against the evil chances of life," an insurance effected even at endless waste and expense. On their part, the gods were well disposed if treated generously. And finally, "the expedition of Alexander the Great was far less national in character, led as it was by a despot, than the voluntary undertaking of the Trojan war."

---

*In Sicily*, 1896-1898-1900. By Douglas Sladen. 2 vols. London: Sands & Co.; New York: E. P. Dutton & Co. 1901.

If information were sold by weight, there would be a precious supply of it in these ponderous quartos, which hardly turn the scale at twelve pounds. In point of fact, they contain a good deal not at all heavy in character, and it is a pity that the bookmaker should have done so much to spoil its usefulness by printing it on such thick, loaded, glossy paper. The volumes are absurdly inconvenient to carry about with one, and the page unpleasantly shiny.

As for the text, the worst that can be said of it is that it is garrulous and slipshod, sometimes even ungrammatical. There are pages of description which do not describe, where the essential and the non-essential are thrown together higgledy-piggledy in a torrent of words, somewhat after the manner of Mrs. Nickleby. And yet the book turns out to be, on the whole, pleasant reading, and in its way it makes a good companion for the traveller in Sicily, at least for one who does not object to paying for extra luggage.

Its way is this: according to the title-page, the book is the record of three visits made to Sicily, yet it reads as that of a single visit made in company of a young American lady and her betrothed, to whom the author plays the part (very much emended and brought up to date) of Piscator toward Venator and companions. Among the emendations is that of making Miss Heriot and Witheridge something more than empty names at the head of the sentences. Each has a distinct personality of his own, and their figures move through the pages with every appearance of life. The incidents bear the stamp of genuine personal experiences; some of them—*e. g.*, the episode of Stephana Heriot with the students at Cefalù—adding greatly to the charm of the narrative. The human nature is exceedingly well observed, though it might be objected that the vocabulary of the young lady is not always that of a Bostonian avid of culture, but would seem to be alloyed with that of some more untrammelled Western sister. The conversational *déshabillé* of Witheridge, who, though a graduate of Yale, would seem to owe his training largely to the boat club and the football ground, one may accept as exactly reported. He is rather out of his element in Sicily, except as an attendant on Miss Heriot; he possesses no

language but his own peculiar variety of English; he has no interest in art or antiquity, and very little in scenery; he is careless and bored, but he is a capital good fellow, and his complete contrast to all his surroundings gives a slight tang to the narrative that is far from disagreeable. In fact, there are some of his sayings that one would be sorry to miss, as, that "There is very little a goat does not know, except how to behave." He and pretty, eager, unaffected Miss Heriot fairly divide with Sicily our interest in the book from beginning to end.

And as for the other half of the subject which gives its title to the work, it really does not suffer by the division. We simply make the tour of the island in pleasant company. It is the day-by-day record of the winter of a little party of indefatigable tourists, just like many another party, who want to see everything there is to be seen, and to know as much about it all as intelligent people, without pretensions to high scholarship, care to know. They suffer somewhat from the extortions of *facchini*, and they learn the lowest price for which a cabman can be induced to serve them, but their curiosity and enthusiasm are boundless, at least in the case of Miss Heriot and Mr. Sladen, and they are interested not only in churches, palaces, and ruins, but in the wild flowers, in chaffering with the dealers in curios, and in the people of the country. Mr. Sladen does the learning for the party with copious extracts from Cicero against Verres, from Professor Freeman and from Cardinal Newman. It has been already said that he is garrulous and discursive, which implies that he tells us a great deal that the fellow-tourist is always glad to hear: the comparative desirableness of the various hotels and pensions, the price of everything, from the weekly "arrangement" down to the samples of native pottery that he collects as souvenirs, the thousand little incidents of contact with the people of the country which make travelling a lesson in humanity. The reader gets to feel that he is making the round of Sicily with the Sladen party, and they are all so natural, so friendly, and communicative that he quickly becomes intimate, and ends with a sincere liking for their company. He gradually quits the critical for the sympathetic attitude, and when he learns the modest pretensions of the party leader as given in the closing sentence of the book, he has already accorded to him an unbegrudged esteem.

"I have given our itinerary in such detail, perfectly aware of the fact that it is very small beer. I have not given it because I think that the public will be in the least interested in what we did for any reason but one, and that reason is a highly important one—we contrived to get a vast amount of enjoyment at a very small expense. And I have yet to meet the traveller of modest means who does not want that recipe."

And so we have renounced all idea of carping at small inaccuracies in botany, in architecture, in Italian, or in English, and we gladly concede that the public may be interested in the book for other reasons than that assigned by the author. Neither Vuillier nor Paton nor Rod condescended to the "small beer" of the daily chronicle; but whatever they may have gained in dignity was at the loss of that sense of participation which Mr. Sladen inspires in his readers. Together with an unusually minute enumeration of the treasures of Sicily, he manages to give also an unusually strong impression of the peculiarities that make travelling there so delightful. Part of the secret of this is that the author is thoroughly in sympathy with his subject—he is enthusiastic over the beauties of the country and he makes light of small discomforts; and part is in the system he has adopted. He is, moreover, fairly free from the ordinary prejudices of the English traveller, and when the weakness crops out, it is so obviously weak as to be harmless. He indulges in the common British fling at the stupidity of Italian doctors, and gives a case in point that conclusively shows the ignorance and stupidity of the British patient. He atones, however, for such lapses by frequent flashes of insight or good-natured tolerance; with regard to a certain philanthropic meddlesomeness, he remarks that, "like Neapolitan cabmen, Sicilians do not like being put right by foreigners, odd as it may seem"; and again, with regard to the social code, he decides ("but with no touch of scorn"), "One thing is certain, that the Sicilian Mrs. Grundy would not pass muster in England."

We only regret that so light and gossipy an entertainment should be given in so unwieldy a setting. The volumes are copiously illustrated from photographs and other sources, often satisfactory, and exasperating only when they are the flabby oil paintings of an artist whom there is no need to name.

---

*Mind in Evolution.* By L. T. Hobhouse. Macmillan & Co. 1901. Pp. xv., 415.

Among standing divergences of opinion, that on the subject of animal intelligence holds an interesting place. The lovers of animal pets naturally lean to a generous interpretation of their favorites' actions, while nothing seems to afford greater satisfaction to hypercritical professors than to explain away the pleasing yarns of the enthusiasts. The general public varies its sympathies according to the speculative fashion of the day, inclining now to disavow, now to insist on, the continuity of the lower animals with man. And, as the same facts lend themselves to different inferences according to the prejudice with which they are regarded, the dispute goes merrily on. As Mr. Hobhouse well says, the question, *e. g.*, whether animals reason, is one which people will go on putting for ever, until they arrive at a definition of reason which will satisfy everybody. It is in one sense a question of terms; in another, a question of degree. Nevertheless, Mr. Hobhouse has succeeded in making a distinct contribution to comparative psychology, not only by his well-conceived and interesting experiments with animals, but also by the moderation and impartiality of his interpretations. His general thesis is that mental evolution proceeds continuously, but that, at certain points, increase of quantity produces changes of quality, by rendering possible new achievements with their whole train of consequences.

We have emphasized Mr. Hobhouse's contributions to animal psychology because it is in this that the main value of his book will probably be found. In other respects it is not quite so satisfactory. He has, *e. g.*, difficulties with the conception of Evolution, which, following popular usage, he takes as a process rather than as a resultant of a number of processes. But he sees the need of distinguishing progressive evolution from degeneration, and assumes that the former, which he calls orthogenic, consists of the growth of mind (p. 5). Later on (ch. 16), it is described as an advance toward a *higher* organization, and the higher is distinguished by the double test of organic unity and differentiation or "wider scope." But we are not told how to decide cases in which these two criteria act antagonistically.

The assumption, also (as Mr. Hobhouse admits it to be), that progress is due to the evolution of mind, seems beset with difficulties. He neglects to define his attitude towards the fashionable doctrines of mechanism and psychophysical parallelism before ascribing causal efficacy to mind. Again, on his own showing, mind at first was merely a successful device which was useful in the struggle for existence. Why, then, should it not remain such, and how can he legitimately arrive at his intellectualist vision of "Mind as the dominating principle in this world" (p. 398)? The part played by feelings and volitions in arousing the intellect seems to be seriously underestimated throughout. And finally, even if all orthogenic evolution were mental, it would hardly follow that only one ideal of social organization would be aimed at; for at every point in history there seems to be a number of alternative ideals, good or bad, or merely different, and which rather multiply with mental evolution. This conception, therefore, will hardly dispose of the possibility of degeneration, nor help us to decide whether, *e. g.*, a socialistic or an individualistic organization will be higher.

The metaphysical account, also, of the purposiveness immanent in evolution seems to be very obscure, and to shed no light on a very similar discussion of teleology in Mr. Hobhouse's 'Theory of Knowledge.' On the other hand, Mr. Hobhouse clearly sees that Natural Selection, taken as a model of social organization, is a method of barbarism, and that "organized life rests not on internecine rivalry, but on mutual interdependence." Liberal and progressive thinkers just now have the arduous task before them of impressing the popular mind as deeply with this truth as their adversaries have succeeded in staining it with a consciousness of the ineluctable struggle for existence.

THE ITALIAN RENAISSANCE IN ENGLAND
*Studies by* LEWIS EINSTEIN
"Wholly admirable. . . . A most fascinating and scholarly book, which throws much new light upon the byways of a vast subject, and will interest equally the student and the general reader of culture."—*Daily Telegraph*, London.
"Mr. EINSTEIN'S book has something of the subtle romantic appeal which inheres in the close study of an age of transition and complex development."—*The Atlantic Monthly.*
"Mr. EINSTEIN'S work justifies its existence by drawing on many manuscript sources which have hitherto been inaccessible to most scholars, and by embodying the results of much careful investigation in an admirably comprehensive study. . . . Excellent reproductions of rare portraits of some of the worthies mentioned lend an appropriate touch of human interest."—*The Nation.*

## THE MACMILLAN COMPANY'S NEW BOOKS NEARLY READY

*By* JOHN FISKE
*Author of "The Destiny of Man," etc.*

### HISTORICAL AND LITERARY ESSAYS

In two volumes. *Cloth, 8vo, $4.00 net.*

I. Scenes and Characters in American History. II. In Familiar Fields.

Volume I. embodies the *Formulative Influence* in the development of the United States from the Revolution until the outbreak of the Civil War, viz., the Fall of the Federalist Party, the origin of the Whigs and the growth of national sentiment. It is practically a history of this period as portrayed in the personality, strength and weakness of statesmen of the time.

The Essays in Volume II, some of which were delivered as lectures, show John Fiske's many-sided genius, as no volume hitherto published has. Among them are the best examples he has left of his careful, scholarly, purely literary style; of the care and profundity of his methods of historical research; of the powerful critical analysis shown by the author in his "American Political Ideas," while others are in his best, light, reminiscent style.

*By Dr.* EDWARD EVERETT HALE

### MEMORIES OF A HUNDRED YEARS

By the Author of "The Man Without a Country," etc.

*Two volumes, profusely illustrated. Cloth, cr. 8vo, $5.00 net.*

Undoubtedly the most generally interesting biographical work published this fall. Dr. Hale's long and active life has been in touch with almost every man and woman at all prominent in the country's social and political life. It contains many portraits, fac-similes of interesting letters, and other illustrations.

*By Mr.* JACOB A. RIIS

### THE BATTLE WITH THE SLUM

By the Author of "The Making of an American," etc.

*Profusely illustrated from the Author's photographs and from drawings by Thomas Fogarty. Cr. 8vo, $2.00 net.*

Mr. Riis treats very ably of the conditions to be found among the poor of every large city, of the influences that make for evil in their home life, and of how they can be met and are being met in New York. So widespread are the situations entirely analogous to those with which Mr. Riis has dealt that the book must appeal strongly to every city in the Union.

MR. W. J. GHENT'S *Brilliant Forecast*

### OUR BENEVOLENT FEUDALISM

A prophecy as to the results of existing social and industrial conditions which is attracting wide attention. *Cloth, 12mo, $1.25 net.*

Mr. BROOKS ADAMS' *New Book*

### THE NEW EMPIRE

By the Author of "The Law of Civilization and Decay," etc. *Cloth, 12mo, $1.50 net.*

M. OSTROGORSKI'S *long-promised work on the motive forces of democracy*

### DEMOCRACY AND THE ORGANIZATION OF POLITICAL PARTIES

Translated from the French by Frederick Clarke, formerly Taylorian Scholar in the University of Oxford. With an Introduction by the Rt. Hon. James Bryce, M. P., author of "The American Commonwealth," etc *Two vols., cloth, 8vo. In press.*

He gives for the first time a systematic history of party organization in England and the U. S. with thoroughness and great dramatic interest.

*Planned by the late* LORD ACTON, *Regius Professor of Modern History in the University of Cambridge*

### THE CAMBRIDGE MODERN HISTORY

Edited by A. W. Ward, Litt.D., G. W. Prothero, Litt.D., and Stanley Leathes, M.A. *To be completed in twelve volumes, each a work of special research to which many of the leading historical writers in England and America have been invited to contribute.*

**I. The Renaissance** *Royal 8vo, $3.00 net.*

*Books published at* NET *prices are sold by booksellers everywhere at the advertised* NET *prices. When delivered from the publishers, carriage, either postage or expressage, is an extra charge.*

*NEW YORK, THURSDAY, OCTOBER 23, 1902.*

## The Week.

That the Hague tribunal has found for us in the case of the Pious Fund is gratifying, but the favorable decision is far less welcome than the fact that this long-standing issue has been duly presented to an international court, and that the United States and Mexico have the honor of first committing a case to this permanent tribunal. The court has decided that, since the Government of Mexico had undertaken the administration of a trust fund for the benefit of the Roman Catholic Church of California, it was bound to pay the interest to the beneficiaries, notwithstanding the cession of California to the United States. If the Republic of Mexico accepts the decision without appeal—and this may fairly be assumed—the principle will have been established that an eleemosynary or religious foundation is not rendered void by change of nationality on the part of the beneficiaries. This principle is not new. Generally, conquering or cessionary powers have respected private foundations in newly-acquired territory. But the particular application of the principle in the case of Mexico is unusual and interesting. The Hague tribunal finds that the mere relinquishing of all civic and political control of a given territory does not of itself terminate special fiduciary duties of a private or benevolent nature. Since the old trust, called the Pious Fund, is judged to be in full vigor, we shall have the curious spectacle of the Roman Catholic Church in California receiving a handsome annual subvention from the Government of Mexico. The decision of the Hague court will tend to give confidence to all donors whose gifts lie in debatable territory, while it should tend to make all governments loath to assume extraordinary fiduciary functions. A "Pious Fund" would have been an unseemly object for embittered diplomacy, and much more for war. The new court could have had no subject which better lent itself to calm and dignified deliberation, and the successful conduct of this first case will greatly enhance the prestige of the Hague tribunal.

---

When the coal operators requested the appointment of a "sociologist" on the Commission of Arbitration proposed by them, they seemed to show the wisdom of the serpent, for no one knows what a sociologist is, and the appointee might easily have been President Baer, Senator Platt, or Mr. J. P. Morgan. It remained for President Roosevelt, assuming for the nonce the functions of an academy of letters, to determine authoritatively what a sociologist is. It means for the purpose in hand "a man who has thought and studied deeply on social questions, and has practically applied his knowledge," or, in more concrete language, it means Grand Chief Clark of the Order of Railroad Conductors. If the operators counted upon a pale, professor-like person, they reckoned without a President who makes not only appointments but definitions. A sociologist, then, is a leader of a labor organization, and preferably a railroad conductor. No one can complain of this decision, for there is no scramble for the appellation in academic circles. Prof. Walter A. Wyckoff, whose first-hand experiments as a wage-earner all will remember, writes to the *Sun:* "My subsequent work has not acquainted me with this science of sociology, of which I know nothing, but with the much more definite field of the science of economics." This disclaimer is characteristic of the academic feeling of today. It appears, then, that the word sociologist was going begging when the President took it up, restored it to honor, and gave it to the railroad conductors of the land, whose opportunities for observation and thought on society and social subjects are exceptional, as nobody can deny. This restitution should assure the President a place among humorists, at least.

---

It is in keeping with the solid traditions of Massachusetts law-making that a bill for the incorporation of labor unions is to be discussed at the approaching session. There is an especial appropriateness, too, in the fact that the first serious attempt to fix legal responsibility upon these powerful but irresponsible organizations should be made in a State which strictly regulates the incorporation of capital. If the trade-union bill should become a law, it would simply show that the State of Massachusetts is determined to control all great combinations which affect the common weal, whether composed of capitalists and investors or of laborers. Naturally, the labor leaders see in the proposed incorporation "disadvantages without corresponding benefits," but then, nobody likes to be deprived of power and saddled with responsibilities, while if the objection raised by a Boston labor leader, that "where you have law you have litigation," were valid, we should be obliged to abolish all laws whatsoever. The discussion of this bill cannot but be salutary, and we trust that many other legislatures will follow the example of Massachusetts in this matter.

---

At first reading the press abstract of President Eliot's notable address given on Friday before the Connecticut State Teachers' Association, conveys the impression of an unwonted pessimism. He declares that our common schools have failed signally to cultivate general intelligence, as is evinced by the failure to deal adequately with the liquor problem, by the prevalence of gambling, of strikes accompanied with violence, and by the persistency of the spoils system. In fine, he believes that the schools have failed at nearly all points in their task of training their pupils for citizenship. Such an indictment from such a source will receive the most careful consideration, and yet many will feel that the apparent gloom of President Eliot's survey is not without rhetorical intention—that he hopes to shake the country out of a too great satisfaction with itself, and to win a more liberal and intelligent support for the schools. Certainly, the task which lies before the schools of educating immigrant children in Americanism is unprecedented and of appalling difficulty, and it may well be that some such extraordinary effort as that recommended by President Eliot may be necessary to meet a pressing emergency. Yet it will not do to hope more from the schools than they can give, more than they ever gave when our forefathers held education in almost equal veneration with religion. A trained intelligence may indeed check the potential drunkard, wastrel, and rioter, but education readily becomes the tool of the unscrupulous boss, the professional gambler, and the corrupt labor leader.

---

One "M. S. Quay, Chairman," has been caught violating a Federal law. Instead, however, of being haled into court and made to suffer the legal penalty of his misdemeanor, which, under the statute, is punishable by "a fine not exceeding $5,000, or by imprisonment for a term not exceeding three years, or both," he has been let off with a sharp lecture and a warning from the President. The law in question is the one forbidding any Senator, or Representative, or any Federal officer whatever, to solicit campaign subscriptions, either directly or indirectly, "from any officer, clerk, or employee of the United States." Quay had unblushingly set about assessing Federal employees in Pennsylvania. Having appointed them himself, he naturally considered them his own. What had the President to do with the case except to act as the clerk of the Pennsylvania Senator? As for a little thing like a law, that was, of course, only a joke to Quay. But his unlawful course was brought to the attention of the Civil Service Commissioners, and they asked the President to get the opinion of the Attorney-General on the scope and validity of the

statute, and to issue an order. This Mr. Roosevelt did on Saturday, notifying all persons concerned that the provisions of law as construed by the Attorney-General must be "obeyed and enforced."

---

This is excellent, as far as it goes, and the President's order is said to have spread joy among Federal employees in Washington and elsewhere. They feel that they have found protection against their oppressors. They can show the President's signature to all "assessment" callers, and quote his words to prove that every employee of the Government may "contribute or not exactly as he pleases." But we cannot help feeling that a good way to make the country believe that the law is to be "enforced," would be actually to enforce it in the case of a man taken red-handed, as Quay was. It is all very well to protect the clerks, but it would be better to punish the Senator. Quay in court, Quay fined $5,000, Quay, better still, imprisoned for three years, would do more for the cause of civil-service reform than the most vigorous language in President Roosevelt's vocabulary.

---

Expectations that, after the wholesale disfranchisement of the colored voters in the South, the whites would divide politically on more rational issues than the legacies of slavery and the war, and that what was left of the negro electorate would be treated fairly, seem far from realization in North Carolina. Although the operation of the new registration law in that State will reduce the colored vote to a negligible quantity, the bogey of negro rule is still dangled before Democratic eyes. A negro balance of power between a divided white vote is the form it has taken now; and therefore the ticket must be voted, as before, by the party label, and all agitation for needed reforms on which the Democratic party is not a unit must be tabooed, lest a growing white Republican organization should stimulate the negro to approach the ballot-box by way of the spelling-book. Meantime, extra-legal obstacles are being placed along that road. In some counties, according to one Democratic paper of the State, the registrars are excluding practically all the negroes; and one over-zealous board has earned the censure even of the Chairman of the Democratic State Committee by rejecting a negro preacher, who read and expounded the Constitution "beautifully," but who, in the writing test, spelled the word "divided" with an "e" in the first syllable. With such machinery in their hands, Democratic fear of negro domination is pure invention.

---

In the expressions of administrative disapproval of the "Lily-White" Republican movement in the South, there is evidently a deeper purpose than the holding of the negro vote in the North at the November election. Delegates to the Republican National Convention are to be chosen in less than two years, and Southern Republicans can be largely instrumental in nominating a President, if not in electing one. Hitherto the vote of the Southern delegations has been too often sought by the distribution of patronage and the bald expenditure of cold cash. The present method, if our surmise of its purpose be correct, is much better. In the only two appointments of importance made by the President in Alabama —the District Judge and the District Attorney—he has shown no disposition to buy political favor with public patronage. The Palmer and Buckner Democrats chosen for those positions were selected because of their recognized ability, and, as they are again within the regular Democratic organization, their appointment cannot be charged to an attempt to build up a white Republican party. With the other plan of increasing the number of white Republicans in the South the President has no sympathy, and his recent official announcement on that point, coupled with the further assurance of Surveyor Clarkson in a letter to the North Carolina negroes, ought to remove a false impression which has prevailed largely in the South. The white Republicans, in both Alabama and North Carolina, who thought they were pleasing the President by their course, should have known Mr. Roosevelt better than to have supposed that he would desert the educated and property-owning negroes left in the electorate by the Democratic suffrage laws, whatever the spoils-seeking whites of the South or the Grosvenors and Crumpackers of the North might think about it. There is political acumen, too, as well as justice, in the President's attitude. Despite the unfair franchise laws, the colored voters in the Republican party in the South outnumber the whites, and it would be a reckless Republican Convention which dared to disregard that strength of numbers.

---

In spite of general reports of a dull political campaign, the *Evening Post* published on Monday striking evidence that at least one class in the community is taking a deep interest in it. As the questions at issue are chiefly economic, inquiries were addressed to the gentlemen connected with the department of political economy in our leading colleges and universities, and the volume and outspokenness of the replies obtained from them are of great significance. On the subject of the Constitutional power of Congress to legislate directly against the Trusts, the answers reveal a becoming modesty. The professors disclaim any title to speak as Constitutional lawyers. Nor is there entire agreement among them as to the advisability of Congress exercising large powers of control, even if it possesses them. But on one point there is almost complete unanimity. Immediate repeal of tariff duties behind which the Trusts take refuge is pronounced to be the political duty of the hour. President Roosevelt's suggested plan of a tariff commission is treated with varying degrees of respect, but is, on the whole, roughly handled. "The alleged scientific, non-partisan tariff commission of experts is a humbug," writes Professor Daniels of Princeton. Nay, adds Professor Sumner of Yale, it is "an exploded humbug." Other professors speak of the plan with almost as great contempt and aversion. It is only a trick to "befuddle the public"; it is merely a way of "shelving the issue"; it is a "cloak," an "evasion," and so on. In view of the fiasco and failure which all previous tariff commissions present, it is evident that college opinion as a whole is not going to be caught by this mouldy corn. Will the President take heed?

---

The lack of discipline in the army is well brought out in the annual report of Judge-Advocate General G. B. Davis. With a considerably smaller force in service during the year ending June 30, 1902, than in the twelve months previous to June 30, 1901, there was a decrease of only 754 in the number of trials. One out of every twenty men in the service was tried and convicted, and this in the face of the repeated assertions of Republican orators and newspapers as to the saintly character of the "boys in blue" engaged in killing off the Filipinos. Gen. Davis's figures show that a pretty serious condition of affairs has existed. There were, for instance, 760 convictions for drunkenness on duty, and 477 convictions for larceny, in addition to several hundred others involving robbery or larceny or attempts to commit them. Seventeen soldiers were convicted of rape or attempted rape, nineteen of murder or manslaughter, and forty-six of intent to commit murder. No less than 1,081 soldiers were punished for desertion, 846 for absence without leave, and 263 for sleeping on post. A new crime added to the category is "disrespect to the memory of President McKinley," for which four men are languishing in jail, just as men are punished in Europe for lese-majesty. Finally, 2,645 were dishonorably discharged.

---

During most of the period under consideration the army has had an enlisted strength of about 70,000, exclusive of Filipino troops. In this connection the statement of an officer now on duty in the Philippines is of interest. His regiment, a new one, proceeded to the archipelago within eight months of its formation, composed mostly of beardless youths under twenty-one. The rainy season and the presence of cholera have made anything like strict discipline im-

possible. "The history of other regiments out here is simply degeneration, and I do not hope for any improvement in drill and discipline while in these islands." With officers talking this way, what will Secretary Root say? We suggest that he court-martial Gen. Davis for the publication of an outrageous libel on the army, in saying that one in every twenty of our mercenaries is culpable. No anti-Imperialist ever said so cruel and cowardly a thing as that, particularly in the middle of a Congressional campaign.

---

The proposed subsidy from the British Government to the Cunard Steamship Line has called out Sir Spencer Walpole in a strong argument in opposition to it. He shows, first, that it is not true that Great Britain has been losing her relative position in the ocean-carrying trade during recent years. Although she allows perfect freedom to foreign ships in her own coasting trade, as well as in her colonial and foreign commerce, her own tonnage entered and cleared at British ports has been, for a period of thirty years, almost exactly two and one-half times greater than that of all other nationalities together. If other countries had been outstripping her, it is probable that some signs of the fact would be exhibited in the returns of British commerce, which is free to the ships of all nations. But it is said that Germany is forging ahead at a great rate by reason of subsidies paid principally to the North German Lloyd. Sir Robert Giffen has taken the trouble to procure the correct figures. He shows that the profits of the unsubsidized portion of the North German Lloyd fleet, from 1895 to 1900, increased from 1,900,000 to 21,700,000 marks, or elevenfold. The profits of the subsidized portion increased in the same period from 1,200,000 to 1,800,000 marks, or by only 50 per cent. The subsidized portion is composed of ships running to eastern Asia and western Australia.

---

In the opinion of Sir Spencer Walpole, the very magnitude of British shipping makes a policy of subsidies impossible. If it were applied impartially and uniformly it would bankrupt the nation, but if it were confined to particular ships it would put their competitors at a disadvantage. "If, for example," says Sir Spencer, "a subsidy were given to exceptionally fast vessels sailing to New York, it would make it more difficult for other steamers, either with passengers or cargo, to hold their own on that route. For the sake of encouraging a service of some convenience and luxury, the subsidy would help to destroy a much larger and much more valuable industry." Moreover, he thinks that if subsidies were granted to the Cunard Company, the owners would rely on the Government rather than on themselves for the success of their line. They would fall into the habit of the captains of fishing-boats at the time when bounties were paid to them, of whom it was said that they went to sea to catch the subsidy, not to catch the fish.

---

There was reason enough for an Irish night at the opening of Parliament on Thursday. The Irish members cannot relish the general application of the Crimes Act and the imprisonment thereunder of several of their members, and naturally they took the first opportunity of protesting. In the form of their protest they distinctly scored. Mr. O'Donnell, lately out of his patriot's prison, succeeded in being suspended; Mr. O'Brien, by demanding in a session which is to include the Education Bill, the London Water Bill, the Indian Budget, and the Uganda Railroad, at least one day for the discussion of Irish affairs, got Mr. Balfour to deny the request because it came from the Irish party. So the first day was made to yield a very colorable case of British oppression and Irish wrongs. "Tay Pay" O'Connor contrived to be silenced, if not suspended, and the climax of the evening was reached when the free lance Mr. Healy claimed his privilege "as a native of Uganda," and so thoroughly scarified the Government for its Irish policy that his Ugandan seemed to reading members to be of the family of Montesquieu's satirical Persian, or of Goldsmith's Chinese "Citizen of the World." Nobody, the dispatches report, enjoyed the performance more than Mr. Balfour, and yet he can have felt only a tempered joy, since Mr. William Redmond's statement for the Irish Nationalists, that they must take the first opportunity of "hurling the Ministers from office," should mean that the Irish members are going to withdraw their eighty-odd votes from the Education Bill, which, with 750 amendments (nearly 600 of which are from the Opposition), was already reasonably contentious matter. If the Irish prefer the chance of upsetting Mr. Balfour to bringing the Catholic schools under state support, Mr. Balfour will find the margin of safety for the Education Bill distressingly small.

---

Chancellor von Bülow's attitude before the German Reichstag, as he pleads for reasonable grain duties, is very different from the manner of Bismarck in demanding support for a Government measure. And the milder tactics seem to promise smaller success than the old method of dragooning a majority. To the Chancellor's statement that prohibitive duties on grain and meat will prevent the negotiation of reciprocity treaties, paralyze trade, and discredit Germany before the world, the Agrarians reply in effect that they must have the duties reported by their committee, and that the Squirearchy must be first considered and its demands granted. Von Bülow's traditional allies have betrayed and flouted him, precisely as the ultra-protectionist Republicans humiliated President Roosevelt; and it is to be feared that the Agrarians are even less amenable to public opinion than our own Republican Bourbons. The personal intervention of the Emperor seems the only card unplayed. If that should be tried, and fail, the reciprocity treaties and the great canal scheme would go over indefinitely, and the Government would be forced to seek support elsewhere than among the Agrarians, to yield to whom, the Chancellor pointed out on Thursday, would be suicidal.

---

It was hardly to be expected that the Chamber of Deputies which passed the Associations Act would fail to support Premier Combes for enforcing it. So Friday's vote of confidence, which gained the handsome plurality of ninety-six, must be regarded merely as a formal expression of party loyalty. Later, when the question of authorizing and reopening the suppressed monastic schools arises, the concrete and difficult question will first be before the Deputies, who have so far voted only on the general principle. M. Combes, in demanding supplementary legislation against the religious orders, breaks out the signal of no compromise, and engages himself to pursue relentlessly his anti-clerical campaign. It may be doubted if he can long survive as the pronounced opponent of the Church in a country which, despite the present Radical-Socialist majority in Parliament, is still profoundly Roman Catholic.

---

The "rectification" of the Algerian-Moroccan frontier through the acceptance of the extreme French claims is precisely what might have been expected. It has been understood that, to the west and south of Algeria, France might make her own terms with the wild desert tribes and with the Sultan of Morocco, and that no other European Power would object to such extension of the French sphere of influence. Furthermore, the cession of the Tuat oases by the new treaty is the relinquishing of territory that the Sultan has neither governed nor possessed, and if the French gain control of the great caravan route to central Africa, they merely assume a useful function which no one has previously exercised. Accordingly, this accession of territory to the African domain of the French republic is without immediate significance. It opens possibilities of African trade, but then the French have shown little capacity for this form of commerce; and it brings somewhat nearer the time, still apparently distant, when the Moroccan question will become acute.

### *KILLING THE MANDARIN.*

Whether the President should or would have intervened forcibly in the late coal strike if the Governor of Pennsylvania had refused all military protection to the operators; whether (the protection actually extended having proved inadequate), had nothing come of the President's attempt at a peaceful settlement, he should or would have brought Federal troops upon the scene, or allowed the famine to drag on indefinitely—are questions which we shall not discuss. He chose, if we may use the expression, to exercise his good offices rather than his office. The *modus vivendi* which has resulted is wholly salutary in itself; but, so far as we know, this fact is due to the admirable firmness of the operators, for we are quite in the dark as to the arguments or entreaties addressed to them by the Administration after the futile conference of October 3. As in the Debs case, it has been made manifest that of some strikes *national* cognizance will be taken; otherwise, that precedent has been neither followed nor extended. Nor has anything been done to assure "the people of our country," in Mitchell's sovereign phraseology, that the same situation may not confront them hereafter if those whom he calls in the same breath "our people" are so minded. Indeed, in his patronizing letter to the President of October 16, Mitchell broadly intimates that no Federal force, however large, could have stamped out intimidation and persecution in the coal regions; in his own words, "a hundred thousand troops could not have enabled the operators to start their mines." This, though couched in the past tense, is intended to be prophetic and admonitory, with a confidence derived from experimental gauging of the time-fuse of Presidential resolution—five months at least.

Taking leave of these considerations, we invite attention to the moral aspects of the late strike in relation to the widespread distress deliberately engendered by it. At no stage was the miners' controversy with the operators alone, in the hope of constraining them by loss of profits to accede to redress of grievances and recognition of the union; just as at no stage did the striking miners depend upon their savings in the waiting game with capital. Their expectation of success lay solely in the cornering of an article indispensable to the life and trade of the country, and in making the need of it so acutely felt as to rouse a popular clamor for surrender at any cost of principle. The actual hardship and suffering and panic apprehension produced in the Eastern section particularly were watched by the strike leaders as the mariner watches his glass, and with growing exultation, inwardly; while their outward attitude towards these calculated effects of their machinations was one of pure detachment and irresponsibility—of hypocritical regret that the operators could be so unfeeling.

If we ask ourselves how any body of men professing to be Christians could, for no matter what grievance or injustice, make the misery of a community of millions—embracing the very poorest, and all innocent—a stepping-stone to the relief desired, we shall find one answer in the remoteness of the scene affected. There is a French proverbial expression, originating in an inquiry—fathered upon Rousseau—"Which one of us, if the pressing of a button would take the life of a rich mandarin in China, and make us his heir, would refrain?" In other words, the victim of our action being but the shadow of a name, and we not being in his accusing presence and witnessing his death, we press the button, kill the mandarin, and pocket the inheritance—with a clean conscience. Mitchell was at no time confronted by hospital managers imploring coal to keep their patients alive; by teachers beseeching him not to turn the children adrift and stop their training; by the poor whose occupation was menaced or destroyed; by the well-to-do confronted with conditions equivalent to poverty. In detail, such sights might have made some impression upon him, while in the mass and in the abstract they gave him only satisfaction. That way lay his advantage; he knew it and counted upon it.

The heathenishness of this is not peculiar to Mitchell or to other strike leaders. The force of a proverb lies in its universal applicability, and we are all capable of killing our mandarin. As a nation, we are now sustaining practices in the Philippines which, from beginning to end, have no moral justification whatever. Both the ordinary warfare against the innocent inhabitants, and the hideous forms of torture to which the water-cure belongs, are going on—have been going on for four years—because our Filipino mandarin is eight thousand miles away and completely invisible from this continent. For this reason, and because we expect to enjoy the swag of national aggrandizement and world-importance and commercial profits, the American conscience is easy. The latest handbook for American citizens, Dr. W. A. Mowry's 'Territorial Growth of the United States,' does not formally couple the acquisition of the Philippines with the manifestations of "the special favor of Divine Providence towards this country" from the Louisiana purchase to "the saving of Oregon from the grasp of England"; but this must be an oversight, for it fully justifies that acquisition. "Without doubt we need a large increase in our foreign trade; in other words, we want a much larger foreign market. Most certainly the possession and control of the Philippine Islands will be of great advantage to American commerce."

Had Mitchell, to return to him, actually appeared at the asylum or hospital or school door, dismissing the inmates in pursuance of his design of coercing the operators, it is conceivable that he might have encountered some resistance, or at least reprobation of his inhumanity. It would have been entirely in keeping with strike methods if he had done this very thing vicariously, by ordering a boycott of every institution, public and private, using coal that had issued from the mines since the strike began. This will seem anything but a monstrous supposition to those who are familiar with the condition of the mechanic trades to-day, with the chronic uncertainty fostered by the walking delegate, the cessation of work when non-union labor enters into any part of the job, the fine exacted before the construction is allowed to proceed, and the thousand and one modes of petty tyranny practised upon men who thought themselves free, by men who pretend to be free. In all these invasions of liberty we must not seek for the agent; we must recognize the Strike Power, a creature without soul, conscience or bowels of compassion, which consistently involves in its ruthless warfare both the unoffending and unseen members of society not a party to the immediate quarrel, and, by a forced tribute to its campaign chest, the equally unseen and unrelated unionized craftsmen who make up the federation of labor. To each his suffering.

We may set it down to a lack of imagination that this iniquity is not regarded in its true light by the American people. But we must have patience. Time was when men needed tales like 'Uncle Tom's Cabin' or collections of horrors like its 'Key' to understand the real nature of slavery—they could not deduce it from the bare fact of absolute control of one human being by another. And to-day the national imagination has only half grasped the essence of protective tariff legislation, though it has for forty years seen measure after measure framed under its very eyes, with all the clash and compromise of greedy interests, all the secret interpolations—like the Dingley tariff rate on anthracite coal—all the juggle of conference committees. The finished product of such a grab-game we still dub science and wisdom and sanctity—till greed again orders an overhauling.

### *THE REAL PROBLEM OF FUEL.*

Prof. Edward S. Morse, in his interesting book, 'Glimpses of China and Chinese Homes,' describes the fuel of the poor class of Chinese. Charcoal is used only by the well-to-do; for the poor, a pile of straw and twigs laboriously gathered from the roadside represents

the woodpile and coal-cellar of Western civilization; the cooking stoves and utensils are contrived to utilize every particle of heat emitted from the light material. "In our great country," declares Professor Morse, "with its long streaks of Oriental blindness and stupidity in not enacting and enforcing proper laws for the preservation of the forests, it will not be many generations before able-bodied Americans will be seen picking up dead leaves and dried pods along the road in order to cook their dinners." This prediction has had startling verification in recent days, when the wealthy have been sacrificing old shade trees, the poor of this city carrying away the splinters and débris of the subway construction, and a large portion of our Eastern population using various makeshift substitutes for the convenient anthracite. This recent experience confirms sensationally the truth fully realized by economists since Jevons, and by acute observers like Professor Morse, that the fuel supply of the world is limited, and the coal supply relatively near exhaustion. The lesson of economy enforced by our recent conditions of panic may thus prove one of the most important teachings of the strike.

European nations have already learned this lesson, and it is instructive to recall that a coal famine in Europe, while it would cripple the great industries, would hardly touch the average household. Such general distress and potential panic as lately loomed before the American public could not be brought about in France, Italy, or Germany by any conflict of mine owners and laborers. The European family is not upon the Chinese basis of burning rubbish, but it observes the strictest economy of fuel. Coal is used only by the moneyed classes. The poor burn wood sparingly (in the cities the old paving-blocks are a valuable resource), briquettes compounded of coal dust (generally wasted by us), pitch, and clay; artificial and natural peat—and all these in a great variety of convenient and compact forms. They not only use in general wood and vegetable fibre, of which a constant natural supply may be expected, but they burn just enough fuel to do the necessary cooking and heating, and no more. Reducing the case to terms of domestic economy, European housewives and servants are always making fires and letting them go out, while American housewives and servants are always keeping fires up.

It is not to be expected that we should all at once attain that Italian dexterity by which three burning twigs under a pan are made to last precisely the making of an omelet or the cooking of a chop, nor can we readily assume that German frugality which, in a climate quite as rigorous as our own, heats a room only moderately, and only when it is occupied. We are too near fire-worshipping ancestors who burned some cords of wood a week, and we are ourselves too habituated to over-heated houses for these sensible economies. But in spite of this tradition of wastefulness, the failure of the anthracite supply has shown us unmistakably that these thrifty people are right and we are wrong. Our need has brought many who never before gave a thought to the subject of the old-world practice of burning fuel only when it is actually needed. The kitchen range, that devourer of coal, has been disused in many families in favor of the gas or oil stove. It is to be hoped that the practicability of a system which lights a fire only when the food is ready for cooking, and puts out the fire when the cooking is done, will commend it to many long after the coal famine is past. If the price of anthracite should be high through the winter, as is likely, that might render us an indirect service in prolonging the experiments with substitutes for coal, and in teaching us to keep our houses at a temperature conducive to hardiness and health.

The great possibility of reform lies in sparing domestic habits. When hard coal is ten dollars a ton or so, many will study the mysteries of their furnace and kitchen range, and it will be found that with careful husbanding of heating and cooking fires, from a quarter to a half of the fuel formerly consumed can be saved. Once this economical mind prevails, invention will come to the aid of thrift. Already manufacturers and chemists are studying briquettes and the coking of peat. It will be generally perceived that in thickly settled communities there is a tremendous economy in turning coal into gas for the common use over burning it individually in ranges. This will put off the day that Jevons foresaw, when the coal supply will give out. The recent makeshift of burning kerosene oil upon porous bricks should open up the whole question—so far treated chiefly from the railroad point of view—of petroleum as domestic fuel. Finally, great relief is to be anticipated from the full utilization of water powers, tidal and fluvial, for the production of electricity. We see only the beginnings of these possibilities, but in France there was recently held the second "white coal" convention, the white coal *(houille blanche)* being the poetical name for the Alpine glaciers, which are the great source of hydraulic and, vicariously, of electrical energy. The discussion at this meeting was conducted not by visionaries, but by shrewd manufacturers who had a practical stake in the proposed transmission of heat and power.

But such speculations are for the distant future; for the present it is sufficient if we read the plain teaching of the strike, and realize that we are past the time of a pioneer profusion in fire-making, and that now a rational use of fuel must prevail, unless we prefer to learn by some still more bitter experience.

## *SECRETARY SHAW ON THE STUMP.*

Secretary Shaw arrived with the early frost in Indiana on Thursday. The unfeeling dispatches say that his speech at the Oakland City fair-grounds had been "widely advertised," but that "the railroad trains brought very few people," and that "one of the smallest crowds of the campaign was out to hear him." Under those circumstances, the Secretary naturally, or innocently, made "apathy" the chief subject of his story. Over the heads of the Hoosiers who were present he rebuked those who had not come out to hear him explain the importance of electing a Republican House of Representatives. He frankly confessed his "surprise" at the slight interest shown in his stumping tour.

It might occur to the Secretary, we should think, that he, as a member of the Cabinet, had been making himself a little too common, not to say cheap. As ornaments of special occasions, as delegates of their chief to utter in his name the correct nothings at civic or commemorative gatherings, Cabinet ministers are rightly in demand, and their presence lends fit grace. But when a political campaign is on, there are certain delicacies which they should observe. Neutrality is not expected of them. They are frankly of the party in power. But their honorable position demands that their public deliverances be dignified, and not of a sort to be bellowed from every stump. A Cabinet member in rough-and-tumble debate with objectors in the gallery is not a pleasing spectacle. It is eminently proper, and desirable as well, that the President's official family should expound and defend the policy of the Administration. Mr. Root's few speeches, Attorney-General Knox's careful and able statement of the intentions and hopes of the Government in the matter of regulating Trusts, the promised exposition of our foreign policy by Secretary Hay—these are examples of the fit and traditional participation of Cabinet members in a political campaign. But beyond such infrequent and weighty addresses, danger lies for them. It would be a public calamity were any of the President's Secretaries to make himself so weariful and hackneyed a rounder of the party stump as, for example, Mr. Depew.

The versatility of Secretary Shaw as a campaign speaker was newly illustrated at Detroit on Saturday evening. He took up the subject of our foreign trade, and found it to be in such a flourishing and progressive state as to suggest the advisability of subsidies from Congress to help it along. To the objection that this policy would impose a burden on the taxpayers in behalf of a private in-

terest, he replied that "the drain on the Treasury would be infinitesimal." Under the Senate bill, not more than $1,200,000 can be paid any one year until more ships are built, and this would be the merest trifle in comparison with the amount we pay for ocean freights now. But when more ships are built, 95 per cent. of their cost is paid for labor, "and I have never yet raised my voice," he continued, "against expending the public revenues, which come from the rich and well-to-do, in such way as throws 95 per cent. of it to labor."

This economic absurdity is gravely propounded by one of the chief officers of the Government at a time when socialistic ideas have received a dangerous impetus in our political life in consequence of the coal strike. The essence of Socialism is, that the Government ought to appropriate the public money so as to help citizens to earn their living. There are infinite varieties of method by which the Socialist philosophers seek to accomplish this end. The one most commonly advocated is that of public workshops, as, for instance, shipyards where a certain number of workers can always be sure of employment at good wages. Government coal mines and Government steel factories would naturally follow. Public bakeries would perhaps be more desirable than any other channel of state aid to industry, because the price of bread touches society more closely that that of any other article. Now observe how much stronger is the argument for subsidies to bakeshops than to shipyards.

Mr. Shaw says that 95 per cent. of all the money spent on shipbuilding goes to labor. Of course he includes in the 95 per cent. the materials of which the ship is composed, as well as the labor employed in putting them together. He means that only 5 per cent. of the whole sum expended goes to the builder himself. But (says the Socialist), according to our plan, labor will receive the full 100 per cent. Why should the capitalist receive anything beyond wages of superintendence? Besides that, who is to guarantee that under the capitalistic plan he will not take 10 or 15 per cent. instead of a beggarly 5 per cent.? Is it not evident that in a joint debate between Secretary Shaw and Karl Marx, or some acute disciple of his, the latter must get the better of the argument? The disciple of Marx would probably add, sneeringly, that any man to whom Congress should vote $100,000 could well afford to expend $95,000 of it for labor.

The Secretary declines to discuss the merits of the bill now pending in the House, but gives the weight of his influence to a different measure not yet reported in either branch of Congress—a measure for subsidies for ships running to "South American countries and the islands adjacent thereto." The only islands adjacent to South America which supply any trade, or are capable of doing so, are the West Indies. According to the Secretary, we are destitute of facilities for sending our goods to those countries, and we need ships for the purpose, or we need better and faster ones than we now have. Argentina, he tells us, exports $120,000,000, and takes only $12,000,000 from us. Brazil's imports and exports are in about the same ratio. Of the imports of those countries only a very small part is carried under our flag. "When a manufacturer desires to test the South American market," he continues, "he must first ship to Europe and then to South America, or he must send in sailing vessels or charter a tramp."

Chartering a tramp is no doubt disgraceful, especially in these days of large ship combines, but we venture to suggest that since all the shipping in the world is at liberty to carry goods from North American ports to South American and West Indian ports, and since large numbers are now so employed, the smallness of our exports to those countries cannot be due to a want of facilities of transportation. Possibly one cause of it may be the failure of the Senate to ratify the treaties of reciprocity with those countries negotiated by President McKinley. Nor is any reason apparent why the ships that bring our imports from those countries should not take return cargoes of equal value if we offer them our goods as cheaply as other nations do. We think, however, that our merchants and manufacturers are making very creditable gains in that part of the world, and that they will continue to make satisfactory progress in the future without any adventitious and socialistic aid from the public purse.

Secretary Shaw seems to have been rummaging the records of the Harrison Administration, when Secretary Blaine was working over the problem of South American trade, and trying to persuade his countrymen that the money we spent for foreign freights was impoverishing us, being virtually cast into the sea. We have since gone on wasting our substance in that reckless manner until we have grown to be the richest nation in the world. What can be the reason why we have not been sent to the poor-house in consequence of this drain upon our resources? Evidently the reason is that the price we paid for freights was worth the money. And this might have been reasonably assumed, considering that we are the universal Yankee nation and are proud of knowing on which side our bread is buttered.

## *THE DANISH ISLANDS TREATY.*

The treaty for the sale of the Danish Islands in the West Indies to the United States for the sum of $5,000,000 is now under consideration in the Landsthing, or upper house, of the Danish Parliament. The treaty was rejected once by that body, but the time for consideration was extended for one year. It may be inferred that this extension of time was made at our instance, since the Danish Premier, Mr. Deuntzer, in the debate last week, said that if he did not get a favorable vote now he should ask for a further prolongation, "provided the United States desired it." So it appears that we are in the undiplomatic position of asking a foreign nation to give more time, not to us, but to itself, to consider a pending treaty. This might be considered by Denmark as a hint from us that she did not know her own mind, or that, if she did not finally consent to the sale, we should take the islands by force. Indeed, the latter threat has been proclaimed in a portion of the press and by word of mouth, although, of course, there is no ground for such a charge of "criminal aggression" on our part.

All of our proceedings in the matter of the so-called "Christmas Treaty" have been undiplomatic. The man Christmas, who started the negotiation, is an ex-lieutenant of the Danish navy who had been court-martialled and dismissed from the service. He had become a *chevalier d'industrie* at large. He conceived the brilliant idea of selling the Danish islands to the United States, with the expectation, of course, of getting a commission out of the sale in some way. He came to Washington in December, 1899, with this object in view. Imperialism was at that time more rampant in the United States than it is now. Christmas managed in some way to get an interview with President McKinley, to whom he broached the subject of the purchase of the islands. Mr. McKinley referred him to Secretary Hay, and the latter gave him a letter of introduction to the American Embassy in London.

This was the first undiplomatic step taken, and the first one ever taken by the present head of the Department of State. There was a Minister of Denmark in Washington and a Minister of the United States in Copenhagen. Both of them were ignorant of the fact that a momentous negotiation was going on behind their backs, and that it was conducted by a common adventurer. Since these facts became notorious, efforts have been made to show that the negotiation was merely initiated by Christmas, but was not carried on by him. This is an error. Efforts were made to shake him off, especially by the Danish Government, but they were unavailing. He clung to it like a burr on a fleece. To him it was a golden fleece, and nothing could make him relax his hold.

Christmas accompanied Mr. Henry White, our Secretary of Legation at London, to Copenhagen. The Danish Minister of Foreign Affairs was astounded

when the nature of the business was laid before him by a discharged officer of his own Government. He received Secretary White with the courtesy due to his station, but refused to have any dealings with Christmas, or even to admit him to his room. Christmas had the audacity to appeal to the Premier and demand admittance to the Foreign Office as a party to the business in hand, and, by using Secretary Hay's letter, he actually carried his point, and not only joined in the negotiations, but got himself recognized by the Danish authorities as a party to the future conduct of the business.

How Christmas made use of this authority was disclosed in the Richardson investigation ordered by the House of Representatives last spring. He persuaded the Danish Ministry and Parliament and the Danish public that money would be required to carry the treaty through the Senate at Washington. This was an infamous lie, but it was believed in most of the countries of Europe to be true. People were accustomed to read of the corruption of some of our city governments and State legislatures. They were familiar with the names of Croker, Quay, and other political bosses, and were prepared to believe the worst things that could be said of our public men. Yet the Danish Government spurned the thought of bribing anybody to vote for the treaty. If Christmas had received any money for the purpose of putting it through the Senate, he would have pocketed it, of course. But he received not a penny.

The Richardson investigation in the House disclosed nothing except the method by which the treaty had been set on foot, but that was a revelation in itself. The facts did not become public until after the treaty had been ratified. If they had been known before, it is most likely that the Senate would have rejected it, not with the intention of rejecting the islands, perhaps, but to prevent the Christmas scandal from becoming a part of our national archives. The opportunity to do this is reserved for the House of Representatives, which can refuse to appropriate the money. It is sometimes necessary to break a limb that has been badly set, in order to make a good job and enable the patient to walk properly. Something of that kind would seem to be necessary here.

That strong pressure has been brought to bear on the Danish upper house to accept the treaty appears by the late dispatches. In the debate last week we read that "the Premier said he had received the written promise of the United States Government that, after the cession, free imports from the island into the United States would be granted." It would be interesting to know who promised that Congress would vote for free trade with those islands, when President Roosevelt, with his utmost efforts, could not get a bill passed reducing the duties on Cuban sugar 20 per cent.

## *SHALL WE RAISE A STATUE TO SHEPHERD?*

The expenditures for public works in the District of Columbia during the last thirty years, and, within the past year, the public approval of the magnificent plans of the Park Commission for the improvement of Washington, emphasize the desire of all our citizens that the visitor to the national capital shall see in it the expression of our highest aspirations. The lessons to be taught by its statues and monuments are not of merely local interest, but so deeply concern the nation at large as to merit attention throughout the land. The movement now being vigorously pushed to give a place to the late Alexander R. Shepherd among the chosen few whose public services are to be commemorated by a monument or other memorial, should therefore command general attention, especially in view of the great respectability of its promoters. One feature of the movement is especially fitted to excite sympathy. History has frequently to reverse the judgment pronounced upon a great man by his contemporaries, but one can hardly find so rapid a transition as that from sweeping condemnation to unqualified adulation within the lifetime of one generation, and it would be very pleasant to see historic justice executed so rapidly as it would be in the present case were the transition justified by the facts.

Were the question merely one of personal merit or demerit, we might perhaps inquire whether it were not better to follow an order of preference in the erection of our memorials, and whether statesmen like Jay, Madison, or Clay, and financiers like Gallatin or McCulloch, might not take precedence of one whose claims are merely local. But the great question in connection with such a civic memorial as this is, what moral lesson will it teach our youth? As the latter look at the statue, their question will be, "What is there worthy of imitation in the achievements of him whom it commemorates?" In answering this question, there is no necessity of our discussing any disputed facts in Shepherd's life. The change of sentiment to which we have referred has not risen from any discovery of new facts, but only from a different interpretation of those facts on which Senator Allison's committee pronounced its verdict. In stating who Mr. Shepherd was, and what he did, we shall confine ourselves to facts which all must admit.

In the Washington city directory for every year through Mr. Shepherd's governorship, including that of his downfall, may be found the following entry:

"SHEPHERD, ALEX. R. & CO., Plumbers and Gas Fitters, 910 Pa. Ave., n. w."

In stating this, we do not mean to imply that he was but a commonplace plumber. That he was much more—that he was a man of extraordinary activity and vigor—may be inferred from the finding of the Congressional Committee that the Vice-President of the Board of Public Works was practically the Board, and exercised its powers as absolutely as if no one else had been associated with him. Probably the same thing might have been said of the Legislature, and, in fact, of the entire District Government. Yet he had no business experience or training other than that of the head of an establishment like his, and such as he had acquired as an enterprising house-builder. With all his vigor, the results show that Shepherd was neither an administrator, an engineer, nor a financier. Had he been an administrator, he would have foreseen the results of his plan of letting out contracts for work to the amount of millions of dollars, without public competition, to a thousand different men to be selected by himself, at prices fixed by himself so as to insure the best of work with a reasonable profit. That the same facilities for evasion and for imposing bad work on inspectors existed under his plan as under any other, that the main difference was the greater chance for profit to be made under his arrangement, that every contract he let was a valuable franchise of which the possessor could readily dispose under the guise of subletting, and that the work would finally be done by those who would undertake it at the lowest rates, he seems not to have foreseen. Had he been an engineer, he would have seen the necessity of not commencing any piece of work until detailed surveys were prepared, showing exactly what was to be done in every street improvement. Had he been a financier, he would have seen the necessity of keeping a rigorous check upon expenditures and incurring no unauthorized indebtedness. Being none of these three, he proceeded to execute great public works with preparations more like those he would have made for the erection of a house than those required for his actual purpose.

The result hardly needs to be told. It is written in official documents. It is fresh in the memory of all who then lived in Washington or were connected with the Government. In the spring of 1874, when the Congressional Committee made its investigation, there was opened up from the first step a scene of confusion which is, we believe, without a parallel in the municipal history of this or any other country. Under authority to expend $6,000,000, the estimated or supposed expenditure had amounted to about $19,000,000, or more than three times that authorized. But this was a purely nominal amount. Multiplicity of contracts, the confusion of accounts, and the entire absence of order from begin-

ning to end, were such that the committee had to acknowledge its inability to get to the bottom of the affair, and recommended that the subject should be considered by some other authority. When this was finally done, the claims were found to be much greater than the total of the nominal amount. And this immense expenditure had been incurred in the short space of three years, and for a city of hardly more than 100,000 inhabitants. Indebtedness was being piled up at the rate of $300 or $400 per annum for every family in the city, with no immediate prospect of its cessation.

Commissioner McFarland, in a recent address stating the reasons for the proposed memorial, condenses the public services in question into a single sentence so happily that we can not do better than quote him:

> "Governor Shepherd, chiefly as a member of the Board of Public Works, in an incredibly short space of time, ploughed up the city so as to make necessary and inevitable that the plans of George Washington would be carried out."

The first thing to strike the reader of this would be that the same thing might be said of an invading army; the main difference being that in that case the ploughing up would have been done by cannon-shot rather than by spades and ploughs. But the final outcome might well have been the same. The fact is, that the crisis was such as to make it imperatively necessary to stop the career of the great actor in the affair. If he were allowed to go on spending ten or fifteen million dollars a year in this manner, where would be the end? The volume of indebtedness already accumulated was such that it was impossible for the city to bear it alone. Congress was obliged to come to its aid by assuming thereafter one-half of the municipal expenses. Through this help, and the adoption of rational methods, Washington was made what it is to-day.

We now reach the heart of the whole affair. From one point of view the position claimed for Shepherd may be that of one who voluntarily sacrificed himself to attain a great and good public end. We may suppose that he was profoundly struck with the indifference of Congress to the condition of the city, and the seeming difficulty of awakening the nation to a sense of its duty toward its capital. He seemingly saw but one speedy way of making Congress do what it ought to do, and that was to create a situation which would compel it to act, even though he sacrificed himself thereby. From this point of view, the more reckless the expenditure, the greater the destruction, and the more intolerable the situation, the more likely would be the attainment of the end in view. He himself might be condemned, but Washington would become what it ought to be, and posterity would praise him for what he had brought about. Whether these were the considerations which moved him, we do not pretend to decide. We leave that to the promoters of the scheme under consideration. But this is what seems to be implied in all the utterances and in all the proceedings when interpreted in connection with the facts. In no other sense than this was Shepherd the author of the Washington of to-day. How else can we interpret Commissioner McFarland's claim that he made the improvement of the city necessary and inevitable? And the question which we ask is, Is this the example which we are to show to our posterity to teach it a great lesson of national policy?

We commend another question to the very respectable movers in this scheme. Will it be possible to cleanse the proposed monument from all taint of association with the safe-burglary conspiracy? It may be admitted that no proof was or can be adduced showing that Shepherd knew of this nefarious plot; the fact being that the case was never brought under judicial investigation, owing to the burglar being released on straw bail, and never again heard of. But that a burglar was suborned to break into a safe of the District Government, take books out of it, and carry them to the house of the principal prosecutor, and that the plot was hatched by, or with the cognizance of, an official of the District Government, was established about as certainly as any facts well could be from the detailed accounts of the affair which appeared in the public prints.

## THE THREE-YEAR COLLEGE COURSE IN NEW ENGLAND.

BROWN UNIVERSITY, October 14, 1902.

With the beginning of the present academic year, Harvard College formally offers the degree of Bachelor of Arts at the end of three years of study. This important step, one of the most important in the history of higher education in this country, is no sudden move, but the latest of a series of steps reaching back over the history of the University for a number of years. Nor is the possibility of obtaining the degree in three years now for the first time held out. The catalogue for 1901-'02, embodying the practice of some years, gave notice that the degree might be obtained in three years, provided the student completed the requisite number of courses with such grades as would entitle him to graduation *cum laude*. This year the requirement of *cum laude* rank has been removed, and the degree is now open to all students in three years on the same terms, so far as scholarship is concerned, that it has hitherto been obtainable on in four.

While the action of Harvard in this matter is again in advance of the other New England colleges, there are significant indications that corresponding action may before long be taken elsewhere. The new collegiate department of Clark University, opened this month under the Presidency of the Hon. Carroll D. Wright, offers a three-year course to all comers, but with what is known as the group system instead of the elective system. At Brown, while a three-year undergraduate course is not yet offered, a regulation by which the degrees of A.B. and A.M. may both be obtained at the end of four years (provided a somewhat higher rank in certain extra courses be secured than is otherwise required) went into effect this year. Boston University offers the degree upon the completion of 120 semester hours, without limitation as to the number of years; and Dartmouth, which requires 122 semester hours, does the same. At Tufts the degree has, since 1893, been obtainable in three years by those students who received an average grade of B in the work of the 128 term hours required. At Bowdoin it is possible for a student who enters with three term courses to his credit, and who pursues in college five courses a year, to take his degree at the end of three years. At Amherst the student must have two term credits at entrance, take six courses each term (besides required work in declamation, debates, and hygiene), and maintain an average standing of "C plus." Amherst also allows the degree to be taken in three and one-third years, leave of absence being granted for the remainder of the fourth year, while at Dartmouth an appreciable number complete the course in three years and a half, using the surplus time in one of the professional or special schools. At Yale it has for some years been possible to obtain the degree in three years by completing satisfactorily the required number of courses, anticipation of college courses at entrance being allowed.

A further examination of the usage, or rather permission, of these different institutions discloses a situation of considerable educational interest. At Harvard the movement towards the three-year course has been accompanied by a gradual reduction of the number of courses required for the degree. The 21 courses required in 1880-'81 have been reduced, first to 20, then to 19½, then to about 18½, and finally to 17½, while this last figure may in practice be reduced to 16 by the anticipation of English courses at entrance. Further, the abolition of the requirement of a higher grade of scholarship on the part of three-year students than was demanded of those who had chosen the four-year term, puts the degree within the grasp of the average student in three years. Harvard, in other words, has now a bona-fide three-year course, unaccompanied by conditions tending to make its pursuit less free or more onerous than were the conditions which attended the older plan.

None of the other New England colleges, except the new institution at Worcester, has yet gone as far as this. The so-called three-year course, where such exists, is simply the old four-year course completed in three years, with the help, often, of permitted anticipation of courses at entrance or allowance for summer work, but with the additional requirement, in most instances, of a higher grade of scholarship on the part of the student who chooses the shorter time. It is not surprising, accordingly, to find that elsewhere than at Harvard the number of students availing themselves of the privilege of shortening their course is very small. At Yale, for example, only two members of the present senior class are reported as having attained senior rating after two years, while since 1886 but six students have graduated in

three years. At Tufts thirteen students have graduated in three years since the adoption of the plan in 1893, while as many more have taken the master's degree in four years, as a few seem likely to do at Brown. At Wellesley one student of unusual maturity and ability has taken both the A.B. and the A.M. in four years, and a member of the present senior class will, it is said, probably obtain the bachelor's degree in the shorter term from having entered in advance of the admission requirements in modern languages. For five or six years past an occasional student of exceptional power at Boston University has taken the bachelor's degree at the end of three years, while "probably three" students are reported to be now planning a three-year course. At Dartmouth, where there is said to be "no thought of shortening the college course to three years by a reduction of the number of courses required for a degree," not more than two men a year take the whole course in three years.

At first sight, this showing might be interpreted as an indication that the demand for a three-year course has been overrated, and that, even with such a course offered to them, the great majority of students, without regard to aims or financial means, manifestly prefer to spend four years in study for their degree. Such an inference, however, seems hardly warranted. With the exception of Harvard, where the requirements for the degree have been steadily reduced as the standard of admission has been raised, the three-year course, as has been said, is only the four-year course taken in three years. Precisely as much work must be done in the one case as in the other, only with a difference of a year in the amount of time spent upon it. That the average college course can thus, with profit to the student, be compressed at both ends, is at least questionable. Not that the average undergraduate at present works too hard; on the contrary, the oft-noted lack of robust intellectual interest among college men in the East to-day constitutes one of the gravest menaces to the standing and usefulness of many of our older institutions. But the four-year course, however variously contrived, is nevertheless a unit in which the order of subjects is determined, not only with reference to the total quantity of work to be accomplished, but also, and very considerably, with reference to the amount of time to be spent; and to attempt to do in three years what has been carefully planned to be done in four is seriously to disturb the logical arrangement of studies, and to bring into juxtaposition subjects which hitherto it has been deemed wise to keep somewhat apart. Further, the increase in the number of different subjects which must be pursued at any one time, under the compression plan, tends to work intellectual confusion in the average student, and so far to scatter his effort over a variety of topics as to make difficult the doing of good work in any of them. Few mature scholars would care to pursue even so many as four or five separate lines of study—say mathematics, a foreign language, history, chemistry, and psychology—at the same time, and it is not surprising that college students as yet show no great eagerness to take up six or seven. At Tufts, for example, the student who would complete his course in three years must carry a programme of over forty semester hours a year—a task which only those of exceptional ability are capable of performing; while at Wellesley it is frankly said to be "almost a physical impossibility" for a student to take the amount of work required for the degree in three years.

It seems clear, therefore, that, with the exception of Harvard, where the principle of fewer courses and greater content in each course prevails, the arrangements now somewhat widely in vogue in New England are hardly more than intimations of the kind of three-year college course which has of late come to be strongly advocated. Irrespective of the merits of the case, the demand for a course of study which shall lead to a first degree in three years is, obviously, not merely a protest against the amount of time which the present college course requires, but a criticism as well of the course itself as at present constructed. It is urged that the requirements for the degree are excessive in both variety and amount, and greater than preparation for business or professional life necessitates. To yield to the demand, consequently, involves something of what has been pointedly called the "degradation" of the bachelor's degree from the plane to which it has been, in the course of years, exalted. Clearly, then, the mere permission to do, if one can, four years' work in three, even though unaccompanied by special requirements as to scholarship, will not be regarded as fully meeting the case; it will still be insisted that the volume of work is too great, whether the period be three years or four.

The solution of the problem of a three-year course seems thus to depend upon the ability of the college to frame such a course out of the educational material at its disposal. The college must give up the notion that any existing four-year course can, with a little pruning and a good deal of compression, be made to work well enough in the new conditions, and, instead, must address itself to the making of a new programme, which, while demanding less time in years, will still offer to the student the substantial elements of a modern liberal education, and give opportunity for at least as sufficient a preparation for professional or business life as is commonly afforded now. Further, the college must make this provision for all students, not simply for such as have special ability or unusual powers of application; it must offer it as distinctly the kind of education which society now needs, and not as a concession to such as are poor or in a hurry. If it shall prove possible to do this successfully, the fear lest in the process the degree shall be "cheapened" will probably disappear, and the new course shortly be held in as high regard as the old. The problem is certainly one of the most vital with which educational reconstruction has now to deal.

WILLIAM MACDONALD.

## THE INFLUENCE OF LAWS ON LEGISLATIVE OPINION.

LONDON, October 7, 1902.

That public opinion is the parent of legislation, is an important truth which is now so generally recognized that it passes for a truism. That laws themselves are in many countries, and notably in modern England, the creator of that public opinion which may be called legislative or law-making public opinion, and which leads in the long run to fundamental and even revolutionary changes, may sound a paradoxical assertion. My aim in this letter is to justify this paradox and to show the importance of the truth which it embodies.

Laws are often the creator of legislative public opinion; they gradually create, that is to say, a state of feeling which in its turn favors legislation of a particular character. It is not hard for any one who watches the course of legislative changes in England, to understand how it happens that an Act of Parliament may greatly affect public opinion. Statutes are more often than not passed, not with a view to carry out any wide and recognized principle, but with the object of meeting in the readiest and most obvious manner some special evil or hardship which happens to arrest the attention of the public. A member of Parliament is assaulted by garroters; the demand is immediately made that garroters shall be flogged. Some philanthropist discovers that the houses of artisans are ill-built and unwholesome; he draws a striking picture of the misery caused to the working classes by habitations which are productive of disease; a proposal is immediately made that a law of one kind or another shall be passed for the pulling down of dens of disease, and the erecting in their place of solid, wholesome dwelling-houses for artisans. A notorious usurer displays the cruelty as well as the craft of Shylock; general indignation is excited by the sufferings of its victims, who are hastily assumed to be as innocent as they are reckless; newspapers and the readers of newspapers forthwith advocate the revival of laws against usury. Children, it is found, are ill-treated in certain factories, and women who are not children suffer in health from overwork in ill-ventilated workshops; the suggestion is naturally made that factories and workshops shall be inspected, that the employment of children shall be regulated or prohibited, or that women shall be protected against ill-usage by being deprived of the right to dispose freely, on their own terms, of their own labor.

These demands and a score more like unto them may be reasonable or unreasonable—on this point it is my intention to say nothing whatever—but they and other popular cries, even when defensible as they often are on grounds of reason, have two alarming features in common, namely, that they are demands that a law shall be immediately passed dealing off-hand with some particular case or cases of great real or apparent hardship, and that Parliament shall, when engaged in meeting some patent evil, pay little attention to the general principles which govern legislation, and shall direct the whole of its power towards putting down some particular and definite abuse.

This being so, let it be further noted that such cries for a law which may put an end to a particular case of hardship have, during the nineteenth century—at any rate, since the passing of the great Reform Act—generally received attention and satisfaction; and laws, originally of an exceptional character, have been again and again passed to meet some particular grievance. The earlier Factory Acts had a limited scope and affected one particular class

of factories. The acts which have revived the punishment of whipping were, and are, enactments passed to punish particular offences which happened, at a given moment, to excite the indignation of the public. The recent Money Lenders' Act, 1900, may, without much exaggeration, be described as an enactment for the suppression of Isaac Gordon; but (and this is a point calling for special attention) a new kind of law framed to meet a specific and immediate evil always does, however little the legislature which passed the act may be aware of the circumstance, rest upon some principle or assumption which, whether sound or unsound, is of wide application. The first Factory Act contained within it the principle or admission that it was the business of the state to regulate labor in factories. The first enactment which, in a hesitating and very partial manner, provided for the housing of the working classes, involved the assumption that the supply of habitations for the mass of the people cannot be left, like other branches of trade, to be governed by the haggling of the market, but must be the special concern of the state. The revival of whipping as a punishment for crime rests on the old idea, attacked by the wisest philanthropists of a past generation, that the severity rather than the certainty of punishment is to be relied upon as a check upon crime. Isaac Gordon's Act—to call the Money Lenders' Act, 1900, by the name which best describes it—rests upon the assumption, for which as yet no argumentative basis has been found, that Bentham's argument against the usury laws admits of confutation, and that these laws ought to be more or less revived.

Now the one thing which is certain as to the course of legislation is, that principles which are the foundation of an actual law, must obtain thereby a certain weight or prestige among the ordinary public. It is also certain that a principle once recognized by law will, if of wide application, be, as time goes on, widely applied. To this we must add—and, as regards England, at any rate, the point is one of great importance—an act of Parliament is a precedent; and the well-known dictum of a judge that an ounce of precedent is of more importance than a pound of theory, holds good quite as much in Parliament as in the law courts. It is absolutely certain, for instance, that, to take an example from legislation which most persons rightly hold beneficial, the Married Women's Property Act, 1870, which to a very limited extent and in a very tentative manner gave property rights to married women, was, though ineffective in its direct results, the precedent which justified in the eyes of Parliament and of the nation the Married Women's Property Act, 1882, which, with some subsequent amendments, has bestowed on a married woman the property rights, and from one point of view more than the property rights, of an unmarried woman or of a man.

In dealing with the matter under consideration, I have purposely made use of the word precedent, for it suggests the true and most important conclusion that in England Parliamentary legislation, or, in other words, legislation by Act of Parliament, bears a very close analogy to judicial legislation—that is to say, to rules of law originating in the judicial decision of particular cases. It is admitted on all hands that judge-made law is in reality the gradual development, through adherence to precedent, of general principles involved in the decision of given cases. But Parliamentary law bears in this matter much the same character as judge-made law. An act is passed to meet a particular case, *e. g.*, the overworking of children in a particular kind of factory. Little attention is paid to the principle on which the act logically rests; yet it is soon perceived that, if a law regulating the labor of children in one kind of factory is beneficial, it is applicable to almost any factory or even any workshop. Meanwhile, as the sphere of the Factory Acts is extended, a public opinion is formed in favor of state intervention. A host of acts dealing with particular cases obtain more and more the force of precedent, till at last the long line of what we may call "Parliamentary judgments," beginning with the Health and Morals Act, 1802, is closed, for the time at least, by the Factory and Workshop Act, 1901, and the state regulation of labor stands forth as a recognized principle of modern English law. Note, further, that this course of legislative action has at each step stimulated the growth of public opinion in favor of state intervention, and has produced a body of collectivist sentiment or conviction which, in its turn, has given birth to large bodies of collectivist or, as some would say, socialistic laws.

This action of law by way of precedent on the growth of law-making or legislative opinion, is important in at least two different ways. It explains a point which certainly requires explanation in the development of English law during the nineteenth century; it further reveals the existence of a danger which has hardly been sufficiently noted by the critics of English institutions.

Any one who studies the evolution of English law during the nineteenth century, is ultimately met by a problem which it is easier to raise than to answer. How has it happened that legislation which may be called revolutionary because it tends towards fundamental social changes, has in many instances been promoted by men who called themselves, and really were, Tories? The fact itself is past dispute. What is its explanation? It may partly, no doubt, be found in the desire of a party whilst in opposition to gain at any cost popular support. It may be found in part in a real affinity between a certain type of Toryism and socialism. Nor can any one doubt that Tory philanthropists, such as Southey and Sadler, did, even during the heyday of Benthamite Liberalism, propound doctrines which, whether their authors knew it or not, were more or less socialistic. But these explanations do not go very far in the way of answering the question I have raised; they hardly apply to the case of Lord Shaftesbury. He was, from many points of view, a genuine and even a stiff Tory. Socialism, as he understood it, was in his mind associated with infidelity, and he was not consciously a whit more inclined towards any kind of collectivism than towards religious scepticism, yet no one man did more than he to promote the factory movement; and this movement has developed into a system of state interference with the conduct of labor which, we may suspect, would have excited his Lordship's astonishment and condemnation.

One explanation, though a partial one, of the course pursued by Lord Shaftesbury, and by men like him, is to be found in the influence, which I have already traced out, of laws on the formation of public opinion. Lord Shaftesbury had certainly no intention of promoting any kind of socialism. When he became the advocate of the Ten Hours Bill, he was influenced wholly by religious and humanitarian feeling. His aim was to put an end to the overworking of children in factories; and he, in a manner very characteristic of English philanthropists, recommended legislation which he was convinced would free wretched children from ill-usage, without thinking it necessary to form any very clear idea of the principles on which the Ten Hours Bill was based. His intellectual dulness increased his moral authority; his obvious honesty and his sincere Toryism made it impossible either for himself or his followers to believe that he was the advocate of socialistic legislation. The moral and religious weight of his character had much to do with the success of the factory movement. The so-called Ten Hours Bill became an Act of Parliament; its provisions were gradually extended to one kind of factory after another, and Lord Shaftesbury naturally rejoiced over a triumph of legislative humanity. But to the end of his life, we may suspect, he did not recognize the real nature of his success. The Tory peer, whilst fighting for the humane treatment of children, had become the unconscious promoter of collectivist legislation, which in its turn produced a body of collectivist opinion destined ultimately to create a condition of things under which a leading politician of to-day could assert that nowadays we are all Socialists.

A danger with which English institutions are threatened is the occurrence of gradual though ill-considered revolution. This peril is immediately connected with the effect of legislative precedent on law-making opinion. At the present moment the English Constitution is not seriously threatened by sudden and avowed attacks upon its fundamental principles. The vigor of the resistance to Mr. Gladstone's Home Rule policy must convince even Home Rulers that the characteristics of the present time do not favor any course of action which is avowedly revolutionary; but the annals of the nineteenth century show that in England innovations which cannot be accomplished by a political *coup de main*, may often be achieved by the passing of laws which do not appear to effect any large change, but set a precedent for following some new and wide-reaching principle. Let any one who doubts this weigh the great effect which has gradually been produced by the passing of a number of acts, none of which, taken alone, may have appeared of great importance, but which, taken together, have gone a great way to sanction the principles of collectivism.

With this gradual process of change there would be no reason to quarrel were it not that the habit of legislating with a view to particular and exceptional cases introduces into English institutions wide and far-reaching innovations without the nation ever having had the opportunity, or ever having taken the trouble, to consider or discuss adequately the principles on which alone far-reaching changes can be defended. It is not my wish to express any opinion either against or in favor of the

Education Bill of the Government, but a critic may be allowed to note one indisputable fact. Habits of piecemeal legislation, combined with respect for precedent, have produced a condition of things which no man of sense, whatever his political or his religious beliefs, would have dreamed of creating if, from the first, the subject of national education had been discussed in Parliament as a whole, and an attempt had been made to deal with it on broad and intelligible principles. The influence of laws, as precedents, both on opinion and on legislation, is assuredly not without its obvious evils. AN OBSERVER.

## THE CAUSE AND EVIL OF OVERCAPITALIZATION.

TO THE EDITOR OF THE NATION:

SIR: It is a pleasure to turn from the unbaked sciolism of cheap politicians to the serious, lawyerlike, and statesmanlike speech of Attorney-General Knox, before the Chamber of Commerce in Pittsburgh, on the 14th instant. Without the impudent efforts of the Senatorial style of statesman to deny or belittle the impending calamities of gigantic combinations of capital, it is a real and earnest effort to consider, and if possible to find, a legal remedy for them. It is not necessary to agree (as I certainly do not) with all of Mr. Knox's conclusions, in order to admire the spirit and intellect which he has shown in his treatment of the subject. There is, however, one portion of his criticism that I think invites more attention than he has given it.

Of the abuses of these organizations he says:

"Overcapitalization is the chief of these, and the source from which the minor ones flow. It is the possibility of overcapitalization that furnishes the temptations and opportunities for most of the others. Overcapitalization does not mean large capitalization or capitalization adequate for the greatest undertakings. It is the imposition upon an undertaking of a liability without a corresponding asset to represent it. Therefore, overcapitalization is a fraud upon those who contribute the real capital either originally or by purchase; and the efforts to realize dividends thereon from operations is a fraudulent imposition of a burden upon the public."

The greatest injury that is worked by overcapitalization is not "the efforts to realize dividends thereon." In the bulk of the modern corporations, the stock is not intended to represent assets. The property put in is not represented, or intended to be represented, by the stock—certainly not the common stock. The real money or property which the organizers of these corporations put into them is returned to the vendors in the shape of bonds or at the least preferred stock. The common stock is generally issued as gifts to the promoters, bribes to those granting the franchises, paying so-called "underwriters," or as a bonus given to float the bonds. It is not supposed or intended generally that the concern can or shall pay dividends on the common stock in the near future. It is sufficient for the purposes of the getters-up of these Trusts if its profits are sufficient to pay the interest on its bonds, and perhaps the dividend on the preferred stock. The real value to them of this common stock is the inflation of the public credit, without any responsibility. They create thousands of pieces of paper, which are called securities, which may be pledged and gambled with on the Stock Exchange. It is not to manufacture merchandise or furnish transportation that these immense stock issues are required; but it is for the purpose of making in a few hours the colossal fortunes which the manipulation of the stock market may insure them, that these countless pieces of paper are manufactured. It is the most dangerous form of inflated credit; like incontrovertible paper money, it is imaginary assets. It serves no useful purpose, but its object and end is gambling.

It will be observed that neither Mr. Carnegie, nor any of the sellers of properties which go to make up a large Trust, take any of their purchase money in common stock—they get bonds or preferred stock. Such of the common stock as has not been used in bribes or bonuses remains with the syndicate, who shove it off on the public or use it as counters to gamble with. The certificates representing stock are the chips—blue, red, and white—of the faro or poker table, with the advantage on the side of the latter that they are paid for in money, while the former are not.

This then—the undue inflation of credit, the inducement to and opportunity for gambling, and not merely the efforts to earn dividends on water—is the great injury which is done by these enormous and fictitious issues. J. S.

PHILADELPHIA, October 18, 1902.

## LEVYING TRIBUTE ABROAD.

TO THE EDITOR OF THE NATION:

SIR: The enclosed quaintly addressed and naïvely worded missive has just reached me, and I think it might amuse your readers as much as it has myself. The fact is, that I never had the chance of voting but once in my life. I have been kept professionally abroad ever since I was twenty-two. And, although I have no longer a vote, Mr. Quay—I suppose the person you have repeatedly exposed—seems to think I must still support the Republican machine in my native State. I am only too willing to do anything I can to support the United States, but I refuse to be blackmailed by the Republican or any other party. JOSEPH PENNELL.

LONDON, October 8, 1902.

PHILADELPHIA, PA., September 18, 1902. D.

*Mr. Joseph Pennell, 14 Buckingham, London, England:*

DEAR SIR: The Republican State Committee is greatly in need of financial assistance for the election of Republican Congressmen and State Officers, and will be greatly obliged if you will aid to the extent of your ability and inclination.

Yours, with much respect,

M. S. QUAY, Chairman.

## POPULAR INDIFFERENCE TO ART.

TO THE EDITOR OF THE NATION:

SIR: Your issue of September 25 contains an admirable editorial on the lack of interest in art in this country, the point of which is, that Americans care for statues and paintings, but for intellectual rather than æsthetic reasons. The subject is everything, the art with which it is represented is a matter of indifference. With this conclusion I am inclined to agree, but certain implications of the writer are less satisfactory.

He plainly implies that portrait art is scarcely art at all, unless the subject be commanding or exceptionally attractive, and that the sculptor who is called upon to execute a monument to Gov. Flower or Dr. Channing has a barren opportunity unless he is permitted to introduce allegorical figures. In other words, the central theme of our monument art is hopelessly unæsthetic, and any art that is to be lodged in such a monument must be embodied in pretty, not to say arbitrary, accessories. Is this so? Is the only beauty in Saint Gaudens's Gen. Sherman to be found in the airily draped figure that leads his horse? Would it help Gov. Flower to surround him with angels or pretty girls on some allegorical pretext? Is there not here a narrow conception of art which may bias if not invalidate the diagnosis of the entire situation?

There are profound æsthetic possibilities in the treatment of even a commonplace face or figure. Scarcely an artist of the Renaissance can be mentioned who has not scored one of his greatest triumphs in portraiture. The subtle analysis of character, the discriminating choice of personal characteristics and their synthesis into a higher self that is both beautiful and true—this is a process which has tempted the greatest artists to the exercise of their highest faculties. This higher interpretation of personality is the highest type of idealization, one altogether transcending the possibilities of the allegorical figures with which the feeble artist is wont to surround his barren creations. It is doubtless true that our sculptors spend too much time "modelling trousers and hats," but the *artist* can inform these things with a higher meaning and beauty if he will.

Nor is the public quite indifferent to this higher meaning. Some statues wear and others do not. Slowly but infallibly this same popular judgment which is so much decried, puts one statue on a pedestal and casts down another, and all because the one has a beauty and a significance which the other has not. It must be remembered that we feel a good deal more than we can say, more even than we are conscious that we feel. The intellectual content of a picture may be all we talk about, all we can analyze enough to put into words, but half of the pleasure that we think we derive from the characters and the story, we really do derive from the art, from the poetry of line and color and the witchery of shadow which the artist has employed in their representation. Nor is it clear that we should enjoy these things more if we were conscious of the source of our pleasure and could talk learnedly about composition lines, values, and color schemes. The epicure is not less an epicure because he knows nothing of the jargon or the skill of the cook. We are dull enough, but we are neither so dull nor so perverse as we seem, and the popular insistence upon meaning in art, and its opposition to irrelevant prettinesses, is not unwholesome. It is but an expression of that requirement which is emphasized by the history of art in every age, namely, that the artist should find beauty and significance in the life and thought of his time. There is something the matter with

him if he sees in it nothing but trousers and hats, to be represented grudgingly and atoned for by cleverness in unmeaning detail. "The poor little accessory allegory by which the artist tries to escape from the hideous and the real" is too often a confession of failure on his part to comprehend the æsthetic possibilities of his subject.

Finally, if we are not greatly interested in art, we are willing to become so. A course in the interpretation of art offered for five or ten persons in Boston Museum brings sixty applicants the first day. Try to interest people in mere artists' biographies and gossip about painters and you will accomplish nothing, for this is not art. Take them to art by the back door through the studio, with shop talk and craftsman's perspective, and again you will give them no love for art. The epicure doesn't whet his appetite by loitering in the kitchen; the tapestry doesn't show its pattern when seen from the workman's side. But if you can see what it is in a picture that makes it art, and can tell what you see, there is no people in the world that will give you so eager or so intelligent a hearing. H. H. POWERS.

BOSTON, October 12, 1902.

[We were quite aware that we had presented only one aspect of a subject which has many others. Everything that Dr. Powers says may be true, and yet what we said be not untrue. No one would think of denying the artistic possibilities of portraiture—even of portraiture in sculpture—and yet the world would have lost something if Michelangelo had devoted himself to it. The qualities of great portraiture, moreover, are impossible when the statue is modelled after death from photographs, and it would do no harm if our sculptors were oftener asked for something more specifically sculpturesque than a portrait statue in modern costume can ever be. There is a great deal in a word. Dr. Powers speaks of "pretty girls" where we spoke of ideal figures, but if the Venus of Milo and the Victory of Samothrace are "pretty girls," then no one need be afraid of prettiness.—ED. NATION.]

## ETHICS OF THE WILDERNESS.

TO THE EDITOR OF THE NATION:

SIR: It is related of Georgia moonshiners who took a liking to some sophisticated summer tourists, that one morning the tourists found paper-weighted along a favorite walk the confiding allurement: "Ef you-all wants whiskey & leaves a Quarter on this here stump y'll get it."

Which promise held good upon test.

Very respectfully, H. O.

October 17, 1902.

## A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: Are you not in error in assuming that the Bodleian is a tribute to the enlightened management of Sir E. Maunde Thompson? As he has been connected with the British Museum since 1861, is there not some confusion in assigning him to Oxford?

ALBERT S. COOK.

NEW HAVEN, CONN., October 18, 1902.

[There is. We should have written the name of Mr. E. W. B. Nicholson.—ED. NATION.]

# Notes.

Readers of the *Nation* possessing letters of Stephen A. Douglas which have a biographical value are invited to correspond with Allen Johnson, Iowa College, Grinnell, Iowa.

R. H. Russell announces a new volume from Mr. Dooley, and 'The Girl Proposition: A Bunch of He and She Fables,' by George Ade.

'Our Benevolent Feudalism,' by W. J. Ghent, is to be issued by Macmillan, along with 'Furniture of Olden Times,' by Frances C. Morse; 'Sun-Dials and Roses of Yesterday,' by Mrs. Alice Morse Earle; 'Memories of a Hundred Years,' by Edward Everett Hale; and the first of four volumes of 'An Illustrated History of English Literature,' by Richard Garnett and Edmund Gosse.

Mr. E. A. Abbey's illustrations to Goldsmith's 'Deserted Village,' already shown in *Harper's Magazine*, are to reappear in book form. The Harpers will also publish directly Justin McCarthy's 'Reign of Queen Anne.'

Thomas Whittaker will soon have ready 'Theology's Eminent Domain, and Other Papers,' by the Rev. W. R. Huntington, D.D.

A new volume of verse by Nixon Waterman, 'In Merry Mood,' is promised by Forbes & Co., Boston.

Forest and Stream Publishing Co. will make a more and a less expensive edition of Mrs. Llewella Pierce Churchill's 'Samoa Uma, Where Life is Different.'

Additional publications from Houghton, Mifflin & Co. will be 'Grimm Tales Made Gay,' by Guy Wetmore Carryl; 'Penelope's Experiences in Ireland,' by Kate Douglas Wiggin; and a 'Guide to the Study of Reference Books,' by Alice B. Kroeger.

J. B. Lippincott Co. will publish 'Yachting: Historical Sketches of the Sport,' by Julius Gabe.

Arthur Upson's 'Octaves in an Oxford Garden,' decorated and lettered by Margarethe E. Heisser, is in the press of Edmund D. Brooks, Minneapolis.

Henry Frowde will extend the "Oxford Miniature Poets" series on Oxford India paper with Mrs. Browning's 'Aurora Leigh, Sonnets from the Portuguese, and Other Poems,' as well as with Longfellow's Poems in three volumes.

From Lemcke & Buechner is to be had the third edition of Alexander Schmidt's incomparable 'Shakspere Lexicon,' in two volumes, prepared by Prof. Gregor Sarrazin, who has revised and enlarged it in the light of Shakspere criticism of the past fifteen years. The new matter is in a supplement, but connected with the main work by references.

Prevailing good taste and decorative feeling characterize Margaret Armstrong's embellishments of Messrs. Putnam's dainty edition of Mrs. Browning's 'Sonnets from the Portuguese.' It is mostly floral and scroll work, and safest so, as the one figured drawing (for frontispiece) intimates. The coloring is delicate. The text is in brown ink.

Kipling's 'Just-So Stories for Children' (Doubleday, Page & Co.), gathered into a volume and illustrated by himself, confirm his reputation as a story-teller for the nursery. They are uneven, and the two non-animal tales about the origin of the alphabet and of writing are too elaborate fooling for the age addressed. Most of the verse thrown in could be dispensed with, and much of the legends attached to the illustrations (except as a hint to the parent who reads aloud). The designs are proof of visualizing with the pencil to a degree which Kipling's less imaginative father could, we think, hardly equal. There is choice, again, here, and at the head we should place the whale swallowing the mariner, at page 5, and the cat that walked by himself at page 207.

Mr. Peter Newell's return to the illustration of Lewis Carroll in 'Through the Looking-Glass' (Harpers) must be pronounced more successful than his similar treatment of 'Alice in Wonderland.' He has evidently endeavored to refine his Alice, with partial success—as much as was proper, perhaps, to be consistent with the companion volume. With chessmen he is altogether at home, and he has managed cleverly the designs for "The Walrus and the Carpenter"; particularly good is that of the eldest oyster winking his eye and refusing to leave his oyster-bed, whose counterpane has an appropriate design of star-fish. The fanciful borders are again printed in a pale tint, and the vellum-like covers invite clean hands on the part of the favored young person allowed to own this handsome book.

It has been said that the pension rolls of the civil war reach higher figures than its muster rolls; likewise, it seems probable that the heroes of historical novels will soon account for the full roster of the Revolutionary army. In 'The Maid-at-Arms' (Harpers), Mr. Chambers tells of the love of a Continental officer for a patroon's daughter. The scene is laid in the Mohawk and Sacandaga Valleys during the eventful summer of 1777, and the amatory portion of the tale is pleasing, although burdened with doubtful historical references and much valuable misinformation concerning that interesting people, the Iroquois. The "historical" ambition of this book and its predecessor ('Cardigan') are due to the fact that Mr. Chambers is partial to the geography of Broadalbin, Fulton County. The manners and customs of the patroons are somewhat startlingly portrayed, but let none say that they were wanting in deference to Mrs. Grundy. The patroon's daughter dons a man's buckskin suit for an evening ride in the forest with the hero, whom she had met for the first time on the day before, but the patroon counsels her to be at home "by the new moon rise," say about seven A. M. When the much-to-be-desired School of Elementary Astronomy for Novelists is established, Mr. Chambers should become one of its most diligent pupils.

The Sixth Annual Report of the Forest, Fish, and Game Commission of the State of New York, covering the year 1900, is but just issued. As in previous years, the for-

mal report is accompanied by essays on forestry topics, nor are there lacking the fine colored plates which have lent distinction to this series. The elaborate "Forest Working Plan for Township 40," published last year by the Division of Forestry, United States Department of Agriculture, is here reprinted, while of the new matter the most important is a "History of the Lumber Industry in the State of New York," by William F. Fox, the State Superintendent of Forests. This history is illustrated by a colored map of great interest, showing graphically the progress of the settlement of the State by towns, from New York, 1614, to Indian Lake, 1843. After much agitation, the game law was in 1896 amended to prohibit the hounding of deer. From the figures given in this report it would appear that the forebodings of those who doubted the wisdom of this enactment are justified. These figures "indicate that more deer are now killed by still hunting than were killed when hounding and jacking were permitted." Since the prohibition of hounding has also increased the proportion of does among the deer killed, and has added man to the list of animals shot in the Adirondack forests, the repeal of the prohibition is plainly indicated.

The third instalment of the 'Catalogo Generale della Libreria Italiana, 1847-1899' (New York: Lemcke & Buechner) comprises F and the greater part of G. Among the longer lists of works are, for native authors, those by Goldoni, who is still a live classic; Gioberti, Giusti, and Aurelio Gotti. There was a Galileo revival in the nineties, and Garibaldi's autobiography went into a tenth edition in 1895. Among foreigners, there was a translation of the 'Vicar of Wakefield' as recently as 1895. Such of Gladstone's works as were reproduced naturally had relation to Neapolitan tyranny; but his Homer was translated in 1881. The latest date for any of Gautier's works is 1892. Goethe's "Faust" shows numerous renditions, some as late as 1895, in which year, also, the 'Italian Journey' was revived.

A little work by Prof. Wilhelm Rein, 'Bildende Kunst und Schule' (Dresden: E. Haendke), is one of the many recent endeavors to cultivate in early life the sense for the beautiful in nature and art. It is distinguished, however, by pedagogical insight and a comprehensive survey of the leading thoughts and plans hitherto advanced. It is not so easy with us as it is in a country like Germany to provide a large amount of pictorial material of real value for educational purposes. Still, an earnest coöperation of artists, teachers, and publishers might accomplish a great deal, and Professor Rein's treatise is suggestive of the lines along which to proceed.

Two valuable contributions to the history of the South African war have been just published in Munich, Bavaria. The first of these is a volume of 314 pages, with eighty illustrations, entitled 'Unter dem Roten Kreuz in Transvaal,' by Dr. J. Fessler (Seitz & Schauer). The author is privatdocent in the medical faculty of the University of Munich, and conducted an expedition to the Transvaal sent by the Society of the Red Cross for the purpose of nursing the sick and wounded Boers. The record of his observations, while devoting himself to this humanitarian work, is exceedingly instructive. Richer in personal adventure, and therefore of a more popular character, is Franko Seiner's 'Ernste und Heitere Erinnerungen eines Deutschen Burenkämpfers' (Beck), of which the second and concluding volume has just appeared. It contains some entertaining anecdotes of Oom Paul, illustrating his peculiar humor. Thus, when the Jews complained that only half as much ground had been allotted to them for a synagogue as to the Hollanders for a church, he replied: "Well, that's perfectly fair; you believe only half of the Bible." The author praises the valor of the Boers, but criticises their lack of strategy and military discipline, due to excessive self-confidence and individual independence.

The growth of the Boston Public Library during the past year, as shown in the annual report, has not been in books and circulation alone. The agencies by which the books are brought within the reach of the public are now 128, an increase of 30. These agencies include 44 schools and 33 engine-houses. Nearly $50,000 was expended for books, "the largest sum ever spent in a single year," and the library has been enabled to obtain many valuable books and manuscripts, some of which are described in the report. Among the gifts specially noted are those "to the now very large collection on the abolition movement in the United States." We remark further the avowed intention of the trustees to commemorate in some fitting way the first half-century of this institution; and their expressed opinion that most current works of fiction "have little permanent or even temporary value," which has led to their diminishing the purchase of such books "until their value can be tested by time." In one month, nearly half of the 2,417 slips in the children's department were for Miss Alcott's 'Little Men' and 'Little Women,' Jacobs's and Lang's fairy tales, Mother Goose, and 'Uncle Tom's Cabin.' This raises the question whether Uncle Tom is not, in the infant mind, as unsubstantial as any character in nursery lore. The children will get small aid from their school histories to think otherwise.

The *National Geographic Magazine* for October contains an illustrated account, by R. H. Chapman of the Geological Survey, of a horseback journey across the northern Rockies, in the Lewis and Clark Timber Reserve in Montana. The limiting width of meander belts is shown by Prof. M. S. W. Jefferson, from numerous measurements of rivers in this country and in Europe, to be "eighteen times the mean width of the stream." Among the minor contents are Peary's official report of his Arctic work during the past year, and a description of the newly-established Reclamation Service for the construction of irrigation works in the arid lands of certain States and Territories.

Volume xxx., part ii., of the Transactions of the Asiatic Society of Japan (pp. 362), contains two papers of high literary value. One is a translation by Dr. G. W. Knox of the autobiography of Arai Hakuseki, the famous Japanese scholar of Yedo and virtual ruler of Japan, who wrote in 1716 when sixty years old. The other is a study of Bashō (born 1644) and the Japanese epigram, by Prof. Basil Hall Chamberlain. Arai and Bashō were contemporaries, and both in their way representative of the best of the old Japan which has utterly passed away. Arai, born poor, became official scholar to the Shogun himself, a sort of "court preacher," so that, although without legal authority, as confidential adviser, through his master, he ruled the empire. Arai was scholar, poet, historian, economist, moralist, and statesman, and in native bibliographies the list of his writings fills many pages. His autobiography, which was prepared for his family, was printed only a few years ago. As a bit of the interior history of Japan, it has no match. By it a window is opened at the very centre of life and power in Yedo, and we see, not the imaginary Japan of foreigners, poets, and modern artists, but the real country and people. Arai, when in public life, succeeded the fifth Shogun (1681-1708), whose personal profligacy and superstitious practices and administrative looseness required the reforms of later years. A fanatical Buddhist, he became "the merciless protector of animals," often taking the life of a man for hunting a dog. On diplomacy and trade with China and Korea, the narrative sheds much light, and thus, both for politics and literature and for history, the work of Arai is unique. The paper on Bashō, besides being rich in flashes of native wit expressed in felicitous English, is a profound study of metres and literary methods, as well as of the limitations of the Japanese intellect; for the critic's frankness is equal to his scholarship.

—The fourth volume of Helmolt's 'History of the World' is the second to make its appearance in the English translation (Dodd, Mead & Co.). As we have already described the general scheme of the work, we shall say nothing now upon that score. The first volume, it will be remembered, dealt with prehistoric conditions, with America, and with the Pacific Ocean. Volumes ii. and iii., when they appear in English, will take up the countries of the Orient. In volume iv. Asia is left behind, and the scene of action becomes the countries of the Mediterranean. The task of bridging over the gulf between East and West was entrusted to that accomplished scholar, Edward, Count Wilczek, whose death, however, occurred before the German edition was completed. As his essay occupies the place of honor in this co-operative volume, we shall venture to single it out from the rest. Count Wilczek entitled his paper, which fills the first forty-five pages of the fourth volume, "The Inner Historical Connection of the Nations of the Mediterranean." This extensive subject he divided into four parts, each of which embraces several sub-headings. His main sections are as follows: "A Conception of the Mediterranean Race Derived from a Survey of the Mediterranean Nations," "The Part Played by the Various Nations in the Creation of the Mediterranean Spirit," "The Development of the Mediterranean Spirit," and "The Renaissance, or the Flower of the Mediterranean Spirit." The most striking feature of this thoughtful disquisition is its choice of the Renaissance as a culminating point in the development of the Mediterranean spirit. "The peculiar nature of the Mediterranean spirit finds its purest expression in the Renaissance, which comprises in itself material, moral and intellectual welfare, the beautiful and the useful, the rights of the state and the citizen, and the free unfolding of the individual. Rejoicing in the power of creation, it passed directly into the wider conception of European civiliza-

tion." In the allotment of other important subjects, "The Rise of Christianity and its Spread in the East" falls to Prof. Wilhelm Walther; "Greece," to Prof. Rudolf von Scala; "Italy and the Roman World-Empire," to Prof. Julius Jung. The illustrations, which are clear and good of their kind, include several large plates. Of these, a colored reproduction depicting the battle of Issus as it is represented in the Pompeian mosaic at Naples is the best. In the case of the Iberian Peninsula, the survey extends to the recent loss of Spain's colonial possessions.

—An elaborate study of hysteria, on the theory that it is, in great part, a mental malady, was completed and published in French ten years ago by Prof. Pierre Janet, Litt.D., M.D., of the chair of philosophy at the Collège Rollin. This has been translated by the late Mrs. Caroline Rollin Corson as 'The Mental State of Hystericals' (Putnams), and is a study of the subject from a philosophical as well as a medical point of view. As Professor Charcot remarks in the preface, M. Janet found it "necessary to bring together these two kinds of knowledge and these two educations in an effort to analyze clinically the mental state of patients." The conclusion of his study is the provisional definition that "hysteria is a form of mental disintegration characterized by a tendency toward the permanent and complete undoubling (*dédoublement*) [halving, splitting up] of the personality." This is not an explanation, but an attempt to summarize the observed phenomena. Of course, the primitive meaning of hysteria was long ago submerged and has no connection with the actual state. This the author classes among diseases due to weakness and cerebral exhaustion, the physical condition being that of general under-nutrition, and its psychical state being a weakening of the faculty of synthesis, an aboulia (a lack of will power), with the field of consciousness peculiarly limited. Certain elementary percepts appear suppressed, and the tendency is to a division of the personality into independent groups which alternate or coexist. This asynthesis favors the development of subordinate ideas which grow by themselves under the cover of personal consciousness, and manifest themselves by very varied but apparently only physical disturbances. It will be seen that this condition is much wider than that ordinarily designated hysteria, and embraces the phases of double consciousness, here called somnambulism, as well as those states, dependent upon suggestion, which lead to subconscious acts. Many of them are due to associate neuroses, rather than to open suggestion.

—President Atherton of the Pennsylvania State College has caused to be printed for private distribution a comparative view of the Barons' Articles and the Great Charter. The several sections of the two documents are translated and placed side by side, in such wise that the Barons' Articles occupy the left half of the page, and the corresponding articles of Magna Carta occupy the right half. Such a comparison is most useful. Indeed, on a smaller scale it recalls Gneist's edition of the Institutes, with Gaius at the left end and Justinian at the right. One point in the translation deserves to be specially noticed by students of English Constitutional history. The fourteenth section of Magna Carta begins, "Et ad habendum commune consilium regni." In turning this passage into English, translators have usually rendered *commune consilium* "General Council" instead of "common counsel," the version of President Atherton. For our own part, we are quite prepared to accept the latter form, both because *consilium* ordinarily means "counsel," and because there is such a reiteration of *consilium* at the close of the section as implies a connection between the two words; and in the second case, every one translates *consilium* "counsel." This fact President Atherton points out, but he would somewhat strengthen his argument if he placed more stress upon the cross-reference. Then a paraphrase of the passage would run after this fashion: "To elicit the common counsel of the realm, regarding the assessment of a certain type of aid, magnates of specified grade shall be summoned. . . . Should all of them fail to appear at the fixed day, the business shall nevertheless be transacted according to the counsel of those who may be present." We are inclined to allow greater weight to the obvious meaning of *consilium* in the present context than we should to the fact that it ordinarily means "counsel," for there are certainly exceptions to this usage. President Atherton does not raise the point for the sake of a verbal quibble. The usual translation implies that a "General Council" had been definitely constituted in the time of John as a first form of Parliament. "The correct view seems to be that in this, as in most of its other provisions, the Great Charter did not so much aim to designate a Constitutional arrangement already fixed, as to provide for the future a convenient *mode of procedure*. It prescribed the manner and purpose of calling the Magnates of the Kingdom together, but gave no name to the Assembly, nor even seemed to know a name, or to think one necessary." To us this seems a sound view.

—Two important works in Greek lexicography have been published this year, one in Holland and the other in Germany. Neither is intended for the use of college students, but both have great value for more advanced scholars. Van Herwerden's 'Lexicon Graecum Suppletorium et Dialecticum' (Leyden: Sijthoff), as the name implies, is primarily a supplement to existing Greek dictionaries, and in particular to the Paris edition of Stephanus's "Thesaurus Graecae Linguae,' nearly all of which was published half a century ago, before most of the now-known inscriptions had been found, and before the tombs and rubbish-heaps of Egypt had yielded more than an indication of their treasures of papyrus. In these inscriptions and in these private and public documents on papyrus, very many new words have appeared, and familiar words in strange uses, of which but a small part had been put into Greek lexicons. The two most important attempts, before Van Herwerden, to gather these new words and uses were made by the veteran Athenian scholar, Kumanudes, who in 1883 published a collection of words not in the 'Thesaurus,' which he had noted in his reading, and by an American young woman, Miss Helen M. Searles, who, in 1898, presented as her thesis for the degree of Ph.D. at the University of Chicago a 'Lexicographical Study of Greek Inscriptions.' Van Herwerden's work has 973 large octavo pages, with eighteen or nineteen articles on a page, [illegible] 000 articles in all, and a cursory comparison indicates that one-third or one-fourth of this matter is neither in Liddell and Scott's Lexicon nor in the 'Mega Lexicon,' of which the publication was begun in Athens a year ago, and which was designed to contain every known Greek word. For a long time the reading of Greek inscriptions was left to specialists. They were collected for publication first in heavy folio volumes, too expensive for the ordinary college library, and too clumsy for familiar use. Now, however, excellent collections have been published in convenient form, both of historical and of dialectic inscriptions, yet only specialists have been able to read these easily. A scholar might know well his Xenophon and Thucydides, but be puzzled by technical terms and dialectic forms not found in literature. Still more has the ordinary Greek scholar shrunk from the careful study of the collections of papyrus documents. But now one chief obstacle has been removed by the 'Lexicon Suppletorium.' For the compiling of such a work few men are better qualified than Van Herwerden, who published a score of years ago an important tract on the evidence of inscriptions with regard to the Attic dialect, and has honored for thirty-eight years the chair which he has just resigned in the University of Utrecht.

—Kirchner's 'Prosopographia Attica' (Berlin: Reimer) is intended to include all citizens of Attica, whether by birth or adoption, whose names are known from literature, inscriptions, or coins, from the earliest times to the age of the Emperor Augustus. Those whose Attic citizenship is questioned, even the orator Isaeus, are excluded. The first volume, including K, contains the names of 8,935 persons, on 601 pages. The labor of distinguishing persons of the like name, but of different parentage, residence, or age, must have been very great. For instance, 85 men are registered by the name of Diocles, and 186 by the name of Dionysius. Possibly fuller information might reduce these numbers somewhat, by showing that some details have been separated which should be combined, but the compiler distinguishes most of them clearly. Such a register shows the necessity for legal purposes of distinction by the addition of deme and father's name. For the chief known facts in the life of each of his personages, the compiler (who really deserves the name of author) gives exact and carefully arranged and sifted references to inscriptions or literature. In the case of prominent men like Alcibiades, Demosthenes, and Aristides, these references occupy several pages. Family trees *(stemmata)* are given for many families, some of which, as those of Callias and of the tyrannicide Harmodius, are followed for nine generations. For the study of Athenian history, this work of Kirchner will be invaluable. Since it is limited to Attica, it will not supersede Pape's lexicon of Greek proper names. A few omissions have been discovered, but evidently great care has been exercised in the collection of Athenian names.

## AVIATION.

*Travels in Space:* A History of Aerial Navigation. By E. Seton Valentine and F. L. Tomlinson. London: Hurst & Blackett. 1902. Pp. 328.

*Aerial Navigation:* A Practical Handbook on the Construction of Dirigible Balloons, Aerostats, Aeroplanes, and Aeromotors. By Frederic Walker. D. Van Nostrand Co. 1902. Pp. 151.

Should the reader entertain the theory that books showily printed on calendered paper, with abundant illustrations, more or less splurgy, are not particularly apt to prove attractive reading, we cannot say that 'Travels in Space' will tend to convince him he has been wrong; albeit the nature of its subject renders it readable. It would be unreasonable to expect it to present the strange experiences of ballooning with all that life and reality that Mr. Bacon's 'By Land and Sky' did, last year, because that was a masterpiece. A glance at the volume will inform him that it is not a work of research, like Mr. Chanute's 'Progress in Flying-Machines,' from which, by the way, it copies extensively, almost verbatim, without acknowledgment, and to which it is vastly inferior in all respects in which the two works come into comparison, excepting in a very few details. It is later in date by more than eight years, and its scope is wider. The field still remains open, however, for a really workmanlike history of aeronautics.

The building of an airship is as much more difficult than the building of a steamer, like the *Kaiser Wilhelm II.*, as the latter is than the throwing of a trussed suspension-bridge across the North River. Consequently, Mr. Walker has judged a duodecimo of a hundred and fifty pages to be the proper sort of volume in which to convey the airship-building art. For, once problems reach a certain pitch of difficulty, and the more profound they are, the less is the knowledge generally thought requisite for attacking them. The first chapter of Mr. Walker's "practical" book is entitled "The Laws of Flight." The only statement of a law which it contains is the following:

"When a moving body is directly opposed by a *vis mortua*, such as a pressure or resistance like that of gravity, the measure of such *vis mortua* required to neutralize the force [of the moving body] and bring the moving body to rest must form the basis of the measurement of the force."

Thus, the persons who Mr. Walker assumes are to undertake the construction of airships, and for whose encouragement he has provided his handbook, are supposed to be in need of this information; while further dynamical science, he would appear to presume, is quite beyond their comprehension. Later in the book, it appears that they are persons who need to be told what a sine and cosine are. What Mr. Walker fails to tell them, but, on the contrary, implicitly denies, is that, with such an outfit, they will make great fools of themselves if they undertake the building of an airship.

Vessels to sail the air are of four types. The first is that of a machine with ascensional power, but with no motor. Such is a simple balloon or other aerostat, a kite-balloon, or a system of attached balloons. Much may be done with a skilfully managed balloon. Its great advantage over other air-sailing vessels lies in its comparative safety. Let any other kind of airship decisively come to grief, and instant death ensues for all its crew. But if a balloon bursts, not too near the ground, the calm and skilful aeronaut can take measures to save himself. This accident happened to Wise in Pennsylvania in 1836, at an elevation of 13,000 feet, but he was so far from being reduced to a pulp by the fall that, jumping up, he remarked upon the heat of the lower atmosphere, and, before many minutes had elapsed, had determined to repeat the experiment at the first opportunity. The fatal falls (other than drowning cases) have usually been from moderate heights, or have been due to the fright or inexperience of the operator. When Simmons met his death in 1888, he fell only 50 feet; yet neither of his two companions was killed, and one of them was not even injured. Capt. Dale's balloon in 1892 burst at a height of 600 feet, he and Mr. Shadbolt, a professional aeronaut, being killed, while two amateurs who were with them escaped unhurt; but experts opined that with proper management all might have been saved. This comparative immunity arises from the fact that the lower half of a falling balloon of the ordinary shape invariably cups into the upper half, forming the best of parachutes. Immunity, therefore, does not extend to aerostats stiffened with hoops or made of aluminium. A serious fault of the ordinary balloon is that there is no level at which it is in equilibrium unless the gas be confined, which is too unsafe. When it goes up, it retains the same ascensional force, and continues to be accelerated upward until it loses gas; and its momentum of perhaps a couple of tons moving four or five hundred feet per second will carry it up long after the gas has so swelled and spilled that, by the time it ceases to rise, it is much heavier than the air, and would come down to earth if ballast were not thrown out; and so it goes, alternately rising and falling until its ascensional power is quite wasted. Mr. Walker does not make this matter at all clear, but talks, as aeronauts are apt to do, of the level "to which the balloon must rise," just as if it were a closed bottle. A metallic balloon would be free from this objection, having a definite level at which, if tight, it would remain in equilibrium, or oscillate above and below it, indefinitely. Schwartz's machine of 1894 demonstrated that an aluminium balloon can be made sufficiently light (its ascensional power must have been about 7,000 lbs.) and can be filled with hydrogen; but it is very unfortunate that the inexperienced operator took fright and destroyed the airship, though not his miserable self, before it had risen high enough to show whether or not at its level of equilibrium it would have been able to withstand the pressure of gas within. The excess of gas would naturally be allowed to escape; but if this escape were too rapid, all the advantage of the metallic construction would be lost, while if it were not very rapid, the excess of pressure from within would become very considerable. Though such things are subject to calculation, actual experience is extremely welcome. To-day it is probable that such a vessel would be made of magnalium, not of pure aluminium. Somebody with a spare million could make an interesting experiment by combining the metallic balloon with a suggestion of the celebrated Monge that has never yet been tried. He was eminently a practical man as well as a mathematician of the first order. His suggestion was that of an air-snake, to be composed of twenty-five aerostats strung together, the vermicular or serpentine motion being brought about in a vertical plane by the transfer of ballast from one to another.

The second type is that of machines having both ascensional power and motors. Mr. Walker maintains that this is the only practical form, on the ground that this alone affords safety in case the machinery goes wrong. Plausible as this sounds, facts are against it, and reason too. Notwithstanding the thousands of ascensions that still take place in vessels of the first type for every one in a vessel of this second type, four times as many men have been killed since 1892 in ascensions of the latter type as of the former. It would be quite absurd to maintain that carrying a motor adds to the security of a balloon. That the addition of a balloon to an airship with a motor is a most serious source of peril would seem obvious enough, even if indirect effects of danger are left out of account. It may, however, be that a ship of this type supports a minor accident better than does any other. The breaking of the steering-apparatus of Count Von Zeppelin's great air-ship at its grand gala trial on Lake Constance did not prevent its accomplishing a little excursion and effecting a beautiful descent upon the lake; and M. Santos-Dumont, on his first ascension in Paris, broke his rudder, successfully landed, mended it, and continued his performance. Many engineers of standing have declared in favor of this type, which is the only one that has as yet attained some undeniable success; yet those who have most deeply studied the problem are opposed to this type. Sir Hiram Maxim, in a preface which he has contributed to 'Travels in Space,' argues that "it is not possible to make a balloon strong enough to be driven through the air at any considerable speed [meaning above six or seven miles an hour] and at the same time light enough to rise in the air." But he gives no assurance that this judgment is based upon calculations relating to magnalium balloons. Besides, it has been urged in reply, by Von Zeppelin and others, that a velocity of seven or eight miles an hour, or even less, would be all-sufficient for the peculiar purpose to which air-ships must be restricted. For, it is said, it is quite unreasonable to suppose that a vessel sailing the air should ever be able to compete with an ocean steamer, and quite ridiculous to imagine it should ever carry freight or many passengers. Its distinctive superiority lies in the fact that, moving in the three dimensions of space, it can never be intercepted or obstructed except by the most improbable chance. Its service must, therefore, always be to go where nothing else can go, without carrying or bringing back anything but intelligence. Its function will be to hunt up lost explorers, to spy out an enemy's doings, to visit the upper atmosphere, and in short to act as a reporter. Now for this business it is contended that great speed is needless. One can but feel, however, that it is highly desirable that the reporting air-boat should not be carried quite away from its course by anything short of a moderate gale; which would demand a velocity of at least twenty miles an hour.

The third type is that of machines provid-

ed with motors, but heavier than the air. This is the form advocated by Langley, Maxim, Barton, Hargreaves, and, in short, the general body of those who have in our day studied the subject in a scientific manner. It is the only form which by any possibility could ever decidedly distance the "ocean greyhound" of to-day. Its real merits cannot be estimated until it has been embodied in some practical shape.

The fourth type is that of instruments neither possessed of ascensional power nor carrying any engine. To be sure, they may, and hitherto generally have, supposed a man to be kept hard at work during their trips. But how little this could amount to, as mechanical work, becomes manifest when we reflect that the more powerful of a man's muscles are unadapted to the long-sustained production of impulses at a greater frequency than, say, two per second. If, therefore, such impulses were to be relied upon to prevent the instrument from falling, since in the interval from one to another the machine would have fallen four feet, it follows that the labor the man would be called upon to perform would be equivalent to that of taking the instrument (say, a hundredweight) on his back and running up stairs with it at the incessant rate of eight feet per minute, or four hundred and eighty feet per hour. Each reader can speak for himself as to how many hours at a time he would contract to keep up that lively exercise.

It has many times been demonstrated that there is no very formidable difficulty in constructing an instrument weighing about a hundred pounds which shall lift a man, or even two men, up into the air in a fresh breeze, and carry them up into the wind. It is supposed that they could sustain themselves indefinitely, if they were skilful enough, without any particular expenditure of energy, in the same way in which birds ranging in size from the lark to the condor soar. A condor will weigh eighty pounds and will soar all day long without any sign of effort or of fatigue. Various facts go to support the theory of Professor Langley that it is by taking advantage of the puffiness of the wind (its "internal work," as he calls it) that birds soar; though it is not certain that other factors, of which three readily suggest themselves, may not contribute to the effect. It is quite certain that a considerable weight is one requisite. The most successful of the flights of Le Bris occurred one day when the rope by which his instrument (which was intended to carry only himself) became accidentally wound round a second man. Le Bris, not noticing what had happened, carried the man up two or three hundred feet into the air, and forward into the wind for a furlong or so, and could apparently have gone indefinitely further. But when he had descended sufficiently to set his captive passenger free, he found that without that ballast he could no longer fly. Thus far, however, no man has found it possible to acquire the necessary skill to manage such an instrument, in advance of getting killed by his blunders. The thing has not really had a fair trial. Le Bris was a very poor man, a common sailor, and circumstances prevented his practising on the water, although his machine had been specially constructed with a view to that. Consequently, before he could learn the art, his machine was smashed; and he lacked the means to reconstruct it.

Although Mr. Walker contemplates the construction of airships of the second type alone, yet, owing to this type reuniting the positive features of the others, his volume contains many facts pertinent to the construction of any airship. As far as our verifications have extended, his numbers are accurate. But nothing more inaccurate and unintelligible than his statements of mathematical rules and formulæ can be imagined. For example, on pp. 17 and 18 is an attempted explanation of the manner of calculating the elevation from the pressure of the air. Not until one has corrected several misprints, including the uniform printing of exponents as factors, do the difficulties of finding out what the man means (although the reader knows what he ought to mean) fairly emerge. They are not confined to any one sentence. A number has been obtained, and, being correct, there is substantially but one way in which it could have been reached; yet what relation there is between what is said and this operation, one cannot make out. So it is, in lesser degree, throughout the volume.

## RECENT NOVELS.

*The Wings of the Dove.* By Henry James. Charles Scribner's Sons.

*The Virginian.* By Owen Wister. The Macmillan Co.

*The Desert and the Sown.* By Mary Hallock Foote. Houghton, Mifflin & Co.

*The Champion.* By Charles Egbert Craddock. Houghton, Mifflin & Co.

*Typhoon.* By Joseph Conrad. G. P. Putnam's Sons.

*A Sea-Turn and Other Stories.* By T. B. Aldrich. Houghton, Mifflin & Co.

*Bylow Hill.* By G. W. Cable. Charles Scribner's Sons.

*The Way of a Man.* By Morley Roberts. D. Appleton & Co.

*In the Gates of Israel.* By Herman Bernstein. J. F. Taylor & Co.

Readers pretty well *en rapport* with Mr. Henry James will be put to it to tell what his latest contribution to psychological fiction is all about. In the case, the most useful office of the reviewer is to say at once what some of it is about, to declare the situation. In doing so he may acknowledge a sense of indelicacy, even coarseness, much as if he were tearing away the enveloping leaves of a rose just to show its heart, or denuding a much-swaddled infant only to prove that it is all there. As we make it out (with some vanity of intelligence) the actual situation imagined by Mr. James for what he might call a study of the abysmal in human consciousness is this: An impecunious young Englishman, a journalist by profession, named Martin Densher, is in love with, in fact secretly engaged to, Kate Croy, dependent for a luxurious subsistence on "Aunt Maud," otherwise Mrs. Lowder, who dwells in splendor at Lancaster Gate. Mr. Densher, humbly conscious that his only talent is a "talent for thought," recognizes with rapture in Miss Croy a "talent for life," and becomes, therefore, for the guidance of their affair, a pliable instrument in her capable hands. At an early age she had divined that it is "of the essence of situations, under Providence, to be worked"; so we behold her in her great situation electing to conceal from Aunt Maud how far she and Densher have gone, trusting to time and her wits to "square" her invaluable relative. Appears upon the London horizon Miss Milly Theale, an American of the richest, already in love with Densher, and, at the dawn of life, in full possession of its resources, stricken with some mysterious and mortal disease. Milly is the "dove," and has innocently nestled up to Miss Croy, unaware of any relation between her and Densher. When she becomes aware, it is by indirection, with the view advanced that Densher nourishes an unrequited passion for her friend—a view that Miss Croy herself resolutely maintains, for in Milly's passion she has perceived the situation to be worked, whereby Aunt Maud may be squared and Densher and everything else she wants eventually secured to her.

Exactly what she is driving at nobody can know till he approaches the middle of the second volume, where her plan is explicitly stated. It is Densher who states it. The poor young man feels that he is being pushed in directions too mysterious, through a fog too thick, and demands light. Miss Croy fences thus:

"'Don't think, however, I'll do *all* the work for you. If you want things named you must name them.'

"He had quite within the minute been turning names over; and there was only one, which at last stared at him there dreadful, that properly fitted.

"'Since she's to die, I'm to marry her?'"

"To marry her," Miss Croy assures him without blinking. He presses her further: "'So that when her death has taken place I shall, in the natural course, have money?'" Not in the least flustered, she replies: "You'll in the natural course have money. We shall in the natural course be free."

The situation, thus baldly stated, seems rather monstrous, but Mr. James saves some from moral indignation and others from nervous shock by swathing his situation in the speculative, wrapping it in the conjectural, and protecting it with infinite precaution from direct judgment. He removes it from contact and conflict with moral preferences and emotional susceptibilities, and presents it voluminously to the intelligence as a subject with a wonderful variety of points for subtle disquisition. The simple or superficial has never engaged his interest, and he has always been blessedly free from a desire to proclaim the obvious. Events and their possible consequences attract him only in so far as they prompt conjecture about how certain imaginable people might face them, what they might conceivably do with them. To read him (in his later days) without mystification and utter dissatisfaction there must be a clear understanding on these points; the reader must be able to take a cheerfully reciprocal attitude. For certain sentences, even chapters, the faithful should not be lured into defence, but declare boldly that the author has taken sanctuary and may be as cryptic as he pleases. In 'The Wings of the Dove' he frequently retires so deeply within himself that the more he labors to express his meaning, the more involved and incom-

communicative he becomes, which, of course, makes the scoffer free to declare that he has no meaning to express. The part played in the drama by Sir Luke Strett, a famous physician, remains to us an unfathomable mystery; Aunt Maud has flights that we do not pretend to follow, and Mr. Densher's "talent for thought" leads him into regions hypothetical quite beyond a humble gift of understanding.

Kate Croy, with her "talent for life," is less difficult. Her talent for life includes naturally a talent for lies, and with the benefit of her history a shrewd guess may be made at the unnamed crime for which her father had been rejected by society. It is not improbable that Mr. James, among other dark motives, has a rather far-reaching tragic one, and that Kate Croy stands for a victim of destiny rooted in character, destiny not unconnected with an inherited proclivity for wickedness that may long escape detection and can not be defined. In the first chapter she reflects on the humiliating worldly condition of her family, and wonders why a "set of people should have been put in motion on such a scale, with an air of being equipped for a profitable journey, only to break down without an accident, to stretch themselves in the wayside dust without a reason."

From the last chapter we infer (under correction) that Kate has lost Densher, for whom her passion is beyond question, and has lost him because of the existence of sentiments deeply rooted in his nature and her own on which she had not counted when she entered him in the race with death for Milly's fortune. Like the rest of her family, she has broken down, and, however vigorously she may rally, can never shake off the wayside dust.

Heroes of fiction, being scrutinized, so seldom turn out to be men, that the highest praise bestowed by authority on 'Tom Jones' is, "This is not a book, but a man." Presumably, women novelists can not draw a real man, and men are afraid to. Mr. Owen Wister's 'Virginian' is a "sure-enough" man, a male being, whom the most earnest female advocates of equality of the sexes could never convert into a thing like unto themselves. He is also a person to whom the much-abused word charming may be applied without a blush. As a Virginian he is exceptional, for he has no ancestors or family portraits or old furniture or silver—nothing common to his native State but a soft drawling speech and a chivalrous attitude towards the weak who happen to be women. As a cow-puncher of Wyoming he is, however, a historical personage, as genuine as George Washington. For Mr. Wister says that, during the last decade, cattle-thieves and politicians have ravaged Wyoming, and between them exterminated the cowboy with his high heels, his jingling spurs, and his awful readiness to shoot or to be shot. "He rides," says Mr. Wister, "in his historic yesterday. You will no more see him gallop out of the unchanging silence than you will see Columbus on the unchanging sea come sailing from Palos with his caravels." Many good stories about the ungoverned cowboy have been well told, depending mostly for effect on external picturesqueness and thrilling adventure. Mr. Wister, in a number of short tales, and now at length in 'The Virginian,' has given him character, connecting him with the rest of his species, while emphasizing a differentiation due to his career. Several chapters included in 'The Virginian' have been published separately, and are given rather more space in the novel than they are worth to its principal motives—characterization of the Virginian. The New England relatives of Molly Wood, schoolma'am at Bear Creek, are hypothetical New Englanders, so fearful of compromising their respectability. Throughout the tale, Molly Wood is never quite good enough for the pains and persistence with which the Virginian woos her, but in the last crisis she justifies his choice. As a test of character for both, the final moment of conflict between Molly and her lover is excellently devised. The dramatic thrill in it is very quick, and the outcome so satisfactory that one realizes an immense fear of a disappointment. 'The Virginian' has, we believe, been one of the most popular books of the season; it deserves to endure through many seasons.

The motive of Mrs. Foote's tale, ambiguously entitled 'The Desert and the Sown,' is too fanciful, too remote from the common, to permit so much real tragic intensity as she has tried to attach to it. Some ideals of self-sacrifice are a little too fine-spun for everyday use, and that which animated Adam Bogardus first to wander twenty years in a wilderness, and again to deny his identity, seems to us one of them. At all events, if such fantastically ideal conduct is to appear supremely noble and extract sympathetic emotion, the presentation should be direct, pitched in a serious key, and kept in rather stern poetic isolation from common occurrences. Mrs. Foote's method of presentation is very defective—a matter for wonder, since in her earlier days she showed a strong sense of the value of form and knew how to use her subject for all it was worth. In this case she approaches her subject through garrison gossip and chatter about weddings and clothes, and, even after reaching it, she continues to offer the diversion of not very relevant triviality. It is given to few to expose a soul's tragedy coherently, and the most vivid impression to be derived from 'The Desert and the Sown' is that Mrs. Foote's aspiration has flown a little beyond her power of performance.

In the days, now long ago, when Charles Egbert Craddock wrote tales of strange and warlike folk who dwelt in remote mountains, engaging in bloody family feuds, in the illicit distilling of whiskey and in uproarious dances at the cross-roads, some good people were more shocked by the unconventional matter than pleased by the vigorous vivacity of her narration. Surprise when this supposedly bold, bad man turned out to be a woman was great, yet hardly greater than that experienced when, taking up Miss Murfree's latest book, 'The Champion,' one finds a chronicle, not of wild deeds done under the light of the famous Tennessee moon, but of a good little "printer's devil" whose bad companion persuaded him to enter a theatre without the preliminary formality of paying for his ticket. The consequences of the "devil's" irregularity were dreadful, and the activity of his conscience points unmistakably to a tendency of his enlightening occupation to convert devils into angels. The inferences, too, that he drew from strange things seen and heard behind the scenes are clearly beyond the mental range of a small boy whose days are spent in blacking boots, for instance. When he is safely out of his scrape, his cultivated conscience and mind together arrive at a reflection which marks him for a predestined prig. Mr. Gorham, the manager of the theatre, has helped the devil to clear himself of accusation of arson and robbery, but this kind deed, we are given to understand, was prompted by impulse, and was not an expression of character founded on righteousness; therefore, "In his observation of Gorham in those days, Ned [the devil] became more and more aware that impulse is a poor substitute for principle as a basis of action, and that although impulse may serve as an excuse for much that is fierce or weak, it detracts from the merit of what is good." Miss Murfree's moral excursion will not, we think, add to her reputation either as an observer or delineator of life.

Mr. Joseph Conrad, who has written some stirring tales of the sea, becomes in 'Typhoon' too obscurely nautical for easy understanding by land-going people. What the captain and the mate, the engineers and the two hundred Chinamen between decks were all about, individually and in relation to each other, while the typhoon was playing with the steamer *Nan-Shan*, is matter easily grasped, perhaps, by experienced sailormen, but surely most bewildering to any other. There can be no mistake, however, about the man at the helm and his business, and we cannot but think that he is clearly seen because he is so vividly presented:

"He had flung down his cap, his coat, and stood propped against the gear-casing in a striped cotton shirt open on his breast. The little brass wheel in his hands seemed a bright and fragile toy. The cords of his neck stood out hard and lean, a dark patch lay in the hollow of his throat, and his face was still and sunken as in death. . . . His head didn't budge on his neck—like a stone head fixed to look one way from a column."

It is a matter of common report that some fortunate men have followed the sea through a long life without encountering a big blow. Captain MacWhirr of the *Nan-Shan* had been one of these until the typhoon surprised him, and the circumstance is noticed by the author in a way that makes his accumulation of detail and technicalities, his toil and care for great effects, seem singular waste of time. This about Captain MacWhirr comes so naturally:

"The sea itself had never put itself out to startle the silent man who seldom looked up, and wandered innocently over the waters with the only visible purpose of getting food, raiment, and house-room for three people ashore. Dirty weather he had known, of course. But he had never been given a glimpse of immeasurable strength and of immoderate wrath, the wrath that passes exhausted, but never appeased—the wrath and fury of the passionate sea. . . . He sailed over the surface of the oceans as some men go skimming over the years of existence, and sink at last into a placid grave, ignorant of life to the last, without ever having been made to see all it contains of perfidy, violence, and terror. There are on sea and land such men thus fortunate or thus disdained by destiny or by the sea."

The collection of tales which have been written by Mr. Aldrich for magazines may be best described without disparagement as

neat little nothings. The subjects are thin, requiring for their development neither force nor passion—very easy things for a practised writer to turn out without any sweating of the brow. The title tale is light comedy of a mechanical sort, and suffers from that blight of affectation or insincerity which affects many American representations of compatriots who are persons of fashion. A young man who betrays his genuine Americanism by saying to his servant, "If there's a bottle of Bass on the ice, serve that," and immediately becomes so Anglo-Indian (presumably) as to say to himself: "The boys can't have finished tiffin yet," strikes us as a young man with a false note in his character—one who must be living a double life, who, linguistically and otherwise, doesn't know "where he's at." "An Untold Story" is, from every point of view, the best in the book. The feeling of the scene and of the tragic circumstance in the garden at Budapest is admirably given, and one recognizes a poet in the observation of a group of children, curious, yet afraid, who "stood in an attitude of hesitation, ready for instant flight, like a flock of timid sparrows."

Mr. Cable's 'Bylow Hill' is a domestic drama, showing how one man's insane jealousy destroyed the peace and comfort of several of the most virtuous and amiable people in the world. The trouble appears to have arisen from the too great amiability of Miss Isabel Morris, who, under pressure, married Arthur Winslow, feeling that she was not too fond, and wishing she were "fond in the old, mad way the word meant when it was young." It may be supposed that Winslow is not quite sane, and that, therefore, in his passion, he is always cowardly and violent. The assumption naturally deprives the delineation of his jealousy of the interest with which its development may be watched in a man normally strong and courageous like Othello. The book is very prettily done up with large, clear print, wide margins, and colored illustrations.

Several men are prominent in 'The Way of a Man,' by Mr. Morley Roberts, and there is no indication of which man's way he wishes to celebrate. The book is an example of romance gone mad, and worth notice only because it may indicate that the tale of adventure in revolting South American states is in the death-throe. Bad as it has been, however, it might in decency have been permitted to die without positive ignominy. No subject is bad enough to be mauled and battered and travestied with the incoherent fury displayed by Mr. Roberts.

Much that is interesting about Jews (as Jews) may be gathered from the tales by Mr. Herman Bernstein, collected under the title 'In the Gates of Israel.' In the heart of New York they live, in the shadow of the Goddess of Liberty, yet moving and breathing under the personal supervision, as it were, of the denunciatory prophets. The marriage broker alone appears quite to escape their gloomy domination, but his clients do not appreciate the joke of his occupation. Mr. Bernstein's literary manner is direct and sincere, and he shows no desire to sentimentalize the sorrows of his people. There may be no English equivalent for some words he uses (Hebrew, Yiddish, Russian), but in the interest of the reader he might contrive to do without unpronounceable symbols.

*An Introduction to the Scientific Study of English Poetry.* Being Prolegomena to a Science of English Prosody. By Mark H. Liddell. Doubleday, Page & Co. 1902.

We have an abiding and unflagging interest in all phases of all questions relating to poetry, versification, and kindred topics; we approach every new book on any such subject with a thrill of hopeful expectancy. Be it never so volcanically flamboyant or never so shapelessly hazy, still, at first glimpse, we hope that each may be the pillar of fire or cloud to lead us divinely out of the desert wilderness of our present state of English verse criticism. We do not shrink from the ugliness or thorns of the most repulsive weed in the hotbed of prosodial treatises, hoping to discover therein the beginnings of the mighty tree that shall overshadow with its branches and fill with its perfume all the garden of poetics. We have a soft place in our hearts for all attempts, however ridiculous, because there is merit in the effort. The world of literature needs light on the verities of English versification; let every one who feels capable, try to give us that light. We shall praise the intention no matter how inadequate the result. But here we have a book almost impossible to read at all. Many pages are defaced by the heavy sprinkling of pseudo-algebraic formulæ. For example, $X+HI^n+VF$ is the "formula" for poetry.

In the author's expression of what he means by "Human Interest" (HI) in littrature he says (p. 39):

"Macbeth goes not alone and unaccompanied to his final damnation, but draws us along as protesting witnesses, crying for the mitigation of his inevitable punishment—the very essence of tragedy."

This has a familiar ring to our ears, but it cheers us on our way. On pages 130, 131 we find, in what is said of "the poet," this really true and felicitous statement:

"Because he makes the selection at once, he does not do it either by chance or by inspiration. The happy coördination of the craftsman's physical activities is not essentially different from the happy coördination of mental activities which produces the poet's verse."

On page 172 we find:

"When English poetry is set to music, the impulses are given an artificial time-duration to suit the music. That it is an artificial apportionment of time is evident from the fact that a single hymn can be sung to a number of different tunes in which a given thought-impulse may have a number of different time values."

This just observation is wholly misused in the attempted demonstration of which it forms part.

At pages 140, 141:

"The general notion of poetry we thus obtained was: ideas normally formulated in the terms of correlated sound-group-images, possessing the general and abiding human interest of literature, and rendered æsthetically interesting by being couched in some recognizably æsthetic Verse Form. Or, stated as a formula: $X+HI+VF$."

This is the author's definition of poetry. It seems superfluous to characterize it.

On page 17, we find:

"According to this theory, an English unaccented syllable corresponds to a classic short syllable, and an English accented syllable corresponds to a classic long syllable. A great deal of printer's ink has been wasted in trying to show that this is really the case in English speech; in other words, that accent lengthens a syllable."

The misconception expressed in the last clause is not original with Mr. Liddell, and it is true that much printer's ink has been wasted as he says. The point is, that the question whether accent in English lengthens the syllable upon which it falls has nothing to do with the structure of English verse. A running pattern can be made with wooden blocks of two colors or with any materials of two distinct kinds. So classic verse was a running pattern of long and short syllables. So English verse is a running pattern of accented and unaccented syllables. The accented syllables in the scheme of verse-patterns in English *correspond* to the long syllables of analogous verse-patterns in Latin and Greek. This is not asserting or implying that an accented syllable is long in English. Not at all.

On page 97 we read:

"Alliteration is the only arrangement of impulses according to their articulation-character that has been largely used as a punctuating element."

What of rhyme? Rhyme punctuates, and the lines of a stanza are an arrangement of impulses according to their articulation-character.

With a sinking of the heart we view the heading of one chapter: "Nomenclature and Notation." Like most recent books on poetry, this proposes a new set of technicalities; as in all the rest, the new terms, if they mean anything, mean precisely what the old terms meant, and are longer and far clumsier than the old. Mr. Liddell calls words, phrases, clauses, and sentences "thought-moments," and uses the term "emotion-stress" for what is usually called tonic-accent or inflexion. After two hundred and sixty-eight labored and laborious pages we find: "Single rising rhythm, single falling rhythm, double rising rhythm, double falling rhythm," offered as improvements on iambic verse, trochaic verse, anapæstic verse, dactylic verse. We do not see that the new terms make us any better off, nor are they original. The chapter bristles with "may" and "might." This tentative presentation is justified. Is the term "wave of impulse" an improvement on "foot," or "five wave-rhythm" on "pentameter"?

"Here we part company," we read on page 304, "with classic prosody, and say farewell to 'iambus,' 'trochee,' 'dactyl,' 'molossus,' 'tribrach,' and all the unctuous fictions which the Renaissance schoolmaster has introduced into our English system."

That is as if we were to say: "From henceforward there shall be no more murders in the world; we'll call 'em all homicides."

In common with many other laudators of the English language and poetry as superior to all others, Mr. Liddell speaks of the old English alliterative poetry and of its rhythm in a tone of hushed awe, as if the mere mention of it were a talisman to dissolve all difficulties in modern English verse-study and to furnish light in all dark places. In common with them, again, he ignores almost entirely all forms of English versification except the blank-verse line. Yet, again in common with them, in expounding his examples and citations from the poets, he has no conception which features of the character of a passage belong to rhetorical effects and which to effects of verse-form. This appears all through the book and vitiates most of the deductions. The author's method

is toilsome in the extreme and seemingly well-intentioned. His fashion, however, of attempting to illustrate the beauty of a citation by translating it into phrases of his own, which retain the general meaning while altering some of the words and their order, is wholly useless for the purpose for which he designs it, especially when applied to passages from Virgil, Milton, or Shakspere.

Sidney Lanier, in his 'Science of English Verse,' set forth that when we recite poetry we utter sounds, when we listen to poetry we hear sounds, when we read poetry the letters recall sounds to our mind, when we remember or conceive poetry we imagine sounds. This is good physics, good physiology, and good psychology. It is a plain statement of plain facts. It is universally accepted by competent thinkers. This does not prove it, but is a point in his favor. All the critics of his book agreed, and have since agreed, that, whatever it failed to do, it furnished in its chapters on poetic form and sound a point of departure for all future treatises. The book before us is an attempt to take the study of verse-form out of the safe province of acoustics, an attempt to argue the facts of verse-form altogether out of the category of objective realities, and to banish them into the nebulous realm of subjective phenomena.

---

*Westminster.* By Sir Walter Besant and G. E. Mitton.—*The Strand District.* By Sir Walter Besant and G. E. Mitton.—*Chelsea.* By G. E. Mitton, edited by Sir Walter Besant. [The Fascination of London.] London: A. & C. Black; New York: The Macmillan Co.

Readers of the Autobiography of Sir Walter Besant will remember the great scheme for "the survey of London" on which he was engaged at the time of his death. This project, according to his own account, fascinated him more than anything else he had ever done. It included a regular and systematic perambulation of London by different persons, with a view to the writing of a history not only of every parish, but of every street that possessed associations worth recording. There have been innumerable guide-books and historical and antiquarian compilations of various kinds, but since the time of Stow there has been no such elaborate attempt at exact description as that which employed the enthusiasm of Sir Walter Besant.

In these three volumes we have the first-fruits of this new survey. The mechanical production leaves nothing to be desired. This series will undoubtedly be of value to the traveller in giving him various particulars of literary interest which are not to be found in the ordinary guide-book, especially in the identification of the houses in which distinguished writers have lived. Here and there, too, may be found curious details such as the fact that in 1656 there were more than 300 watercourses crossing the Strand between Palace Yard and the Old Exchange.

Unfortunately, when this has been said, the special merit of these books appears to be exhausted. On the whole they are very disappointing. Anything like a complete survey would have supplied much fuller information. Each volume has one map and one picture, but there is not a single plan to illustrate the description of a building, even in the case of Westminster Abbey and the Houses of Parliament. And some of the omissions are inexcusable. Imagine a book on Westminster, running to nearly a hundred pages, without even a bare reference to the Westminster Assembly or the Westminster Confession! In guiding us through Downing Street, the editor does not take the trouble to give the number of the Prime Minister's house, nor does he think it worth while to mention that cabinet councils are held there. The Privy Council Office finds a place on the list of public buildings without the reader being reminded that there sits in one of its rooms a court of appeal which performs a unique function in binding together the colonies of the British Empire. Of the present Houses of Parliament we learn scarcely anything except the inept comment, that they "have been the cause of much of that criticism which is applied to the work of some people by others who certainly could not do so well themselves." The West End clubs are pointed out to us, and named, but, except in the case of the Travellers', nothing is told the distinctive features of their [illegible] ship. The American memorials in St. Margaret's are recorded, but Dean Farrar, to whose interest during his rectorship they were largely due, is entirely ignored. There is a paragraph about the old Kitcat Club near the Strand, but, though it is stated that the portraits of the members were painted by Kneller, there is no reference to the origin of the "Kitcat" style. The National Portrait Gallery receives mention without a word as to its contents. Several other instances might be added of the undue brevity with which the authors have treated some of the most important buildings in London. It cannot be said that the omitted facts would be outside the scope of the series, for some of the descriptions and associations included in this survey are of recent date and trivial interest. Space has been found, for example, for a list of places with which the New Scotland Yard has telephone connection, for particulars of the Ladies' Dwelling Company, and for the bill of fare at the Duke of York's school at breakfast and dinner respectively.

Occasional repetitions give further evidence that sufficient pains have not been taken in putting the collected material into shape. On page 101 of the book on the Strand it is said that Long Acre, a piece of land consisting of seven acres, was granted to the Earl of Bedford in 1552. On page 108 we are back again to Long Acre, which is now mentioned as having been granted to the Duke of Bedford. In the same book, we find on page 21, "For St. Martin's Lane, see page 16," and a paragraph about the Public Library in that street. Referring to page 16, we discover nothing but a reference to the fact that the Lane once continued as far as Northumberland House. The fullest account of St. Martin's Lane actually occurs on page 109, with a description of its various buildings, except the Public Library, for which we are referred back to page 21. The same volume contains such errata as "Earl of Shaftsbury" (p. 41), the statement that the University of London is now in Burlington Gardens (p. 44), and the mention of "Sir John Lubbock" as the occupant of a certain house in Charles Street. The latter anachronism is the more surprising from the fact that on the very same page another house in the street is said to be owned by Lord Avebury.

Two sentences in the Westminster volume deserve a paragraph to themselves:

"On that black day, when England shamed herself before the nations by spilling the blood of her King, the scaffold was erected before this building, though the exact site is unknown. It is believed that the window second from the north end is that in front of which it stood, and that the King stepped forth from a window in a small outbuilding on the north side; he came forth to die, the only innocent man in all that great crowd, who watched him suffer without raising a finger to save him."

---

*A Short Life of Abraham Lincoln,* Condensed from Nicolay and Hay's Abraham Lincoln: A History. By John G. Nicolay. The Century Co.

No word of explanation as to the principle that has controlled this condensation accompanies the above volume. Perhaps the death of Mr. Nicolay accounts for this silence. In the main the elimination, heroic in its proportions, has been of those parts which make the original biography a history of Lincoln's time. But much of the properly biographical matter has also vanished—fortunately, sometimes, as where we are spared the misleading account of Lincoln's religious opinions. The abridgment is made so well that no one ignorant of its relation to the larger book would suspect it of being one. It preserves, however, the disposition of the 'History' to gloze the homelier and less impressive aspects of Lincoln's life. The squalor of his early years is not rendered so sincerely as by Herndon and Lamon, and the wonder of his successful emergence from it is by so much diminished. That dreadful letter to Mrs. O. H. Browning about Mary Owens is shorn of its more draggled plumes, but the mistake of calling it "grotesquely comic" is not made again. The eccentricity of Lincoln's love affairs in general, following the Anne Rutledge episode, is discreetly veiled. So is the freak of September 22, 1862, when the anticipatory emancipation proclamation was introduced to the Cabinet with a reading from Artemus Ward. The statesman is not made to appear greater than he was, but of the shrewd politician there is less than just measure, and in general the presentation tends to such an effect as a statue of Lincoln in a Roman toga would produce. This is better than to exaggerate, as some have done, the rougher side. It seems not quite fair to relegate to anonymity the speech made by George William Curtis in the convention of 1860, which brought back Giddings into the convention and the Declaration of Independence into the platform. There is no retraction regarding Lincoln's mooted influence in favor of Johnson's nomination as Vice-President. Such influence is denied with emphasis and supporting facts. An absolute silence for the six years from Lincoln's Congressional term to the outbreak of the Kansas-Nebraska legislation is a too violent sacrifice of the historical to the biographical method. Two chapters, covering twenty-five pages, exhaust the most significant part of Lincoln's Administration—the steps leading to emancipation, and that climax itself. This is scant measure, but, on the other hand, there is an agreeable absence of Mr. Morse's acrid girding at the radical anti-slavery men, for whose ardent temper Lincoln's was too cool and slow.

BOOKS OF THE WEEK.

# MACKENZIE'S VOYAGES

FROM MONTREAL THROUGH THE CONTINENT OF NORTH AMERICA TO THE FROZEN AND PACIFIC OCEANS in 1789 and 1793, *with an account of*

The Rise and State of the Fur Trade

*By ALEXANDER MACKENZIE*

*With Three Maps and a Portrait in Photogravure reproduced from a very rare stipple engraving. 2 volumes. Post 8vo, cloth, gilt top, $1.00 net per volume. Large Paper Edition, 210 numbered copies on Dutch hand-made paper, portrait on India paper, $3.00 net per volume.*

SIR ALEXANDER MACKENZIE'S journey to the unknown regions of the wild north and his exploration of the great Mackenzie River from its sources to the Arctic Ocean may easily rank among the greatest achievements on this continent. In view of the fact that the opening of the territory west of the Rocky Mountains followed quickly after Mackenzie's Voyages, and the great Hudson Bay Company immediately started to stud the whole northern country with small trading posts, whence have been drawn since incalculable riches in the furs of the North, the quiet, unimpassioned story of the sturdy Scotchman's victory over almost incredible privations and obstacles is invaluable as a contribution to our knowledge of early American exploration, and has therefore been included in the *Commonwealth Library*.

# *New Scribner Books Now Ready*

James Whitcomb Riley's

## The Book of Joyous Children

Profusely Illustrated by WILL VAWTER

$1.20 *net*. Postage 8 cents

THE sweetness, the grace, the laughter, and the tenderness that are characteristic of Mr. Riley's best verse are found to the full in this book of charming poems for and about children. The types are, of course, Hoosier, but the traits of human nature in its most lovable and winning childlike moods are common to humanity and give the book a universal interest. The illustrations have been made under the author's supervision, and portray the scenes and the little heroes and heroines of the poems with artistic fidelity.

*An Extremely Important Work Recast and in Part Rewritten*

## The Grounds of Theistic and Christian Belief

**By GEORGE P. FISHER, D.D., LL.D.,**

Professor of Ecclesiastical History in Yale University. Revised Edition; in great part rewritten. $2.50.

THE *London Spectator* says: "This is really a good book, full of learning and full of thought—learning which illustrates and never confuses, well digested, and consequently adding to the vital power of the thought. . . . And those portions which deal with the recognized basis of faith are equally able. Indeed, we have seldom seen the current arguments—from design, causation, order, and the rest—so well or so pointedly stated."

## A Fighting Frigate and Other Essays and Addresses

By HENRY CABOT LODGE, author of "The Story of the Revolution," etc. $1.50 *net*, postage 12 cents.

A volume of sane, illuminative writings on these subjects:

A Fighting Frigate; John Marshall; Oliver Ellsworth; Daniel Webster—His Oratory and His Influence; The Treaty-Making Power of the Senate.

Three Governors of Massachusetts—1. Frederic T. Greenhalge, 2. George D. Robinson, 3. Roger Wolcott; Some Impression of Russia; Rochambeau.

## The American Merchant Marine:

**Its History and Romance from 1620 to 1902**

By WINTHROP L. MARVIN, Associate Editor of the Boston *Journal*. 8vo, 2.00 *net*, postage 22 cents.

It has the interest of a romance, especially the chapters dealing with the East India trade and with the whaling fishery. The serious value of the work to the student of the problems which confront American ship-builders is not easily overestimated.

## Through Hidden Shensi

**By FRANCIS H. NICHOLS**

Profusely illustrated from photographs taken by the author. 8vo, $3.50 *net*, postage 18 cents.

THIS important book of travel details the story of a journey, in the autumn of 1901, from Pekin to Sian. The route lay through the heart of the "Boxers' Country" and across the oldest two provinces of China. It is essentially a story of untraveled roads over which few white men have ever ventured.

# THE NEW INTERNATIONAL ENCYCLOPÆDIA

Now in course of publication in 17 Royal Octavo Volumes, of 15,000 pages.

## ENTIRELY NEW—NOT A REVISION

The only new Encyclopædia issued in English during the last ten years.

**EDITORS**

**Daniel Coit Gilman, LL.D.,** President of Johns Hopkins University (1876-1901); President of Carnegie Institution.
**Harry Thurston Peck, Ph.D., L.H.D.,** Professor in Columbia University.
**Frank Moore Colby, M.A.,** late Professor of Economics in New York University.

**Assisted by over 200 eminent authorities**

Every page gives evidence of thoughtful care and the highest skill in selecting such salient and significant features of the learning of the past as explain and illuminate.

**The most recent events, the latest phases of progress. All branches of knowledge.**

Science, Sociology, History, Literature, Business Affairs, Invention, Commerce, Art, are all fully treated by modern specialists, whose lives have been devoted to their study.

About 65,000 titles are included, dealing with over 100,000 subjects, more than 30,000 of which are not found in any other general reference encyclopædia in the English language.

**RICHLY ILLUSTRATED.**

Never before has it been attempted to illustrate a work of this character so copiously and so artistically. The plates and maps alone, if printed separately, would make a book larger than Webster's International Dictionary.

**Send for Sample Pages FREE**

## Abraham Lincoln

Condensed by JOHN G. NICOLAY from Nicolay and Hay's "Abraham Lincoln: A History." This edition brings into one volume all the essential facts of President Lincoln's life and a large part of the detail. It is entirely an abridgment of the larger work. 8vo, 600 pages, with frontispiece and index. $2.40 *net* (postage 18 cents).

## Daniel Webster

By JOHN BACH MCMASTER. Professor McMaster, the author of "A History of the People of the United States," here gives a terse yet comprehensive picture of Webster's striking career, written in an easy, forceful style. 8vo, 343 pages, 23 full-page illustrations. $2.00 *net* (postage 16 cents).

## Old English Masters

Engravings by TIMOTHY COLE, with Text by Prof. JOHN C. VAN DYKE. This work contains 48 wood engravings, including reproductions of the most famous pictures of Hogarth, Reynolds, Gainesborough, Turner, and other English masters. Super-royal 8vo, 223 pages. $8.00 *net* (postage 38 cents).

### A PORTFOLIO OF PROOF IMPRESSIONS

of the above, with the pictures printed from the original wood blocks on specially made Japan paper, each signed by Timothy Cole and the proof-printer. Limited to 100 sets. $1.50 *net*.

## East of To-day and To-morrow

By Right Rev. HENRY C. POTTER, Bishop of New York. This book is the result of Bishop Potter's trip through the Philippines, China, Japan, India, etc., and is straightforward, concise, and full of prophecy. 12mo, 190 pages. $1.00 *net* (postage 9 cents).

## The Story of Athens

By HOWARD CROSBY BUTLER, A.M. The volume is not a critical review of the history of the classic city, but, as the title rather suggests, "a simple sketch of the life and art of Athens from its earliest beginnings." 8vo, 520 pages, illustrated with photographs and drawings. $2.40 *net* (postage 18 cents).

## Two New "Century Classics"

A series of the world's best books, selected, edited, and introduced by distinguished men of letters. Issued in beautiful form, on pure rag paper, rich cloth binding. Price, *net*, cloth, $1.25; full sheep, $2.00 (postage 11c.).

**Essays of Elia**

With a frontispiece portrait of Charles Lamb and an introduction from Walter Pater's "Appreciations."

**A Sentimental Journey**

By LAURENCE STERNE. With a frontispiece portrait and an introduction from Thackeray's "English Humorists."

## Caterpillars and Their Moths

By IDA MITCHELL ELIOT and CAROLINE GRAY SOULE. Gives the Life Histories and Life Size Illustrations of 43 Species of Moths. Here is the result of more than twenty years' experience in studying and rearing moths. The illustrations are from photographs and *show actual size*. 8vo, 300 pages of text, 80 insets, with index. $2.00 *net* (postage 18 cents).

*Sold Everywhere. Published by*

**THE CENTURY COMPANY, Union Square, New York**

# LONGMANS, GREEN, & CO.'S NEW BOOKS

## In Kings' Byways

By STANLEY J. WEYMAN, Author of "A Gentleman of France," "Count Hannibal," etc. With a frontispiece by George Varian. Crown 8vo, cloth, ornamental, $1.50.

## The Lord Protector

A Story. By S. LEVETT YEATS, Author of "The Chevalier D'Auriac," "The Heart of Denise," and other tales. With frontispiece. Crown 8vo, cloth, ornamental, $1.50.

## Life The Interpreter

A Story. By PHYLLIS BOTTOME. Crown 8vo, cloth, ornamental, $1.50.

A modern story of social conditions, showing the author's familiarity with settlement work and problems. The characters centre round a club for "factory hands" in the East End of London.

## The Adventures of Captain John Smith

**Captain of Two Hundred and Fifty Horse, and sometime President of Virginia.**

By E. P. ROBERTS. With 3 Maps and 17 Illustrations. Crown 8vo; pp. xiv.-307, $1.50 *net*. By mail, $1.65.

*** This book has been compiled mainly from the writings of Capt. John Smith, with the view of presenting a plain, straightforward story, in which the chief events of the captain's life shall be brought together in a concise, accurate and simple form.

## Letters of Dorothea

By CHARLES SEARS BALDWIN, Ph.D., Assistant Professor of Rhetoric in Yale University. Crown 8vo, pp. xvi.-451, $1.35.

## Thoughts on Education:

**Speeches and Sermons.**

By MANDELL CREIGHTON, D.D., D.C.L., LL.D., etc., sometime Bishop of London. Edited by LOUISE CREIGHTON. Crown 8vo, pp. xiv., 215. $1.60 *net*. By mail $1.70.

## Pastor Agnorum:

**A Schoolmaster's Afterthoughts.**

By JOHN HUNTLEY SKRINE, Warden of Glenalmond, Author of "A Memory of Edward Thring," etc. Crown 8vo, $1.60 *net*. By mail, $1.72.

"His book is attractive, suggestive, at once virile and scholarly in style. He treats his theme with serious earnestness. . . . Clear-sighted balance is everywhere present . . . a book readable and worthy of reading."—*The Academy and Literature.*

**LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York**

# The Nation.

NEW YORK, THURSDAY, OCTOBER 30, 1902.

## The Week.

Senator Morgan of Alabama continues in a state of moral deafness or judicial blindness in reference to the coming election. In a recent interview he is quoted as saying:

"I do not see that the Democrats have anything to gain by controlling the next House of Representatives. I do not believe the Democrats of this country want to constitute themselves a clog to legislation; yet that result would naturally follow. With the two branches of Congress of opposite political faith, the Government will be seriously embarrassed. There is nothing to gain by a condition of this kind. It would not be any advantage to any one."

The Senator's argument would be equally valid against any attempt by the Democrats to carry any election unless they could secure the House, the Senate, and the Executive, all at once, since gaining one of the three without the others would be a clog to legislation. But there is something else besides legislation which the House or the Senate can usefully employ. It can investigate even if it cannot legislate, and investigation is needed at the present time even more than legislation. Six years have passed since the Democrats have had a sufficient number of votes in either house to investigate anything on their own initiative. All inquiries into the doings of the executive branches of the Government, the army, and colonial affairs have been conducted under Republican auspices, and in some cases have been extremely unfair and partisan. Nothing is more needed at the present time than a searchlight directed by persons who want to find out facts instead of those who want to conceal them. For this reason, if for no other, the election of a Democratic House this fall would be a blessing to the country.

---

It is the most natural thing in the world to find Lieut.-Governor Woodruff caught, as Senator Quay recently was, violating the civil-service laws. Politicians of their kidney never think of the law against political assessments as a statute to be obeyed. It is, to them, simply a thing to be got round in the safest way possible. There stands the law of the State, declaring it a misdemeanor for any officer of the State of New York to sign his name to such a coercion circular as went, bearing Woodruff's signature, to every place-holder in Brooklyn. Of course, he may plead, as Quay did, that it was put there without his knowledge or consent; but it is safe to say that, if he did not authorize it, it was placed on the illegal circular by some one who was very sure that Woodruff would not object—unless, indeed, it should turn out to be in violation of the Eleventh Commandment of small-potato politicians (the only one they really care about), "Thou shalt not be found out."

---

"I can see no serious national ills at present." Thus, in the *Independent*, writes the Quay Governor of Pennsylvania, one William A. Stone, whose name stands in the public mind for official incapacity and weakness. "It is, indeed," he continues, "unfortunately true that there are labor strikes and industrial disturbances, but they are not evidences of financial depression. They are, on the contrary, evidences of industrial prosperity, for they only occur in a serious manner when the country is prosperous." Using the same philosophy, smallpox and yellow fever are a sign of health in the person afflicted, and paralysis merely an indication that all is well with the patient's general condition. What else could one have expected from such a Governor? When the whole country was brought to the verge of unheard-of suffering and distress, when his own State was seething with lawlessness, he could see nothing in the situation which called for any action except the dispatching of a handful of troops. His voice was never heard in condemnation or warning. He withheld the full weight of his armed hand until compelled thereto by overwhelming public sentiment. The 147,000 men thrown out of employment may have felt no "financial depression," but thousands of others were plunged into it and into moral and physical suffering by the surplus of prosperity in Pennsylvania.

---

The coal companies are to be commended for their firm stand in regard to the non-union miners who worked for them at the risk of their lives during the strike. Many of these men prevented serious and lasting damage to the mines by their devotion to duty. To turn them out now at the behest of the strikers would be an outrageous return for their extremely valuable services. Naturally enough, the companies have declined to take the slightest notice of the numerous threats of the strikers, and have, moreover, served notice that any employee molesting a non-union worker will be immediately dismissed. "Dismissed and prosecuted" the notices should read, if only because the few offenders captured by the troops have thus far practically escaped punishment, or are likely to get off with light sentences. Nothing that the Arbitration Commission can say or do will affect the relations of the non-union men to their employers. There was no issue between the strikers and the operators which related to the employment of non-union men, and Mitchell himself has diplomatically spoken out against discrimination.

---

The general strike of the plasterers of this city should call attention to the fairly mediæval conditions under which building is conducted here. We know of small contractors who deal with upwards of a dozen separate unions, any one of which may, upon a good or bad pretext, hold up the whole work. The subdivision of handicraft went no further at the time of the old trade guilds. To add to the difficulty, there are rival unions, as in the case of the painters and paperhangers. The employment of either union may involve a boycott by the other, and the case has lately arisen at the White House, as well as in the new building of the Union Club. In the present case the employers' association refuses an increase of 50 cents a day, offering $4.50, and declines to let the plasterers' union appoint the foremen. Naturally, no employer, and especially no contractor, is willing to give up the right to direct the laborers he pays. Accordingly, the employers' association will fight on the issue of retaining control of its own business. Work is already suspended in some dozen important buildings, and the striking plasterers have it in their power to call out practically all the allied trades, painters, plumbers, glaziers, etc. It is to be hoped that the employers' association will stand firm. In no other branch of industry is the incorporation of the unions so necessary, for in no other does the union wield so much irresponsible power. Architects and building contractors are under strict legal bonds and penalties which do not exist for the multifarious organizations that actually control the building trade.

---

The War Department, thanks to Messrs. Charles Francis Adams, Carl Schurz, Moorfield Storey, and others, has investigated the case of the Filipino priest, Father Augustin, tortured and killed by Capt. Cornelius M. Brownell of the Twenty-sixth Volunteer Infantry, and has found sufficient evidence on hand to justify the Attorney-General in proceeding in the matter. We have lost count of the number of times the charges in this case have been declared, in official and semi-official circles, to be nonsense, but it is entirely due to the much-maligned Anti-Imperialist Committee that there is now a chance of justice being done at last. If Secretary Root's policy of suppression and connivance had continued, this case would have been entirely overlooked and the facts denied. It is interesting to

note that the special dispatch to the *Tribune* telling of the action in the Brownell case concludes by saying that there are still nearly one hundred charges against the War Department and army "which the Anti-Imperialists make no pretence of establishing, and the War Department can only contemptuously ignore." It "contemptuously ignored" Father Augustin's murder for a year or two until Anti-Imperialists produced the facts. Then, after several months, it took action on September 18, and it has taken the Judge-Advocate-General five weeks to decide whether the case should be referred to the Attorney-General or not. The War Department need not delude itself into believing that it will be allowed to "contemptuously ignore" all the other cases, for the Lake George Committee, which is shaming the War Department by doing its work of prosecution, has plenty of additional evidence on hand to submit at the proper time.

---

Gov. Taft, on October 22, addressed twenty-two officials of towns situated in the province of Cavité, and gave them to understand that they and their people must unite to suppress crime. To this "must" the presidentes at once submitted, and promised to organize volunteers to act as police. They then turned the tables squarely by asking Gov. Taft to have a vagrancy act passed that would reach the "dissolute Americans and foreigners" who have settled among them. "Many of these men," the dispatch continues, "make their homes with the natives, and the influence of these men is often bad." The Government having been frequently called upon to remove these vicious characters, Gov. Taft was apparently quite aware of the evil, and in turn promised to have the desired law enacted at once. We give prominence to this interesting occurrence for two reasons. In the first place, no Republican newspaper, we are certain, will notice it in any way. In the second place, we are thus furnished with an official admission that our beneficent civilizing process has unloaded upon one province so many rascals as to make their removal the crying need of the hour. We well remember with what joy the Imperialist press chronicled the news that large numbers of discharged soldiers were settling in the islands. This was a sure sign that the Americanization of the Philippines would proceed apace and in the best possible way.

---

A dispatch to the Associated Press from Manila says that the depreciation in the value of silver has cost the insular Government approximately $1,000,000, and has turned an expected Treasury surplus into a deficit. The gold dollar is now worth $2.40 in silver. The Government is thus going through the same trials that British India experienced ten years ago. The dispatch adds that merchants have suffered losses in the same way as the Government. That is, they have bought their goods on the gold basis and have sold them on the silver basis. They are now trying to put their business on the gold basis exclusively. This is not an easy thing to do. Congress ought to take up this question immediately and pass the House bill of the last session, which was a measure for transition from the silver to the gold standard, similar in effect to that adopted by Japan. At the last session of Congress the two houses disagreed on the question of the Philippine currency. The Senate adopted a plan for confirming and retaining the silver standard. The House refused to concur, and signified its purpose to kill the whole Philippine Government bill rather than assent to that feature of it. As the Senate was equally stubborn, there was nothing to do but to abandon both plans and leave the currency question *in statu quo*—that is, with the Mexican silver dollar as the standard unit of value. This condition cannot last much longer without producing dire distress among the Americans who are condemned to live there, and among the upper classes generally.

---

It is improbable that fifty persons in the United States not in official life were aware that an arbitration was pending between Germany on the one hand, and the United States and Great Britain on the other, concerning affairs in the Samoan Islands, or one affair therein. It seems, however, to be a fact that such a case has been in court since November 7, 1899, the arbitrator being the King of Sweden and Norway. It has been decided by King Oscar in favor of Germany. The finding of his Majesty is, that when the naval forces of the United States and Great Britain in Samoan waters fired on the canoes of one of the rival claimants to the throne of Samoa, and landed a force of bluejackets in the island of Apia, in the year 1898, they exceeded their authority. The usual consequence of an arbitration, as of an ordinary lawsuit, is a claim for damages on the part of private individuals. These amounted originally to about $30,000, but after the case was referred to arbitration they rose to $300,000, which is probably in excess of the value of all the property on the island of Apia at the time when the damage was inflicted.

---

In addition to the papers heretofore published relating to the title to the Panama Canal, is a written opinion of M. Waldeck-Rousseau, former Premier of the French republic. In his professional capacity, he says that "by the transfer the United States will acquire the firmest and most impregnable title of ownership to the property transferred, and will assume no other obligations than those stipulated for in the contract of transfer itself, without any claim being possible to be made, either by the old company, or by its shareholders, or by the liquidator, or by its creditors and bondholders, or by their representatives." This covers every claim on the other side of the Atlantic. Attorney-General Knox has procured an abstract of title for an intending purchaser, has given his own opinion upon it, and has procured that of a first-rate lawyer in France. The United States as an intending purchaser has given notice to all governments and peoples, and especially to those of France, of what she is about, so that all concerned may have their day in court. Therefore, when the money is paid over, the title passes, and everybody in Europe is concluded. Not even a case for the Hague tribunal could be raised afterwards, since that tribunal deals only with claims presented by governments. But, of course, the money will not be paid until a settlement is effected with the Colombian Government. The United States will not buy a pig in a poke either in Panama or in Nicaragua.

---

Texas has been peculiarly disgraced by three recent lynchings within her borders. In the case at Nacogdoches there was a feint made at compliance with legal forms. Few men voluntarily surrender thirty days of life, and the prisoner's waiving of the time mercifully granted by the law to prepare for eternity was due undoubtedly to a preference for death by the rope to torture at the stake. From Governor down to Judge, Sheriff, and militia officer, it was a cringing surrender to the demand of the mob, without the poor excuse of averting a worse result, as soldiers enough to protect the prisoner in his rights were present. It is small wonder that this concession to Judge Lynch at Nacogdoches was followed so quickly by the lawless hanging at Hempsted of two negroes, whose coerced waiving of the thirty-day period was not accepted by a just judge.

---

The long-debated matter of segregation of the sexes at the University of Chicago has resulted in a compromise. In the Junior College, consisting of first and second-year students, the young men and young women are to be put into separate classes; beyond the Junior College the old coeducational system will prevail. It is easy to see practical reasons for this not wholly logical solution of the problem. The required elementary courses of the freshman and sophomore year, crowded as they are, offer in any case difficulties to the teacher which do not exist in the case of the smaller and more advanced elective courses. Virtually, Chicago University refuses to teach the younger men and women together

*en masse*, but signifies a willingness to abide by the old system with the older and more serious students. Of course, the decision will satisfy neither the advocates nor the opponents of coeducation. The former will say that if coeducation is a good thing, the under-class students should not be deprived of its benefits; the latter will insist that since coeducation is pernicious, it should be abolished throughout the college. Neutrals in the controversy will see at least this virtue in the Chicago compromise, that under it the relative advantages of segregation and coeducation will be put to an actual test. The young men who study masculine analytical chemistry will proceed to coeducational organic chemistry, and the comparison of results should prove whether the presence of the other sex is a distraction or a stimulus. But educational radicals of all complexions would like to have President Harper and his trustees come out frankly and declare whether this change is in favor of the two years' college course recently advocated by President Butler, or whether coeducation in the upper-class years is held out as an inducement to waverers to be faithful to the end.

---

It is some months since the case of Gross vs. Rostand brought the subject of plagiarism to the fore, and now the suit of Mr. Victor Herbert against the *Musical Courier* is likely to cause more innocent merriment than was ever had from his excellent comic operas. Some time after Mr. Herbert ceased to use the *Courier* as an advertising medium, there began in it a series of unfavorable notices, in which both the popularity and the originality of Mr. Herbert's music were impeached. To the charge of plagiarism the composer rejoined with a libel suit, to cast his defamer in damages. Those who recall the judicial comparison of "The Merchant Prince of Cornville" and "Cyrano de Bergerac" will appreciate the greater difficulties that assailed Judge Truax. How may a composer prove to the satisfaction of a jury, none of whom are musical, that his music is his own? Witnesses have been found to swear that they have *seen* Mr. Herbert in the very act of composition, and that no scores of other composers were in sight. This kind of testimony, which has only a laughable kind of plausibility, is, after all, the best that coudd be offered on Mr. Herbert's side. For the defence, sundry musical "experts" declared that they felt that this *morceau* of Mr. Herbert's was Offenbach's, and that phrase Wagner's—this on their mere say-so. What seemed to be needed was, first, a musical jury, and, next, an experimental orchestra, as *amicus curiæ*, by which every alleged plagiarism might first be played and then its asserted original, the duty of the jury being to hum over the two pieces *sotto voce* until, as good men and true musicians, they were convinced that the pieces were one, or are two. However, the ordinary jury proved quite competent to arrive at a just decision.

---

Recent reports that Sir Wilfrid Laurier would resign are apparently unfounded; indeed, the prompt dismissal of the protectionist Minister of Public Works, Israel Tarte, indicates a certain haste on Sir Wilfrid's part to resume the responsibility of leadership. That the sacking of Minister Tarte, with the accompanying reprimand, is in the interest of the Liberal party, no one can doubt. Mr. Tarte had been speaking in season and out of season for an advanced protectionist policy, although the Ministry to which he belongs is traditionally attached to free trade, and actually bound to the present low tariff schedules. To the rebuke which Sir Wilfrid administers while requesting his resignation, Mr. Tarte could only say that he had spoken as his heart urged him to speak—an explanation which apparently did not convince Laurier that kind hearts are more than party regularity. This dismissal of Tarte was a bold move, for he is past-master of the arts of the politician, and powerful in the over-represented province of Quebec. Sir Wilfrid's action fairly clears the political atmosphere and brings back the Liberals to their old lights. Unless local conditions, particularly in the province of Ontario, should be unfavorable, the present government will have every prospect of continued existence under its skilled opportunist leader.

---

It is an odd fate that is to send Joseph Chamberlain to South Africa in the character of a peacemaker, and yet recent events have made him in a sense the champion of the Cape Colony and, perhaps involuntarily, the friend of the Cape Dutch. It will be remembered that Lord Milner was unwilling to restore Parliamentary rule in Cape Colony, and there were other observers to insist "that the Cape Colony should be reduced to the same administrative status as those colonies lately acquired by force of arms, . . . and responsible government ought not to be restored one day earlier in the Cape Colony than in the Orange River Colany and the Transvaal." To this counsel of suspicion Mr. Chamberlain opposed the more generous policy of assuming that the Cape Colony was loyal, and fit, not only to conduct its own affairs, but to help in the great task of reconstruction in South Africa. So far the Cape Parliament has rather signally fallen short of Mr. Chamberlain's generous expectation. The Afrikander Bond has asserted its predominance, has apparently captured the Premier, Sir Gordon Sprigg, and has devoted itself chiefly to unseemly squabbles between the loyal Dutch and the more radical members of the Bond. The loyal Dutch have naturally been a difficult element to manage. They have demanded quite their full share of the £3,000,000 indemnity for restocking the ravaged farms, and they have with bitterness insisted upon the strict execution of the war penalties, much as our American Tories would have done had George III. made good his title to the American colonies. With these people the very means of conciliation have been made matters of strife. Mr. Chamberlain will come more directly upon the work of his own hand when he visits the new crown colonies of the Orange River and the Transvaal, sees the dismantled farms, and studies the conditions of forced labor at the mines. His visit will be not merely by way of inspection, but, in the eyes of the world, by way of reparation. To put the burden of taxation upon the miners, for whom the war was fought, will seem to them like base ingratitude; to Mr. Chamberlain it may seem like poetic justice.

---

Last week's defeat of the German Ministry was in itself humiliating enough when the size of the majority against it is considered. It was all the more bitter a dose for Count von Bülow, because it followed his earnest and eloquent appeal to the Reichstag, in the course of which he again declared himself the warm friend of the Agrarians. None the less, the Reichstag insisted upon the recommendation of the Tariff Committee for higher duties on wheat and rye than the Government could possibly grant. As if to complete the Chancellor's mortification, the only votes cast for the Government were by the three parties—Social-Democrats, National Liberals, and Radicals—which have oftenest opposed the Government, and which the Government has hitherto regarded with suspicion, distrust, and, very frequently, hostility. So complete a change of the pawns in this game cannot but have important results. The Chancellor's policy has hitherto been to strive by concessions, promises, and smooth words to tide the Ministry over difficult places, rather than to threaten and browbeat in Bismarckian style. For the latter policy Count von Bülow is in no way fitted. On the other hand, he must have long since exhausted every possible promise in his efforts to avoid yesterday's defeat. It is quite possible, therefore, that the Chancellor's usefulness has reached an end. Even if the Kaiser decides to let him fight on a while longer, there are many equally dangerous rocks before him on which he may again come to grief. The way out may be to suppress the bill in the Bundesrath, or to dissolve the Reichstag. Either would be most unwelcome to the Ministry, and add to its unpopularity.

### *THE ELECTION FORECAST.*

That there will be Republican losses at the elections is certain. The only question is, will those losses be great enough to turn the majority of that party in the present House of Representatives into a minority in the next? For more than sixty years the party which won at any particular Presidential election has been unable to maintain its strength unimpaired at the Congressional elections in the middle of that Presidential term. Whigs in 1842 and 1850, Democrats in 1838, 1846, 1854, 1858, 1886, and 1894, and Republicans in 1862, 1866, 1870, 1874, 1878, 1882, 1890, and 1898, alike found that to the universality of the rule there was no exception. The change in the House of Representatives has sometimes been small, as in 1878, when the Republicans lost only some eight seats, counting sixteen on a division. It has sometimes been very great, as in 1894, when the Democrats returned 113 fewer members than they did in 1892. In the twelve off-year elections which have taken place since the formation of the Republican party, the average loss of the party which had won the preceding election was forty-three seats, counting eighty-six on a division. If the Republican losses this year shall reach the average of the last forty-eight years, the Democratic majority in the House will be about forty-seven.

Of course, President Roosevelt's Administration can sustain as serious losses as those of President Hayes in 1878, of President Cleveland in 1886, or of President McKinley in 1898, and still retain control of the lower house of Congress. In considering the probabilities of the Republicans securing a majority of the next House, it must be borne in mind that, in order to do so, they must, outside of the eleven States which formerly made up the Southern Confederacy, elect about two-thirds of all the members. Under the new apportionment, those eleven States will have ninety-eight members. Of these the Republicans cannot with certainty count upon securing more than two—those from the First and Second (East) Tennessee districts. Not more than three other districts are even doubtful. If the Republicans shall secure four members out of the entire ninety-eight, they will be doing very well indeed. In that event, the South, as above defined, will be represented in the Fifty-eighth Congress by ninety-four Democrats and four Republicans. The Administration will, therefore, to retain control of the House, have to elect one hundred and ninety out of the two hundred and eighty-nine members from the other thirty-four States. That is, it will have to put its candidates at the head of the poll in more than 65 per cent. of all the Congressional districts of the Northern and Border States, including among the latter Missouri and Kentucky, with their large and overwhelmingly Democratic delegations.

Experience seems to indicate that it is usually only in times when political feeling in the North is keenly aroused that any such degree of unanimity can be looked for. Since the organization of the Republican party in 1854, it has succeeded in only nine out of twenty-four Congressional elections in securing 65 per cent. of the Representatives from the Northern and Border States. Its first triumph of this kind was won in the year of its birth. Then the North was in the first flush of its indignation at the repeal of the Missouri Compromise by the enactment of the Kansas-Nebraska Act. The Republican triumph in many localities was facilitated by the Democratic disorganization which resulted from the sudden springing up of the Know-Nothing party. As a result, Northern and Border States sent to the Thirty-fourth Congress one hundred and seventeen anti-Nebraska men, as against fifty-four supporters of the Administration. The reaction soon came, and it was not until ten years later that, at the second election of Lincoln, in 1864, the Republicans were able to do as well as they had done in the middle of President Pierce's term. In 1864 their success in the Northern States was due to the popularity of President Lincoln and to the intensity of the war fever, then at its height. The disfranchisement of a large part of their opponents in the Border States enabled them to win districts in which otherwise they would have had no chance. All these causes combined to give them more than three-fourths of the entire number of Representatives outside of the States then in rebellion.

In each of the elections of 1866 and 1868 they lost a little ground, but, so long as the Democratic opposition was handicapped by the unpopularity of President Johnson, the Republican strength remained substantially unimpaired, and in 1868 the Republicans elected 123 out of the 185 members from those States which had not been subjected to the processes of reconstruction. In 1870, however, they secured but 109 out of 185 members; but as in the reconstructed States they secured 30 out of the 58 seats, they retained control of the House. The fiasco of the Greeley campaign in 1872 again gave to the Republicans a more than two-thirds majority from the Northern and Border States, and for the last time they succeeded in securing more than half of the Representatives from the territory once included within the Southern Confederacy. Then came the panic of 1873, the full realization by the country of the scandalous conditions of public life in Washington, and the intensifying disgust with the carpet-bag administrations in the South; and at the election of 1874 the Republican majority of 99 from the Northern and Border States was turned into a minority of 31.

For twenty years after 1872, the Republicans were unable, outside of the eleven Southern States, to obtain a two-thirds majority. A great commercial crisis preceded the loss of their overwhelming supremacy in the Northern States. A like crisis, happening when a Democratic Administration was in power, preceded their regaining such supremacy. In 1892 there had been an opposition majority of 14 from the Northern and Border States. In 1894, out of the 267 members elected from those States, no less than 237 were Republicans, a proportion which has never before or since been even approximated. Two years later, even handicapped by Mr. Bryan's candidacy, the opposition gained forty seats in the Northern States, and in 1898 made a further gain of sixteen seats, thirteen of which, however, were again lost at the Presidential contest of 1900. It has, therefore, happened for the first time in the history of the Republican party that for four successive Congressional elections, viz., those of 1894, 1896, 1898, and 1900, the Republican party has had a two-thirds majority of the Representatives from the North and the Border. Even in the days of war and reconstruction, Republicans were not able to do so well for as many successive Congressional elections. It is to be noted, moreover, that of the seven off-year Congressional elections when there was a Republican President in the White House, only once, in 1898, have the Republicans secured that proportion of Representatives from the Northern and Border States which is now requisite for them to obtain if they are to have a majority in the House of Representatives. In 1862, in 1870, in 1874, in 1878, in 1882, and in 1890 they failed to get such a majority, and in 1874, 1882, and in 1890 they were in an absolute minority.

### *A MORE EXCELLENT WAY.*

We shall make no apology for recurring to the subject of the coal strike. Its calamitous effects abide with us, and will continue for months to come. Every one of us is still being taxed for it, and a normal supply of fuel is remotely distant. The Commission which, in the minds of thousands, is expected to justify the strikers' methods by establishing the existence of grievances—large or petty—has yet to prosecute its labors. Few have sat down to consider thoughtfully the exact meaning and probable consequences of the President's intervention. Is the moral of it that trade-unionism has acquired a new weapon of offence, and that a strike has only to be outrageous enough to constrain the President to summon the victims to a

conference and a forced composition? Has it, in other words, been a step towards suppressing strikes; or will it foster, even in humane and disinterested minds, the presumption that strikers are in the right, and encourage the mob to multiply and aggravate strikes? Does it emphasize the strategy of choosing a national-election year with a view to "getting a cinch" on the President as on all the tribe of machine politicians? Will it bring into the field, if not a Labor party, a new class of Presidential candidates and aspirants with "Labor" principles—such as we may expect the coming session of Congress to develop?

For our own part, we do not hesitate to declare the late crisis the most momentous since the civil war; and we are not unmindful of the Hayes-Tilden dilemma of 1876-77. Before it passes, with our frivolous public, into the limbo of the South African war, the destruction of St. Pierre, and the minor sensations of the year, we desire to "improve" it for the benefit of an unbalanced portion of the community. We refer to Anarchists with a capital A (by way of distinction from the coal-strike variety). If the last Presidential assassin were alive to-day, what reason he would have for envying Mitchell and for writing himself down an ass! His victim was a solitary man; Mitchell's killed and maimed are reckoned by scores. The dying McKinley carried away with him neither the office which furnished the motive for his murder, nor the national power to maintain it, refill it, and proceed, after a nine-days' ripple of excitement, unconcernedly, with the function of government absolutely unimpaired. Mitchell kept the country for five months in a state of famine, and threw it into a panic over a common necessary of life; threatened with a standstill the educational, charitable, and industrial machinery of the land, causing the very sun of civilization to pause in its course, and, with fresh disorders in reserve, dragged the President of the United States into the arena of controversy, and openly fraternized with him as an ally.

Moreover, Mitchell is alive. No incarceration awaits him; his body will not be interred with quicklime, his name will not be excluded from text-books and biographical dictionaries. A host of demagogues will sing his praises on the stump. He may be only at the beginning of his career. Already he has his "Mitchell Day." He neither moves by stealth in the consummation of his designs, nor conceals his deadly weapon in a cloth. In the midst of a reign of terror of his own creating, he goes to and fro directing operations in the presence of the militia, unmolested, and at least as much respected as the Governor of the State of which he is not even a citizen. He pinches the Navy Department for coal for its cruisers, and holds up ocean liners. Nobody seems to mind, many admire. What a contrast to a life of disguises, of fleeing from city to city and from continent to continent, with every man's hand against you. The Anarchist may well pause to reflect on this curious apportionment of public favor.

More than twenty years have elapsed since the second Alexander of Russia was assassinated. Since then, many a king, empress, and president has been taken off by bomb, dirk, or bullet without a single change in the form of government or any specific amelioration in the condition of the governed. If there is a spark of sense left among the Anarchists, they must see that they are on the wrong tack. Not only that, the experience of this country during the past five months is an object-lesson in the better way. Let the humblest of them, if the scene of his duty or his ambition be the United States, begin by becoming the henchman of a political boss. Let him assist in packing primaries and conventions, in filling the Legislature with men pledged to send the Boss to the United States Senate, and the Governor's chair with a creature pledged to approve whatever measures the Boss directs or permits the Legislature to pass. Meanwhile, let him join a trade-union and become a windy spouter at its secret meetings. Let him conspire to have the Boss's Legislature pass a bill forbidding the employment of any but certificated miners, and the Boss's Governor give his assent to it. Then let him see that no certificated miner can live in peace and safety if he do not enter the union. Meanwhile he himself may even enlist in the militia of the coal region. The time is now ripe for the strike which shall cripple the operators, bring awful distress upon the country, and begin the loosing of the bonds of society, his cherished aim. His taste for bloodshed can concurrently be gratified to the utmost upon every non-union laborer and his terror-stricken family; and all this with impunity.

It remains only to smother the patriotic feeling of the American people. Our Anarchist, if as cunning as he is bloodthirsty, will have begun afar off by preaching the doctrine of protection and international hatred. At the same time he will stimulate the clash of selfish interests in the struggle to plunder the consumer under color of law and philanthropy. The creation of divisions in the commonalty he will accelerate by his protective trade-union propaganda, into which he will carry all the political arts learned in the discipline of the Boss. No body of workers so insignificant but it must be made to organize, down to the "varnishers" of bretzels. Everywhere the output of labor must be hedged about by restrictions, by limitation of hours and of the number of craftsmen—so many tile-setters for a city, and no more; so many apprentices in a trade, and no more; one artisan one craft, or branch of craft, and no more. Walking delegates must earn their salary by throwing the performance of all contracts into complete uncertainty. Unions must make war not only on independent labor, but on each other.

A few years of this sort of chaos having sufficed to make it appear normal and natural, labor federations, overstepping State boundaries and interfering from without, work a continental havoc unquestioned and unresented like any local disturbance. Our Anarchist can now safely distribute American flags to school-children, with choice readings from 'The Man Without a Country.' When the little ones are turned out of school for want of coal which their parents have held back by contributing funds, say, in Massachusetts, to support Mitchell in Pennsylvania, our Anarchist can sing "Nunc dimittis," and, if he cannot conscientiously subscribe himself, can at least wring from the untaught pupils one more penny apiece for the half-million dollar monument at Canton, Ohio.

### *JOHN SHERMAN'S VIEWS.*

We quoted the other day some extracts from speeches made by Henry Clay and Justin S. Morrill on the subject of the tariff existing in their time, showing that neither of these fathers of the system ever contemplated that protection should last forever, or be kept in force a day after the protected industries should have become firmly established at home. We shall now quote another representative man on the same side. There was a debate in the Senate in March, 1872, on a bill to reduce the duties on imports 10 per cent. all around. This was a Republican measure, both branches of Congress and the Executive being then controlled by that party. The bill was reported in the Senate by Mr. Sherman, as Chairman of the Committee on Finance. There was a great deal of remonstrance from the protected classes; for, although they had already got the war taxes on their products repealed, they were quite determined to hold on to the new import duties which had been enacted as compensation for the internal tax. They annoyed Mr. Sherman so much with their importunities that he made some remarks for their benefit in open Senate. He said:

"It must be remembered that the present duties, taken together, are far in excess of what they were before the war, and that they have been three times largely increased since the passage of the Morrill Tariff Act of 1861. . . . The result of such duties is to secure to mechanical industries higher wages than can be earned in other kindred employments. Such excessive protection not only ceases to diversify production, but forces labor into protected employments. If the present rates of duty were high enough during and

since the war, when home industry was burdened with heavy internal taxes—with stamp duties, income taxes, and high rates on raw materials—then surely they are now too high when all these taxes are removed."

It should be remarked that the duties prevailing in 1872 were generally much lower than they are in the present Dingley tariff; yet they were the same schedules which the Tariff Commission of 1882 said ought to be reduced 20 or 25 per cent.

Mr. Sherman went on to rebuke the tariff privateers who were then besieging Congress. He said, in the same speech from which the foregoing words are quoted:

"I have listened with patience, day by day, to the statements of gentlemen who are interested in our domestic productions. I am a firm believer in the general idea of protecting their industries, but I assure them, as I assure their representatives here, that if the present high rates of duties, unexampled in our country, and higher by nearly 50 per cent. than they were in 1861, are maintained on metallic and textile fabrics after we have repealed the very internal taxes which gave rise to them, and after we have substantially given them their raw materials free of duties, we shall have a feeling of dissatisfaction among other interests in the country that will overthrow the whole system, and do greater harm than can possibly be done by a moderate reduction of the present rates of duty."

These words proceeded from a man who was ruled by protectionist ideas and by a protectionist constituency. He was the foremost man of his party, if not the foremost of his time in public position as a financier and economist. He was not a courageous man, however. He was so much under the discipline of the wool-growers of his State that he rarely said anything against the tariff extremists. His speech of 1872 was evidently wrung from him by the strongest sense of duty. The old-fashioned ideas of Clay, Morrill, Sherman, and the other fathers of the so-called "American system" have given place to the idea that protection by tariff ought never to cease, and that it ought never to be lowered if any small producers are engaged in it.

Such extraordinary pretences justify us in asking whether protection was ever necessary in this country. It is a fact of history that the iron industry sprang up in this country not only without the aid of a tariff, but in spite of the hostile legislation of Great Britain. Alexander Hamilton considered that industry well established at the time when he wrote his report on manufactures. Glass-making, tanning, copper-smelting, rope-making, wool-combing, and the manufacture of gloves, boots, and shoes, and of cotton and woollen cloth and sail duck, and of gunpowder and fire-arms, were carried on here in the seventeenth century without tariff protection, were carried on to such an extent as to excite the jealousy and alarm of the mother country. The exportation of iron, both pig and bar, from America to England was so great in the early part of the eighteenth century that the British iron-master sought and obtained protection against it at home, and even procured a prohibition against taking it into the interior ten miles from London. Nobody had the face to ask for a duty on pig-iron in this country until the year 1818. It was not needed then, but it was made part of a log-rolling scheme, and has been continued ever since at various rates ranging from 18 to 58 per cent. *ad valorem*. But if we concede that protection was needed in some cases, they were few in number, and the necessity has passed away in nearly all.

Mr. Sherman's speech, from which we have quoted, is the most philosophical in its reasoning and the most lofty in tone of all those embraced in the volume which he compiled for publication, and on which he intended that his reputation should rest. We extract one more paragraph, in which he deals with taxes on consumption, showing how unjust they are to the wage-workers and the poorer classes, and how they serve to put upon their backs an undue share of the public burdens:

"The income tax expires with the collection of the tax of 1871, which, on personal incomes, is assessed during the present month. The public mind is not yet prepared to apply the key to a genuine revenue reform. A few years of further experience will convince the whole body of our people that a system of national taxes which rests the whole burden of taxation on consumption, and not one cent on property or income, is intrinsically unjust. While the expenses of the national Government are largely caused by the protection of property, it is but right to require property to contribute to their payment. It will not do to say that each person consumes in proportion to his means. This is not true. Every one must see that the consumption of the rich does not bear the same relation to the consumption of the poor as the income of the one does to the wages of the other. As wealth accumulates, this injustice in the fundamental basis of our system will be felt and forced upon the attention of Congress."

---

### *THE DANISH ISLANDS TREATY.*

The dispatches from Copenhagen describing the defeat of the treaty for the sale of the Danish West India islands to the United States seem to have been edited by Capt. Christmas. They pour the utmost ridicule on the heads of two old men who are members of the upper house of the Danish Parliament. After reading this account, we are compelled to think that members of the Landsthing ought not to be allowed to vote after they reach a certain age, and if they are in poor health. This may be the opinion of Capt. Christmas, but he will hardly be able to bring the American people to that belief, especially those who remember how John Quincy Adams, in his old age, was carried to his place in the House of Representatives on a great occasion. That venerable patriot actually fell upon the floor of the House in a swoon, and died in an adjoining room, and yet he is held in high honor by his countrymen. But, according to these dispatches from Copenhagen to the American press, the two old men who were conveyed to their places to vote according to their convictions of duty to their own country were ridiculous characters, fit only to excite the laughter of gods and men.

May it not be possible that these old men have some such feeling in reference to the sale of the islands as most Americans would have if a foreign country should offer to buy Florida or Alaska from us? Perhaps they have more feeling on the subject than we should have in like case, seeing that Denmark has held those islands longer than we have held anything, longer than we have had an independent existence. Tradition is a strong force among the political elements of nations, and it is especially so in the minds of aged Senators. But the edited dispatches lay stress on the pecuniary aspects of the treaty, as showing how these old men are losing sight of the main chance. Denmark has to meet a bill of expense every year in carrying on the government of the islands. How absurd, then, to vote against a treaty which saddles this bill on another country which is willing to assume it!

The mercantile view is the one which Capt. Christmas would naturally take. He is one of those men, described by the lamented Jacob Sharp, "who don't stir around for nothing." He has a claim, or thinks he has, for a 10 per cent. commission on the purchase price of the islands, and has even threatened to bring a lawsuit against the Danish Government to recover this sum in case payment is refused. Fortunately, that case will not go to trial at present, although the Danish Ministry may ask us to consent to a supplementary treaty extending the time for ratification. Premier Deuntzer said in the debate at Copenhagen that he might do so if we should request him to ask us.

In a recent article on this treaty we said that, even if it were ratified by Denmark, a vote of our House of Representatives would still be necessary to carry it into effect, since it required an appropriation of $5,000,000, and that the House might refuse. The *Tribune*, in an article combating this proposition, said: "Never yet has the House failed to redeem the honor of the nation, and pass the laws necessary to meet treaty obligations, whether it was pleased with the treaty or not." The *Tribune* had forgotten the treaty of reciprocity with Mexico, negotiated during the Administration of President Arthur, ratified by the Senate, and rejected by the House on the 29th of January, 1885. Reference was made to this treaty in President Arthur's message of December 1, 1884, in the following words:

"During the past year the increasing good will between our own Government and that of Mexico has been variously manifested.

The treaty of commercial reciprocity concluded January 20, 1883, has been ratified, and awaits the necessary tariff legislation of Congress to become effective. This legislation will, I doubt not, be among the first measures to claim your attention."

In pursuance of this recommendation, Mr. Hewitt of New York moved in the House, January 28, 1885, to take up the bill (H. R. 7366) to carry the treaty into effect. The House rejected the motion by yeas 80, nays 157. On the following day the bill was reached in its regular order and was rejected by yeas 105, nays 144. An arrangement was immediately made by President Arthur to extend the time for completing the treaty by one year. President Cleveland referred to the subject in his first annual message, December 8, 1885, thus:

"The lately concluded commercial treaty with Mexico still awaits the stipulated legislation to carry its provisions into effect, for which one year's additional time has been secured by a supplementary article signed in February last and since ratified on both sides. As this convention, so important to the commercial welfare of the two adjoining countries, has been Constitutionally confirmed by the treaty-making branch, I express the hope that legislation needed to make it effective may not be long delayed."

The year passed without action on the part of the House. A second extension of time till May 20, 1887, was arranged for by President Cleveland, but no action was ever taken by the House, and the treaty never went into effect. Now anybody may argue that the House ought to have passed the necessary legislation to make the treaty effective, but can anybody say that the treaty became the law of the land without such legislation? Senator Cullom made an able speech during the last session of Congress in support of the contention that the President and Senate, by the exercise of the treaty-making power, can bind the House in all cases whatsoever. If this is the true interpretation of the Constitution, then appropriations of money and changes in the revenue laws may be made without the consent of the House, and it is improper even to introduce a bill in the House for these purposes, since debating and voting always imply the right to reject as well as to adopt the measure. There was a heated debate in the House on the question of appropriating money to carry into effect the treaty for the purchase of Alaska. The bill was passed, however, not because the House had any doubts of its Constitutional power to refuse the money, but because Russia had rendered us a service in the crisis of the civil war, and it was deemed fitting to acknowledge her friendship in that manner.

With the rejection of the treaty by Denmark, however, this ceases to be a practical question.

---

## *"THE NEWER HUMANITIES."*

"We must deal in college with the spirits of men, not with their fortunes," said President Woodrow Wilson of Princeton University last Friday, in an inaugural address distinguished both for breadth of philosophic vision and for grace of literary form. He thus takes his stand firmly for the humanistic and against the utilitarian ideal of education. But he is confident that this training of the intelligence is also that which fits a man as well for the winning of fortune and participation in the daily work of the world, as for the disinterested service of scholarship. "Learning is not divided," he insists. "Its kingdom and government are centred, unitary, single. The processes of instruction which fit a large body of young men to serve their generation with powers released and fit for great tasks, ought also to serve as the initial processes by which scholars and investigators are made. They ought to be but the first parts of the method by which the crude force of untrained men is reduced to the expert uses of civilization." Behind this high plea for a humanistic ideal lies the conviction that any lower ideal is less practical and less serviceable. It is salutary to have such a doctrine presented at a time when the latest tendency has been to make the college merely a preparatory stage to the professional school.

That this training is incomplete without the study of at least one ancient language and literature President Wilson is fully convinced; but he also believes that our own language and literature and a comprehensive study of one of the basal sciences are equally indispensable. Very happily, as President Wilson lays down the principles which should guide a liberal education, President Schurman of Cornell presents in his annual report an actual college course which has been worked out under the conditions most favorable for unhampered growth. Cornell started free from any ecclesiastical or narrowly academic tradition, and frankly committed herself to the elective system. Where other colleges hesitated, she assumed the equal value of studies, trusting the student to make for himself a curriculum in which *literæ humaniores* and science should be each duly regarded. Accordingly, the merits and defects of the elective system have had every chance to develop, and the average course at Cornell may be assumed to represent faithfully, if not the education which the American collegian should have, at least that which he prefers.

It is encouraging and a little surprising to find that he prefers very much the kind of course which President Wilson so eloquently advocates—that is, an education which prefers, broadly speaking, the humanities to the scientific and more utilitarian studies. The class of 1901 gave a tenth of its working time to the ancient languages, more than a third to the modern languages, upward of a fifth to history and politics, a tenth to philosophy, leaving one-fifth to natural sciences and mathematics. With all reserves for the misleading nature of these percentages, which undoubtedly cover many eccentric individual cases, there is no avoiding the inference that the preference of the American collegian is as markedly as ever for the humanities over the sciences—only, as President Schurman aptly observes, for the "newer humanities" rather than for the old; and it would be fair to add that students everywhere, and the more radical educators, see in the Cornell course, with its preponderance of modern languages and history, the ideal towards which they are reaching. For them the phrase "the newer humanities" will be a rallying cry.

But the education in the "newer humanities" must be considered not only in its present condition, but in its remoter effects, especially in its reaction upon the schools. For some years past about a third of the students admitted to the Cornell College of Arts have offered both Greek and Latin for admission, as against one-half who offered Latin, with either French or German. Yet, while all but an insignificant fraction of the Cornell freshmen have prepared for college in at least one ancient language, only one-tenth of the working time of the four collegiate years (less than a semester for each student) is given to Latin and Greek. It is evident that the schools which prepare for Cornell University will tend to teach the subjects that their students mean to continue in college, and the logical outcome would be an education which, from beginning to end, preferred the "newer humanities." In such a course Latin would assume a wholly minor position, while Greek would virtually disappear. Is the American college willing to see the old humanities put upon the basis of, say, Sanskrit, fluxions, or spectrum analysis?

Princeton for one is not, and it would be pleasant, did space permit, to reprint President Wilson's tribute to the liberating effect of literatures so unlike our own—so superior in poise and serenity. But this is not the place to fight again the never-ending battle of the ancients and moderns. It is sufficient to have pointed out that the liberal education of to-day shows no sign of rejecting the humanities in favor of natural science, and it may be well to recall that in Dante, Shakspere, Milton, Molière, Goethe, the student has not only a tolerable substitute for the ancient classics, but has, though at second hand and very partially, the ancient classics themselves, from whom the great moderns derived their chief inspiration. It is conceivable that Montaigne might mean to a modern what Cicero did to Montaigne. And yet there is always danger that the substitutes for the classics

may be cheap substitutes—not Montaigne for Cicero, but a smattering of De Quincey; not Molière for Aristophanes, but trivial plays of Scribe and Sardou; not Shakspere for Sophocles, but miracle-plays and moralities. This is the besetting peril of the new education. For this reason, while frankly admitting that the day is with the new humanities, we believe that the success of the new departure is bound up with the retention of the great culture language, Latin. It is needed as a standard of comparison, to steady the vision of literatures that are still perplexingly near us. A new education that does not give Latin a prominent position will infallibly fall short of a liberal education.

## ALFRED DE VIGNY.

PARIS, October 8, 1902.

Fashion rules even in intellectual matters. For some mysterious reason, impossible to analyze, a poet who for a very long time was much neglected and almost forgotten, Alfred de Vigny, has again come to the front and become the subject of a sort of posthumous admiration. M. Léon Séché has just given us a volume of nearly four hundred octavo pages with this long title: 'Alfred de Vigny and his Time, 1797-1863: His Maternal Origin, his Loves, his Literary Friendships, his Political Ideas, his Religion, with New and hitherto Unpublished Documents.' It is illustrated with a portrait of Alfred de Vigny, from a lithograph by Devéria; a portrait of the famous actress, Madame Dorval, with whom Vigny was in love for six years; and portraits of certain literary ladies of his time—Delphine Gay, Madame Desbordes-Valmore, a poetess who has also been lately treated to a sort of resurrection.

I confess to have been somewhat disappointed in M. Séché's work. I have found in it many documents of secondary value, and some which might as well have remained inedited. Vigny, poet and novelist, has already been the subject of exhaustive critical essays, and there is not much worth remembering or noticing in the "private man." "Restait," says M. Séché, "l'homme privé, en robe de chambre et en pantoufles." Montaigne has said that we should not "guetter les grandes hommes aux petites choses." Sainte-Beuve, it is quite true, created a method of criticism which constantly goes from the work to the worker, and which searches the inner life of the writer for the stimulants of his originality and his genius. He applied this method in his 'Port Royal' and in his famous "Lundis," a series which can be read a hundred times, and always to advantage. But it requires the skill of a Sainte-Beuve to use his method, which in other hands becomes tedious by the multiplicity of documents, many of which throw no light on the subject in view.

Taine modified Sainte-Beuve's procedure without changing its character; he places the writer in what he calls his *milieu*, and studies the influence of this environment, organic and inorganic, on the development of the writer's genius. This method has been made even more systematic by Taine's followers; and in the interesting collection of "Les Grands Écrivains Français" we see it carried *ad absurdum*, in so far as every criticism of the writer is written, so to speak, in slices, and the subject, interesting as it may be, is never taken as a whole. I must admit my preference for Sainte-Beuve, who mixes up artfully biography and literary criticism, who follows the development of a writer without dividing systematically the influences which race, time, history, and personal accidents have had upon him. Let us take, for example, since I am speaking of Alfred de Vigny, M. Paléologue's volume on this poet, which appeared in the collection of "Grands Écrivains Français." The summary of the different chapters will explain what I have just said: "Years of Youth and of Production," "The Soul and the Talent," "Conception of Life," "Pessimism," "Last Years," "The Man and the Work." This little volume is an excellent study, more artistic than many in the same collection. The author has not carried to excess the system of critical classification adopted generally in the collection; he has not given undue importance to many details which are found in M. Séché's large volume, but has applied himself chiefly to analyzing the character of Alfred de Vigny's poetical work. He has done it with a grace and delicacy which deserve much praise.

Alfred de Vigny was, in a sense, a creator: he introduced philosophy into the domain of poetry. Till 1836, when Lamartine published 'Jocelyn,' the poets did not leave the domain of the ode, the ballad, the drama. In 1822, long before Victor Hugo became a Romantic, Alfred de Vigny announced that he would undertake to show, in a series of small poems, "the migrations of the human soul through the ages." In one of his prefaces he says: "The only merit which has never been denied to these compositions is that of having been the first in France in which a philosophical thought was put on the scene in an epic or dramatic form." This pretension is not unfounded, and M. Paléologue can justly call Alfred de Vigny the creator of philosophical poetry in France.

Alfred de Vigny left to M. Louis Ratisbonne, his literary executor (who died only three years ago), all his manuscripts, and among others as many as eighty *cahiers*, in which the poet kept a diary during forty years. By Vigny's orders these portfolios were all destroyed; but several people had had access to them, and, among others, M. Paléologue and M. Léon Séché. A few fragments were even published in 1867, under the title of 'Journal of a Poet,' by M. Ratisbonne. M. Bégis, a collector of autographs, has communicated to M. Séché the letters written by Alfred de Vigny to Madame Dorval, and these letters are printed in his volume. The episode of their relations is the part of M. Séché's volume which will be read with most curiosity. The passion of Vigny for this great actress was but an incident in his life, but it throws much light upon the character of the poet. He was essentially a dreamer; he lived in the highest sphere of thought, almost always in solitude; and when he was by circumstances put in contact with realities, he saw them still through a veil. Madame Dorval became for a time his idol; but the idol whom he adored was very unlike the real woman. She became for a time his muse, but she never meant to live long on Parnassus.

M. Séché gives us the history of the youth of Marie Dorval. She was born in 1798, and was the child of two provincial dramatic artists; she was made to appear on the stage as a child, and followed her parents from Lorient to Strasbourg. In going through Paris she heard Talma in "Hamlet," and he made a great impression on her. She made her début in Paris in 1818, but became famous only in 1822, when she played in a drama called "Trente Ans, ou la Vie d'un Joueur." The great days of the Romantic drama were approaching. Alfred de Vigny had made his reputation in his lyrical poems, especially in "Éloa," which Théophile Gautier pronounced "the most perfect in our literature"; he had written an historical novel, 'Cinq-Mars,' in which he took great liberties with history, but which is a very living and dramatic picture of the time of Louis XIII. It was probably this novel which gave him the idea of writing dramas for the stage. He first tried his hand on a translation in verse of "Othello." Perhaps he was prompted to make this attempt by Lydia Bunbury, whom he married in 1828. "Othello" was represented at the French Theatre on the 29th of October, 1829. It was a great event; Classicists and Romantics fought a battle which ended in the victory of the Romantic school. Vigny's translation is timid; it is not perfect; but Heine wrote that "in this work M. de Vigny has gone more deeply than any of his predecessors into the genius of Shakspere." "Othello" was followed by "La Maréchale d'Ancre," the wife of Concini, which was played at the Odéon on July 25, 1831.

But Vigny's dramatic triumph was a play founded on the history of the unfortunate Chatterton. The part of Kitty Bell, who loved Chatterton, was played by Marie Dorval. She was, *par excellence*, the Romantic actress, intensely realistic, and the opposite of Mademoiselle Mars, who represented at the time the Classic school and the traditions of the French comedy. Alfred de Vigny fell in love with his interpreter. The contrast between them was very great. Vigny was very shy, though very proud; he possessed extreme sensibility, but much reserve. Madame Dorval was animated, expansive, and, let us say frankly, vulgar; but it was not without reason that the ancients represented Love as blind. Vigny paid court to Madame Dorval as he would have paid it to a queen. Has not Pascal said: "The longer the way in love, the more pleasure is felt by a delicate mind"? Madame Dorval was not so Platonic. She lost patience, after two years of courtship; and one fine evening she said to her timid suitor: "Well, M. de Vigny, don't you think it is time you should ask me to marry you?" Their liaison lasted about four years, and during this period Vigny wrote to his idol many letters which are now brought to light, and which had better not have been published. There remain some which, fortunately, have not been printed, but which are alluded to by M. Séché, and which, it seems, show to what degree of folly a lover can attain.

Mme. Dorval soon became tired of Vigny, and she gave him several rivals, one of them taken from the stage, where he afterwards became famous in the popular drama. She deceived Vigny even at the time when she was playing the part of Kitty Bell in Chatterton. After he had lost his

mistress, Vigny fell into a state of profound discouragement and pessimism. For a moment he thought that politics would be a distraction; he ran as Deputy after the Revolution of 1848, but was defeated. He hoped under the Empire to enter the Senate, but was not appointed. He became very misanthropic and religious, but his religion was austere and savored of Jansenism. He ended his life in a proud solitude, and died on September 17, 1863, from a cancer which made his last years a long agony.

# Correspondence.

## THE NEW RECIPROCITY TREATY WITH NEWFOUNDLAND.

TO THE EDITOR OF THE NATION:

SIR: The news reached us to-day that Sir Robert Bond, the Premier of Newfoundland, has made a preliminary arrangement with the American Government, mainly on the lines of the Blaine-Bond treaty of 1900. It is a triumph for our Premier, and his unwearied perseverance deserves success. It will be remembered that Sir John A. Macdonald killed the former treaty just after its conclusion. It was a clever, unscrupulous political trick. The Canadian Premier, on the eve of an election, wanted the support of Nova Scotia and the Maritime Provinces, the portion of the Dominion most keenly interested in the fisheries, so he used his powerful influence with the Imperial Government to destroy Sir Robert Bond's work. Nothing ever angered Newfoundland against Canada so much as this nefarious attack on her rights as an independent colony. Sir John, however, could do as he liked with the British Ministry.

While we are still a long way from an actual treaty, the Senate having yet to be dealt with, the chances are strongly in favor of the confirmation of the Blaine-Bond treaty. To many, no doubt, one of the most attractive points about the new arrangement will be the hit at Canada. The real and solid basis for the treaty, however, is the mutual advantage to both Newfoundland and the States. Just at present the American fishermen have to bear a heavy burden, in license money, light dues, etc. A charge of $350 to $400 each season on a little schooner of about one hundred tons is a tremendous tax. Newfoundland has the whip hand, also, in the supply of bait, ice, transhipment supplies, etc. It is the nearest point to the fishing grounds, and far away the most convenient and profitable basis for carrying on the fishery. On the other hand, unlike Canada, she is not a rival; she does not compete either in manufactures or in agricultural produce. For over two centuries there has been a long, friendly intercourse between the two countries.

Looking at the subject in a plain, practical, common-sense way, one can see the reasonableness of allowing a great fish-producing country like our island to send its supply of food to its natural market, the great republic with its seventy millions, and the right of your people to obtain free food and untaxed fish. I have argued out the question already in former communications. The effect of the new treaty in Newfoundland will also be very beneficial. It will stimulate a fresh fish trade, now in its infancy. The supply of the finest salmon, lobster, turbot, caplin, herring, etc., is almost unlimited, and with cold storage these can all be sent in perfect condition to Boston and New York. The new situation will probably invite American enterprise for the exploitation of Newfoundland's immense mineral resources and the handling of fresh fish. Every reasonable man can see that the two countries will benefit by a free mutual exchange of their natural products, and that the breaking down of the absurd barriers of protection in this small way may have further beneficial results.

D. W. PROWSE.

ST. JOHN'S, October 18, 1902.

## CONGRESSIONAL REPRESENTATION IN SOUTH DAKOTA.

TO THE EDITOR OF THE NATION:

SIR: There are two States in the Union to which have been apportioned more than one Representative in Congress, and which elect them by a general ticket. These States are Washington and South Dakota. Since the admission of South Dakota into the Union in 1889, that State has been entitled to two Federal Representatives, but at no time during that period has the commonwealth been divided into Congressional districts. Prior to 1842, the States elected their Congressmen as the several Legislatures thereof determined, sometimes by a general ticket throughout the State, again by districts, or by the State Legislature. The political complexion of the Legislature frequently determined the mode, and altered it oftentimes accordingly. But in 1842 the control of elections for Representatives to Congress was taken from the States, and a Federal Law enacted by Congress. That famous act declared: "That in every case where a State is entitled to more than one Representative, the number to which such State shall be entitled under this apportionment shall be elected by districts composed of contiguous territory, equal in number to the number of Representatives to which the said State may be entitled, no one district electing more than one Representative." Much opposition on the ground of unconstitutionality was raised against this law by New York and other States at that time. New Hampshire refused to accept and be governed by it until 1846. Since its enactment, the law has been operative, and has been regularly reaffirmed by all the various apportionment acts of Congress.

This Federal law is binding upon all States alike; were it not so, New York, Pennsylvania, and Illinois might have a solid Republican representation in Congress to-day. The question then arises: Why is not this wise provision in force as regards South Dakota? At first thought it might seem that the number of Representatives apportioned to South Dakota is so small as to furnish the excuse. But there are six other States with but two Representatives which nevertheless elect by districts. These States are Colorado, Florida, New Hampshire, Oregon, Rhode Island, and Vermont. States have been allowed to elect their Congressmen by general ticket when a new apportionment law has reduced their number of Representatives, and when a short period of time does not conveniently permit the assembling of the Legislature for the purpose of redistricting the State. If the new census increases the number of Representatives to which a State is entitled, that State may, when the Legislature neglects to redistrict, elect the additional Congressmen at large. But neither of these provisions affects the South Dakota situation, as its number of Representatives has never been increased nor lessened.

In the year 1890, during the early days of the first session of the State Legislature in South Dakota, the Senate introduced "A Bill for an Act to Provide for the Election of Representatives to Congress by Districts." The House committee, on the 18th of February, recommended that the bill be "indefinitely postponed," and it was. There are prospects that the question will be again considered at the next session of the Legislature.

The South Dakota deviation from the Federal law is frequently accounted for by the topography, varied interests, and Indian reservations in the State. The State may properly be said to be divided into three parts. East of the Missouri River are forty-four counties, the citizens of which are extensively engaged in agricultural pursuits. The population of this region is 341,753. Nine counties west of the river are organized, and extend along the western border of the State and eastward through the centre. In the Black Hills region of the west, mining is extensively carried on; gold is found there in such paying quantities as to make the State rank third in the Union for the output of this metal. The people in these nine counties number but 43,774. The remainder of the State, comprising most of the region immediately west of the river, consists of fifteen unorganized counties, together with two strips not included in any county. Most of this territory consists of Indian reservations. Great tracts of it are employed in cattle-raising. The whites are engaged in herding cattle and sheep on the ranches, where the native grass possesses as good fattening qualities as grain. The entire population of this third region of the State, with the Indian reservations, numbers but 16,043.

This uneven population and varied employment renders the task of districting the State especially difficult. The counties of the Black Hills regions would need to be joined with a part of the State east of the Missouri River. That district might then be said to resemble a dumb-bell, with the unorganized counties on each side of the handle, joining people of diverse occupations. There are no railroads crossing the Missouri in this State, and, consequently, the territory of the western district would be completely severed; geographically it might be joined, but socially and commercially it would be anything but compact. The need of a railroad through the State, as a means of developing the natural resources, is pressing. South Dakota is the only State in the Union not crossed from east to west by a railroad. Rumors are afloat that the Missouri will soon be bridged. But this improvement is not so imperative now as it would be if the State were districted, as indicated above. At present the State is a unit in all its elections. Dissatisfaction would surely prevail in the western district formed as above. The mining interests and the ranchmen would fail to agree. There would be a continual scramble for office between these disjointed parts of the one district. As now tacitly agreed to, the older

part of the State is given the Senators and the newer sections the Representatives, and thus harmony is maintained throughout the commonwealth.

South Dakota has been so long without Congressional districts that many leaders in the State have concluded that the question of districting rests entirely with the State. They are supported in this view by section 1, article xix, of the State Constitution, which was framed at Sioux Falls in September, 1885, and adopted by the Territory in 1889 when it became a State. The reading of that instrument is: "Until otherwise provided by law, the members of the House of Representatives of the United States apportioned to this State shall be elected by the State at large." Whatever may be said about the failure to form Congressional districts in South Dakota, the omission should all be charged up to Congress. That body acts on the question of eligibility of its own members, and, if not properly elected, the House should refuse them seats in the United States Congress. But both parties, when in a majority in the House of Representatives, have seated the two Representatives from South Dakota, although they were not elected by districts in accordance with the national law of 1842.

The State of Washington since 1892 has been allowed to elect its two Congressmen at large. The new census permits that commonwealth to elect three, and at the approaching election each voter in the State will be allowed to vote for three Congressmen. It is understood that Washington will be districted for the first time by the Legislature which will be convened immediately after the fall election.

CHRIST IN 'THE SCARLET LETTER.'

TO THE EDITOR OF THE NATION:

SIR: It seems to the writer that in Mr. George E. Woodberry's 'Nathaniel Hawthorne' we may fairly be said to have the most adequately interpretative word yet uttered concerning the work of America's great romancer. But, this being granted, it yet remains true that Mr. Woodberry is a Massachusetts man, and that the fact has to a certain extent colored his estimate of 'The Scarlet Letter.' He says:

"In the scheme of Puritan thought . . . the atonement of Christ is the perpetual miracle whereby salvation comes not only hereafter, but in the holier life led here by grace. There is no Christ in this book. . . . Is it too much to suggest that, in ignoring . . . the atonement of Christ, and the work of the Spirit in men's hearts, the better part of Puritanism has been left out, and the whole life of the soul distorted?"

Now the circumstance noted by Mr. Woodberry that there is no Christ in the 'Scarlet Letter,' only makes the story (in the judgment of the writer) the more thoroughly and intimately Puritan. Looked at closely, Puritanism itself was without Christ. It was in fact, whatever it may have been in scheme, a reinauguration of Judaism—of the Old Testament. Its sermons, its writings, its laws, and its conduct, all were of the dispensation of Moses. Christ came into New England only in so far as Roger Williams came into it, for with the latter there came that largeness and tolerance which were essential marks of Christ. Indeed, Williams at the time of his controversy with John Cotton found it necessary to point out that, were Christ then to set foot in Massachusetts, he (so thoroughly was New England Judaized) would in all probability be banished or put to death.

But it is the opinion of the writer that the real reason there is no Christ in 'The Scarlet Letter' is not so much that Puritanism was without Christ as that Christ (in the sense of the tenets of dogmatic Christianity) is not essential to the purposes of the book. The story sets out to portray the effects of guilt upon the human soul, and these effects—supervening as they do under conditions almost purely naturalistic—serve to impress the truth that guilt (Christianity or no Christianity) is a thing real, terrible, and escapable (in so far as it is escapable at all) only in one way—through confession. IRVING B. RICHMAN.

MUSCATINE, IOWA, October 17, 1902.

# Notes.

Messrs. Scribner announce 'Bookbinders and their Craft,' by Miss S. T. Prideaux, in a limited edition, and 'A Literary History of Persia from the Earliest Times until Firdawsi,' by Edward G. Brown, lecturer in Persian at the University of Cambridge.

The 'Poems You Ought to Know,' which have been running for some time in the Chicago *Tribune*, are being gathered into a book with the imprint of the Jamieson-Higgins Co., of that city.

The 'History of John Decastro' and his brother Bat, commonly called Old Crab, is to be reprinted by the Irwin Press of Pittsburgh, Pa., nearly a century after its first appearance in London and Boston in 1815.

The Century Company adds to its pretty series of booklets in Elzevir form Tennyson's 'In Memoriam,' with an introduction from the 'Victorian Poets' of E. C. Stedman; 'Selections from the Thoughts of Pascal,' translated by Benjamin E. Smith; Sheridan's 'The Rivals,' with an introduction from the Autobiography of Joseph Jefferson. These little volumes are bound in stamped leather and contain each a portrait of its author.

A very pretty rubricated title-page has been devised by Messrs. Scribner for a handy edition of Stevenson's 'An Inland Voyage'; the cover is less well conceived. The letterpress is bold and handsome, and a few photographs of scenery and buildings, by James B. Carrington, enhance the value of the text.

In the decoration accorded by Dodd, Mead & Co. to their new edition of Mr. Mabie's 'Under the Trees,' there is also a good title-page, with figures, and several plates in the same vein, by C. L. Hinton, whose work is graceful if not strong. The greenish border designs—continuous, not repetitious—from the same hand, appear to us an excess of illustration. They cast, if we may pervert the poet a little, the author's thought in a green shade.

Mr. Mabie furnishes an introduction for 'A Book of Old English Ballads, with an Accompaniment of Decorative Drawings,' by George Wharton Edwards; and as he has something to say about the neglect of chronological arrangement, he seems to have had some hand in the selection. This opens with "Chevy Chace," and includes "King Cophetua and the Beggar Maid," "Barbara Allen," three of the Robin Hood series, "The Twa Corbies," "The Nut-Brown Maid," "Sir Patrick Spens," with twice as many more. Some of Mr. Wharton's headpieces are felicitous and truly decorative; the full-page pen-drawings, on the contrary, are ineffectual, and contrast unfortunately with the print of the ballads themselves. The defect extends to the cover in red and green.

The introduction to Mr. Joseph B. Gilder's 'The American Idea as Expounded by American Statesmen' (Dodd, Mead & Co.) is from the pen of Mr. Carnegie. It takes a hopeful view of our democracy in spite of what he hopes is the temporary aberration from American first principles since "our late President was swept, against his own ardent wish and better judgment, into a departure from the policy of the Fathers of the Republic." Mr. McKinley's last speech is one of the seventeen documents in this collection, beginning with the Declaration of Independence. Washington, John Quincy Adams (in "the Monroe Doctrine"), Lincoln, Webster, Lowell on Democracy, Cleveland, Hoar on free speech, are some of the historic expounders here brought together.

The New Amsterdam Book Co. have launched a series of 16mo reprints, "The Commonwealth Library," inexpensively got up, but clear of print, including thus far the Lewis and Clark already noticed, in three volumes, and now Alexander Mackenzie's 'Voyages from Montreal to the Frozen and Pacific Oceans (1789 and 1793),' in two volumes, with a portrait of the author, and Matthew Arnold's 'Literature and Dogma,' also with a portrait.

The "Little Masterpieces of Science" published by Doubleday, Page & Co. under the editorship of Mr. George Iles form a set of six pocket volumes in plain attire, labelled respectively 'Mind,' 'Explorers,' 'The Naturalist,' 'Skies and Earth' (astronomy and geology), 'Health and Healing,' and 'Invention and Discovery.' The general title proves to be a misnomer, for while there are numerous extracts from the writings of well-known scientists of high and sometimes of the first order, none of these deserves the style of "masterpiece," as few fragments could. But mixed up with these textual quotations we have much popularizing of science in articles by Mr. Iles himself and by others possessed of greater scientific training, but still not first-hand authorities. The series will be useful, but it is too pretentious.

Without commenting on them in detail, we can recommend to teachers both Prof. J. M. Hart's 'Essentials of Prose Composition' (Philadelphia: Eldredge & Bro.) and the third book of Gardiner, Kittredge and Arnold's 'The Mother Tongue: Elements of English Composition' (Boston: Ginn & Co.). Each abounds in illustrations of style, which are given more at length in the second and larger work. Professor Hart again displays his fondness for Hawthorne as an exemplar. The triple authors add supplementary exercises and exhibitions of common errors, with a glance at punctuation and a chapter on English prosody.

Few recent diplomatic episodes have caused more discussion than the alliance of Italy with Prussia before and during the

war of 1866. Many attempts have been made to convict the Italian Government, and especially its head, Gen. La Marmora, of lack of faith towards Prussia. The negotiations have just been reviewed from first to last in Senator Luigi Chiala's 'Ancora un Po' Più di Luce sugli Eventi Politici e Militari dell' Anno 1866' (Florence: Barbèra), a work which seems to exhaust the subject. Written with Senator Chiala's characteristic frankness, it presents many important inedited letters, besides his inside knowledge of the transactions, and the impressions which his intimacy with many of the leading Italian public men enabled him to form at first hand. He has effectually silenced Bernhardi and other accusers, and he has confirmed Bismarck's statement that Italy behaved loyally in all her dealings with Prussia. Incidentally, the book is indispensable for any one who wishes to understand the diplomacy which made Prussia mistress of Central Europe and undermined Napoleon III.

The *Annals* of the Astronomical Observatory of Harvard College, volume 38, is devoted to a "Discussion of Variable Stars in the cluster ω Centauri," by Solon I. Bailey. This is the first portion of an elaborate study of variable stars in clusters undertaken by Professor Bailey. In all, 19,050 stars have been examined, and the area covered by the examination is 5.8 square degrees. The area in which variables were actually found, however, was only 1.4 square degrees, and the remarkable announcement is made that, in a region covering only one thirty-thousandth part of the whole sky, have been found more than five hundred variables, nearly as many as are known to exist in the remaining region. It also appears that in one cluster, Messier 3, one star in seven is variable, while in other clusters there is only one in five hundred. The volume is made up of several chapters in which are described the sequences of comparison stars, observations of the variables, the elements of the variables, and a detailed study of four variables. There are numerous reproductions of photographs of clusters showing variables, and six plates showing light curves.

The diamond and carbon product of Bahia is decreasing, writes H. W. Furniss in the Consular Reports for October, notwithstanding fabulous wealth awaits development—simply from lack of intelligence. "In my trip, which included the greater part of the diamond section, . . . . I could not find or hear of a person or company working with modern machinery or tools or using modern methods." The absence in Berlin of that cloud of dusty smoke so frequently observed in our cities is due to three facts, according to Consul-General Mason: "The preponderant use of coke and briquettes, which are practically smokeless; the skilful scientific construction of boiler furnaces and chimneys; and, finally, the high standard of skill that is taught and enforced among firemen who stoke furnaces with coal for steam and manufacturing purposes. It is not every strapping laborer who can shovel coal who is permitted to stoke a boiler furnace in this country. Before he can assume such a charge he must be taught the theory and practice of economical, scientific firing, by which the coal is distributed in such manner and quantity over the grate surface as to secure the most perfect combustion of its volatile elements."

In the *Geographical Journal* for October is an account by Oscar Neumann of his journey through southern Ethiopia to the Sudan, one of the most interesting parts of Africa yet to be explored. In the course of it he passed through five different zoölogical regions and "was able to collect more than 1,000 specimens of mammals belonging to about 140 different species," of which sixteen are new. This is the greatest zoölogical collection which has ever come to Europe from Africa at one time. He found a curious system of fortification prevailing in certain South Ethiopian kingdoms. "Where the countries are not bounded by high mountain chains, difficult to cross, they are surrounded by deep ditches and strong fences, which can only be passed by means of a guarded gate." In the capital of one of these kingdoms there was a Thursday market which "is visited by nearly twenty to thirty thousand persons." The address of Sir T. H. Holdich at the Belfast meeting of the British Association on "Some Geographical Problems" was a strong plea for better geographical education in England. It needed the bitter experience of the South African war to teach English administrators and English generals what the United States, Germany, Russia, and France have long known and acted upon, that "the cheapest, the quickest, the surest, indeed, the only satisfactory method of regulating the progression of public works, the development of commerce, the proper recognition of the frontier boundaries, the administration of justice, and the military control of a large and growing colony, or of a long stretch of military frontier, is to be armed with a perfect summary of what that country contains in the shape of a geographical map." He stated that, in order to secure a "definite understanding about the meaning of geographical terms," the Royal Geographical Society had in preparation a geographical dictionary, and he expressed the wish that there might be "homogeneity in spelling." An illustration of the need of this is to be found in this number of the *Journal*. In the text the capital of Abyssinia is always Adis Abeba, on the map it is Addis Abbaba.

The principal articles in *Petermann's Mitteilungen*, No. 9, are on the earthquake in Guatemala on April 18, 1902, by Dr. Karl Sapper, and on the place names of the Eskimo of Smith's Sound, by Dr. Robert Stein, with an accompanying map. Stein embodies the results of his investigations during a two years' residence in the Sound region. His linguistic studies have led him to the conclusion that the Eskimo have not long, relatively, inhabited the Greenland coast, but are emigrants from the west. Through increase of intercourse with the world, they are fast losing their old traditions and folk-lore, some of which, in the form of ballads, he has collected. He praises the English and American explorers for their brilliant achievements, but adds that, "from the lack of phonetic analysis," they have written the Eskimo place names in a manner which he characterizes as "ein wahrer Gräuel."

Dr. Karl Dziatzko, head librarian of the University of Göttingen, has recently extensively investigated the question whether, in the ancient world of literature, there existed anything like copyright. The problem was forced upon his attention by the recent large papyrus finds, there being already three hundred of these containing portions of Homer alone. The supplement to the Munich *Allgemeine Zeitung*, No. 193, reporting on these researches, states that, as might have been expected, no such right existed in the ancient world on anything like the scale of the modern. No law has been found protecting the rights of the writer, no matter in which of the two ways his books were multiplied, by the book-trader or by private enterprise. Everybody could have copies of any work prepared at his own pleasure. One restriction, however, was discovered, to the effect that he who, against an author's will, was the first to offer a book for sale, could be subjected to the process "injuriarum actio." But, after copies had once been made and circulated, then the special right of the author came to an end. Sometimes an author would make changes in his books in order to render it impossible for dealers to sell their unrevised copies. Another peculiarity of ancient publication methods was the fact that such a thing as the circulation of a writing privately, or, as the Germans say, as "manuscript," was unknown. Even works written for private circles at once became public property—which worked mischief to certain authors under the tyranny of several Roman Emperors.

The issue and continued maintenance of the *Japan Register*, a bi-lingual magazine published semi-monthly in Tokio, which has reached its third volume, recalls attention to the important question whether the Japanese—to say nothing of the Chinese—will ever give up their ideographic writing and adopt Romaji, or Roman script. The distinguished barrister-at-law, Mr. Masujima, conducts the *Japan Register*, which, in English and Sinico-Japanese (that is, in mixed Chinese square character and the *kana* script), discusses events and themes of contemporaneous interest most congenial to literary and scholarly people. There is certainly no sign that the Japanese will give up their ideographs within this present century, at least. In adopting Occidental civilization, they have put their Sinico-Japanese style and script to a severe test which has been most creditably borne. Called to express to an Oriental people the thoughts elaborated by European minds during many centuries, it has shown aptitudes undreamed of. It is not only an instrument of enormous merits, enabling a Japanese to express every shade of meaning from the columns of a European newspaper, but its use during more than fifty years' contact with the modern West has demonstrated the enormous capabilities of the Japanese language. "The existing written language of Japan is immensely superior to colloquial Japanese as a terse and precise instrument of thought," because to the native phonetic, or rather syllabic, script and "hooks and eyes" of speech it joins the Chinese ideographs, which are almost matchless for the tone and shadings of thought. The Japanese portion of Mr. Masujima's *Register* shows how much can be done in the simplification of the written style and in blending the classical and the colloquial, which are now the particular and pressing problems to be solved. The articles, editorials, critiques, and translations are of excellent selection and proportion. (The publica-

tion office is No. 14 Yamashita, Cho, Yokohama.)

One of the chief purposes in the organization of the International Association of Academies of Sciences, effected about two years ago, was to furnish a medium through which an international exchange of manuscripts for scholarly research could be brought about. The Royal Academy of Sciences in Madrid, although invited to membership in the new association, did not respond, and important literary documents from Spain are accordingly still almost inaccessible to foreigners. Now, however, the Government has itself taken steps to meet the wishes of scholars in this regard, and has recently issued to all of the great libraries of Spain a detailed set of rules and regulations controlling such an exchange of literary treasures with foreign countries. These make it possible for scholars of other lands to secure any manuscripts and other documents from Spanish collections save those of exceptional value; but this permission is confined to countries which extend similar courtesies to Spanish scholars, and the borrower is also compelled to make a money deposit, the amount of which is to be determined by the director of the library from which the loan is made.

We have received from Messrs. C. F. Libbie & Co., Boston, the catalogue of a remarkable collection of books in American genealogy and New England history which on November 11 and following will be sold for the estate of our old associate, the late William H. Whitmore. Of the nearly three thousand items, which include books, pamphlets, maps, broadsides, and historical portraits and views, we can now enumerate only the original manuscript passenger-list, containing forty-one names, of the *Speedwell*, endorsed by Gov. Endicott: "These were Landed in Boston in N. E. the 27th of ye 6 moneth 1656, J. E."; a great number of New England chap books, twenty-nine editions of "Mother Goose," including the earlier and rarer issues (one of Mr. Whitmore's numerous diversions); and a series of mezzotints by the eighteenth-century engraver Pelham, who is said to have been the first artist and engraver in America and one of Copley's masters. Genealogies predominate, but the collection of Bostoniana is of exceptional richness, as might have been expected from a leading founder of the Bostonian Society.

—It is a far call from Chevy Chace to Lexington, from Harry Hotspur to the officer whom Halleck, by a curious slip, called a "younger son," a "Major of Dragoons"; from the Percy of romance to the Percy of the days of George III. The letters of this latter, rightly named Hugh, Earl Percy, written in America between April, 1774, and November, 1776, have lately been published by Charles E. Goodspeed, Boston. The volume is beautifully printed, perhaps even too much so, since the result is a high price for a thin book of eighty pages of letters which, though interesting, are by no means of great importance. They are carefully edited by Charles K. Bolton, Librarian of the Boston Athenæum. The old Duke of Northumberland, father of the writer, was a strong opponent of the Ministry and its measures and treatment of the American Colonies. His son, the writer, was, above all, a soldier devoted to his profession and desirous of success and advancement in it. The letters relate principally to affairs of the time, but it is pleasant in one of the earliest to find a tribute to the great charm of New England independent of all time. On July 27, 1774, Percy writes: "With regard to the climate, it is ten times more inconstant than in England." His admiration of the country about Boston is expressed in words strong enough to satisfy the most devoted friend of her Park system of to-day. His views with regard to public men and measures are those of an intelligent but prejudiced young aristocrat. He could see no good in the leaders of American sentiment or in the people in general: "They have not the least Idea of either Religion or Morality." On April 20, 1775, after meeting the Rebels, he had learned that "whoever looks upon them as an irregular mob, will find himself much mistaken." The letters contain short accounts of the day of Lexington and Concord, and of the battles of Bunker Hill, Long Island, and White Plains, in all of which, except Bunker Hill, Percy took an active part. The letters were well worth printing, though their interest is largely due to the personality of the writer.

—The reverence which is felt for the memory of Father Marquette has of late years been illustrated in many ways. Sculpture has been invoked to commemorate his services, and his deeds are thus recorded in national centres like Washington and Chicago. His daring and sincerity have also been recalled in many public addresses. While Michigan and Wisconsin seem to owe a special debt of gratitude, the sense of recognition is widespread among other States of the Middle West, and may be expected to appear at any time. Under these circumstances, the public is likely to welcome the short biographical sketch entitled 'Father Marquette,' that has recently been published by Mr. R. G. Thwaites (Appletons). It is the work of one who has long been perfectly familiar with the geographical explorations and the missionary services of the Jesuits, besides having shown a special interest in the career of Marquette. A sufficient account of the Indians, the Jesuits, and Marquette's companions is given, but the book is a real biography, and centres in the deeds of the Father himself. As between Marquette and Joliet, Mr. Thwaites finds it impossible to do more than divide the praise of discovering the Mississippi; but he will not admit that the merits of the priest fall below those of the civilian. Marquette, too, it was who left the record. The illustrations are numerous and well chosen. Among others is the reputed portrait that was discovered in Montreal five years ago. If we ever had any doubt in the matter, we must now express a strong individual opinion against the authenticity of this picture. An account of its discovery will be found in volume 71 of the 'Jesuit Relations' (p. 400). In conclusion, we may quote Mr. Thwaites's final estimate of Marquette: "Others of his order, in America, were doubtless greater than he, suffered more acutely, spent more years in the service; but popular imagination in America has perhaps more generally centred upon the hero of this tale than upon any of his fellows. He was, in truth, a man of action as well as of ideas; a true explorer as well as a scholastic; a rare linguist; a preacher of undoubted capacity; gifted with unusual powers of mastery over the minds of fierce savages; and his saintly character will long remain an inspiration to men of every creed and calling."

—We have received a reprint of Mr. Hubert Hall's 'Court Life under the Plantagenets' (Dutton), which was originally published in London twelve years ago. In some ways this book reminds one of "The Merchant and the Friar,' by Sir Francis Palgrave, wherein Marco Polo is brought to England and made to converse with Roger Bacon on topics of public interest. Mr. Hall's 'Court Life' is less conversational than the 'Merchant and the Friar,' but in both cases an attempt is made to render popular the study of mediæval life. The English Constitution, under several of its aspects, is also a subject which both books have in common, although the action of the one is laid in the twelfth century and that of the other in the thirteenth. Mr. Hall's book being already well known, we need not criticise it at any length. On the whole, it is inferior to 'The Merchant and the Friar' in sprightliness, and it has the further misfortune of being so written that it does not exactly suit the demands of specialists. Mr. Hall knows a great deal about the working of the Exchequer and other matters connected with the administrative system of the Plantagenets, and he has also a marked sympathy for the social side of the national life. In this book, however, he is not technical enough for the student of constitutional detail, and not light enough in touch for those who are fond of historical novels. Still, we must not drop out of sight Mr. Hall's precise aim. "I have attempted in this book," he says, "nothing less than the delineation of living characters and the description of existing institutions at a given period of a typical reign." The design is ambitious, and even though success may be but partial, the attempt was worth making. We must also add with emphasis that this book contains a great deal of curious information, and may be used by the judicious teacher to qualify the dryness of lectures on constitutional history.

—The reader of Dr. Karl Federn's 'Dante and his Time' (McClure, Phillips & Co.) will probably be surprised, and take it for a hopeful sign, that such a book should have been made in Germany, for it presents the results of much study not in the form of the heavy dissertation dear to German scholars and their disciples, but in a series of popular essays, which are readable throughout and often abound in striking suggestions. Dr. Federn attempts to reconstruct the world into which Dante was born in 1265, its political, religious, and social conditions, and the immediate history of Florence. He traces the decay of the antique and the coming of the mediæval ideals, the conflict between Church and State, the rise of modern poetry; and, being a German, he emphasizes, perhaps unduly, the Germanic elements in the new order which superseded the ancient. It is important to have this side properly presented, although we may not accept all the conclusions which Dr. Federn reaches. To claim Dante as of Germanic origin on the assumption that *Alighieri* is simply the Italian for the old German *Aldiger*—which itself "has about the same significance as the word *Shakespeare*, meaning 'the ruler

of the spear'"—is fanciful. Whatever Dante's remote ancestors may have been, he is the most *un*-German master in literature. But this is a slight point, which we cite merely to show the possible eccentricity of a pro-German treatment of the subject. In the last third of the book, Dr. Federn gives a summary biography of Dante and a criticism of his work. Here, also, there is much to commend—enthusiasm, opinions formed at first hand, flashes of insight. Dr. Federn does not dissect a literary cadaver, but tries to impart to his readers what a living force he has found in Dante. He writes most convincingly when he is least "psychological"; witness his statement that, as "there are things which nobody can paint without having gone through," Dante could never have described "the sinful love of Francesca and Paolo so touchingly" if he had not been guilty of the like himself! We shudder to think of the crimes which, by the same wonderful psychological law, Shakspere must have committed before he could draw Lady Macbeth and Macbeth, Iago and Iachimo, and the other villains of his plays. But, to sum up, the general drift of Dr. Federn's book is so interesting that it can be honestly recommended. There are few Dante-lovers so learned that they will not find in it some fresh suggestions; and the average reader will derive from it much valuable information, clothed in a vivacious style.

---

POOR-LAW RELIEF IN ENGLAND.—I.

*Public Relief of the Poor.* Six Lectures, by Thomas Mackay. London: John Murray. 1901.

*The Early History of English Poor-Relief.* By E. M. Leonard. Cambridge (Eng.) University Press. 1900.

Mr. Mackay's 'Public Relief of the Poor' is a work of extraordinary power which raises questions of general and urgent importance.

"Death and sickness," writes our author, "are inevitable incidents in human life, but destitution is economically avoidable. Its avoidance depends on two things: the quickened economic competence of our industrial population, and the relaxation of the primitive feudal status of servitude which, as the pauper habit, lingers in our midst, arresting progress and development."

These sentences contain the fundamental principles on which Mr. Mackay's criticism and history—and the two go hand in hand—of the English poor-law are based; and the powerfulness of his reasoning consists in the intellectual tenacity with which he adheres to these elementary truths, and the skill with which he shows that they in reality afford the key to the historical, social, and political problems raised by the confused growth and the inadequate reform of the scheme for the relief of the poor which has existed in England since the days of Elizabeth. Let it be added that Mr. Mackay is no *à-priori* theorist. He is thoroughly well grounded in the history and the literature of his subject. Nothing shows this better than the relation of his teaching to Miss E. N. Leonard's 'Early History of English Poor-Relief.' This lady, whose industry in research is more fully developed than her capacity for logical reasoning, would, we conceive, dissent from the conclusions and be opposed to the tone of Mr. Mackay's book. Yet the interesting facts ascertained by Miss Leonard's labors afford additional proof of the truth of Mr. Mackay's doctrine, namely, that, under the conditions of modern society, the only mode of affording real relief to the poor is to render every man competent to support himself, and thus, instead of pampering paupers, abolish pauperism.

The effect and nature of this doctrine are best illustrated, as its truth is also established, by insisting on two or three conclusions to which it inevitably leads. First, the legislation of Elizabeth, which is embodied in the Poor-Relief Act, 1601, 43 Eliz. c. 4 (which itself, as Miss Leonard points out, is little more than a reënactment of a statute of 1597), is placed in a new light. The Poor-Law statute of 1601 (which should be read together with the Statute of Charitable Uses, 43 Eliz. c. 4) was a deliberate attempt of English statesmanship to mitigate the sufferings of the poor, and constituted a philanthropic, but also in its essence a reactionary, effort to check the growth of the new organization of society which was based on personal liberty, on freedom of contract, and on free exchange of services. The act of 1601 was, in short, a return towards the principles of gradually expiring feudalism. Laborers were, when necessary, to be provided with work and with wages, but laborers were also deprived of the freedom to move from one place to another so as to sell their labor at the best advantage. In so far as the principles of the Elizabethan poor-law were put into effect, the working classes might be secured against starvation, but they were deprived of freedom. By the Law of Settlement, English laborers became again *adscripti glebæ*. No doubt the stringency of the Law of Settlement arises directly from the Poor-Relief Act of 1662, but the detestable law of Charles II. only carried out to its logical result a principle involved in the legislation of Elizabeth, and if the poor-law did not produce anything like the whole of its calamitous results till sixty years after the death of the great Queen, the reason is that the law was for a long time most imperfectly carried out. It is here that Miss Leonard strengthens the position of Mr. Mackay. She proves that the constant effort of the central Government, represented by the Privy Council, was needed in order to make the poor-law become a reality. It is no accident that Charles I. and his advisers were zealous in the enforcement of the poor-law, or, as Miss Leonard expresses it, "that these infringers of individual liberties were also, in intention at least, the protectors of the poor"; benevolent communism is the natural ally of political despotism.

It is worth while to insist on the true character of the Elizabethan poor-law because, for reasons fully explained by Mr. Mackay, even the reformers of 1834 were tempted to argue that, had the act of 1601 been "strictly interpreted," reform would have been unnecessary. This was a delusion. The act never was "strictly" interpreted. The idea on which it partially rested, that a workhouse could be turned into a place where real and profitable work was done, has been shown, not only by argument, but by experiment, to be erroneous. Support by the parish was, as already pointed out, found to involve a law of settlement fatal to the free exchange of labor. Parochial aid destroyed among the poor the sense of personal responsibility for their own support, and checked among the rich the natural impulses of personal, and therefore salutary benevolence; and the worst and necessary result of the English system of poor relief is that pauperism became, and still in spite of all reforms remains, for a large portion of the population, a recognized status. The evils of this state of things may be estimated by two facts. When an Act of George III. repealed the worst provisions of the statute of Charles II., and thereby restored something like personal liberty to the English laboring classes, it was found that the spirit of pauperism had become too strong to permit the free exchange of labor. Scotland, again, possessed a poor-law much like that of England, but the Scotch people were not pauperized. The reason is, that the central Government was not strong enough to enforce the law, and it remained more or less a dead-letter.

Secondly, the "New Poor-Law" of 1834 achieved a great and rapid success. It abolished the outdoor relief of able-bodied workmen, and this abolition of a monstrous abuse was enough to save England from destruction. The true glory of the Whig leaders is not that they carried the great Reform Act which, though it benefited the nation, promised the Whigs a long lease of power, but that they deliberately sacrificed their own popularity for the sake of carrying through a social reform which saved the country. The principles, indeed, on which the English poor-law was partially reformed were thought out and enunciated by Bentham and his school, but the Whigs of 1834 did what few statesmen have done either before or since their time: they carried out, though only to a limited extent, a reform demanded by the best thinkers of the day, though it was opposed to the popular sentiment of the time. On this matter it is unnecessary to say much; whoever doubts the necessity for the reforms embodied in the New Poor-Law should study Mr. Mackay's fourth chapter, or, what is even better, the report of 1834 on which the Poor-Law Amendment Act of that year is founded.

Thirdly, the new poor-law, though excellent as far as it went, aimed at but a very limited reform, and was never allowed to produce the full effect intended by its authors. This is a point on which Mr. Mackay most rightly lays great stress. The violence with which the act of 1834 was attacked has given rise to the belief that it was a drastic measure of thoroughgoing reform, whence the inference is suggested that, if England still suffers from pauperism, we may assume that, in some way or other, the principles advocated by the social reformers of 1834 were unsound. No idea could be more utterly groundless. The plain truth is, that popular opposition has always made it impossible to carry through any thoroughgoing reform of the poor-law. The Commissioners who drew up the report of 1834 no doubt soon came to the perfectly sound conclusion that to propose the abolition of the poor-law was absolutely impossible. They, again, or at any rate the Parliament which in the main acted on the Commissioners' report, did not venture on the absolute abolition of outdoor relief. What was really done was to

offer relief to able-bodied persons on such terms as it was improbable that any man capable of supporting himself by work would accept. To carry this amendment of the law into effect was difficult enough. Sentimentalists and reactionists, supported by a large amount of popular feeling, denounced the use of the so-called "workhouse test," which was the essential feature of the plan proposed by the Commissioners, and to this day sentimentalists and reactionists are still opposed to that complete abolition of outdoor relief which it seems clear enough that the reformers of 1834 contemplated as the ultimate result of their new system. They apparently hoped that one Board of Guardians after another would, acting on the suggestions of the central authority constituted by the act, see the expediency of gradually abolishing a form of relief which in the long run is at once demoralizing and expensive. This expectation has not been fulfilled. Its fulfilment, indeed, was hardly to be expected by any one who thoroughly understood the character of the local bodies by which the English poor-law has been administered. True it is that the abolition of outdoor relief would lighten the pressure of the rates, and would in the long run be of the highest benefit to the poor. But it is also true that the immediate effect of refusing (say) five shillings a week to a widow who, if she remains outside the house, can earn an additional five shillings, and thereby do something to support herself and her children, is in the first instance to increase the charge upon the parish, and also to act with apparent harshness to a person who hates going into the workhouse, and is willing to do the best she can in the way of contributing towards the support of herself and her family.

Now there can be nothing more certain than that English guardians will be much impressed by the immediate effects and not be impressed at all by the ultimate and distant results of their conduct. It is just possible, though not certain, that a body of officials and trained experts living in London might have carried through the policy, and, as any one who reads Mr. Mackay's book will feel convinced, the very salutary policy, of altogether abolishing outdoor relief. But no human being can believe that Poor-Law Guardians would ever have systematically carried out a course of action which, while it appeared to them extravagant, was also opposed to their feelings of humanity. If it was intended to abolish outdoor relief, and thus at any rate go near to abolishing pauperism, the administration of the poor-law ought to have been placed in the hands of some central authority endowed with the power and representing the wisdom of the nation. Small local bodies are not fitted to carry through large national reforms. This, at any rate, is the inference irresistibly suggested by Mr. Mackay's account of the results flowing from the measure of 1834. That the reform, imperfect as it was, achieved the great results which may fairly be attributed to it, is, to a thoughtful reader, a matter of astonishment. That a reform which fell far below what its authors felt was required by the necessities of the time, and which was so opposed to popular feeling that it was never fully carried out, did not get rid of pauperism created by centuries of injudicious legislation, excites great regret, but can excite no surprise. The true nature of the legislation of Elizabeth, the results of the old poor-law, the failures no less than the success attributable to the reform of 1834, all point to one and the same conclusion, that pauperism is, as Mr. Mackay teaches, an evil which is avoidable and which, as it has been fostered by the errors, can, conceivably at least, be removed by the wisdom of legislators.

## BARBARIAN INVASIONS OF ITALY.

*The Barbarian Invasions of Italy.* By Pasquale Villari. Translated by Linda Villari. With frontispiece and maps. 2 volumes, pp. 231, 238. Charles Scribner's Sons. 1902.

The attention of Signor Villari, which seems of late to have been diverted from the times of Savonarola and Machiavelli, is now occupied with the origins of modern Italy. To his book on the first two centuries of Florence there succeeds a sketch of the barbarian invasions in so far as they affected Italy from the coming of the Visigoths to the coronation of Charlemagne. This is expressly designed to be a popular work, and, though the process of translation has cut it in two, it is really complete in one volume. Footnotes are of rare occurrence, and the style, while it is by no means infantile, is adapted to the taste of those who are not scholars. Indeed, Signor Villari holds strong views on the subject of historical composition. Admitting that research has made great progress since the establishment of the national kingdom, he nevertheless laments the loss of books "supplying narratives of past events in a simple, easy, readable style, such as abounded formerly in Italy, and served as models to other countries. . . . Yet, undeniably, the true object of ransacking the national archives is to assist the production of narratives suited for the general mass of readers."

Impressed by this deficiency of Italian literature, and moved by the conviction which has just been expressed, Signor Villari induced Hoepli to publish a special series of popular histories. Some of the volumes have already appeared—for example, a revised edition of Balzani's 'Italian Chronicles,' and 'The Liberation of Italy,' by Professor Orsi, of Venice. Besides treating the different periods and aspects of Italian history, it is designed that the series shall embrace the history of other civilized nations. All this is primarily for the benefit of the Italians themselves, but we shall be surprised if the leading volumes are not eventually translated into English. We have given the above explanation partly because it may be of some bibliographical interest, but mainly because it will serve to explain the scope of Signor Villari's work on the barbarian invasions. In the author's own words, "It is neither a learned nor a scholastic book, nor is it a philosophic study of universal history, such as Bryce's 'Holy Roman Empire,' or Quinet's 'Italian Revolutions.' I merely narrate events in chronological and logical order, without commenting or descanting on them, doing my best to avoid dryness."

This is the author's own statement, but its modesty needs to be supplemented by a word or two which shall point out the real merits of the work. While it deals with the same period which is covered by the numerous volumes of Hodgkin, and while it confesses obligation to half-a-dozen other histories of recent date, no one who is familiar with the writings and personality of Signor Villari can imagine that it is simply a piece of compilation. After naming Bury, Malfatti, Bertolini, Dahn, Mühlbacher, and Hartmann, the preface proceeds: "I have also recurred to certain other authorities, such as Gibbon, Tillemont, and Muratori, who never grows old; nor have I forgotten to refer to original documents." The narrative (and of course the book consists chiefly of narrative) is simple, well-ordered, and exact; but that is not quite all. Though the philosophical strain is avoided, the tone of the *Jahrbücher* is avoided as well; and even if we accept Signor Villari's remark that he has not commented or descanted on events, it is clear that he shows a willingness to venture general statements. For example, the chapter entitled "The Fall of the Empire," with which the book begins, contains broad reflections on the subject of Roman decline; and, just at the close, we encounter such a saying as this: "The constitution of the Frankish Empire was the chief and central achievement of the Middle Ages." There is an abundance of good narrative, but there is also from time to time an expression of mature opinion.

Some readers will perhaps regret that Professor Villari has found it inconsistent with his plan to estimate the exact contribution which was made by the Germanic tribes to the life and institutions of Italy. In the case of all the provinces where the barbarians established themselves, the historical student finds it hard to determine the number of the invaders, the character of their social relations with the Romans, and the extent of the changes for which they were directly responsible. What were the chief Teutonic elements which entered into the fabric of mediæval civilization in Italy? How was the system of landholding throughout the northern and central parts of the peninsula affected by the circumstances of the migration? In what wise do the customs which the invaders brought with them forecast the Italian type of feudalism? These are questions of high moment, and any opinion which Signor Villari might express concerning them would be entitled to careful consideration. As it is, however, such matters are almost wholly ruled out by the conception of the series, and we must look elsewhere for a discussion of them.

Signor Villari's account of the Gothic, Lombard, and Frankish occupation takes the form of a story rather than of a disquisition, but it never assumes the tone of a romance. The picturesque aspects of life during the fifth and sixth centuries which leave so profound an impression upon a mind like that of Charles Kingsley, and which have also appealed to the imagination of Mr. Hodgkin, are not thrown into strong relief here. The sequence of events is more regarded than the play of forces. It is a plain tale that Signor Villari tells. His period abounds with materials for epic or dramatic treatment, but with poetry or even with rhetoric he does not meddle. Everything is kept in stern subordination to the requirements of a sober and dispassionate history.

We have now described at sufficient length the aim and method of this work.

It remains for us to express some opinion concerning the quality of the execution. Where the scale is so small and the issues are so great, success or failure must hinge upon the author's accuracy, his power of selection, and his gift of telling statement. Signor Villari offers little that will seem new to the mediævalist, and he is precluded by conditions of space from investigating moot points like the negotiations of Athaulf and Honorius, the relations of Theodoric with Boethius, and the character of Theodora. On the other hand, he is careful, not to say conservative, in statement, he has chosen his topics with a discrimination that comes from wide general knowledge, and he has fulfilled his express purpose of avoiding dryness. It follows that this book in the English translation will henceforth occupy a fixed place between the manual of Church and the *opus* of Hodgkin.

In respect to chronology, the middle point of the narrative comes just before the middle of the sixth century—that is to say, the book divides at the time of St. Benedict and Totila the Ostrogoth. Without attempting, however, to analyze the subject-matter in any detail, there are two topics which seem to invite special notice—Signor Villari's comments upon the decline of Rome, and his attitude towards the Holy See. Beyond a slight discussion of these questions we must not go.

By common consent, the Empire fell not because the barbarians were stronger in the fifth and sixth centuries than they had been in the days of Marcus Aurelius, Decius, and Gallienus, but because the Romans were then enfeebled. Instead of expressing surprise at the dismemberment of the provinces or at the decline which produced it, Signor Villari is astonished that the imperial system endured so long as it did. What impresses him most deeply, as he surveys the Empire at its widest extent, is the failure to secure any real assimilation. As the rule of Rome extended itself farther and farther, the difficulties which arose in the path of true unity grew greater with each forward step.

"The assimilation of the Italian populations had proved comparatively easy, but Africa, Spain, Rhætia, and Gaul opposed an increasingly obstinate resistance. Then fresh obstacles had to be faced in Asia Minor and in Greece, where the Romans encountered, for the first time, a higher civilization than their own. After conquering the country by force of arms, they were conquered in their turn by the culture of Greece, and were obliged to fuse their own with it in order to spread both through the world. Thus, by the time the Empire reached to the Rhine and the Danube, it no longer possessed any real kernel of unity corresponding with its outer shell. The Empire was neither a state nor a nation; it was a compound of different races, held together by force and subject to the same civilization."

Some time ago it was usual to insist upon the uniformity that Rome secured by her conquests and the spread of her law. The so-called "Romanization" of the world was attested by an appeal to the poets like Claudian and Rutilius, who speak in glowing terms of the universal brotherhood. More recently, the tendency seems to be in the direction of emphasizing latent differences, of separating the Greek from the Roman. It is discovered that, after all, the civilization of Rome was hardly more than a veneer, beneath which persisted irreconcilable hostilities of race. Whether by way of restoring the balance or not, Signor Villari is apparently disposed to lay more stress upon the mutual opposition of the parts than upon the seeming unity of the whole, and in this latent antagonism he finds a fundamental cause of downfall. According to his view, one leading function of the Empire was to create that "moral and civil unity of the ancient world which was a necessary preliminary towards the formation of nationalities." But such moral and social unity as was attained could not be permanent after the dawn of the national instinct.

"Nationalities, in fact, can neither live nor thrive unless so closely inter-related as to feel themselves members of the same family. But their rise put an end to the existence of that ancient world which recognized the absolute predominance of one civilization alone, outside of which were only barbarians."

Towards the Church, Signor Villari adopts the attitude neither of a Guelph nor of a Ghibelline, but of the historian who recognizes the importance of Christianity and laments the present indifference of Italian writers to ecclesiastical and theological subjects. "Without investigating them," he asks, "how can it be possible to appreciate the history of a people that founded the Catholic Church, of a people whose religious life was formerly so intense, and so closely connected with its political, literary, artistic, and civil life?" From such a passage it will be inferred that no great enthusiasm is likely to be shown for the Papacy as a purely religious or ecclesiastical institution; but, besides being pontiffs, popes were Italians, and in this capacity they make a direct appeal to our author's sympathy. They were the natural leaders in those days of desperate distress when leaders were needed.

Signor Villari's freedom from anti-clerical prejudice is well seen in his portrait of Pope Gregory the Great, to whose career a whole chapter is devoted. While the celebrated letter to Phocas receives just censure, and while it is recognized that Gregory was willing to sacrifice everything to the interests of the Church, the harsher lines of his character are not unduly emphasized, nor does his true nobility of purpose fail to elicit due praise.

"The fourteen books of his *Epistolæ* form an imperishable monument to his memory, and a most valuable contribution to the history of his times. These Epistles teach us to appreciate the lofty character of the man who might be truly called the second founder of the Papacy; while the writer's practical power, untiring energy, Christian charity, and fervent holiness are brilliantly displayed throughout their pages. They plainly show us why he became the first man of his age, and not only the leader of the Church, but of Italian policy, and, to some extent, of the policy of all Europe."

The establishment of the papal state is another important incident of which Signor Villari takes notice, but the relations of Pippin with the Church are not made the subject of any special digression from the narrative.

The translation by Signora Villari is very good, but there are several slips of the pen in connection with names and dates. Those, however, which we have noticed are so obvious that they will not mislead any reader save the most unwary. Other volumes in the same series are announced by Professor Errera of Turin, Professor Salvemini of Florence, and Professor Brizzolara of Reggio.

*Franz Schubert.* Von Richard Heuberger. Berlin: "Harmonie."

One of the most noteworthy phenomena in the musical world to-day is the growing recognition of the exalted rank of Schubert among the great masters, and perception of the fact that he was a pathfinder in every branch of the art. When he died (1828) he was acknowledged to be a good song-writer, but otherwise very little was known about his works. Even his songs were soon neglected, while the land was filled with the sound of Mendelssohn's infinitely inferior *Lieder*, until a revival was effected, in a roundabout way, through Liszt's arrangement and performance of pianoforte versions of them. Some of the instrumental works were brought to light by Schumann ten years after Schubert's death; but they were still "music of the future" to most concert-goers. The leading Parisian orchestra refused, in 1842, after rehearsing the first movement of the superb symphony in C, to go on with the remainder; while in London, two years later, the behavior of the players in the Philharmonic Orchestra toward this same symphony was so insulting that Mendelssohn declined to proceed with the rehearsal.

Schubert's life was so short and uneventful that it is hardly surprising that the literature relating to him should be scant. The elaborate and exhaustive biography by Max Friedländer, promised years ago, has not yet appeared; Kreissle's meritorious biography (1865) is antiquated, and Niggli's is a mere sketch. In the English language Sir George Grove's equally erudite and enthusiastic article in his 'Dictionary of Music and Musicians' (120 columns) remains the most satisfactory and useful monograph on the subject; but, having been written twenty-one years ago, it is naturally incomplete. At that time the greater part of Schubert's works had not been critically edited and printed. It is only quite recently that Breitkopf & Härtel have completed their great undertaking of printing the entire works under the able editorship of Dr. Mandyczewski; and the first biographer to benefit thereby is Heuberger, who touches on the well-known biographic facts briefly, and devotes most of his space (there are only 114 pages) to the discussion of Schubert's achievements in the various branches of music.

To the songs less space is given than their importance seems to call for; but that is no doubt because the author felt that that subject had been pretty well covered, while concerning the other works much of importance remained to be said. Following the example of Mandyczewski, he takes pains to correct the impression that Schubert was uncritical. He may have written many of his songs in a clairvoyant state of inspiration, but when he rewrote them—which he often did, in some cases three or four times—his critical sense was keenly active. Doubt is thrown (p. 54) on the well-known anecdote regarding the impromptu composition of "Hark, hark, the Lark" on the back of a bill of fare. The autograph is written on stout *Regalpapier*, and is included in a notebook containing also some other songs. This, however, does not seem to us to disprove the anecdote, for

it is quite possible and likely that Schubert rewrote the song when he got home, and did not keep the bill of fare. In any case, the story is so characteristic that it must be considered as particularly *ben trovato*.

In one respect, it must be admitted that Schubert was uncritical—in the choice of poems for many of his songs, and of libretti for his numerous short operas. It is a significant fact, on which the author might have dwelt, that, of the best seven songs among the first 262 which Schubert wrote, six are to poems by Goethe and one to a poem by Schiller. This suggests the inference that if he could have had a Goethe or a Schiller to write libretti for him, he might have composed operas as dramatic as his "Erlking." He was passionately fond of writing for the stage, and persevered in it all his life; but although several of the operas contain some of his best music, he never enjoyed a success, partly because of the wretched texts, partly because he lacked theatrical skill, as the author shows convincingly (p. 73). He should have added, however, what Liszt pointed out, that while he lacked the theatric knack, he had a genuine dramatic talent, as was often manifested in his songs, through which he influenced the development of realistic operatic music indirectly. In all other branches of vocal music he was a direct promoter of reform and progress. Heuberger's remarks anent Schubert's male choruses and cantatas cannot be too urgently called to the attention of the numerous vocal societies in this country. Here, too, as in the *Lied*, it will be acknowledged some day that Mendelssohn has been allowed unjustly to usurp a place of honor belonging to Schubert, by right of priority as well as of superior genius. Concerning the male chorus, Heuberger says:

"Before Schubert, the only composer in this genre that calls for mention is Mozart, the inventor of it. From him he got, however, little more than suggestions. What the male chorus has become since Mozart is comprised exhaustively in the works of Schubert, who is the first in time, and the greatest writer of male choruses up to the present day."

When he wrote his oratorio fragment, "Lazarus," the author remarks:

"he had no model to influence him. Of Bach he knew but little, as we know through Hüttenbrenner. Some of Handel's works he had, indeed, heard or played with enthusiasm; but when he went to work himself it came over him like tongues of fire, and he spoke a language like none before him. He wrote no pseudo-archaic style, but a thoroughly modern, specifically Schubertian cantata, full of original and deeply emotional music worthy of his genius."

Among the instrumental works, the two last symphonies have long held the place of honor they deserve; and so have some of the quartets and other chamber works; but it is only within recent years that amateurs and critics have had the courage to confess to themselves that in euphony and variety of color charm, in melodic spontaneity and originality of harmonic modulation, they surpass even Beethoven's symphonies and chamber works. Of these compositions Heuberger gives interesting analyses. Schubert's epoch-making originality as a writer for the pianoforte is also admirably discussed (pp. 23, 36-38, 53, 60). While Beethoven called his short pieces "bagatelles," Schubert gave his best in them, and thus fathered the endless variety of short pieces that have gradually displaced the sonata. He also ennobled and practically created the Viennese dances which subsequently, under the banner of Strauss and Lanner, conquered the whole world. Nor is that all. He created an entirely new style of pianoforte music when he wrote his four-hand marches and other pieces. These have a charm and an "idiomatically pianistic quality" that have never been equalled by any of the thousands of four-hand pieces that have since been written.

The importance of Heuberger's book lies in its thus emphasizing the manysidedness of Schubert's musical genius, and the great number of paths in which he was a pioneer. Even without this feature the volume would be indispensable to Schubert-lovers because of its abundant portraits, facsimiles, and illustrations. Unfortunately there is no index or real table of contents. The last twenty pages are an appendix containing much interesting information, some of which should have been incorporated in the text, and the rest printed as footnotes in the proper places.

*The Founder of Mormonism:* A Psychological Study of Joseph Smith, jr. By J. Woodbridge Riley, one-time Instructor in English, New York University. With an introductory preface by Prof. George Trumbull Ladd. Dodd, Mead & Co. 1902. Pp. xix, 446.

Most writers, like Mr. Linn, whose elaborate and accurate work, 'The Story of the Mormons,' we lately reviewed, have approached the question of the sincerity of its founder from the outside—from the external history of the sect, from facts more than from philosophy. Mr. Riley, on the other hand, aims to ascertain what manner of man the Mormon founder was by a study of his characteristics as stamped and expanded by heredity and environment. Starting in the ultimate heyday of Smith's power and life, he traces salient family traits so far as he can through seven generations backward to 1666, and the surroundings by which they were successively influenced. The heterogeneous elements in 1805 gave birth to a leader whose life is a riddle for which, as Mr. Riley holds, the new-born hypnotic psychology furnishes the most universal solvent, though he confesses that, "after all, how far the wonderful power of Peep-stone Joe was fictitious and how far due to unconscious self-suggestion, it is hard to decide" (p. 185). Thanks to the curious peep-stones which the revelator called his Urim and Thummim, he unconsciously and accidentally first hypnotized himself—and that a decade before Braid in England first published some analogous occult discoveries. (The theory of every operation is later than its performance.) Surprised that persistent gazing on his crystals, or opaques, threw him into hypnosis where he took suggestion as a cat laps milk, Smith could not fail to repeat the hitherto undetected process. The result was, that, while he was under unconscious conditions through suggestions or impulses, whether from within him or without him, his mental visions, though airy nothings, were projected outwardly and became external realities with local habitations. While in the dark he saw lights and angels. His illusions were of identical nature, from his youthful guidance of money-diggers to the last verse in the Mormon Bible. Those who wonder that visions were so multitudinous and vast should remember that in hypnosis it is the first step which costs, for hypnotizing becomes more and more easy, and each new trance most naturally follows in the wake of its predecessors. This explanation is countenanced by much of what fills the Book of Mormon. Interwoven in its warp and woof are allusions to the Bible (298 to the New Testament), and as many to anti-popery, anti-masonry, and anti-deism—the three topics most talked of at the time and place where Smith's sacred book was found, or invented, or translated.

In regard to the meaningless hieroglyphs, the "Caractors" (in the handwriting of Smith himself) which were sent for translation to Professor Anthon, Mr. Riley thinks that "Smith doubtless believed them of supernatural origin—and that because they were written under more or less unconscious conditions." On the same ground the Mormon prophet must have believed his Book of Mormon with all its supplements to be divinely revealed, and so he was no knave at all, but throughout believed his own lie to be truth, and it hence became truth to him. If we believe this theory, we can see how Smith won disciples as soon as he fell in with victims who were either as good hypnotic subjects as he was, or whom he could manipulate up to an equal receptivity. His early success in the use of "collective hypnosis" in securing eight eye-witnesses of optics keen enough to see the gold plates, and who "hefted" them with their own hands, could not fail to be followed by further miracles of its class.

If Mr. Riley holds Smith to have believed in one revelation, why not in all? In a word, as we incline to think, our author, mounted on hypnotics, rides his hobby to death. His proving hypnotics to quadrate in so many points with Mormonism reminds us of interpretations still popular in orthodox circles of St. John's apocalypse as foretelling or tallying either with the career of Napoleon or, as others are equally sure, with that of all the Popes; or, as a third class judge, with signs of the "Second Advent"—and that with minute historical accuracy. Mr. Riley's treatise is of wonderful ingenuity and readableness, yet on the whole it deepens the feeling we have long had that Mormonism is, in fact, a phenomenon in one grand feature very like the Scriptural apocalypse as described by Dr. Robert South—"A book intricate, perplexed, and, for the most part, never to be understood; on which, when wits and industry have done their utmost, the best commentary is conjecture."

Some latent distrust of hypnotism as too weak to bear the load he puts upon it, is betrayed by our author. He declares the prophet's "mind seriously affected," so that his words and deeds became as crazy as anything in the mad Dean's Gulliver—as when he said, "I know more than all the world put together, and God is my right-hand man"; and again when he demanded of Van Buren a million dollars in damages as his due from Government for persecutions, and when, through wire-

workers, he was nominated and was actually running for United States President at the hour of his death. In reading Mr. Riley, one thinks how Rufus Choate would have welcomed hypnotism. Could he have reinforced his insanity defences with that plea, all murderers would have gone unwhipped of justice.

---

*Shakespear.* By W. Carew Hazlitt. London: Quaritch.

Mr. Hazlitt was disappointed in Mr. Sidney Lee's 'Life of Shakespeare.' It seemed to him little more than a readable distillation of Halliwell-Phillipps's 'Outlines.' He determined, therefore, to take up the subject himself, or, rather, to resume a "half-abandoned design," and the fruits of his determination are before us. He insists, however, that his volume does not profess to be a systematic biography—that it is simply "an essay, restricted to new points of view, which may or may not be held in certain instances to amount to new facts." He claims the same freedom of conjecture and inference in settling the details of Shakspere's life that would be allowed in other uncertain cases, where the person involved was less considerable. Accordingly, he deals largely in a process which he calls "the concentration of scattered points and hints."

In the main we may accept Mr. Hazlitt's characterization of his own book. Yet it is not an essay in the strict sense of the word. It is rather a collection of essays, for there is little continuity between chapter and chapter. The whole thing rambles and staggers and halts along. There are digressions so little pertinent that they might well have been relegated to an appendix; there are pages of dreary commonplace, and there is everywhere, of course, Mr. Hazlitt's clumsy style—his unsurpassably long-winded fashion of saying the simplest things. As for the restriction to "new points of view," it is not and could not be thoroughgoing; but we meet with a good many new guesses. Most of these are of dubious value, but there is now and then one which merits the attention of scholars.

Mr. Hazlitt, though he has edited a collection of antique jest-books, is somewhat deficient in humor. He can hardly forgive Shakspere for having so much of it. One gets the impression that he regards a joke as vulgar unless it is either academic or elephantine. If space allowed, we should like to quote his profoundly diverting animadversions on Touchstone's words to Audrey: "I am here with thee and thy goats, as the most capricious poet, honest Ovid, was among the Goths." The reader will find it on page 135, embedded in a chapter on "Self-Culture."

With the Sonnets Mr. Hazlitt has little patience. "Small, very small, loss to the world and to the fame of the writer had it been if the MS. had perished." "The sentiment is often thin and weak, the diction poor, and the metre faulty." "In the Sonnets, forsooth, we see the poetical expression of the author in its earliest and rawest form." "I grieve that they are so poor." As to metre, one is disposed to set up Shakspere, even in his "earliest and rawest" period, as a match for Mr. Hazlitt, especially after reading a note on page 281. Here, having described a line in Sonnet cvii. as "neither sense nor metre," he presents us with an emendation. The line is this: "And peace proclaims *olives* of endless age." The new reading which, we presume, is expected to mend the measure, runs as follows: "And peace proclaims *an olive* of endless age"!

Much as he despises the Sonnets as literature, Mr. Hazlitt attaches some biographical value to them. But his attempts to extract this biographical material are not more successful than those of his predecessors. Bartholomew Griffin, a decidedly minor poet, appears as a candidate for the position of Shakspere's friend, replacing the perhaps sufficiently discredited Pembroke. The dark lady is Griffin's wife. All this is advanced tentatively, with other conjectures of a more trivial kind. We cannot forbear quoting the following sentence: "Shakespear's 80th Sonnet suggests his acquaintance with the literary gifts of a contemporary, who had been more successful than him in ingratiating himself with a common lady friend at a distance from London, yet at one accessible on horseback, even if not without fatigue." "Mr. W. H.," by the way, becomes William Hammond, concerning whom Mr. Hazlitt favors us with some information and much ingenious guesswork.

It must not be inferred that the volume is valueless. Mr. Hazlitt is a learned and indefatigable bibliographer, as well as a persevering manufacturer and revamper of books. His qualities, good and bad, are well known to scholars, and they all appear in the present "essay." To scholars, then, his 'Shakespear' may be left. They will use it with considerable vexation of spirit, but may find some things in it that will do them good. The general reader will probably let it alone.

---

*Letters from Egypt.* By Lady Duff Gordon. London: R. Brimley Johnson; New York: McClure, Phillips & Co. 1902.

Lovers of some of the best letters in English literature will rejoice that Lady Duff Gordon's from Egypt have been reprinted in a single volume. The first series appeared in 1865, the second ('Last Letters') in 1875; and both are now brought together, and some other letters are added. Moreover, all are now printed as Lady Gordon wrote them, so that many characteristic touches, omitted earlier, for various reasons, are given their proper place. This is as it should be; for, if there were ever any doubts as to the lasting quality of this correspondence, they would vanish now that nearly forty years have tested it. The present writer knows of no other Englishwoman's letters that compare with these, and he questions whether the letters of many Englishmen during the past generation will be read longer, or with more delight.

What first strikes one in Lady Gordon's letters is their naturalness; they have high literary excellence, but they do not sacrifice to it the priceless quality, spontaneity. She describes with wonderful vividness the Egypt of the sixties, which had not yet become the commonplace resort of Cook tourists. The land, the people, the associations were to her inexhaustibly interesting. "I write to you out of the real Arabian Nights," is her first greeting from Cairo. But the gorgeousness of the Oriental pageantry is not her main theme. She is not merely a sympathetic traveller, who observes, describes, and passes on. She seeks the human in the Copts and Arabs among whom she lives. She learns to know them better than any other Englishwoman has ever known them; they admit her to their confidence; they look to her for sympathy and aid in their distress; and they come at last almost to worship her as their "Own Lady." The economist not less than the historian will not overlook her account of Egypt from 1862 to 1869, and both will acknowledge that that country to-day, after twenty years of British rule, has greatly improved. Not for the mass of entertaining information, nor for the succession of vivid descriptions, however, will Lady Gordon's letters be most prized. Their deepest charm lies in the fact that they reveal one of the most fascinating of modern women, one who was almost the best specimen of the highest type of Anglo-Saxon womanhood—highly cultivated, tender, strong, fearless; always ready to protect the weak from social or political tyranny; hating pretence; mixing as a matter of course with the best that London could offer or with the humble fellaheen at Luxor; radiantly beautiful; both witty and humorous; and of perfect courage. These letters, written in solitary exile by a consumptive stricken in the prime of life, have no trace of invalidism about them; and, but for passing references to her condition, one would suppose that the writer was as vigorous in body as in mind. But, as Mr. George Meredith says, in an admirable introduction, "her dislike of superlatives, . . . renders hard the task of portraying a woman whose character calls them forth. To him knowing her, they would not fit; her individuality passes between epithets. . . . Lucie Duff Gordon was of the order of women of whom a man of many years may say that their like is to be met but once or twice in a lifetime."

Lady Gordon's daughter, Mrs. Janet Ross, edits this volume. It is to be regretted that she has not amplified the biographical memoir, which stands practically as it first appeared in 1875. A more detailed account of the beautiful Lucie would be welcomed by every one who comes to know her through these letters, and who will hardly be appeased by the chapters devoted to her in Mrs. Ross's 'Three Generations of Englishwomen.' A few inaccuracies ought also to have been corrected; for instance, Heine's "Wenn ich an deinem Hause," first printed in 1824, could not have been inspired by the merry girl of thirteen with whom he played at Boulogne in 1834. The volume has three portraits of Lady Gordon, but not the most beautiful, by Phillips.

---

*Sheridan's Plays.* London: David Nutt. 1902.

There have been many editions of Sheridan's famous comedies, but all careful students of stage literature will be glad to possess the authoritative version, printed from the original manuscripts and edited by W. Fraser Rae, which has been published by David Nutt, in a handsome and convenient volume, with every advantage of good paper and typography. Comparatively few persons, probably, are aware that none of these plays except "The Rivals" was given to the world in printed form by Sheridan himself. All the other published copies were reproductions of

those used upon the stage. The original manuscript of "The Rivals" was lost, unfortunately, in the fire which destroyed Covent Garden Theatre, and it is therefore impossible to discover the character or the extent of the alterations made in the piece by the author between the first unsuccessful production of it on the 17th of January, 1775, and the second triumphal presentation nine days later. This, perhaps, is not a matter of much consequence. At all events, we have the comedy in the amended form which Sheridan prepared for the press. Thus there is now a certified text of all the plays, which can scarcely fail to be useful hereafter.

In common with other playwrights, Sheridan, of course, suffered a good deal at the hands of stage-managers and actors, but on the whole he has not been treated very badly. Even adapters, such as Mr. Augustin Daly, did not venture to take important liberties with his dialogue. That he was "cut" sometimes pretty severely, as in the cases of Faulkland and Julia in "The Rivals," is not to be wondered at. That the creator of the Absolutes, Sir Lucius and "Fighting Bob," should have been responsible for this precious pair is a literary fact that cannot easily be explained. Yet, strange to say, that intolerable prig and egotist Faulkland excited the admiration of more than one contemporary critic. In his prefatory notes, Mr. Rae furnishes a number of extracts from the press notices of "The Rivals" as originally played, and they make very amusing reading. In many respects, they are almost as silly as those of to-day, but they indicate pretty plainly that gross incompetency was almost as common among actors then as it is now.

In addition to the Sheridan pieces, "The Rivals," "The School for Scandal," "The Critic," "St. Patrick's Day," and "The Duenna," the present volume contains Mrs. Frances Sheridan's "A Journey to Bath" and an introduction by the late Marquess of Dufferin, Sheridan's great grandson.

## BOOKS OF THE WEEK.

Abbot, W. J. American Merchant Ships and Sailors. Dodd, Mead & Co. $2.

# TIMELY BOOKS ON PUBLIC PROBLEMS

W. J. GHENT, *in*

## OUR BENEVOLENT FEUDALISM

*PROBLEMS OF THE FUTURE*

Gives a careful analysis of present industrial and social tendencies, and a forecast of the coming state of society. If his view is right the book will be a particularly useful one, though there is no recent book which will do so much toward creating opposition to present conditions as this will do.

*Cloth, 12mo. $1.25 net. In a few days.*

BROOKS ADAMS, *in*

## THE NEW EMPIRE

*PROBLEMS OF NATIONAL SUPREMACY*

Deals with the fluctuations in social equilibrium which have accounted for a constantly changing seat of empire in the past; by one of the most entertaining writers on political and economic subjects, author of "The Law of Civilization and Decay," etc.

*Cloth, $1.50 net. (Postage 10 cts.)*

By WM. GARROTT BROWN, *Harvard University.*

## THE LOWER SOUTH IN AMERICAN HISTORY

*PROBLEMS OF THE SOUTH*

"An exceptionally competent piece of historical writing."—HAMILTON W. MABIE.

"I have read it through with care, and with much interest. It is keen, penetrating, sympathetic, and, above all, sane."—KENDRIC CHARLES BABCOCK, University of California.

*Cloth, Cr. 8vo, $1.50 net. (Postage 12 cts.)*

MICHAEL A. LANE, *in*

## THE LEVEL OF SOCIAL MOTION

*PROBLEMS OF SOCIAL THEORY*

AN INQUIRY INTO THE FUTURE CONDITIONS OF HUMAN SOCIETY.

Aims to develop a law of social motion, foreshadowing the future of human society in its moral, intellectual, and economic forms.

*Cloth, 12mo, $2.00 net. (Postage, 14 cts.)*

WILLIAM ALEXANDER LINN, *Sometime Managing Editor of the New York Evening Post, in*

## THE STORY OF THE MORMONS

*SOME PROBLEMS OF THE WEST*

Has written a book "admirable in conception and execution, in clear vision and fairmindedness—no other work exists upon the subject that approaches it—to the United States at large it is of value, but to the Western State it seems of special pertinence."—(*Topeka State Journal.*)

*Cloth, 8vo, $1.00 net. (Postage 21 cts.)*

By GEORGE L. BOLEN.

## THE PLAIN FACTS AS TO THE TRUSTS AND THE TARIFF

*PROBLEMS OF THE TRUSTS*

With chapters on the Railroad Problem and Municipal Monopolies. "The treatment is so direct there can be no misunderstanding it. The book deserves careful campaign study"—(*Philadelphia Public Ledger.*)

*Cloth, 12mo. $1.50 net. (Postage, 11 cts.)*

JOHN BATES CLARK, *Columbia University, in*

## THE CONTROL OF TRUSTS

*PROBLEMS OF THE TRUSTS*

Argues in favor of curbing the power of monopoly by a national method. He is author of "The Philosophy of Wealth," etc.

*12mo, Cloth, 60 cts. net. (Postage 5 cts.)*

CHARLES ZUEBLIN, *Chicago University, in*

## AMERICAN MUNICIPAL PROGRESS

CHAPTERS IN MUNICIPAL SOCIOLOGY

*PROBLEMS OF THE GREAT CITIES*

Takes up the problems of the so-called public utilities: transportation, street paving or cleaning, sanitation, public buildings, public schools, libraries, children's playgrounds, public baths, public gymnasiums, parks and boulevards and the questions of public control, ownership, and operation, etc. The discussion, popular and pleasing, is from the standpoint of public welfare, and is based on repeated personal investigations in leading cities.

*In the Citizen's Library. Half leather, $1.25 net. (Postage, 12 cts.)*

PAUL S. REINSCH, *University of Wisconsin, in*

## COLONIAL GOVERNMENT

*PROBLEMS OF THE COLONIES*

Treats of motives and methods of colonization, forms of colonial government, institutions of colonial government, etc. He is the author of "World Politics."

Of Booksellers Generally, or of the Publishers
**A. C. McClurg & Co., Chicago**

**The Nicaragua Canal.**

*One of the rarest books on this subject to be reprinted by the Burrows Brothers of Cleveland.*

**Lionel Wafer's "Voyage & Description,"**

**Edited by George Parker Winship of the John Carter Brown Library.**

With an introduction, notes, and a most valuable index. The edition limited to 750 copies on Dickinson hand-made paper (net $350), and 27 copies on Imperial Japanese vellum (24 of which are for sale) from the famous Insetsu Kioku of Japan (net $500). Beautifully printed, about 300 pages 8vo, done in the finest American ribbed cloth. An exact reprint from the edition of 1699 with all the plates, map, and new chart for comparative purposes, this edition will stand forth as one of the finest pieces of reprinting attempted in America in many years. The experiences of this famous old traveller (and perchance buccaneer) are as interesting and exciting as the best portions of Esquemeling or Capt. Kidd. Mr. Winship gives a most delightfully readable and extensive foreword, throwing much light on subjects heretofore doubtful. As an artistic production, the article will take first rank. A rover not unlike Marco Polo or Richard Burton, blessed with the gift of being able to tell of his wanderings in a clear and readable style, this narrative should be considered one of the classics of English Adventure-Literature. Nicaragua of that day, and this, is vividly set forth. The name of the publishers, who are doing some of the finest work of this kind in America, is a guarantee as to the excellence of the production. An illustrated descriptive circular on application.

**An Open Letter to You!**

"Inasmuch as ye have done it unto one of the least of these, my brethren"—the lepers of Surinam—"ye have done it unto me."

**BETHESDA,** THE PROTESTANT LEPER HOME AT GROOTE CHATILLON, SURINAM DUTCH GUIANA, SOUTH AMERICA, has sent its superintendent, the REV. HENRY T. WEISS, AND WIFE, who are devoting their lives to the care of these poor lepers, to the United States, in order to appeal to the PROTESTANT CHRISTIANS of this country for means to erect additional much-needed buildings. The current expenses are met by friends in Surinam, Holland, England, and Germany. Every dollar, therefore, you may now contribute will be used exclusively in enlarging the home, so that every leper (THERE ARE 3,000 IN SURINAM) who applies can be received. The Bishop of Central Pennsylvania, Rt. Rev. Ethelbert Talbot, D.D., in forwarding a contribution, writes: "May I also be permitted to express the hope that God's blessing may attend and crown your praiseworthy efforts in behalf of so excellent a charity." Thus it will be seen that the members of all Protestant churches, without exception, have joined hands in this Christ-like work of relieving the sufferings of the lepers of Surinam. The leper committee in Paramaribo consists of all the Protestant churches in the colony—the Dutch Reformed, the Lutheran, and the Moravian. MRS. L. PIGOTT, an Episcopalian, the wife of the British Consul, spent a week at the leper home, and has published a soul-stirring booklet, **WITH THE LEPERS OF SURINAM.** It will be sent to every contributor. You will be delighted to read it. Contributions to the building fund will be most gratefully acknowledged by REV. HENRY T. WEISS, 12 CHURCH STREET, BETHLEHEM, PA.

Yours sincerely, H. T. F.

# The Cambridge Modern History

VOLUME I. WILL BE READY NOV. 1.

Planned by the late Lord ACTON, LL.D., Regius Professor of Modern History in the University of Cambridge. Edited by A. W. WARD, Litt.D., G. W. PROTHERO, Litt.D., and STANLEY LEATHES, M.A.

*To be complete in twelve volumes. Royal 8vo.*

*THE TOPICS OF THE DIFFERENT VOLUMES AS PROJECTED ARE AS FOLLOWS:*

I. The Renaissance.
II. The Reformation.
III. The Wars of Religions.
IV. The Thirty Years' War.
V. Bourbons and Stuarts.
VI. The Eighteenth Century.
VII. The United States.
VIII. The French Revolution.
IX. Napoleon.
X. Restoration and Reaction.
XI. The Growth of Nationalities.
XII. The Latest Age.

THE principles which guided the conception of this work were laid down, and the scheme of it was drawn up, by the late Lord Acton, Regius Professor of Modern History in the University. On his retiring from the editorship when no longer able to contend against illness, the task of giving effect to the scheme was undertaken by Dr. A. W. Ward, Master of Peterhouse, and formerly Professor of History in the Owens College, Victoria University, Manchester; Dr. G. W. Prothero, formerly Professor of History in the University of Edinburgh; and Mr. Stanley Leathes, Fellow and Lecturer in History in Trinity College. In the Preface to Vol. I., the Editors have briefly stated the principles which they believe Lord Acton to have followed, and to which it is their attention to adhere.

## VOL I. THE RENAISSANCE

750 pp., Royal 8vo, Buckram, gilt tops, **$3.75** *net*
(postage 30 cts.)

Rockland St. 1902

## THE AMERICAN MERCHANT MARINE:

**Its History and Romance from 1620 to 1902**

By WINTHROP L. MARVIN, Associate Editor of the Boston *Journal.*

**8vo, $2.00 net (postage 22 cents)**

IT HAS the interest of a romance, especially the chapters dealing with the East India trade and with the whaling fishery. The serious value of the work to the student of the problems which confront American shipbuilders is not easily overestimated.

*20th 1,000*

**By JAMES M. BARRIE**

*A New Novel*

## The LITTLE WHITE BIRD

**Or, Adventures in Kensington Garden**

"There can be no question that this is Mr. Barrie at his best."
—*N. Y. Commercial Advertiser.*

A TENDER, fanciful, poetic story with a novelty of conception and a range of humor and pathos for which even Mr. Barrie has not prepared his readers.

"*The subtile charm of Barrie at his best.*"—New York *Times Saturday Review.*

**$1.50**

**By HENRY VAN DYKE**

*A New Book*

*50th 1,000*

## The BLUE FLOWER

**Elaborately Illustrated in full Color**

THE Blue Flower which Dr. van Dyke takes as the title for his new book symbolizes that ideal of happiness for which all are striving, and each of the stories illustrates some phase of the search for it. The publishers have given the volume a sumptuous presentation, suggestive of "The Ruling Passion," including illustrations strikingly reproduced in full color.

"The Ruling Passion" has sold more copies than any volume of short stories (except possibly one) ever published in America.

*Bishop Potter's new book, of special importance just now.*

## The Citizen in his Relation to the Industrial Situation

**By the Rt. Rev. HENRY C. POTTER, D.D., LL.D.**

12mo, $1.00 *net.* (Postage 10 cents.)

CONTENTS

I. The Citizen in his Relation to the Industrial Situation.
II. The Citizen and the Working Man.
III. The Citizen and the Capitalist.
IV. The Citizen and the Consumer.
V. The Citizen and the Corporation.
VI. The Citizen and the State.

BISHOP POTTER'S book is in effect a direct and powerful appeal to the citizen not to limit his responsibilities of citizenship to his own class. Its method is an examination, scholarly and convincing in its balance, into the relations between capital and labor. A new volume of the Yale lectures on the responsibilities of citizenship.

*Translated from the German by EDITH WHARTON.*

**The Joy of Living—(Es Lebe Das Leben)**

A Play in Five Acts by HERMANN SUDERMANN. 12mo, $1.25 net. (Postage 8 cents.)

*The* SATURDAY REVIEW (*London*) *says of this play:*

"Sudermann, who has long proved himself a clever playwright, has here shown himself a consummate artist. The drama is creative. It presents a new problem in a setting that convinces even while it startles."

*NEW YORK, THURSDAY, NOVEMBER 6, 1902.*

## The Week.

With incomplete returns, the general result of Tuesday's elections yet appears unquestioned. The Republicans hold the House, though by a greatly reduced and narrow majority. The Democrats fought in some States with unexpected spirit and success; they lost heavily in others through unexampled folly of leadership. Col. Gaston in Massachusetts cut deeply into the Republican majority, and made a run which recalls the days of the lamented William E. Russell. In Ohio a veritable cyclone has blown over the circus tent of the grotesque Tom Johnson. Bryan's ostentatious endorsement of him was the one thing needed to complete his ruin. And, finally, the sarcophagus of free silver was freshly weighted with lead in Colorado, that State having apparently gone Republican and retired Teller, Bryanite Congressmen, and all their works. We consider the net result, which is of the nature of a check and warning to the Republicans, wholesome. It shows that the Spanish war is over. No more sweeping victories are to be won by attainting the Opposition party of high treason. Nor will unthinking cries about our "unparalleled prosperity" longer suffice. If a "calamity howler" is a nuisance, a "prosperity yawper" is an affliction. His day is passing. The party has had notice that, in order to retain the confidence of the country, it must address itself to the questions of social injustice and class favoritism which are pressing for solution.

---

In this State, those who believed that Coler had more than a fighting chance of election, even as Hill's dummy, have been justified. Governor Odell is re-elected by a much reduced and feeble plurality. Mayor Low, on his part, will find food for reflection in the enormous Tammany vote, which indicates a widespread dissatisfaction with his nine-months' Administration. Truly gratifying is the defeat of Judge Werner for the Court of Appeals, and of Attorney-General Davies, President Roosevelt's unworthy candidate for the Supreme Court in the Fifth Judicial District. The significance of the vote should not fail to penetrate the skin of Judge Werner, and make him consider seriously the advisability of again becoming an instrument to wreak the narrow and contemptible revenge of one boss upon another. As for Platt, no happening of recent years has been such a direct slap in his face.

Among the many examples of non-partisan voting which the elections afforded, none was more inspiriting than the defeat of Major Carl Lentz, the Republican candidate for Sheriff of Essex County, New Jersey. All of his colleagues on the Republican County ticket won by majorities in the thousands, so that the discrimination against him was as marked as that against Judge Werner in this city. This rebuke was the more signal because every effort had been made to bolster up Major Lentz's candidacy. Everybody knew, from his standing apology during the campaign, that he presented as arguments for his election, besides his services in building up the county machine, chiefly his personal poverty and his wounds during the civil war, while he glozed over the most notable feature of his public record, namely, the court judgment pronounced upon him for the appropriation of trust funds; and yet the Governor of the State, the Attorney-General, the United States Senator, and other prominent Republicans accepted the unfit candidate, personally interested themselves in his canvass, and sympathized with him in his defeat. The voters, however, by their exemplary repudiation of the sophism that by receiving a party nomination a man too bad to be nominated becomes fit to be voted for, have done much to elevate the public tone of the State.

---

President Roosevelt's ante-election expression of "keen interest" in Republican success was, of course, only the perfunctory official announcement always expected from the titular head of the party. His friends could wish, for his own sake, that he had not made special mention of the contest for the Governorship in Pennsylvania as one of the struggles in which he hoped the Republicans would win. This was to express the hope that a corrupt and debasing tyranny against which the best citizens of Pennsylvania are fighting, might be fastened upon them for two years more. The diminished vote for Judge Pennypacker, the open lauder of Quay, is a rebuke to the President for playing the party game no matter into what company it leads, or how much it may confound moral distinctions.

---

Secretary Moody made a speech at Chelsea, Massachusetts, on Thursday evening, on the tariff question. He held the Democrats up to scorn for their opposition to reciprocity, which he said was a Republican doctrine. In the same speech, he referred to reciprocity with Canada, which, he said, found many advocates in Massachusetts, though none made a definite proposition for reciprocity with the Dominion "which an American who believed in protection could accept." A treaty of that kind he would ardently support, but he did not say what kind of treaty a believer in protection could accept. Apparently, it would be a treaty which nobody objected to, as, for example, admitting from Canada all articles now on the free list in exchange for a similar concession on the part of Canada. But it would never do to admit barley, or wool, or iron ore, or coal, or lumber, or wood pulp, from that country, because some Americans who believe in protection could not stand that. Similarly, Canadians who believe in protection could not accept a treaty which admitted boots and shoes, hardware, cotton and woollen cloth, and many other products of Massachusetts. Mr. Moody's objection to reciprocity with Canada is the same as Mr. Lodge's objection to reciprocity with France. The treaty is inadmissible because it offends some particular producer of something. In short, "reciprocity is essentially a Republican doctrine," as Mr. Moody says, but there is no place for it to begin.

---

In his speech at Dorchester, on Monday week, Senator Hoar made use of an expression which betrays a very imperfect conception of the financial disasters of 1893-6, which he helped to precipitate. The "hard times which President Cleveland brought on," in the Senator's phrase, are those which became acute very soon after his second inauguration as President. That event took place on March 4, 1893. When he entered office, he found less than one million dollars of "free gold" in the Treasury. By free gold is meant gold over and above the $100,000,000 at that time "reserved for the redemption of United States notes." He found the Government facing a deficit. The revenue had been cut down some $60,000,000 by the McKinley tariff, and we were spending $50,000,000 per year for silver bullion under the Sherman act—both of which were Republican measures, and passed by Republican votes. The panic began in June, 1893. It was the natural consequence of the Sherman act, and of the silver legislation that preceded it. President Cleveland's first step was to call an extra session of Congress to repeal the Sherman law. Was it in that way that Mr. Cleveland brought on the hard times? Is it Senator Hoar's opinion that the panic of 1893 was brought on by the man who caused the Sherman act to be repealed? Did Mr. Cleveland cause the Sherman act to be passed in 1890, or was Mr. Hoar himself, in conjunction with Senator Sherman and William McKinley, responsible for that disastrous measure?

The *Commercial West* of Minneapolis thinks that Secretary Shaw's speaking tour has been open to criticism, not because he has been seen repeatedly on the stump, but because the things he has said there have not been directed to the right end. "Instead of urging financial reform through legislation," it says, "he has pursued policies as Secretary which will probably tend to delay reform, for he has boldly demonstrated that awkward laws can be circumvented, or even almost directly disobeyed; and when this can be done, why bother to change them?" The Minneapolis paper refers, no doubt, to the Secretary's declaration that the banks need not keep any cash reserve against Government deposits, and to the advice he gave to collectors of customs to expedite the importation of anthracite coal. The latter intimation seems to have fallen upon willing ears, since anthracite is coming in daily from Wales without any analysis to determine its percentage of fixed carbon. This is very much for the public convenience, of course. To stop the unloading of a ship till a chemist can ascertain whether the coal is dutiable or not would be simply maddening to a community suffering for want of fuel, yet that is what the law contemplates. Its words are not susceptible of any other interpretation. It is of the same character as many other schedules which require scientific treatment of the article imported, as, for example, the counting of the number of threads in a square inch of cloth and the determination of the nature of threads, whether wool or cotton etc. The shortest way to untie this knot is to repeal the duties on coal altogether. It is reported that President Roosevelt favors this course. Secretary Shaw will probably concur in that policy when he comes to survey the situation calmly as it affects himself.

---

"Mitchell Day" was celebrated in the anthracite fields on Wednesday of last week by general idleness, a monster procession, brass bands, speeches, and the like. One cannot but think this jubilation ill-timed, and the manner of it strangely at variance with the professed principles of the man whose name it bore. No one has been more lavish of sympathy for the coalless public than Mr. Mitchell, nobody knows better that mining is so far in arrear that every day's work before severe cold comes is worth a week later in the season. Everybody knows that such a demonstration as last week's means for many of its participants at least two days of idleness. In view of these facts, Mr. Mitchell might have made a wise and graceful use of his power by postponing the holiday, urging the return to labor of the 20 per cent. of miners still unemployed, and the signalizing of "Mitchell Day" by an extraordinary production of coal. If this were too much magnanimity and wisdom to expect of a labor leader flushed with success, it would none the less have been the surest way of commending Mr. Mitchell and his cause to the proprietors of some millions of ill-stocked or empty coal bins, who, as it is, can only protest—

"There is a public mischief in your mirth."

---

"We honor and respect our Presidents, Roosevelt and Mitchell," was the inscription on one of the banners borne in the "Mitchell Day" jollification. It was generous in the miners not to put Mitchell's name first. Mr. Roosevelt plainly endeavored to be entirely impartial, as between miners and operators, and has given it to be understood that he will altogether keep his hands off the work of the Arbitration Commission. It was inevitable, however, that his intervention should have been felt by the strikers to be a powerful weapon placed in their grasp. They certainly chose an unfortunate time and mode for showing their gratitude. With the country still crying aloud for coal, on the edge of winter, the workers snapped their fingers in the faces of the mine superintendents, threw down their tools, and went off for a day's merry-making. Thus we have already in evidence the headstrong insubordination and defiance of discipline which have made the Union so difficult a body to deal with. Doubtless the members all feel now a perfect right to say, as many of them in the past have impudently said to their employers, "We are not working for you, we are working for John Mitchell."

---

The connection between President Roosevelt's intervention in the coal strike and the effort of the French Government to bring about arbitration between the owners and the striking miners of Pas de Calais, is obvious and direct. Indeed, Mr. Roosevelt's example was openly adduced by Socialist orators in the Chamber. Why could not their Government come forward in the benevolent and effective manner of the American President? It is one proof more how small the world has become. Countries are now only as so many adjoining parishes, and what occurs in one is at once gossiped about and applied in the others. The pressure put upon the French Premier to imitate President Roosevelt is also a very sobering indication of the immense extension of the powers of Government which we are in for if this sort of thing goes on. Presidents and monarchs and party leaders will have to become Great Fathers of all their people, and will be held angrily to account if anything goes wrong anywhere. Government as an earthly providence, instead of a guarantee that all citizens shall be allowed peacefully to work out their own destinies, will be a new conception for Anglo-Saxons, and will involve vast changes for them. But we may take courage by reflecting that, as Sir Leslie Stephen says, people are saved by being illogical. They take each case simply by itself, and refuse to carry out a principle to its legitimate consequences. The President may elect to wash his hands of the next big strike, and then we should have a precedent on *that* side.

---

Little that is new is contained in the statement of the case of the anthracite miners, which was published on Tuesday. We presume that their assertions are supported—or that the attempt is made to support them—by detailed figures. In the absence of complete statistics, it would be impossible to say whether their claims have a foundation in fact. One point of theirs is, we suppose, not open to doubt. This is, that the cost of the necessaries of life has so increased under our belauded prosperity that workmen at fixed wages are worse off than before. General experience and price-lists bear this out. In their appeal for recognition of the Mine Workers' Union as promotive of "discipline" and efficiency, there seems to be a touch of sardonic humor. With 123 local strikes in 1901, though the Union was under agreement to keep at work and control its men, it is hard to see how this claim could have been put forward solemnly by Mr. Mitchell. He must have had at least a concealed grin. In his argument for collective bargaining between the men and the operators, he once more comes irresistibly up to the inference that the Union ought not to ask for a contract until it is incorporated and made legally responsible. Mr. Mitchell does not draw this inference, but others will. It is made compulsory by the whole situation.

---

A test is now to be made of the validity under the Federal Constitution of the "grandfather" clause which has been adopted by most of the States that have attempted to disfranchise the negro. This is the clause, inserted in the Constitutions of Mississippi, Louisiana, North Carolina, Alabama, and Virginia, which exempts persons whose fathers or grandfathers were voters before the civil war, from franchise disqualifications based on literacy or property holdings. In other words, it is the clause on which registration boards can rely to reject all negro voters in whose reading, writing, or interpretation of legal phrases from the Constitution they can pick a flaw, while permitting white illiterates to register and vote in spite of their ignorance. The "grandfather" clause was not a necessary part of the plans for negro disfranchisement. The negro vote as an important factor in the South has been effectively eliminated by means of educational and property requirements which, however wise or un-

wise they may be, are of undoubted legality if applied with equal justice to all. The tests provided for the negro, however, would logically have disfranchised illiterate white voters also. To prevent this, and to defeat the requirements of equal justice in the application of the suffrage qualifications, the grandfather clause was devised. The question which the United States Supreme Court will be called upon to decide in the Alabama case is not, then whether a State may restrict its elective franchise, but rather whether it may apply a restriction to one class of its citizens and not to another.

---

The nineteenth annual report of the United States Civil Service Commission records considerable progress. The rural free-delivery service of the Post-Office, a portion of the field services of the War Department, the permanent Census Office employees, and the clerks appointed for temporary duty during the war with Spain, are now all included in the competitive system. It is true that these employees got in by favor, but it is certainly a distinct gain to have the bars up now, even if the pastures are filled with henchmen. The increase of the Commission's business is best indicated by the fact that 62,029 persons were examined and 14,983 appointed to office. The Commission lays down excellent rules in regard to the partisan activity of office-holders, maintaining that in the classified service appointees should express their political feelings privately and take no part in campaigns. In the case of officers appointed through patronage, the Commission holds that they must not coerce their subordinates, or use their offices to control political movements or influence elections. Fourth-class postmasters, however, the Commission believes, should not be treated in the same way as the head of a great Federal office. But the Commission should not forget that the sole Federal official of a small village is often as influential in his smaller sphere as the great office-holder in his, and that the retention by the village postmaster of his party leadership frequently gives rise to abuses. If the Commission really wishes to strike a magnificent blow for the principle of non-interference by office-holders, it can do so by prosecuting Senator Quay for his flagrant violations of the Civil-Service Law.

---

A statement from the office of the City Comptroller shows that the budget of Greater New York for the ensuing year will be $1,545,534 less than it was last year, and that this reduction is due to the practical extinction of the direct State tax for the ensuing year. If we take into account the increase of local expenses caused by the city's growth, we shall find that the reduction in the budget due to the lessened State tax is $3,965,000. This in its turn is largely accounted for by the fact that there was a surplus in the State Treasury from former years amounting to $9,789,351. The Governor referred to this surplus in his last annual message, and recommended that the sum of $4,200,000 from the fund should be used the present year. By so doing, he said, the direct State tax could be reduced to 13-100 of a mill, which the Constitution requires to be levied for the sinking fund and interest on the canal debt. There would still be a surplus in the Treasury of upwards of $4,000,000, which might be considered a fair working balance to avoid the necessity of loans in anticipation of tax receipts. The showing is very satisfactory, as far as it goes, but it must be remembered that a surplus can be used only once, and that the problem of abolishing the direct State tax is not yet solved, although encouraging progress has been made in that direction.

---

Assuredly, it is time something were done to put a stop to the constant and progressive demoralization of the public mind by vulgar, morbid, and impure plays; but the reputed scheme of the Church Club and the Actors' Church Alliance to reform by means of boycott, with clergymen acting as moral walking delegates, does not inspire much confidence. All decent people, and all true friends of the stage, will sympathize with these enthusiastic gentlemen and wish them every success, but there is grave reason to doubt whether much good can be done by laborious personal advertisement of the fact that this or that play is so shocking that modest persons ought to stay away from it. In some cases, no doubt, the warning would be effective; but, unfortunately, the more energetic the crusade, the more notorious would become the cause of offence, and to make a vicious piece notorious is to play right into the hands of the managers. Is it so certain, moreover, that clergymen, as a rule, are the best judges of the moral quality and effect of a play? Is it not, as a matter of fact, almost proverbial that they are easily beguiled by a little mock religious sentiment, and that they have frequently extended valuable countenance and support to very flagrant theatrical impostures? Plays like "The Sign of the Cross" and "The Christian," not to mention a host of others, in which the attempt has been made to give a religious flavor to cheap and meretricious melodrama, have never experienced any difficulty in securing clerical commendation, sometimes in very unexpected quarters. There are, we believe, a considerable number of clergymen of different denominations who even to-day are in favor of public representations of the Passion Play, and are convinced that the result would be widespread spiritual regeneration.

---

It is encouraging to hear from an unbiassed observer of Cuban affairs that the outlook for the island is distinctly promising, despite the present stagnation in the Cuban sugar trade. The Chairman of the Cuban Central Railways made this statement in London on Thursday, and added that, from the point of view of the British investor, President Palma's Government was proceeding most satisfactorily. Our own advices from Havana confirm this optimistic view. The sugar growers believe that the coming winter will be better than the last, and the price of sugar has risen slightly. Not so much planting as usual has been done during the present season, but the low rate of wages now prevailing has enabled the work to be done more cheaply than in the past, which will help the plantation owners a good deal. President Palma shows that the Government has $1,500,000 in the treasury, and more money is being collected at the Custom-house than during the corresponding period in the American occupation. The Government, too, is spending less money than did the extravagant and wasteful administration of Gen. Wood. In Havana the sanitary conditions continue favorable. It is all the more to be regretted, therefore, that reports from Santiago and Cienfuegos indicate a retrogression in the matter of sanitation and general cleanliness.

---

The action of the South Kensington Museum in refusing longer to harbor certain loaned exhibits puts the lenders to the necessity of storing their treasures elsewhere. Nothing more can be made of the affair than that. Collectors are naturally glad to save storage and insurance charges while exhibiting their collections to art lovers at no inconvenience to themselves, and museums are glad to get temporary exhibitions of high quality. The collectors are perfectly able to pay for the cost of storing their objects of art; and the museums, as their permanent exhibits increase, can naturally give less space to loans. Some of the American collectors, however, whose pictures have been long at the South Kensington Museum, must choose between burying works of great interest in storage warehouses, or paying the oppressive Dingley duties, which thus not only deprive us in America of art treasures that should naturally be ours, but also affect the art situation abroad. There is a palpable absurdity in legislation that further enriches through American money the private houses and warehouses of a city which is already as regards art one of the richest cities in the world. A proper presentation of the case to Congress should secure the repeal of an obsolete and barbarous provision of the Dingley act.

*MR. CLEVELAND IN NEW JERSEY.*

It was fitting that ex-President Cleveland should make his single speech of the campaign, as he did on Thursday night, in the Fifth Congressional District of New Jersey. The Democratic candidate, Mr. Dewitt Clinton Flanagan, was making his aggressive canvass in the face of a normal Republican majority in the district of about 2,000, and on a genuine Cleveland platform. His convention not only gave Bryanism the go-by, but repudiated it in set terms; and tariff reform, with measures against the Trusts as well as against the bulwark of them, has been the chief issue urged. Very naturally, therefore, there was a great rallying of Cleveland Democrats to Mr. Flanagan's support, and the ex-President could not deny his own when pressed to go to Morristown to aid in this revival of the policies and enthusiasms associated with his name.

Mr. Cleveland might be pardoned for recalling with pride his part in revivifying the Democratic party by giving it the tariff issue. His message of 1887 determined the course of political events for the next five years. In his own party, it created a soul under the ribs of death. The Republicans it drove to the full display of the selfish and baleful power of protection, and to overwhelming defeat in 1892. The man who did all this may justifiably speak of the work of his own hands. Mr. Cleveland's gift of political prescience was never more clearly shown than when, at the opening of the Tilden Club, some months ago, he indicated tariff reform as the great issue of this campaign. The Republican newspapers shook with pitying laughter. Poor man, with only one idea! But they have lived to see the canvass fought precisely along the lines marked by the ex-President. The tariff and Trusts, with the relations of one to the other, have been the staple of political debate in every newspaper and on every stump in the country. It is a striking evidence of the sense of the popular drift which Mr. Cleveland possesses in so eminent a degree. His letter to a Southern correspondent shortly after his election in 1892 (made public much later), forecasting the troubles on the money question, with the breaking away of the silver wing of the party, showed him, as has the present campaign, to be endowed with a prophetic soul in matters political, brooding on things to come.

Not the least remarkable of Mr. Cleveland's predictions was that which he made in his tariff message of 1887, relative to the way in which the historic defence of the protective system would be undermined by Trusts. Competition will undo all the evils of tariff favoritism, cried the protectionists; but "this competition," said Mr. Cleveland fifteen years ago, "is too often strangled by combinations quite prevalent at this time and frequently called Trusts." The Republicans laughed the doctrine to scorn at the time; but to-day they are confessing with visible alarm that it is Gospel truth. Nothing else accounts for the agitation for tariff reform within their own party. Republican nominees for Congress in Massachusetts and in Iowa have echoed Mr. Cleveland's words, and placed themselves upon his platform. Even Secretary Root came on from Washington to confess, in the presence of cheering New York Republicans, that many tariff schedules should be revised. Mr. Root, however, had to make the solemn old proviso that "when the tariff is to be revised, it should be revised by its friends." By a happy coincidence, Mr. Cleveland was referring to this humbugging pretension at the very moment Secretary Root was speaking, and called it, with more truth than elegance, a "hoary-headed, bloated, and malodorous old fraud and pretence." Strong words might be excused in referring to Mr. Root's preposterous assertions. They amount to this: The tariff ought to be revised; but the Democratic party can't do it, the Republican won't. We say that his attitude is practically one of denial of any tariff relief, for that is what it amounts to. His idea of a Republican "wise and conservative" revision, the work done by scientists instead of politicians, is nonsense.

The thing will never be achieved in that way. Why it will not, was vividly explained by a colleague of Mr. Root's in the Cabinet, whose words were telegraphed to the Chicago *Record-Herald* as follows:

> "Our friends out in Iowa think they want some revision of the tariff. So do our other friends, the retail butchers. But I'll wager something pretty they can't agree as to where the protection shall be taken off. The tariff is largely a local question, after all. One section won't have one schedule touched, and another won't have another schedule touched or fooled with, and then there are *men like Aldrich who will raise hades if the duties on dolls' eyes are shaded a hair's breadth, and who will log-roll and make combinations and help everybody who will help them to take care of dolls' eyes.*"

We believe that Mr. Cleveland is right about it. The Republican party is in the grip of men who will not renounce the pound of flesh nominated in the bond. Touch one of them, and they all band together for common defence and continued plunder. The only way to break up the alliance of "one for all and all for one" is to notify all concerned that this thing has got to stop. Electing a Democratic House is the shortest and sharpest way to serve that notice.

*AN ADVANCE WARNING.*

Mr. F. A. Vanderlip's address before the Wilmington Chamber of Commerce, which may be read in Sunday's *Herald*, sounded a note of grave but needed warning in respect to our existing trade and financial situation. On Mr. Vanderlip's qualifications as an expert authority, we need not remark. His service at the Treasury in Washington, together with his more recent banking connections, gave Mr. Vanderlip unusual opportunities for the study of finance; and his investigations of European commerce and the "American invasion" have been too recently put before the public to need fresh reference. Without any political bias whatever, and speaking purely as a financier closely watching the course of events, Mr. Vanderlip pointed out certain ominous conditions and tendencies for which, he said, we must find the proper corrective if we would not plunge into "disaster and humiliation later on."

Taking up first the signs of the times in the sphere of international trade, Mr. Vanderlip asserts, what the cold figures demonstrate, that "if we are honest with ourselves we must admit that the edge is off our invasion of foreign markets." The state of European opinion about our potential power as exporters has undergone something like a revolution within two years. When Mr. Vanderlip was on his travels early in 1901, he found European bankers and statesmen nervously apprehensive on the subject of American competition. They had an almost credulous belief in the unlimited possibilities of our development and in the danger to their interests involved in it. But this year he saw the same men again, and their tone was entirely different. Instead of fears that we might ruin them by taking away their markets, he found an "anxious interest in our future"—an anxiety, that is, lest the enormous American borrowings on the European bourses prove too great a strain for our resources. The amount of this foreign indebtedness Mr. Vanderlip has heard estimated in Europe as high as $300,000,000. He thinks that figure too large, but does not deny that the true total is very large or that it is a real cloud upon our financial horizon. It certainly makes the talk of our "trade balances" look uncommonly silly, and is the best explanation of the perturbing fact that now, "in the midst of extraordinary bountiful harvests and at the season when a movement of gold in this direction might normally be expected, we are concerned lest a high rate of sterling shall lead to gold exports."

On the domestic side, Mr. Vanderlip is no less trenchant. The signs abound that an era of inflation and speculation has strained our credit. The surest sign is the condition of the banks. Since 1899 there has been an expansion of $1,300,000,000 in the deposits of all the national banks, "while the basis of gold and legal tenders, upon which that inverted pyramid stands, is actually slightly smaller than it was at the beginning of the period"—has fallen, that is, from $509,000,000 to $508,000,000. In other words, there has been a phenomenal increase in lia-

bilities, but a shrinkage in the reserve basis.

This great and dangerous expansion of credit Mr. Vanderlip attributes to several causes, though chief among them he ranks "the movement to aggregate industrial establishments into single great corporate units and to convert the evidence of ownership into corporate securities." Thus what was formerly individual ownership and fixed investment has been turned into bank collateral; what was closely held by individuals or separate corporations has been made to pass into the financial operations of the day. Hand in hand with this tremendous extension of credit have gone many forms of lavish expenditure. Liquid capital has been converted into fixed investment by the hundred million. At abnormally high prices for both labor and material, railroads and great manufacturing plants have been locking up money in improvements that often threaten to consume more in interest than they produce in income. Very many such operations, Mr. Vanderlip believes, have "gone beyond the limit of safety." So extreme have been the high prices for raw materials that the cost of production has been markedly increased, with the result that "we find ourselves actually importing from some of the foreign markets that two or three years ago were in a panic over our invasion." The whole trade and financial situation calls imperatively, in fact, for that restriction of bank credits which has been going on perforce during the past few weeks, and which Mr. Vanderlip thinks must go much further if the perils that he so clearly sees are to be warded off.

His bold and plain words are, in our judgment, warranted by the facts in the case, and he has put the public in his debt by uttering them. He calls his address "a conservative note of warning," and such it is. We believe that he speaks the thoughts of many hearts. No one can talk with cautious bankers or financiers without running upon distrust of the soundness of the present position. Still more sail must be taken in if we are not to run upon the rocks which Mr. Vanderlip indicates in the course on which we have been so light-heartedly steering. His sound and courageous speech will have its value as a political landmark, set up before the elections that might result in a Democratic House, when every Republican orator would be found crying that prosperity was chilled and enterprise furled her wings instantly on hearing the news. A parallel to the old lies about who "brought on the hard times" in 1893 would be devised, we may be sure. But Mr. Vanderlip's address will remain for the historian, just as did the action of Secretary Foster early in 1893 in preparing to borrow money for the Treasury which a Republican Administration and Republican laws had emptied, to show that a financial rake's progress was detected by cool observers long before any election.

### *THE PERFECT PLASTERER.*

The reasons for the plasterers' strike which at present is delaying the construction of many great buildings in this city, will be clear enough to all who are so fortunate as to possess a little pamphlet entitled "Instructions for Foremen Plasterers and Information for Employers," being apparently an extract from the constitution of the Operative Plasterers' Society. First of all, the foreman of any plastering job, however small, is certified by the Society, and is responsible, not to his employer and paymaster, but to the body which has made him a foreman. Rather than work under these conditions, the employers have taken the chances of a strike. The duty of the foreman is primarily "to see that all men working under him are in good standing in this Society." The foreman, should he employ a non-member, becomes immediately responsible for his initiation fee. Should he fail to report a non-member put upon a job, the same penalty applies. But the most grievous offence which a foreman can commit is "insisting on rushing the men," or similarly "bringing about a condition of affairs that would be detrimental to the members of this Society." This, if proved against him, is punishable by a fine, suspension, or, at the second offence, by degradation to the ranks.

As one passes from the foreman to the laborers, the plasterers' vademecum assumes increasingly the character of a "Don't" book For example: Don't take more than three apprentices, and don't let any of them work at other work than plastering; don't rough-plaster more than ten tenement-house rooms in two days; don't finish the work in less than six days more; finally, don't do alone what can be done with the aid of a fellow-member, or, textually, "It shall not be allowable for members to work single-handed at any part of the trade of plastering where two men can work to advantage. Foremen will be held strictly responsible for the violation of this rule."

Employers have very little place or honor in this manual, though one may infer from certain clauses that they still retain the privilege of paying their men. This right, however, has its limitations, for do we not read that "none but members in good standing in the O. P. S. shall be permitted to work at the trade of plastering, within the jurisdiction of the above Society"? Just how far the sovereignty of the Operative Plasterers' Society extends is left uncertain, but, from the article on "country work," students of spheres of influence would argue that its jurisdiction is extensive. Country jobs are to be paid for at the city rate, plus board and travelling expenses; and none but members of the O. P. S. are to be employed, except that in case there is a local union, "permission" is given to employers to take on one-half local union men at local union rates. Again, employers enjoy the more costly privilege of paying by the day certain workmen with whom they have a dispute until the dispute be settled. Article xiii., section 8: "After working eight hours, a member shall receive his wages if he demands it" (*i. e.*, may leave the work at will, but may not be discharged by his employer); but "if the member's demands are not complied with, he shall receive the regular rate of wages *for all working time he is waiting*." What power enforces this provision is left as indefinite as is the precise "jurisdiction" of the O. P. S.

If we should now ask in Wordsworthian phrase, "Who is the happy plasterer, who is he?" the answer would be plain from the above. He is a workman who renounces the ambition of doing much work for much pay, and accepts irrevocably the standard of the average workman; he is a workman who takes his orders, not from his employer, who is responsible for the work, but from his union foreman, who is responsible, through the "walking delegate," to the union; he is a workman whose task is laid down with mediæval minuteness—the method, the time to be given to each stage of the plastering; finally, he is a workman who is forbidden to manifest extraordinary individual excellence or industry, under penalty of living in what Commissioner Sargent euphemistically calls "a disagreeable atmosphere." Such is the portrait of the perfect plasterer as it is presented in his own book, and it all recalls the "gospel of work" compiled some ten years ago by certain graceless undergraduates of a New England college. Of this gospel of work the first doctrine was: "Don't work immediately before or after eating"; and the second and last was "Don't work between meals." The plasterers have not yet reached this fine simplicity, but they are clearly in the right way, and the British unions, with their "ca' canny" system, show where organized labor's primrose path is leading.

### *LITERARY AND MUSICAL PLAGIARISM.*

The verdict of the Supreme Court in awarding to Mr. Victor Herbert $15,000 damages will probably diminish the number of charges of plagiarism that have heretofore been brought in great numbers against both composers and authors. The man of letters has one great advantage over the musician: by the simple expedient of using quotation marks, he can honorably appropriate anything he likes in the whole range of

literature. "Blessed be the inverted commas," he may often say to himself. Emerson went so far as to declare that, "next to the originator of a good sentence, is the first quoter of it." Yet, despite this advantage, in thousands of cases authors have preferred to pilfer the ideas of others, and to present them in the disguise of a different phraseology. When Macaulay wrote, "The Puritans hated bear-baiting, not because it gave pain to the bear, but because it gave pleasure to the spectators," he may or may not have remembered that Hume had written, "Even bear-baiting was esteemed heathenish and unchristian: the sport of it, not the inhumanity, gave offence." But his way of putting the same thing is so much more felicitous than Hume's that we pardon the plagiarism.

Lowell sums up the philosophy of the subject in two lines:

> "Though old the thought and oft exprest,
> 'Tis his at last who says it best."

The footnotes in Bartlett's 'Familiar Quotations' showing how many of the best things of the greatest writers were said by others before them, seem to argue that Mr. Andrew Lang was right in declaring that "there are no new ideas." Virgil stole from Homer, but Homer was not original: "all his incidents were of primeval antiquity, even in his own time; he plagiarized them from popular stories; he stole the Cyclops almost ready-made." Shakspere hardly ever invented a plot or incident, but took his material wherever he pleased; yet no one esteems him the less therefor, probably because, as Voltaire said, "Of all forms of theft, plagiarism is the least dangerous to society." Poe's attack on "Longfellow and other plagiarists" did not damage the Cambridge poet; nor was Tennyson injured by those who cried "Stop, thief!" in his case. Mr. Lang remarks that, "according to a recent biographer of Byron, originality can be expected from nobody except a lunatic, a hermit, or a sensational novelist."

While musicians have no quotation marks to legalize borrowings, there is one way in which they can honestly appropriate melodies written by others, namely, by writing fantasias on operas or other compositions. In this line Liszt was a supreme master; he could take a piece by almost any composer, however great, and, in paraphrasing it, or arranging it for other instruments, usually improve on the original. Folk melodies are also considered common property for any one to appropriate. But in original compositions no musician can adopt the melodies or peculiar harmonic combinations of another without incurring the charge of plagiarism. It is no wonder that most composers have incurred it. Richard Wagner was decried at the same time as an iconoclast and as a "plagiarist of Mendelssohn" and others. Undoubtedly there are passages in his works that do recall his predecessors and idols. His early operas suggest Weber and Marschner. In his Nibelung dramas the motive of the dwarfs is rhythmically like the theme of the scherzo in Schubert's D minor quartet. There are also borrowings from Liszt, whose symphonic works he was reading with enthusiasm at the time he was writing his Tetralogy. When it came to a rehearsal of "Die Walküre," in 1876, Wagner suddenly exclaimed: "Here comes a theme which I got from you." And Liszt took the matter very calmly. "Very well," he replied, "that will at last give it a chance to be heard."

Brahms was a great borrower of other people's melodies. His appropriations from Beethoven, in his first symphony, almost amount to unacknowledged quotation. Brahms made no secret of his method; when some one called his attention to something he had taken from Mendelssohn, he replied, "Any ass could tell that." In their early works all the great masters copied their models; Mozart wrote like Haydn, Beethoven, like Mozart, Schubert like Beethoven, Chopin like Hummel, Grieg like Schumann, and so on. Indeed, the only meaning that can be attached to the expression a "school of music" must refer to imitation, which is a kind of plagiarism.

The most unblushing and persistent of musical plagiarists was the pious Handel. So extensive were his practices in this line that one of his most ardent English admirers dubbed him "the grand old thief." Crotch made a list, in 1831, of twenty-nine composers from whom he had "conveyed," and there are others. There could have been no objection to his borrowing fugue themes, for they, like opera librettos in Italy, were at that time common property; but he appropriated, by wholesale, complete pieces of music from the works of other composers, in the most barefaced way. Some of the biographers of Handel have attempted to minimize his flagrant thefts; but the most authoritative of them, Dr. Chryander, rises to the occasion. A fanatic Handel enthusiast, he does not, as might have been expected, denounce those who accuse his divinity of plagiarism; on the contrary, he savagely attacks those who deny the charge, and, with deep erudition, shows up their ignorance. But—and here is the gist of the matter—"he considers," as Mr. Shedlock writes, "that Handel glorified any composer from whom he borrowed, and points triumphantly to the honor which had been paid to the Erba Magnificat and the Urio Te Deum—the latter he had himself published—solely on account of the use Handel had made of them." In view of all these facts, it would seem that modern composers, if accused of plagiarism, could afford to smile, and, if vain—as most musicians are—retort: "Yes, but see how I have improved on my predecessor." And the experience of the past shows that whenever a plagiarism is an improvement, it is sure to be forgiven.

### *A CENTURY OF REVIEWING.*

Probably the last way to stir the reading world of 1902 would be to launch a quarterly magazine, and it is somewhat difficult to imagine the sensational success of the venture of Jeffrey, Sydney Smith, and Brougham a hundred years ago. A glance at the early numbers of the *Edinburgh Review* suggests, as Sir Leslie Stephen has said, that the excitement over each issue was a case of much ado about nothing. And, in fact, cocksure Whiggism in politics and equally cocksure Toryism in letters, were the only ingredients of popularity that the new review contained. Yet the October number, which marks the centenary of this famous review, illustrates excellently the grounds of its permanent influence. The *Edinburgh Review* of October, 1902, comes out in the modest typographical form which it had at the beginning; offers in politics that attenuation of Whiggism which modern Liberalism has come to be; and exemplifies in letters, if not the savagery which slated a Wordsworth and a Byron, at least a conservatism which is severe towards all unruly talent. Such a consistency of purpose and principle is hardly exhibited elsewhere, even in the case of the *Edinburgh's* early rival, the *Quarterly Review*. If the mantle of Jeffrey has grown thin with wear, it rests naturally enough upon the shoulders of the anonymous contributors to the centenary number.

This consistency, based upon a fixed philosophy to which all individual cases are referred, was an unheard-of thing in the journalism of 1802, and now, after a hundred years, is still highly exceptional, and, we believe, valuable. The *Edinburgh* did for English politics very much what the writers for the *Federalist* and the protagonists of the French Revolution had already done for their respective nations—raised it from the level of libellous pamphleteering and venal journalism to that of serious debate. But some such reform was already in the air, and the service of the new review to literature was, though unconsciously, even greater than its services to Liberalism. It would not be to much to say that the *Edinburgh* fairly created critical book-reviewing.

There had been various attempts from the close of the seventeenth century to review the current literary production, but these criticisms had invariably fallen into the hands of booksellers' hacks and other "obscure hirelings," as Smollet in his *Critical Review* called them. And, in fact, the great works of Pope, Fielding, Goldsmith, Gray, to name no others, received, unless they became the subject of literary controversy, only

such comment as town talk afforded. It was, then, a complete and welcome novelty to find honest men of vigorous intellectual parts writing down with absolute fearlessness their personal judgment on the books of the day. And if to-day there are still those who have the courage of their literary convictions and feel that the appeal to first principles is always salutary, they are the legitimate descendants of the courageous young men who founded the *Edinburgh Review*.

It were easy to point out both the doctrinal weakness of this philosophic method of criticism and the concrete errors of judgment which resulted therefrom. The criticism of Macaulay illustrates the merits and defects of the method. He is the Edinburgh Reviewer *par excellence*. His somewhat insensitive nature, which readily converted political differences into literary dislikes; his trenchant manner, with no other ornament than the brilliancy of the thought; his prodigious reading and sometimes unwise readiness to descant *de omnibus rebus et quibusdam aliis*—all these Macaulayan characteristics show doctrinaire reviewing at its best and at its worst. It is easy, we have said, to see the defects of such a conception of the critic's office; imperfect sympathy, rhetorical exaggeration, unconscious misrepresentation, are among the most obvious. From such faults the doctrinaire reviewer will never be wholly free. And yet the method of Macaulay presents merits which the reviewing of to-day signally lacks. It shows, to begin with, a certain confidence in the intellectuality of the average reader. The Edinburgh reviewers were beset by no fears that their readers would not follow a serious train of reasoning. To-day, reviewers of equal competence are prone to seek the mole-like obscurity of the philological or scientific periodicals. The Edinburgh reviewers held it to be their function to study subjects and measure books by the great standards of literature and scholarship. The reviewer of to-day disbelieves in standards, too often is passably ignorant of literature and scholarship, and holds that his duty lies in the amiable advertisement of books and authors. If the reviewing of Jeffrey and Sydney Smith was frequently narrow and dogmatic, it at least never descended to mere chit-chat; it unfailingly made its appeal, not to the reader's curiosity, but to his intelligence.

Any danger that may come from academic aloofness and doctrinaire intolerance is far less than the danger that comes from ignorance and vulgarity. Any critical attitude, however prejudiced, is better for literature and for life than the negation of criticism. For a hundred years the *Edinburgh Review* has carried proudly its style, "a critical journal," and now it will receive from all sides those sturdy congratulations which belong of right to him who fights a good fight and keeps the faith.

## THE BODLEIAN TERCENTENARY.

BALLIOL COLLEGE, October 18, 1902.

The occasion of the 300th anniversary of the foundation of the "public" library of Oxford University by Sir Thomas Bodley has proved a most interesting one. The days set apart for it were Wednesday and Thursday of last week, October 8 and 9. The actual date of the ceremonial and processional inauguration of the Bodleian in 1602 was November 8, but the Gregorian Calendar, adopted in 1582 by most Roman Catholic countries, was not recognized in the England of King James, so that the actual day of the tercentenary had to be fixed in October, and it was convenient for various reasons to put it early rather than late in the month.

The assemblage of delegates was most imposing. They numbered 150 odd, and represented universities, libraries, academies, and learned bodies, in all parts of Great Britain and the British Empire, France, Germany, Italy, Holland, Belgium, Austria, Denmark, Norway and Sweden, Spain, Switzerland, the United States, Chili, and Egypt. There were also more than sixty especially invited guests. Upon their arrival in Oxford these gentlemen were severally welcomed at various colleges and private houses, and at nine o'clock were duly brought to the Vice-Chancellor's evening reception, in the Ashmolean Museum and University Galleries. For many of them, no doubt, this was their first view of the treasures which have accumulated during the directorship of the present keeper of Ashmole's Museum, Mr. Arthur Evans; and, for all, the special exhibition, in the Slade professor's studio, of drawings, plans, and photographs illustrating the keeper's recent discoveries at Knossos, was a revelation. The brilliant effect produced by the various robes academical worn upon this occasion can scarcely be exaggerated. The shades of yellow, ranging from a delicate English cowslip hue to something verging closely upon orange, which characterized the robes of the Universities of Paris, Lille, Nancy, and Caen, the resplendent folds of the gowns worn by Oxford doctors of music, and the gorgeous reds of Oxford doctors of civil law, were thrown into relief by the black robes of the Oxonian M.A.'s, each one of whom wore the red silk hood reserved for state occasions. There were dark blue hoods from Yale and Edinburgh, and black gowns slashed with broad bands of yellow; and also the newly devised gowns of the Oxford doctorates in science and letters lent brilliancy to the scene, which was made more gorgeous by the evening toilettes of the many ladies present.

The result was something which must have come nearer than any ordinary festal assemblage of our time to the color effects of state ceremonial occasions in the seventeenth century. For once the regulation black of men's attire was discarded, and every bidden guest came in bright colors to the festival, with the exception of the few representatives whose university authorities have not sanctioned the wearing of hoods or of academical costumes. Here and there a delegated librarian appeared in the uniform of the civil service to which he belonged. Altogether, the effect to the eye was as unique as was the occasion which caused the assemblage. Those who had been present at the recent Yale University Bicentennial spoke of the striking resemblance—with a difference, of course—between this occasion and that. Indeed, in the merely superficial matter of academic costume, it is plain that our American academic tradition has altered since the 250th anniversary of the foundation of Harvard, in 1886, and perhaps we may take this as an outward sign of the closer association between American and English universities feelingly dwelt upon at New Haven by Dr. James Wilson, the Oxford delegate in 1901.

Having been received officially by the Vice-Chancellor on Wednesday evening, the delegates and guests all assembled in the Sheldonian Theatre to participate in the proceedings of the University there assembled in Convocation for the purpose of conferring honorary degrees, of receiving addresses of congratulation, and of hearing the Latin oration of the Public Orator, the Rev. W. W. Merry, D.D., Rector of Lincoln College. When we reflect that the whole celebration centred around the memory of Sir Thomas Bodley, who retired after a brilliant ambassadorial career, and devoted his fortune and energies to establishing the great library which bears his name, we can appreciate the dramatic appropriateness which brought to Oxford the American Ambassador at Berlin, founder of the Andrew D. White Library at Cornell University, as the delegate representing Yale University, and made him head the distinguished roster of those honored by the degree of D.C.L. In this connection it is also gratifying to note that Mr. Willard Fiske, whose unique services as librarian and collector have so vastly enriched the Cornell Library, was able to be present as a specially invited guest; the Cornell Librarian, Mr. Harris, being its delegated representative. Lord Strathcona and Mount Royal, Chancellor of McGill University, came next, and was enthusiastically acclaimed as the representative of Canada and of the British Colonies. Dr. Feodor Martens of St. Petersburg University was then presented for the degree, and the eulogium of him by Professor Goudy touched upon the same themes dwelt upon by President Hadley in conferring upon him the degree of LL.D. at the Yale Bicentennial. A compatriot of Dr. Martens, Professor Vinogradoff, closed the line of those receiving the D.C.L., and was greeted as a typical representative of the Slavic genius, as well as a familiar friend of Oxford University and a student of the laws and customs of England and Western Europe.

Professor Poulton then introduced for the Degree of D.Sc. the senior delegate from Harvard, Prof. Charles Sedgwick Minot, speaking of his scientific preëminence, and of his presidency of the "Societas Americana ad augendam Scientiam instituta, quam Societatis nostræ Britannicæ sororem carissimam iure dicere possum." He also touched upon Harvard University as yielding in antiquity to the Bodleian "non nisi quinquaginta fere annorum spatio." Last came those presented by Professor Bywater for the Degree of D.Litt., twelve in number. Count Ugo Balzani, representing two Roman societies, came first; then Dr.

J. B. Bury, Regius Professor of Greek at Dublin, was honored; and after him in strict alphabetical order came Dr. James H. Canfield, the well-known Librarian of Columbia University, and Mr. John Willis Clark, Registrary of Cambridge University and the author of an authoritative book on Mediæval Libraries. Three librarians then followed one another, Mr. Jenkinson of the Cambridge University Library, Geheimrat Dr. Georg von Laubman of Munich, and M. Henri Omont of the Bibliothèque Nationale and the Institute of France. The Royal Academy of Berlin was next honored in its eminent representative Geheimer Regierungsrat Dr. Edward Sachau, and then the Rector of Vienna University, Dr. Schipper, was presented and acclaimed Doctor of Letters, and upon him followed Dr. de Vries, Librarian at Leyden, and Mr. George F. Warner of the MSS. department at the British Museum. Last came Professor Andrew F. West of Princeton University, whose reception showed how well-remembered in Oxford were the hospitalities extended at Princeton to those who, not many years ago, took part in the anniversary celebration of that university.

These Latin presentations for degrees being over, the Registrar of the University called, from where he stood by the Vice-Chancellor's side, the long roll of universities, academies, and learned societies which had sent addresses of congratulation. Nineteen British, four French, thirteen German, one Italian, two Dutch, five Austrian, four Scandinavian, two Russian, five Swiss, and seven United States universities handed in variously blazoned, written, and engrossed addresses; and when to these, as they accumulated in cases and boxes of all shapes, were added the written congratulations of libraries, academies, and learned bodies in both hemispheres and on all continents, the resulting mass formed a most formidable barrow, but one of which Oxford may well be as proud as she is of the Saxon mound which is her most ancient monument.

The last business at this meeting of the University in Convocation was by no means the least interesting. Latin in the skilful hands of the Public Orator can hardly be stigmatized as a dead language. Those who frequent the yearly Eucænia know from experience that he can sway his audience with the genuine power of living oratory, and are accustomed to lend themselves with delight to the charm of his rich, sonorous voice, by which they are led through the events of each succeeding year as it closes. When the topic is gay, Dr. Merry can provoke his audience to roars of laughter, and few will forget, who heard them, the deep feeling of his words upon the South African war, just closed, before his oration of last June. The admiration and interest with which all who were present listened to Dr. Merry's *Oratio in Theatro Sheldoniano habita trecentesimum annum a Bibliotheca Bodleiana condita celebrantibus Academicis*, were unmistakable; and I feel sure that those of your readers who have taken interest in American academical celebrations and anniversaries, which have in the present generation been both abundant and imposing, will be glad to know that the Bodleian Oration has been published verbatim in the *Oxford University Gazette* for October 17, 1902.

After a genial welcome to all present in the name of hospitality and on the strength of common pursuit, Dr. Merry contemplated the nothingness of 300 years while he cast his backward glance into the era of letters in Accad and at Nineveh, and adverted to the miraculous revelations of a still remoter day of literature which had yielded to the zealous investigations of "Musæi Ashmoleani custos noster," by whom he hoped they would soon be published. Ancient Egypt, the Ptolemies, the Pergamene kings, Augustus, and Trajan arrested his thought for a moment, and then he dwelt upon the wanton ruin and waste of the barbarian invasions, and gloried in the scholarship of the revival of letters. In this whole train of retrospect, there was a recognition of the remote past which is characteristic of the prevailing atmosphere of Oxford, and may be contrasted with President Eliot's exultant strain of pride in the achievements of modern days and the more immediate past, in his speech at the Yale Bicentennial. "The human world has been made over since Yale was founded," said President Eliot, and he added: "She antedates the accepted basal ideas of existing civilized governments, and their actual forms, whether called empire, monarchy, or republic. She antedates all professions except the ministry and the law, and all the implements of labor and transportation in modernized countries." Striking as is this expression of a genuinely typical modern mood, Dr. Merry was no less eloquent and expressed quite as adequately an equally typical mood of our time when he said, after speaking of the Oxford anniversary rejoicing: "Nevertheless we are not such dullards (*insulsi*) that we rate these three hundred years at more than the estimation of a pin-prick's breadth of time (*punctum temporis minimum*)."

Into the history of the Library at Oxford before Bodley's day and the praises of its benefactors since that day, lack of space forbids me to follow the Public Orator, and I can only touch upon the warm tribute paid by him to the sister University of Cambridge and to other like institutions in the Empire. A peculiar gracefulness of voice and diction marked his greeting to the mother University of Paris, and his mention by name of its representative, M. Alfred Croiset, Director of the Sorbonne, whose recent address at Harvard has left so lasting an impression in America. He deplored that time did not serve him to say all that he would of the famous men who had come from the older universities of Europe or from the younger and vigorous universities of America, "from whom the older institutions had much to learn." Finally, after dwelling upon the great Frenchmen of the old days who had influenced Oxford from the mother university in Paris, the Orator launched into the general subject of the progress in science and the arts as represented by so many distinguished guests not delegated from universities, and concluded a much-applauded speech of welcome in the words with which Dido welcomed Æneas.

The whole assemblage of Convocation then dispersed, and gathered for a time in the Divinity School and the various rooms of the Bodleian, their passage from the Sheldonian being rendered unduly embarrassing by one of those heavy downpours which must be expected in the autumnal season at Oxford. Finally, the whole celebration closed with a banquet in Christ Church dining-hall, where 300 covers were laid. Splendid as the hall of Christ Church is, it is far inferior acoustically alike to the more ancient hall of New College and the very modern one of Balliol College, in either of which would have been heard to better advantage the memorable after-dinner speech in which Sir Richard Jebb, representing, in conjunction with Mr. George Macmillan, the Hellenic Society, declared that "Bodley wrought for Oxford first and England, but also for the world, the wide commonwealth of letters"; and added that he was on that occasion memorably saluted "in his own illustrious University" by "representatives of that cosmopolitan brotherhood." Time runs short for speaking of the toasts to the Bodleian, to the guests, for whom response was made by the Hon. A. D. White and M. Paul Meyer, and to the University, for which the Vice-Chancellor made answer. Suffice it to say that this unique commemoration was brought to a successful close in the dining-hall of Christ Church, and the numerous delegates appear to have enjoyed the whole occasion. Expressions of thanks to Mr. A. Cowley, the sub-librarian, upon whom the heaviest duties of organization fell, were warm and frequent.

If in the confusion of a heavy rainstorm their visit to the Bodleian was somewhat cut short, it is to be hoped this was made up to the delegates by the beautiful book printed for the occasion, and handed to each of them as a memento of the pleasure they gave by their presence at the celebration. This quarto volume of fifty printed pages contains eleven beautifully executed photographic plates, one photographic book-plate, and three full-page photographic facsimiles. It is entitled 'Pietas Oxoniensis in Memory of Sir Thomas Bodley, Knt., and the Foundation of the Bodleian Library.' As this book is not published, it is likely to figure among the unprocurable desiderata of future bibliomaniacs. The Oxford-blue cover has the Bodley medal on its front, and on its back the University arms, as used by Joseph Barnes, University printer in 1585. A life of Thomas Bodley, with the history of the University Library before his day, fills the bulk of the volume, which also gives Bodley's genealogy *in extenso*, a short account of gifts, transfers, bequests, and deposits, a register of successive librarians, and a very full account of all Bodleian catalogues. The frontispiece portrait of Bodley, two other representations of him—all three from originals in the Library—are uncommonly fine plates, as also is the plate reproducing the portrait "by or after Van Dyck" of Archbishop Laud, which is one of the Bodleian treasures. John Selden's picture by Mytens, and a striking, though less skilful, portrayal of Rawlinson, as well as a delightful crayon-drawing of Douce, admirably reproduced, all conspire to make of this sumptuous volume a worthy memento of the academic commemoration just brought to a close.

But the fortunate coöperation at Oxford of the oldest of learned libraries with the oldest existing university press has made possible a timely publication which learned librarians and students of bibliography may well regard as, *par excellence*, the most permanently valuable contribution of Oxford learning to the universal commonwealth of letters that has signalized the Bodleian Tercentenary. It is, indeed, a

coincidence worthy of more than passing notice which brought to their timely completion the twelve-year-long labors of Mr. Reginald Lane-Poole, and enabled the Clarendon Press to publish on the day of the Tercentenary a volume of the 'Anecdota Oxoniensia,' containing in 580 pages Mr. Poole's learned edition of a hitherto unpublished bibliographical MS. preserved among Selden's Bodleian stores. The full title runs as follows: 'Anecdota Oxoniensia: Index Britanniæ Scriptorum quos ex variis bibliothecis non parvo labore collegit Ioannes Baleus cum aliis' (John Bale's Index of British and Other Writers, edited by Reginald Lane-Poole, M.A., Ph.D., Fellow of St. Mary Magdalen College, Oxford, with the help of Mary Bateson, associate and lecturer of Newnham College, Cambridge). Those who are aware of the editor's manifold and exacting duties as University Reader in Diplomatics, managing editor of the *English Historical Review*, and college tutor and lecturer in history, will marvel at the vast range and extent of his learned industry, and above all will associate with the Bodleian Tercentenary commemoration unequivocal evidences that sound and devoted scholarship still flourishes at Oxford as of yore. LOUIS DYER.

# Correspondence.

## TO WRITERS ABOUT ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: In the interests of realism, may I offer a caution to American writers who have occasion to describe the speech of uneducated Englishmen? The efforts made on this side of the Atlantic to represent the Cockney's misuse of "h" are almost invariably grotesque failures, for the reason that no notice is taken of the difference between accented and unaccented syllables. For instance, the editor of a Boston magazine has lately been giving an account of his experiences in the London streets on Coronation Day, and he makes his policemen say, "Hit's a Yank just harrived," "Hit's against horders," "You're one of those Hamerican newspaper chaps." Now if any policemen really spoke in this fashion they were undoubtedly Americans, even though they lived in London, for no one but an American speaks so slowly and with such a lack of vocal inflection as to be able to take breath before an unaccented syllable. "Horders" is good Cockney, for the aspirate is prefixed to a syllable on which the stress falls, but every other example of the superfluous "h" in these three quotations is an evidence of the reporter's deficiency in exact observation. In the sentence I have just written "haspirate," "hevery," "hother," "hevidence," and "hobservation" would be possible to an uneducated Englishman; an American journalist would attribute to him also "hexample" and "hexact," and in this would certainly be wrong. The London policeman himself could tell him that "h" is used for "hemphasis."—Yours faithfully,

H. W. H.

# Notes.

A volume of Mr. James Bryce's personal estimates, entitled 'Biographical Sketches,' will be published directly by Macmillan. Gladstone, Beaconsfield, Freeman, Parnell, Cardinal Manning, Dean Stanley, Lord Acton are some of the figures in this portrait gallery.

Messrs. Scribner announce 'Across Coveted Lands, or a Journey from Flushing to Calcutta, Overland,' by A. H. Savage Landor; 'Biblical Quotations in Old English Prose Writers,' by Prof. A. S. Cook; and 'The Elements of Experimental Phonetics,' by Prof. Edward W. Scripture.

Doubleday, Page & Co. will add to their "New Nature Library" 'American Animals: A Popular and Intimate Guide to the Mammals of North America North of Mexico,' by Witmer Stone and William Everitt Cram, with six colored plates and more than 130 photographs from life.

Forthcoming from John Lane are 'Selected Poems,' by William Watson; 'The Triumph of Love: A Sonnet Sequence,' by Edmond Holmes; 'Later Lyrics,' by John B. Tabb; 'Poems from Wordsworth,' chosen and edited by T. Sturge Moore; and 'Sonnets of Ronsard'—the two last-named volumes from the Vale Press, and sumptuously made.

A. C. Armstrong & Son announce 'John Mackenzie, South African Missionary and Statesman,' by Prof. W. Douglas Mackenzie; and 'The Story of the Martyr Isle, Erromanga,' by John Fraser, LL.D.

From the Outlook Co. will proceed George Kennan's 'Tragedy of Mt. Pelée'; 'From Grieg to Brahms,' by Daniel Gregory Mason; and 'Religious Life in America,' by Ernest Hamlin Abbott, a book of personal observation and travel.

'A Tour in Mexico,' by Mrs. James Edwin Morris, and 'Ruskin's Mornings in Florence,' by Margaret Baker, are in preparation by the Abbey Press.

A book is to be made of the articles on the 'Trees and Shrubs of Prospect Park' contributed to the Brooklyn *Daily Eagle* by Louis Harman Peet, who will be his own publisher.

Houghton, Mifflin & Co. will add to their "American Men of Letters" series a Life of Prescott the historian, by Rollo Ogden.

'Barbizon Days,' by Prof. Charles Sprague Smith, is in the press of A. Wessels Co. It deals with Millet, Rousseau, Corot, and Barye.

D. C. Heath & Co., Boston, will issue directly 'Franklin's Educational Ideal,' prepared by David E. Cloyd.

From John Murphy & Co., Baltimore, we are to have 'The Lords Baltimore and the Maryland Palatinate,' six lectures by Clayton L. Hall.

William Briggs, Toronto, will publish Mr. Henry James Morgan's 'Types of Canadian Women and of Women Connected with Canada, Past and Present,' portraits and biographies, in two volumes.

It was in Boston that Samuel Lover landed in September, 1846, on his sole visit to this country, and a six-volume reissue of his works is appropriately made in that city by Little, Brown & Co. Mr. James Jeffrey Roche contributes an introduction more biographical than critical; but then, Lover is a writer whom one cannot approach in a critical mood, so attractive is his genial personality. He is wholly in character in his modest preface to the volume of his poems, which descend to a non-singing age (as compared with his). He has occasion there to explain the difference between songs made for singing and others—like Byron's, Milton's, even Shelley's, as contrasted with Burns's and Moore's. Lover's dramas form another volume, the 'Legends' a third, and the chief novels eke out the remainder of the set. There are frontispiece illustrations, including a portrait, and some of Lover's own designs are found in the 'Legends.' Perhaps the most interesting thing in Mr. Roche's story is the fact that a daughter of Lover's is still living, the mother of our well-known conductor and composer, Victor Herbert, whose musical gift greatly surpasses his grandfather's, and of a half-German actor, who hands down another trait of Samuel Lover's versatile talent. This edition is handsomely got up and brand new.

'The Struggle for a Continent' (Little, Brown & Co.) is an abridgment of Parkman in one volume, which has been made by Dr. Pelham Edgar of Victoria College, Toronto. It would obviously be fatuous for an editor to take Parkman's facts and compress them in his own words. According to such an arrangement, altogether too much would be sacrificed for the sake of giving a consecutive, unbroken story. Dr. Edgar employs the alternative method of condensation. The passages chosen are cited in the *ipsissima verba* of the original, and connecting links of narrative, placed within brackets, are supplied by the editor. The source of each excerpt is carefully noted, and, as a rule, the passages are sufficiently long to do the author justice. It may be doubted whether one who was unfamiliar with the general history of New France would be able, even with the aid of Dr. Edgar's connecting links, to seize all the main features of the struggle by mastering the contents of the present volume. Few readers, however, will fail to have some preliminary knowledge of the subject, and those who are unable to buy a complete set of Parkman's works will find these selections much better than nothing. The appearance of the book is attractive, and the text is accompanied by numerous half-tone illustrations.

The Rev. Edgerton R. Young, for years a missionary to the Indians in the region of Winnipeg Lake and the Red River of the North, presents in the little volume entitled 'My Dogs in the Northland' (Fleming H. Revell Co.) some account of the sledge dogs he has known. There is room for a book which shall tell us about dogs, harness, and sledges, and the art of transportation in a country without roads or artificial shelter for the traveller. It is somewhat strange that among the many who have had to do with travel in the wintry north, no one has yet written such a book. To do it well would be no trifling task, and when well done it would be not only interesting to the curious reader, but a solid contribution to ethnology and the psychology of domesticated animals. Unfortunately, the book under consideration is little more than pleasant gossip about a few particular Newfoundland dogs or mongrels. Some of the stories are very remarkable, and yet are told in a way that leaves one questioning how much that is not canine has been unconsciously attributed to the beasts under discussion. It is much the same as the case of the nurse and her smiling infant—a question of interpretation. However, the somewhat fragmentary yarns are pleasantly spun and may well serve to pass an idle hour.

Dr. C. W. Larisun's 'Hwot iz the Sol? Haz the Dog a Sol?' (Ringoes, N. J.; Fonic Publishing House), is a discussion in the form of a colloquy between the author and his students regarding the life principle. Like all the later writings of this estimable physician and instructor, it is printed in the phonetic type devised by himself, together with some syntactical and verbal eccentricities soon mastered and not troublesome. Indeed, one quickly learns to read the strange page fluently. The argument embraces something of Dr. Larisun's autobiography having a psychological aspect, and introduces other experiences of a kindred nature. His ante-Darwinian idea is that the Creator, in order to differentiate the species, "created the primordial life-principle of the members of every species different"; and "the psyche of an animal of some species possesses faculties which are not parts of the psyche of animals of other species."

Mr. Edward Robins's 'Romances of Early America' (Philadelphia: George W. Jacobs & Co.) is a réchauffé consisting of twelve chapters, beginning with such well-worn themes as the Mischianza and the love of Agnes Surriage for Sir Charles Frankland, and traversing the love affairs of Washington, Jefferson, and Madison, as well as of Edwin Forrest—a personage we find difficulty in associating with "Early America." In fact, the scope of the book does not extend back of the eighteenth century. The compiler's style is above the average of that commonly met with in works of this class. The portraits and views are not too well printed.

'The Romance of Old New England Roof-trees,' by Mary C. Crawford (Boston: L. C. Page & Co.), admits itself to be a case of book-making, and thus throws itself on the mercy of the public. The author has collected a number of illustrations, showing houses that have histories, and has retold the stories that go with the houses. Some of the stories are hardly worth preserving, and the same may be said of the houses; but if there is a "real need," as the foreword says, for an illustrated collection of these tales, this book seems adapted to meet it.

We cannot particularly congratulate Miss Jane Barlow upon her last work, 'The Founding of Fortunes' (London: Methuen & Co.; New York: Dodd, Mead & Co.), as a novel. As a delineator of the ways of speech of the less English-educated of the people of Ireland, the author is inimitable. In this respect the present book falls behind none of its predecessors. But the story does not run smoothly, and the characters are somewhat wooden. It impresses us as the work of one who has lived more in her own thoughts than in the world, and still one wonders how the language likely to have been used in circumstances such as she has probably never experienced, strikes the reader as so true to nature. Occasionally, we have come upon passages not easy to understand, *e. g.*, page 101: "Hanmer became aware, in some scarcely definable way, that there was about them both the sort of uncommonness due to an impersonal attitude towards things in general, quite compatible with a most strenuous grasp of practical affairs, but not with a voluntary subjection to irrelevant trivialities." The book is written in a sympathetic spirit towards the position in which large numbers of the peasantry of Ireland find themselves.

We can heartily commend to all instructors in English a little volume entitled 'Freshman English and Theme-Correcting in Harvard College' (Silver, Burdett & Co.). It is the joint production of C. T. Copeland, lecturer on English literature, and H. M. Rideout, instructor in English. Their own literary skill is attested by the readableness of their exposition, in which a pleasant humor finds a natural vent. Thus, at the close of the course "English A," freshmen are asked to pass judgment on it; and our authors, following their practice of quoting examples of illustrative productions, give one which pronounces it "dull and uninteresting." Their comment is: "This, by the way, is less discouraging to instructors because, when compared with any of the writer's earlier work, it shows a distinct gain in structure. If he has got nothing else from his practice, he has learned to complain more effectively." The first fortnightly theme elicits an autobiography, of practical use to instructors; the three-hour talks are contrived to range from composition into ethics—to the advantage of the students, as witness the admirable extract from Dean Briggs on page 27. Daily themes, translation, letter-writing, fiction are the chief instrumentalities, together with *pastiche*, or the doubtful discipline in deliberate imitation of stylists. Poetical drill hardly exists, we judge. The authors rightly think that Harvard's experience is profitable for smaller institutions, for classes and for individuals.

For the excellent revision of Cotton's seventeenth-century translation of "Montaigne" (Scribners) in four fine library volumes, readers are indebted to the indefatigable Mr. William C. Hazlitt, whose labors have consisted chiefly in the correction of numerous errors of detail, and in improving many renderings vaguely or ambiguously given in the original version. Cotton's slightly archaic diction and phrasing unquestionably bring out the flavor of Montaigne's style with a smack that would disappear in a conventional modern dilution. Mr. Hazlitt consequently has confined himself to improvement, and has nowhere, so far as we have observed, completely recast a telling sentence. Familiar essays, such as those on Books, on Some Verses of Vergil, on a Custom of the Isle of Cea, etc., are very faithfully represented here. In the "Apologie de Raimond Sebond" we note a number of changes that give greater coherence to involved meanings; but the translations of classical quotations occasionally err in the direction of excessive paraphrasing.

M. Hippolyte Buffenoir's 'Les Charmettes et J.-J. Rousseau' (Paris: Paul Cornuau) is a provincial's account of a visit to the home of Mme. de Warens. It is rather a rhapsody than the study it professes to be, but is the latest report of the condition of this singularly preserved monument of a frail woman and a great genius. Some plates accompany the little brochure, including portraits and a view of Rousseau's room; the exterior view of the house might well have been photographic instead of from an old print. Our author cites good botanical authority for the contention that the venerable "jasmin de Virginie," or trumpet creeper, which covers the garden side of Les Charmettes, dates from the 18th century, and perhaps from the occupancy of Jean Jacques.

The September number of the *Gulf States Historical Magazine*, published at Montgomery, Ala., contains seven letters from John C. Calhoun to Senator and Judge Charles Tait, a cousin of Henry Clay and a Virginian who lived both in Georgia and in Alabama. They were written in the period 1820-21, and are a substantial addition to the volume of Calhoun's correspondence edited by Professor Jameson. Calhoun here shows himself, after two visits to the North, Boston included, unwilling to believe, in spite of the Missouri controversy, that the Northern public was disposed to enter on a contest with the South for supremacy. His moderation is very noticeable. The letters are copied verbatim, and the word "indispensible" occurs consistently so spelt in almost every letter. By an oversight on page 100, line 11, "revenue" is printed "reverence." On page 128 is a list of Louisiana newspaper files in the Library of Congress. The director of the new Mississippi Department of History and Archives announces the acquisition of the "complete muster and payrolls, with detailed historical facts, of the troops furnished by the State of Mississippi to the army of the Confederate States."

The conclusion of Mr. Worthington C. Ford's "John Quincy Adams and the Monroe Doctrine" gives especial interest to the October number of the *American Historical Review*. "That such a man [as Monroe] could have stood up against Europe alone is inconceivable," he concludes; "and there was no person in the Cabinet except Adams who would have given him support in such measure." Worth reading and pondering, also, is Mr. Carl R. Fish's study of "Lincoln and the Patronage." While showing that that President had not attained the highest position in the matter, Mr. Fish is sure "that he never abused, and apparently never used, the patronage for personal aggrandizement," and believes he might have welcomed appointment by examinations. An inedited letter of Alexander H. Stephens in 1854 is a confidential review of his political career. The question of Cuba was then a burning one. Stephens was in favor of repealing laws which hindered filibustering, but was "against Cuba's becoming a *negroe state*."

The bibliography of the geographical literature of the year 1901, published as the September number of the *Annales de Géographie* and the eleventh of the series, contains the titles of more than a thousand publications, Government reports, and papers in scientific journals and the proceedings of societies, in fourteen different languages. In most instances, the editor, M. Louis Raveneau, and his fifty-five collaborators, of various nationalities, have added explanatory and critical notes in French. The list is classified according to subjects and countries, with numerous cross-references and an index of about two thousand names of travellers and authors whose works have been recorded and analyzed. It is worthy of note that our Government reports have received fuller and more detailed notice than those of any other country.

—The November *Century* opens brilliantly with a series of seven color pictures, by Maxfield Parrish, illustrating various features of "the great Southwest." An "open

letter" from Mr. Parrish makes an interesting comparison of the color effects of Southwestern scenery with those of New England. The atmosphere of Arizona and New Mexico has not moisture enough to color the light as it passes through, and give the gilding and richness often seen in New England, nor is the intense blue of the New England sky seen in the Southwest. The color of the Southwest is inherent in the things themselves; the rocks, hills, and sands presenting a bewildering variety of reds, ochres, blacks, blues, grays, and purples. John Muir describes in his happy way the Grand Cañon of the Colorado, in whose sides "hundreds of Yellowstones might be eroded without noticeably augmenting its size or the richness of its sculpture." Here at least is one natural feature of our country which the hand of man can never have the power to make common or unclean. "The So-called Beef Trust," by George Buchanan Fife, begins a series of articles on "The Great Business Combinations of To-day." It is of especial interest in its details of the actual processes of the great packing-houses, the economy of labor, the careful utilization of by-products, etc., which make it so hard for the small concern to compete. The packer's side of the recent high prices for beef is given at some length, and apparently accepted by the writer, though he does not attempt to deny or conceal the power for evil in such combinations and the necessity for official supervision and restraint. The "Confessions of a Wife" come to an end with a heroic halo around the head of each one of the three persons chiefly concerned, and perhaps the reader may as well unite with them in forgetting the hysterical foolishness which made the tragical part of the story possible. It remains for the critics to decide upon the claim that a really great book has been built up on the cornerstone of that foolishness.

—A posthumous paper by John Fiske, on "Evolution and the Present Age," is the most attractive among the serious papers of the November *Harper's*. The depression of Darwin and elevation of Herbert Spencer is its characteristic leading feature. Harry De Windt describes a trip of more than eleven thousand miles through Siberia, to Bering Strait, with the usual incidents of monotonous wastes of snow, villages of stupid and squalid natives, privations of hunger and cold, worn-out sledge dogs, etc. Claiming an experience of Russian prisons dating from 1887, and a personal acquaintance with almost every penal establishment in Siberia, he asserts the belief that the Russian criminal exile is in most respects better off than the convict of other countries. Of the lot of political exiles he speaks not so favorably, yet much more mildly than many who have treated the subject for American readers. Frederic G. Kenyon, of the Department of Manuscripts in the British Museum, gives a brief but very instructive account of the manuscript tradition of the Bible. The "Easy Chair" discusses George Eliot as presented in Leslie Stephen's biography and in W. C. Brownell's essay in "Victorian Prose Masters," leaning rather towards Mr. Brownell's criticism, as "kinder, imbued with a tenderer intelligence, and freed to a fuller expression of its kindness regarding a woman whom Americans can judge more clearly and more justly through their like social and religious tradition than Englishmen."

—President Hyde of Bowdoin opens the *Atlantic* with a discussion of "The New Ethics." One finds it hard to pick out anything really new in the positions taken. Many of them are easily paralleled from ancient literature, sacred and profane. Writing of "The Book in the Tenement," Elizabeth McCracken records some examples of keen criticism and delicate appreciation in literary matters among the tenement-house people with whom she has associated in her work. A scrub-woman who had read 'The Talisman,' 'Kenilworth,' 'The Scottish Chiefs,' 'The Prisoner of Zenda,' and 'The Pride of Jennico' with interest, asked to borrow Ibsen's 'Ghosts.' In less than a day she returned it. She had found by experiment that it began gloomy and ended gloomy, and she had enough gloom in her life without going to Ibsen for it. A girl who had read 'The Christian' pronounced it unhealthy because of its exaggeration. When it was suggested that exaggeration does not necessarily make a book unhealthy, she replied: "Not when it's straight, but 'The Christian' is twisted; it calls things what they aren't, and doesn't call them what they are. And then it makes them bigger—till, altogether, you get so mixed up you can't tell one thing from another." Another read 'The Lady of the Aroostook,' but did not enjoy it. "It was like sitting and looking out of a window." "But that is a very interesting thing to do," suggested Miss McCracken. "Not when nothing is happening," was the decisive reply. Prof. Charles H. Moore writes a suggestive paper on "Modern Artistic Handicraft," calling special attention to the wrong ideas of design which ruin so much well-intended work, and to the general lack of intelligent interest which makes it impossible even for the best workmen to find an adequate market for their wares. The *Atlantic* is fortunate in its ability to announce for next year the autobiography of J. T. Trowbridge and a series of reminiscences by Leslie Stephen.

—The November *Scribner's* devotes two-thirds of its space to fiction. Julia Magruder, Margaret Sherwood, Edith Wharton, Sewell Ford, and F. J. Stimson contribute short stories, and J. M. Barrie brings to its conclusion "The Little White Bird." James B. Connolly turns from his capital sea stories for a study "In the Paths of Immigration," with illustrations by J. M. Burns. Curtis Guild, jr., writes of "The Spellbinder," but comes far short of justifying his contention that the stump-speaker has gained rather than lost in influence during recent times. Perhaps the lack of proof is partly responsible for his assignment of those who entertain a different opinion to that dreadful class "whose vociferous censure of all men in political life is only less marked than their own abstention from the simplest political duties of the American citizen." Winthrop L. Marvin contributes a mournful plea for a generous fillip of American prosperity, from the Treasury vaults, to the subsidy-hungry American merchant marine. Gen. John B. Gordon's reminiscences of the civil war, and a series of articles on the various departments of the United States Government, are the most notable announcements for the coming year.

—An interesting announcement comes from Mr. Edward Dalziel, the last surviving member of the original and once famous firm of wood-engravers known as the Dalziel Brothers, whose firm autobiography we lately reviewed. Few names are as prominent in the history of English illustration in the "sixties." It was chance, perhaps, that produced just at the right moment a distinguished group of artists willing and eager to work in black and white: Rossetti, Holman Hunt, Millais, Sandys, Boyd Houghton, Pinwell, Fred Walker, Keene, among many others. But the Messrs. Dalziel gave them the necessary encouragement, not only by engraving their work on wood as well as it could then be engraved, but by giving them, in the first place, the commission for the work. The engravers were thus brought into close and often delightful relations with the illustrators, and the Memoirs of George and Edward Dalziel showed how much interesting material remained in their hands as a result of this friendly business relationship. Shortly after that book appeared, Mr. George Dalziel died. But before his death he had planned, with his brother Edward, the publication now announced. It consists of a limited edition of India-paper proofs of Millais's drawings for the Parables of Our Lord, one of the Dalziel books now most valued by collectors. Millais contributed twenty drawings to the series, and when the volume was produced in 1864 the Dalziels had fifty proofs of these drawings pulled on India paper, but, for one reason or another, never issued them to the public, so that they are now published for the first time. With them are reproduced in facsimile twenty letters from Millais, touching upon the 'Parables' and other work he did for and with the Dalziels. "We feel," they say, "that the criticisms and remarks made in these letters furnish another proof of what is very dear to us—that a competent wood-engraver, with favorable surroundings, was capable of satisfying to the fullest extent, in his reproduction, the competent draughtsman." The competent draughtsman, it is true, sometimes thought differently, and, in the case of Rossetti, said so very plainly. But still, there can be no question of the fine and important work done by the Dalziels. Nor can it be denied that Millais's masterpieces are to be found among his designs in black-and-white, and that in this medium he never did anything to surpass the 'Parables.' The volume is issued privately from the Camden Press in London, and the price is ten guineas.

—A very interesting pamphlet on 'Ancestor-Worship and Japanese Law' (Tokio: Z. P. Maruya & Co.), by Prof. N. Hozumi of the law department of the Imperial University of Tokio, gives an inside view by a native of the forces which have made Japanese civilization. The learned barrister treats of ancestor-worship in its origin and as the chief factor in primitive man's social life. In Japan he notes three kinds of worship—of imperial, clan, and family ancestors. In his third division, he looks at the subject in relation to the modern codes of law, discussing in this light the Government, Constitution, the people, the house, marriage, divorce, adoption, dissolution of adoption, and succession. He holds that the worship of the imperial ancestors is the national religion and the basis and sanction of the Constitution of 1889, and

that "the influence of European civilization has done nothing to shake the firm-rooted customs of ancestor-worship." The little book is terse in style and informing in content; yet, after all, it is a curious illustration of mental inversion, as showing how little the training of the Middle Temple, which makes a barrister, can equip a judicial critic or historian. As matter of fact, it cannot be proved, as asserted on page 12, that "the primeval religion of the country" was ancestor-worship (at least in the sense of the Chinese or modern Shinto system); or that Japan has any history "that dates back more than two thousand five hundred years"; while, as simple matter of fact, the once highest Department—that of Worship (Council of Gods and Men)—was abolished a generation ago, and the people's representatives in the Imperial Diet have voted down every attempt of the Conservatives to restore it. Despite the family consultation and expressions of filial regard in the graveyards, both custom and sentiment in regard to the political nature of ancestor-worship are weakening. The steady trend of the nation is in the direction of democracy. Outside the palace, all the functions of government are in the line of secular order and justice.

## BOOKS ON ART.

*The Study and Criticism of Italian Art.* Second Series. By Bernhard Berenson. London: George Bell & Sons; New York: Macmillan. 1902.

*Fra Angelico.* By J. B. Supino. Translated by Leader Scott. Florence: Alinari Brothers; New York: Lemcke & Buechner. 1902.

*Sir Joshua Reynolds,* His Life and Art. By Lord Ronald Sutherland Gower, F.S.A. (The British Artists' Series.) London: George Bell & Sons; New York: Macmillan. 1902.

*J. M. W. Turner, R.A.* By Robert Chignell. (Makers of British Art.) London: Walter Scott Publishing Co.; New York: Scribners. 1902.

*Jean François Millet,* His Life and Letters. By Julia Cartwright (Mrs. Henry Ady). London: Swan Sonnenschein & Co.; New York: Macmillan. 1902.

*Modern Mural Decoration.* By A. Lys Baldry. London: George Newnes; New York: Scribners. 1902.

*Chefs d'Œuvre of the Exposition Universelle.* Parts 18 to 25. Philadelphia: George Barrie & Son.

Mr. Berenson's second collection of scattered papers of art study and art criticism is, on the whole, more interesting than the first. It contains nothing so daringly fantastic as his creation of "Amico di Sandro," but, on the other hand, it contains what we are inclined to think the greatest real achievement of modern connoisseurship—the taking from Perugino, and the giving to Lo Spagna, of the Caen "Sposalizio." Whether or not the picture was really painted by the latter artist we neither know nor greatly care, but that it was *not* painted by Perugino, and that it was the imitation rather than the original of Raphael's "Sposalizio," seems to be proved. Mr. Berenson's talent for criticism, as distinguished from connoisseurship, is shown to the best advantage in the article on Renaissance churches.

The unimportance of the questions with which the modern connoisseur often deals is as noticeable in the rest of the volume as in the former collection, and the reason of it is indicated in the concluding paper, on "The Rudiments of Connoisseurship." This article, which is now printed for the first time, "was written more than eight years ago, as the first section of a book on the 'Methods of Constructive Art Criticism' "; but the abstract discussion of method was abandoned in favor of a concrete example, and Lorenzo Lotto was selected as the subject, "more for his excellence as an illustration of Method, than for his actual achievements." The result was disappointing, for, says Mr. Berenson, "although this work, in a special introduction, in the introductory paragraphs to each chapter, and here and there throughout, speaks of Method, yet, to my no small astonishment, not a single reviewer of either the first or second edition has made the slightest reference to the general theory on which the book is based." Either Mr. Berenson's memory plays him false, or he did not see the review of the first edition published in these columns, for his method and his manner of applying it were much more interesting to us than his subject. This more formal statement of that method—we need not, with Mr. Berenson, give it a big M—is, however, welcome and worth a little discussion.

It begins with the statement that "the materials for the historical study of art are of three kinds: (1) Contemporary documents, (2) Tradition, (3) The works of art themselves." And these three kinds of materials are taken up seriatim. Documents, Mr. Berenson contends, really prove nothing. A contract may never have been carried out, or may have been only partially carried out, by the artist who made it; a signature may have been forged or attached to a work really executed by pupils. Such a description of a work of art as will serve really to identify it is impossible, as the description would serve equally well for a bad copy as for the original. In fact, "in no case adduced is the document in art sufficient proof by itself of authenticity or authorship. The document always needs to be confirmed by connoisseurship." Tradition, of course, is of even less value, and "in no case is it to be pitted against documentary facts or the scientific deductions of the connoisseur." We are left, then, to the conclusion that the only means of determining authorship is by the study of the works themselves. "Connoisseurship is based on the assumption that perfect identity of characteristics indicates identity of origin. . . . To isolate the characteristics of one artist, we take all his works of undoubted authenticity, and we proceed to discover those traits that invariably recur in them but not in the works of other masters." Here is the initial difficulty. If documents and tradition are of no worth, how can there be any "works of undoubted authenticity" to examine? Connoisseurship is left with a free hand to examine everything, and should, logically, accept nothing. It might divide works of art into groups, each group presumably by the same hand; but it has no right to put names to them. That there ever was an artist named Titian is matter of document and tradition, and, in his clearing away of all other material than the work of art itself, Mr. Berenson has left connoisseurship in the air, with no foundation whatever.

However, recognizing somehow that authentic pictures exist, what are the characteristics we are to look for? "Types, general tone, composition and technique" are ruled out as characteristic of schools rather than individuals; we must examine the details, "bearing in mind, to start with, that the less necessary the detail in question is for purposes of obvious expression [*i. e.*, the more unimportant it is], the less consciously will it be executed, the more by rote, the more likely to become stereotyped, and therefore characteristic." Hence we have a series of tests which rank in nearly inverse ratio to their importance:

"The most applicable: the ears, the hands, the folds, the landscape.

"The less applicable: the hair, the eyes, the nose, the mouth.

"The least applicable: the cranium, the chin, the structure and movement in the human figure, the architecture, the color and the chiaroscuro."

But these tests are more applicable to insignificant artists than to great ones, because the great ones are more likely to be imitated or copied. So we have this statement in italics: "*The value of those tests which come nearest to being mechanical is inversely as the greatness of the artist. The greater the artist, the more weight falls on the question of quality in the consideration of the work attributed to him.*" Here is the reason, very clearly stated, why modern connoisseurship concerns itself so largely with attributions which may possibly be true if important, for the "sense of quality" cannot be taught or reasoned about: it is just what artists have always judged by, though sneered at for so judging. The more important the question to be solved, the less aid "Method" gives in its solution, and the more we fall back on that personal artistic sense which existed before "Method" was heard of.

Supino's 'Fra Angelico' takes the conventional view of the artist-saint, and is far from being as important a contribution to art history and art criticism as Mr. Langton Douglas's book on the same subject, but it is a pretty little volume which many people will be glad to have. Its pocket size and flexible cover, of dark green crushed morocco, should make it a pleasant travelling companion, while its numerous small but clear illustrations, its eight photogravures, and its two color plates will cause it to be welcomed as a permanent souvenir. Though not to be taken too seriously as reproductions, these color plates are exceedingly dainty and attractive.

The best we can say of Lord Ronald Sutherland Gower's book on Reynolds is that he has chosen for illustration many comparatively unknown pictures by the master, some of which seem never before to have been reproduced; that he has generally used photographs from the paintings, and not engravings, and, where engravings are used, has clearly stated the fact; and that he has published for the first time Gainsborough's touching letter from his deathbed to Sir Joshua. For the rest, the text is of the usual, somewhat inconsequent, "year by year" kind, and contains some blunders and some strange extravagances of criticism.

It may, possibly, be the fault of the printer that Reynolds's first portrait of himself should be stated in the text to have been drawn in his seventeenth year, while the list of illustrations and the title under the plate call it "Reynolds in his nineteenth year." Lord Ronald must himself be responsible for another error. He states that Reynolds at the age of seven made a drawing of the colonnade of Plympton Grammar School, which his father endorsed, "This is drawn by Joshua in school out of pure idleness." Unless Samuel Reynolds made precisely the same comment on two different drawings, the story is mistaken, for the drawing, with its inscription, is reproduced in the book, and is a rough and incorrect perspective sketch of a wall with a square, mullioned window in it, and contains nothing remotely resembling a colonnade. The author's lack of critical ability, and the extremes to which he is led by enthusiasm, are shown in such judgments as that Reynolds's portrait of Sterne "may take a place by the side of Velazquez's 'Innocent X.,'" and that "even Michael Angelo's 'Sibyls,' in the Sistine Chapel, are not more impressive" than Reynolds's "Mrs. Siddons," which "stands on a level with the greatest of artistic creations."

Mr. Chignell's 'Turner' is decidedly a better book than its predecessors in the series to which it belongs. If it contains little of significance as criticism of the artist, it at least succeeds reasonably in its aim of doing justice to the character of the man, and gives a more agreeable picture than that to which we have been accustomed. This is the first volume of the series to contain any apparatus of lists of pictures, etc. Its illustrations, like those of its fellows, are almost invariably reproduced from engravings, and without warning to that effect—to the discredit, we must say, of the London publishers.

The present edition of Mrs. Ady's 'Millet' seems to be an exact reprint, from the same plates, of that published in 1896, and reviewed by us at the time. We observe no other change than a new binding and a new date on the title-page, and there is no announcement that the book has ever appeared before. Whether or not this be considered quite fair practice, there is no occasion to repeat our former favorable comment on this excellent work.

Mr. Baldry's book gives a good deal of information as to the various technical methods employed in "Modern Mural Decorations," but his knowledge of its practice is evidently almost entirely confined to what has been done in England. The hundred-odd illustrations include a few Italian frescoes; a few paintings by Puvis de Chavannes, one of which, said to be in the Sorbonne, is really at Amiens; a ceiling from the Paris Opera-house, falsely attributed to Baudry, who had nothing to do with it; Vedder's design, not mentioned in the text, for the great mosaic in the Library of Congress; and perhaps a score of miscellaneous pieces of work, ancient and modern, some of which are by artists unknown or not named. All the rest is English. This is of the less importance as the book deals with processes rather than results, and scarcely attempts criticism; but the work may be said to be calculated for the longitude of Greenwich.

The last eight parts of the 'Chefs d'Œuvre of the Exposition Universelle' deal with the architecture of the Exposition, the Retrospective Exhibition, etc. As far as they deal with modern work they do not greatly modify the somewhat depressing effect of the earlier numbers. The few plates of really beautiful objects are of old French furniture, the quality of which must have proved food for thought to the devotees of the "new art."

## POOR-LAW RELIEF IN ENGLAND.—II.

*Public Relief of the Poor.* Six Lectures. by Thomas Mackay. London: John Murray. 1901.

*The Early History of English Poor-Relief.* By E. M. Leonard. Cambridge (Eng.) University Press; New York: Macmillan. 1900.

Mr. Mackay's treatise raises historical, political, and moral questions which are of much more than merely local interest. They concern in one sense every civilized country; they have a direct and immediate importance for every state which has inherited or been influenced by the traditions of the Elizabethan poor-law. Is pauperism, as Mr. Mackay in substance maintains, a survival, and a disastrous survival, of feudalism? Has the poor-law been, speaking broadly, a source of mere evil to England? These closely connected inquiries must be answered in the main by historical investigation, but by investigation or research aided and controlled by rigid economic reasoning. We cannot ourselves doubt that the reply given by Mr. Mackay is as nearly sound as can be any summary answer to a complex problem. "Pauperism"—a different thing from poverty—is a survival. The philanthropists of the sixteenth century were, like many philanthropists before and since, unconscious reactionists. To meet immediate and patent evils, they fell back on modes of action which were becoming obsolete, and resuscitated in a new form the evils of the feudal system.

> "The message of feudalism to the poor man . . . was: Serve here, and maintenance will be forthcoming. Then the Poor-Law, addressing itself to the laborer emerging from this shell of servitude, varied the injunction, declaring: 'Remain here where you are, and as you are, and the parish must maintain you.' This policy obstructed the true exodus of the people, and created a monstrous growth of population impervious to the distributing force of the economic motive, and threatening the moral and financial ruin of the nation."

The nature of the evil wrought ought to be clearly understood. It was and is "the resolute proletariate habit, characteristically adopted by certain classes, which effectually prevents them from acquiring property, and, what is perhaps equally important, from acquiring the instincts of property." To those who meditate on the melancholy and profound truth of this statement it is a certain comfort to learn from Miss Leonard that "the survival of the English system of poor-relief is owing to the organization which was . . . created by the Book of Orders of 1631": pauperism is the most fatal legacy bequeathed to England by the despotism of Charles I.

Yet while it is clear that Mr. Mackay in no way exaggerates the evils of a system which has created the status of pauperism, it may admit of doubt whether our author does not overlook two circumstances which, while they do not affect the validity of his practical conclusions, diminish the soundness of his historical estimate of institutions which he rightly perceives to have produced immense evils. The existence and the maintenance of the English poor-law is in part explained by its having from time to time produced two beneficial effects which were sure to attract the attention of statesmen. The certainty of receiving poor-relief did, we may well believe, mitigate, for a short period at any rate, the sufferings of laborers whenever changes in the course or character of trade threw large numbers of men out of employment, and thus reduced them to destitution without any fault on their own part. It is at any rate possible to imagine a state of things where temporary support might be rightly given at the public expense to a large class who were really unable to obtain employment. The sternest of economists must have felt that, during the cotton famine produced by the war of secession, the manly and independent artisans of Lancashire deserved, as they received, aid from public benevolence which, under the circumstances, was only another name for national justice. Security, further, against starvation has, it may be conjectured, been at several crises one cause of the patience with which the English poor have borne want. Would it have been possible to continue the desperate contest against Napoleonic tyranny if the mass of the English poor had felt, whether rightly or not, that the prolongation of the war might mean to many of them actual death? There is no reason to suppose that Frenchmen are a whit less benevolent than Englishmen, but the French workman, though he may depend on the kindness of his neighbors, has not an absolute legal right to support; the resulting dread of starvation has been one cause of revolution.

Does the abolition of the legal right to poor-relief admit of moral justification? This is an ethical inquiry to which Mr. Mackay's whole essay supplies an unhesitating answer. The moral justification for the abolition of a poor-law such as that which exists in England is, and has long been, ample. No moralist of whatever school can maintain that it is right to support institutions which are in the main productive of physical and moral evil. The poor-law undermines the independence of the poor; it has done a great deal to break down in England that sense of mutual responsibility which forms the basis of family life; it hampers at every turn the growth of that system of free exchange of services which is the basis of all that is best in modern society. The suffering, moreover, which the curtailment or the abolition of the poor-law would create is, we may feel sure, immensely exaggerated.

On this point the experiment of 1834 is decisive. The able-bodied laborers of England were daily sinking deeper and deeper into pauperism; parish relief was looked upon as a form of legitimate and supplemental wages; the New Poor-Law did, by the free use of the workhouse test, put an end, as regarded able-bodied laborers, to the receipt of relief. To a great part of the population this change was as sudden as it was hateful; yet this social revolution, which produced profound discontent, caused, as Mr. Mackay shows, far less of suffering than might have been expected. The fetters which had checked the ener-

gies of the laboring class were struck off, and men who had been accustomed to rely on the help of the parish found that when this aid was withdrawn they could help themselves. The alleged surplus of laborers in some instances merely walked into the next parish, the pressure in the parish of Broadacre was relieved, and the landowners in the parish of Whiteacre found themselves supplied with the labor they had long needed; and, under the system of free exchange, the quality of the work rendered underwent a marvellous transformation. "'In old days,' said a farmer, 'I would have given money to keep that man off my land; now he gives me a good day's work for a good day's pay, and I would gladly employ a dozen such.'" The experience of 1834 is, as we have said, decisive. The dictates of public morality not only justify, but, were it politically possible, demand the abolition of the English poor-law.

Is it possible to abolish the English poor-law? This is a question of politics, and, we may be sure, would receive from any statesman, however high-principled, a negative answer. The only problem which even an economist could now consider as coming within the range of practical politics, is whether the time has not now arrived when the reform of 1834 may be carried to its legitimate conclusion by the absolute prohibition of outdoor relief. The reformers who framed the New Poor-Law certainly meant that, within a limited time, the distribution of outdoor relief should cease. They believed that its abolition would be a benefit to the country, and that within a few years the reality of this benefit would become so patent to all administrators of the poor-law that outdoor relief, if it existed at all, would be allowed only under exceptional circumstances which might possibly justify a temporary deviation from sound economical principles. Experience has shown conclusively that the supporters of the New Poor-Law were right in holding that outdoor relief worked nothing in the long run but evil, and that any guardians endowed with sufficient sagacity and vigor to apply the workhouse test with strictness, would relieve the ratepayers from a heavy poor-rate and confer benefit upon the industrious poor. It has further become patent that public charity and benevolence are ready to meet the exceptional hard cases of undeserved destitution which cannot be provided for by the rigid rules of a well-administered poor-law. The time, therefore, has clearly arrived when, if the making of laws depended upon the intelligence of enlightened statesmen, the distribution of outdoor relief ought to be abolished.

But it is certain that a most salutary reform is in this instance a political impossibility. The poor-law of 1834 was the best fruit of Benthamite philosophy, and of that transference of political power to the middle classes which made it possible for the English Parliament to pass laws based on the principles of utilitarianism. From 1834 to (say) 1865 it was at least conceivable that the Benthamite reform of the poor-law might be carried one step further. At the present moment progress in this direction is forbidden no less by the condition of public opinion than by the advance of democracy in England. Benthamite teaching, which, in the field at any rate of legislation, has worked nothing but good, has for the last forty or fifty years been the object of incessant attack. The sentimentalists of every class have succeeded in discrediting doctrines which they could not confute, and have in many cases produced results which they themselves deplore. They have insisted that men ought to trust their feelings rather than their common sense; and the English democracy which has since 1867 obtained predominant political influence, has learned with readiness a lesson which must from the nature of things be acceptable to the poor and the uneducated. Add to this that statesmen are constantly affected, and this without dishonesty, by the opinions and sentiments of the followers whom they nominally lead, but whose wishes they in reality obey. It is no accident that the central authority which for a long time aimed at inducing poor-law guardians to enforce the workhouse test, has, to speak in the very mildest language, relaxed their efforts in favor of a rigid administration of the poor-law.

Mr. Mackay is apparently a man of a hopeful disposition; his fervent belief in the truth of the doctrines of which he is an admirable exponent, makes it impossible for him to renounce the hope that they may obtain general acceptance. An unbiassed critic can hardly on this point be very sanguine. Still, Mr. Mackay points, and with reason, towards the possibility of one fundamental change in the administration of poor-relief. It may possibly become the concern not of small localities, but of the whole nation. If this event should ever take place, it must, it would seem, be accompanied by one of two results. Political leaders may attempt to make the liberal administration of the poor-law a means of obtaining popularity. It is difficult to see how such an attempt could lead to anything but infinite calamity. But it is also possible that some statesman or body of statesmen might be guided by a high conception of their duty to the country, and insist that when the relief of the poor is taken directly in hand by the nation, it shall, as the most ardent among the reformers of 1834 desired, be administered by experts according to fixed principles, and with the distinct object of putting an end to, or at least limiting the area of, pauperism. However this may be, one thing is certain: there is little likelihood that, at the present moment, the great reform of 1834 will be carried any nearer to its natural and legitimate conclusion.

## LYALL'S TENNYSON.

*Tennyson.* By Sir Alfred Lyall, K.C.B. (English Men of Letters.) The Macmillan Co. 1902.

If this latest number of an extended series is not generally accorded a place in order of excellence high up with Sir Leslie Stephen's 'Johnson,' F. W. H. Myers's 'Wordsworth,' and Sidney Colvin's 'Landor,' it will not receive the honor it deserves. Many of the writers in this series have brought only a partial preparation to their work. But Sir Alfred Lyall, though probably the least known of these writers to the general public, is one of the best qualified of them all. He brings an equal intelligence to the form of Tennyson's work and to its spirit, and his criticism is conceived in the most admirable temper imaginable. There is no sign of any such patronizing airs as Mr. Herbert Paul's for Matthew Arnold, and, far back in the series, Trollope's for Thackeray. On the other hand, we have no monochromatic wash of indiscriminate admiration. Sir Alfred's preferences are strongly marked, but, where he is least attracted, he qualifies his dissent with so much deference that no devotee of Tennyson can take offence.

Mindful of the narrow limits fixed for him in advance, Sir Alfred is extremely parsimonious in his allotment of space to Tennyson's childhood, youth, and years at Cambridge. The 'Poems of Two Brothers' have six lines. It is said that they are "evidently drawn from wide miscellaneous reading," and show a promising metrical form, "with occasional signs of that descriptive faculty which matured so rapidly in Tennyson's later works." But the prize poem of 1829, "Timbuctoo," is "worth notice because it contains in embryo the qualities which emerge in his later verse." No wonder when the 'Poems Chiefly Lyrical' was published the next year, containing things, more than few, which time has not yet staled. It is significant that 'Poems 1830-1842' is the longest chapter in the book, nearly forty pages. It has less of chronological sequence than we could wish, and, especially, the line between the volumes of 1830 and 1833 is drawn quite invisibly. Here and there are long leaps of years one way or another, and such anticipations as where "Tithonus" (1860) is brought in with the "Ulysses" of 1842, and similarly the "Lucretius" of 1868. There is nothing to prevent the uninformed from supposing that both the "Tithonus" and "Lucretius" appeared in the volumes of 1842. Interesting comparisons are made between the poems of 1830 and the same as they reappeared in 1842. The changes were in the interest of compression and the elimination of the over-rich. Those in "Mariana in the South" are notably in evidence. Confession is made to Tennyson's indebtedness here to the critics in *Blackwood* and the *Quarterly*, who treated him with extreme severity, but put their fingers on the ailing spots. The *Quarterly* article (1839), which has generally been ascribed to Lockhart, is here credited to Kinglake of Crimean reputation.

Sir Alfred has no such indifference as FitzGerald to Tennyson's product after 1842, but he entirely agrees with him that Tennyson never surpassed the poems collected in the second of the two volumes of that year. Indeed, he calls "The Lady of Shalott," which was in the 1833 volume, "one of Tennyson's masterpieces, an example of his genius at a period when he had brought the form and conception of his poetry up to a point which he never afterward surpassed." To the "Ulysses" of the later issue is accorded the full measure of customary praise, and attention is called to the fact that Dante's suggestion of this poem was less positive than is generally represented. In the Dante episode, Ulysses had not reached home, but set out on his new cruise from Circe's island. Furthermore, Tennyson remembers to forget that Ulysses landed in Ithaca a solitary man, and had no old comrades to rally to new ventures. Wordsworth wrote to Tennyson that he had been endeavoring all his life to write a pastoral

like "Dora" and had not succeeded. Tennyson would hardly have succeeded better in writing such a pastoral as Wordsworth's "Old Cumberland Beggar." But the difference of the two poets has humorous illustration in their contrasting estimates of Burns. Tennyson was enthusiastic over Burns's songs, and said, "You forget, for their sake, those stupid things, his serious pieces." Wordsworth, the same day, to Aubrey De Vere, praised Burns with even more warmth than Tennyson. "Of course," he said, "I refer to his serious efforts; those foolish little amatory songs of his one has to forget."

In a chapter on "The Princess" and "In Memoriam" the former is rightly praised as "a beautiful serio-comic story that has been treated over-seriously, not only by those who dislike playing with a subject which is for them a matter of hard and earnest argument, but also by others to whom the poem is 'the herald melody of the higher education of women.'" But we gladly leave this pleasant bay for the deep waters of "In Memoriam." Henry Sidgwick's elaborate letter in the Tennyson 'Memoir' Sir Alfred Lyall quotes with admiration, and he relates the elegy to the mid-nineteenth century very much in Professor Sidgwick's manner. From the author of that remarkable poem, "Theology in Extremis," we should expect perfect sympathy with Tennyson's engagement with the dark side of nature, so different from Wordsworth's rest in her majestic calm, and we have no disappointment prepared for us. Unsatisfied with the scientists and utilitarians, and disgusted with the dogmatists, Tennyson took refuge in a realm of transcendental intuition. The most novel suggestion of his latest biographer is that

> "Since not every one can be satisfied with subjective faith or lofty intuitions, it may be that the note of alarm sounded by 'In Memoriam' startled more minds than were reassured by the poet's final conviction that all is well
>
> 'tho' faith and form
> Be sundered in the night of fear.'

If, therefore, the poem strengthened in many the determination to go on trustfully, on the other hand there was an attitude of terror in the recoil from materialistic paths that lead to an abyss; and perhaps it may be so far counted among the influences which have combined to promote a retreat in the latter half of the nineteenth century toward the shelter of dogmatic beliefs and an infallible authority in matters of religion."

The Wellington Ode, universally depreciated when it appeared, is made to point the moral of the futility of contemporary praise and blame. The Lucknow poem is contrasted with "The Revenge" as showing the advantage of remoteness in a battle theme. "Maud" is rightly divided into its worse and better parts; and as between the "Idylls of the King" and "Enoch Arden" the preference is clearly for the modern poem. As for the "Idylls" we shall do well not to consider them too curiously. Tennyson did them needless injury when he invested them with a symbolic character. He did well to say that "there is no single fact or incident in the 'Idylls,' however seemingly mystical, which cannot be explained without any mystery or allegory whatever." The wise will take the hint, and yet not, by so doing, lose the large moral of "captive good attending captain ill," the misery of badness dragging down both good and bad in common wreck. It is plain, however, that Sir Alfred thinks that, for all the beauty of many parts and passages, Tennyson has detracted from the beauty of the Arthurian legends as husbanded by Sir Thomas Malory.

In a chapter on the Pastorals and Tennyson's Philosophy we have the deepest ploughing in the book, and it turns up a rich and fruitful soil. It is preëminently the poet of "Theology in Extremis" who comes, in this chapter, face to face with Tennyson's passionate cry for immortality, and his resolve that, without the assurance of such sequel, our own life and the life universal are utterly void of meaning or of worth. The biographer sees otherwise:

> "For it is the inevitability of death that gives a stimulus to life; and strenuous minds draw a motive for exertion, for working while the life lasts, from that very sense of the brevity of human existence and the uncertainty of what may be beyond which, although Tennyson fought it manfully, did undoubtedly haunt his meditations and depress the spirit of his later inspirations. . . . Yet in the four volumes of Jowett's 'Plato' which he received from the translator in 1871, he must have found—not only in the Dialogues, but also in Jowett's characteristic commentaries—that loftier conception of service in the cause of truth and humanity which can inspire men to go forward undauntedly, whatever may be their destiny beyond the grave."

The Plays have an interesting chapter. The insufficiency of the heroine is noted in "Queen Mary," the advantage of greater remoteness in "Harold," while for "Becket" we have the praise of J. R. Green, who said that all his researches into the annals of the twelfth century had not given him so vivid a conception of Henry II. as Tennyson's drama. That Tennyson was not barred from dramatic success by his dominant lyricism seems to be proved by the wonderful involution of Elizabethan dramas and lyrics. Tennyson is praised for his attempt and for the repression in his dramas of his propensity to ornament, so different from Swinburne's conduct of his "Bothwell."

The concluding chapter is made interesting by some tardy reference to Browning, which, however, the lovers of this poet will resent. For while Sir Alfred Lyall is far removed from those who would dismiss Tennyson with one of his own lines,

> "The form, the form alone, is eloquent,"

form counts with him for much, and Browning's lack of it costs him his right of succession in the direct line of the great English poets. It is possibly a defect of this admirable study that it softens the features and expression of the man too much for a portrait that should match the absolutely sincere criticism of the poet's work.

## LOUNSBURY'S 'SHAKESPEARE AND VOLTAIRE.'

*Shakespeare and Voltaire.* By Thomas R. Lounsbury. Charles Scribner's Sons. 1902.

The completely detailed history of the attitude and conduct of Voltaire in the international literary debate on the relative merits of the English and the French drama, which occupies so large a space in the annals of eighteenth-century critical literature, is here given for the first time. Chapters in Albert Lacroix's 'De l'Influence de Shakspeare sur le Théâtre Français' (1854-5), in Jusserand's more trustworthy and familiar 'Shakespeare en France' (1898), had broadly outlined the scheme of combat pursued by the indomitable fighter in defence of ideals which threatened to disappear for want of efficient support; it remained for Professor Lounsbury to retrace, point by point, in his addition to his series on "Shakespearean Wars," the various shifts, feints, ruses, and other insidious tactics which Voltaire permitted himself to employ in the professedly *bonne guerre* he conducted for more than forty years against the foreign invader. No reader tolerably familiar with Voltaire's methods of controversy requires to be told to-day that Benedictine-like accuracy of statement formed no part of his conception of a man of letters; his literary schooling had been received at the hands of another order. Professor Lounsbury, in the true spirit of a *Gelehrter*, takes infinite pains to show that, during the whole dispute, Shakspere's meaning, spirit, and text were frequently misunderstood or deliberately misconstrued by the unswerving champion of classicism. The volume consequently reads like a laborious indictment of Voltaire's literary character, supported by the documentary evidence of the 'Lettres sur les Anglais,' the preface to "Sémiramis," the two Appeals to the Nations of Europe, the Commentaries on Corneille, and the two famous Letters to the French Academy, besides the corroborative testimony of private correspondence.

With the initial contention of this carefully sifted record, it would be difficult to take issue. Professor Lounsbury holds that Voltaire's attitude remained fundamentally unchanged during this passionate controversy; it was his language and tone that increased in acerbity and virulence against the spread of Anglomania. The most cursory comparison of the early 'English Letters' (1733) with the great pronouncements to the Academy (1776) puts this beyond question. In both cases, the Shaksperean plays are characterized in terms of contempt for their truly unclassical want of rigid form and restraint, but with the redeeming clause that admits their genius.

It is perhaps less easy to agree with our critic in some of his subsequent positions. In making out an undeniably strong case, he dwells, here and there, insistently on points of really minor importance, and thus unwittingly diverts his readers' attention from the real issue at stake. Among Voltaire's many utterances on "Hamlet," the oftenest-quoted is the celebrated tirade occurring in the prefatory dissertion to "Sémiramis," which contains the *épouvantail* phrase of the "drunken savage." To characterize the brief summary in which Voltaire jotted down the features that seemed to him to warrant that uncivil designation, as marked with "gross blunders" (p. 144), is to overstate the case; for, after all, without purporting to be in any sense an adequate synopsis of the plot, that description indicates the very elements that clashed with the ideals of French tragedy. It is significant that, both before and after Voltaire, two such apparently independent critics as Saint-Évremond and the Abbé Le Blanc should, at a distance of nearly seventy years, have said virtually the same thing; the latter, indeed, finding precisely the same fault with the "misérables plaisanteries" on the part of the grave-diggers. Voltaire, as every one

knows, gave a detailed analysis of "Hamlet" in his Appeal to the Nations, the inaccuracies of which it is easy to exaggerate; there is not a single poetical play in existence but would suffer in the same measure when reduced to the uncompromising baldness of a prose "argument." To the higher poetic qualities of Shaksperean imagination and diction, Voltaire, like so many Frenchmen (and Englishmen) of his own time, must have remained permanently obtuse. Indeed, it is not long since that a Frenchman exceptionally conversant with English was heard to describe "A Midsummer Night's Dream" with the uncomplimentary term *charabia*.

The charge, frequently brought against Voltaire during his own lifetime and minutely substantiated in this work, of having made use of Shaksperean materials without sufficient acknowledgment or with accompanying detraction from the merit of their inventor, is not to be rebutted. The ethics of play-writing are, however, by no means a formulated code; and the very practice here inveighed against had been almost universally adopted by English dramatists of that period in dealing with the work of their French contemporaries. Prof. A. W. Ward (Eng. Dram. Lit., III., 315) gives the detailed list. Muralt, in a seldom-quoted passage of his 'Lettres sur les Français et les Anglais' (published in 1725), had observed this years before Voltaire's borrowings:

"Une chose où je les trouve encore moins excusables dans leurs Tragédies, c'est d'attaquer toujours les Auteurs Français qui ne leur font d'autre mal que de les surpasser. Le plus fameux d'entre leurs poètes tragiques d'aujourd'hui [viz., about 1695] traite Corneille à peu près comme Schadvel [Shadwell] traite Molière; c'est à dire qu'il le pille et fait des Préfaces pour en dire du mal."

Similar emphasis on one side of the contention may be noted in the almost casual mention of the Abbé Le Blanc (p. 307), who is blamed for "having devoted a long letter to a detailed account of the plot of 'Titus Andronicus,'" for the purpose of illustrating the English fondness for scenes of violence on the stage. But surely, if Le Blanc is mentioned at all, some hint should be given of his very unusual literary equipment and keenness of insight. His letters, published in 1745, are beyond all question written by a man who knew English well, and had read every production he undertook to discuss. The directness of his common sense never came out more clearly than in his bluff rejoinder to Guthrie's often vapory pamphlet: "Lorsqu'il dit que ce n'est pas Shakspere qui parle le langage de la Nature, mais que c'est plutôt la Nature qui parle le langage de Shakspere, je lui demande ce qu'il a voulu dire." In no other treatise of the time does the critic find, in general, so thoroughgoing a knowledge of both literatures, and so judicial a statement of the controverted points. The commentator may reply, in the terms of his preface, that his concern is with Voltaire and his English assailants; why, then, allow an uninstructed reader to carry away a false impression of one of the French combatants?

As to the interpretation of Voltaire's real motives in the conduct of his share of the controversy, it must be said that reading between the lines or behind the actual words of an author is always more or less hazardous. Voltaire's acrimony in his private correspondence does, it is true, bear witness to his fears for his own dramatic reputation before the growing vogue of the immeasurably greater Englishman; it gives a color of justice to Professor Lounsbury's concluding remarks concerning "the men who produce revolutions, shuddering at the words and acts of the men whom revolutions produce"; it may even bear out the suggestion that "the dislike and dread he felt for the great Elizabethan" was one of the secret springs of his persistent attacks. But there was a greater Voltaire than all this. His genuine enthusiasm for qualities essentially bound up with the spirit of literary classicism—"unité, clarté, régularité, choix, logique," as M. Jusserand says—both inspired and sustained his strife against what appeared to him the fantastic waywardness of too many of his contemporaries. He could conscientiously say, with Alceste,

"Le méchant goût du siècle en cela me fait peur."

Beyond and above this, his far-seeing shrewdness warned him of the danger to a strongly individualized national literature in the almost indiscriminate adoption of conceptions and methods devised, in an atmosphere wholly foreign, by men different in race, temperament, and ideals. It may strike some readers that more unmistakable stress on this side of Voltaire's literary character would have set on Professor Lounsbury's admirably scholarly treatise the mark of complete balance.

## MORE FICTION.

*On Fortune's Road.* By Will Payne. Chicago: A. C. McClurg & Co.

*John Malcolm.* By Edward Fuller. Providence, R. I.: Snow & Farnham.

*Paul Kelver.* By Jerome K. Jerome. Dodd, Mead & Co.

*The Heart of the Doctor.* Mabel G. Foster. Houghton, Mifflin & Co.

*The Sea Lady.* By H. G. Wells. D. Appleton & Co.

*The Right Princess.* By Clara Louise Burnham. Houghton, Mifflin & Co.

*Tom Tad.* By William Henry Venable. Dodd, Mead & Co.

*Out of the West.* Elizabeth Higgins. Harper & Brothers.

*Stillman Gott.* By Edwin Day Sibley. Boston: John S. Brooks & Co.

*The Fortunes of Oliver Horn.* By F. Hopkinson Smith. Charles Scribner's Sons.

Mr. Payne's business stories deal mainly with the Chicago market. There is always a financial crisis, a wheat deal, a run on a bank, or a strike. There is always a business-hardened old man, a more scrupulous young one, and a nice girl. The cleaner method of business emerges triumphant, and the old sinner usually has a moment of integrity, a sort of Alpine glow of virtue as the story sets. The nice girl is instrumental in keeping up the standard of honor, and so all ends well after one has been shown with an almost painful intimacy the dark and undesirable ways of the modern money market. The stories, in spite of having this sameness of plan, are quite sufficiently varied in detail and do not fail to hold the interest. The pictures of the Stock Exchange and of business crisis are really noteworthy, while the case of conscience that figures in each story redeems it from being mere short-hand reporting.

'John Malcolm' is written in the calm, monologuing, question-asking manner of Trollope—a manner restful, and in these days novel. We fear the general scampering public will not have time for its leisurely pages. Nor can we truthfully assure them that, persevering, they will find a Trollope-like story. If the skin is the skin of Esau, the voice is not altogether Jacob's. Nevertheless, it is not a bad story of the disputed-will class, duly touched with mystery; and though the characterization is exaggerated, it is not wholly without underlying idea. The young girl belongs to a nearly extinct type (Trollope-like again), gentle and severe, maidenly and bold. Lovers of Dora, Amelia, Laura Pendennis will approve of her. The scene is laid in New York, but when did Mr. Fuller find a candy and news-shop in Irving Place?

Mr. Jerome's venture into novel-land takes the form of autobiography. We accompany Paul Kelver from his childhood, wondering at small things, accepting great ones, as children do, through shy, inarticulate boyhood, through conscious youth, up to the day when, after many a long struggle and many a struggle against struggle, he finds his feet. So have other men of fiction whose names are household names told their stories. If Paul Kelver's does not stand beside theirs, it will be from no lack of quality, but from a certain exuberance of that part of his material that is least able to stand the test of exuberance. It is a temptation for Paul dwelling in Bohemia to set down more than enough of the horse-play of Bohemia; to crowd his real characters in, and to frolic somewhat too freely among his artificial ones and their artificial doings. Mr. Jerome's touch is light, however, and he has worked less harm to his novel by overproduction of anecdote than another pen might have done. We have found much to stir and prick and interest in his story; passages to laugh over, passages to think over, pictures to sigh over, situations to pierce one with the sense of their being old to knowledge and new to the printed page.

The soul of good in things evil is a pet topic with novelists. Mr. Jerome dwells often on the soul of evil in things good; without misanthropy, without exultation, rather with a tender inability to understand it, and a healthy refusal to consider it final. Pages there are, as intimated, that belong less to the novel than to the sketch, and pages that stand apart instead of knitting themselves into the scheme of things entire. But there are forms and forms of novel-writing. If 'Pendennis' were shorn of its episodes, it would be a very thin volume. Who could help rejoicing in the man who sang "Sally in Our Alley" "as if it were a problem ballad"? One may choose between laughing and crying (his mother cried) when little Paul, after days and days of looking and pondering, spends the rare half-crown that has been given him for his pleasuring, on a dozen squares of colored glass. The whole of the childhood story is refreshingly true to life, as free from mawkishness as childhood itself. There is a touch of pathos in the vain struggles of

Paul and of "Goggles" against their manifest destiny to be funny, and we recall Mr. E. S. Martin's verse:

> "Sadly the humorist
> Muses on fate,
> Is it his doom, or is 't
> Something he ate?"

A talent for omission is not conspicuous either in 'The Heart of the Doctor,' which, though a small book and full of kind deeds, has as background a quite annoying amount of accidents and *materia medica*. "The Italian quarter" is described with sympathetic intimacy; so, too, the council of the Lady Managers of the Dispensary. The love affairs and the plot are the least spontaneous parts of the story, which is on the whole a readable and creditable one, although no more concerned with the heart of the doctor than with the lungs, diaphragm, brains and bones of the patients.

'The Sea Lady' is a fascinating excursion into the land of fantasy. Laughter, ponderings, and the shivers are the reader's portion. Mr. Wells shows that he can be as imaginative anent a mermaid as he has heretofore been with flying machines from Mars—and far more entertaining. Nor had we suspected him, from his previous stories, of so much humor, such deep yet airy satire, such interest in human nature, as he has seasoned his new novel withal, whether he be picturing a mermaid "with what bishops call a 'latter-day' novel in one hand and a sixteen-candle-power phosphorescent fish in the other," or whether he be describing the girl who "was always attempting to be the incarnation of Marcella."

Mr. Owen Wister calls 'Silas Lapham' an historical novel, "for it pictures an era and personifies a type." And on that principle 'The Right Princess' may be called an historical novel, for it pictures the era of Christian Science and personifies the type of the Scientist convert and expert. From this point of view it is so entirely historical that it is hardly possible to review it as a novel. It is purely and simply a Christian Science document, with a story that is forfeited if detached. Mrs. Burnham's chatty cheerfulness makes her stories acceptable to the rank and file of readers, and the Christian Science demonstration will no doubt recommend this latest book of hers to all who already hold that it alters the aspect of pain to call it error or a claim of difficulty, and who, as a remedy for a bruise, prefer the 91st Psalm to Pond's Extract. We quote and not from memory.

'Tom Tad' is not a novel, but may be historical, for it tells of schoolboy life of the most plebeian order in a plebeian community on the banks of the Ohio River. A fair description of the flood of '84 occupies one chapter. Otherwise, while the book is not open to censure on moral grounds, intellectually and literarily it is a misdemeanor, if not a crime.

Nor is 'Out of the West' blessed with form, but there is an appreciable amount of substance in its make-up. It tells the story of a young New Yorker who went to Nebraska, and there, persuaded by the public speeches of a young woman known as the Colorado Joan of Arc, became a Populist, and later a Congressman of the People's Party. The homesick aspects of Nebraska, and the war between the farmers and the railroads, are described by one obviously familiar with the place and conditions. Colorado Joan preaches and teaches of Populism ("The Cause," of course, she calls it) in such a glitteringly general way that the uninitiated could easily infer it to be the only road to moral and political salvation. This was the Congressman's view of the doctrine after his conversion; and his speech on high railroad rates caused tears to run down legislative cheeks, and made a woman in the gallery sob aloud, while "the Speaker had dropped the gavel for his handkerchief."

'Stillman Gott' is the portrait of a Maine farmer-fisherman of kindly heart and shrewd head, with the fatal gift for conscious monologue that farmers and fishermen have nowadays in books. The story in which his picture is framed is thin to attenuation.

Mr. Hopkinson Smith's novel makes one think of an old-fashioned mezzotint with its scenes of Southern society and primitive New York studio life. His old gentlemen are always especially charming, be they black or white. In all who read 'The Adventures of Oliver Horn' old memories will be stirred, alike in Virginia and in New York, of the days before and just after the war. There shall be heard in the land questions as to when the iron fence of Union Square came down, when the Washington statue went up; and whether at a nocturnal revel Poe really did recite the Lord's prayer with such solemn power that the guests were stunned and sobered. The differences between Northerner and Southerner in manner and point of view are touched on delicately without exaggeration. Delicate gentleness indeed is the characteristic of the book, which, as a story, is mild, but full of pleasant reminiscence.

---

*In Argolis.* By George Horton. Chicago: A. C. McClurg & Co. 1902.

Any one who has ever sojourned in Greece, or loved it from afar, will enjoy Mr. Horton's 'In Argolis,' and will read it more than once, in memory of skies and scenes and a people that must always haunt his imagination. And any gentle reader who knows nothing of Greece, but keeps his palate free from doses of red pepper, will find in these little pictures of a life that is far from strenuous something rare and genuine that approaches the qualities of a classic. He, too, will read this little book, if not for love of Greece, for love of literature and humanity. The chapter which tells how Kyr' Douzinas, by the blessing of St. Peter, bought a three-pound fish one morning and had it cooked after consultation with a council of village elders—the cobbler, the butcher, the grocer, the postmaster, and the priest—is an idyl that might have come from Sophron, and deserved a smile from Charles Lamb. The vegetative life of such a village might be a sedative for the most acute case of neurasthenia developed by subway explosions and the noise of elevated trains.
